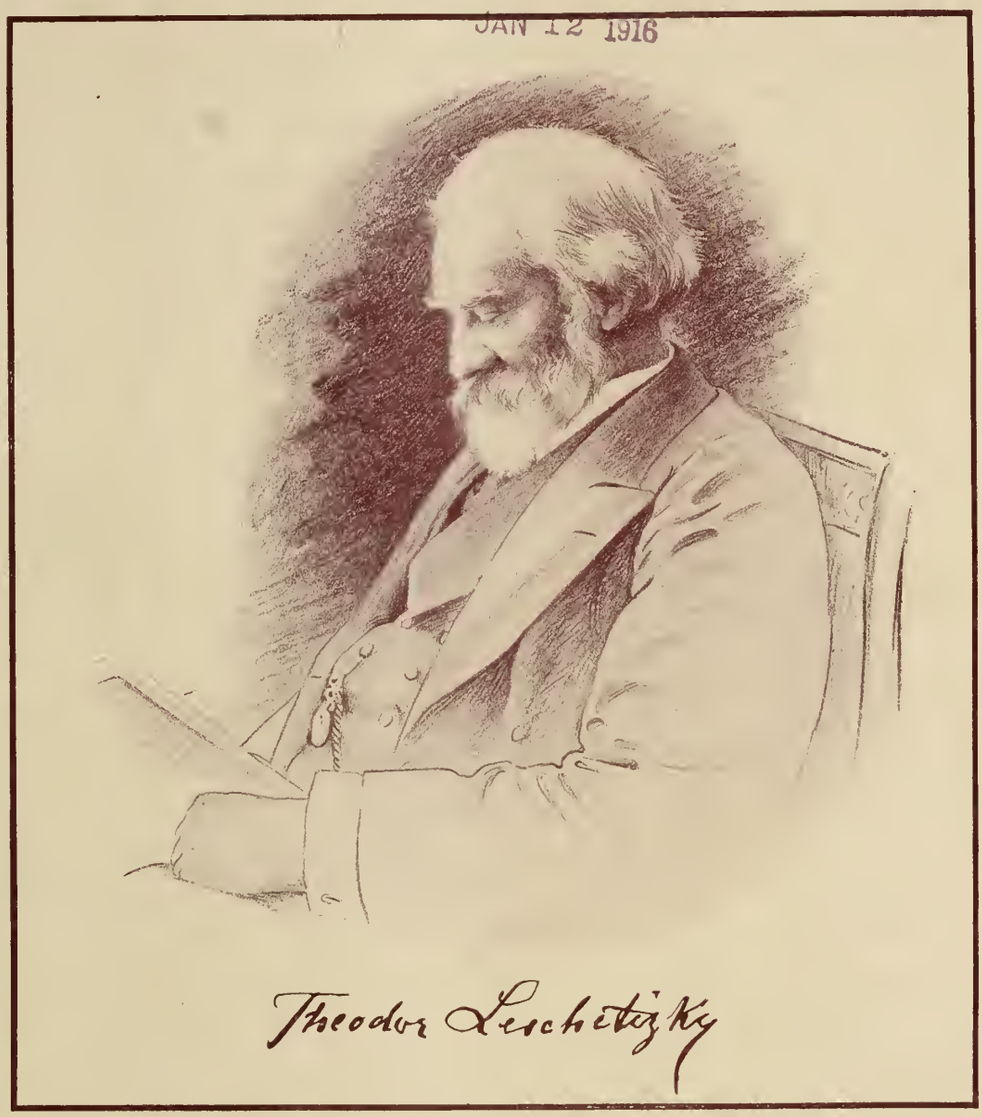
...SITY OF ILLINOIS LIBRARY
JAN 12 1916



Theodor Leschetizky

OLIVER DITSON COMPANY
15¢ a Copy BOSTON, MASS. $1.50 a Year

THE FIRST PIANO BOOK

By THOMAS TAPPER, Litt. D.

NEW AND REVISED EDITION

New Nearly 30 pages of new matter.

Revised Every page submitted to the most thorough test for the child's educational purpose.

Practical The carefully arranged step-by-step progress makes advancement easy.

Tuneful Attractive melodies and rhythms that make practice a pleasure.

Cheerful Easy advancement plus pretty tunes give cheerful results.

The book abounds in HAPPY MUSIC with HAPPY TITLES: Hallowe'en, Knights of Ladies, Paper Dolls March, Song of Sixpence, The Jumping Frog, Bouncing Ball and many others.

Two, three and four hand pieces (the teacher participating) give the pupil experience in Ensemble Playing.

And the Ensemble Lessons make him a careful listener.

Thus Music Appreciation is stimulated from the beginning.

A progressive series of Technics of the most practical order furnish ample practice material for Hand Development and for the easy playing of all the pieces.

The Signs and Words used in the lessons are amply explained.

Both Clefs are taught from the beginning.

The Music Writing Lessons familiarize the pupil with the signs and symbols of music.

The book adapts itself admirably to the making of Pupils' Recital Programs.

And it presents a well tested list of A HUNDRED TEACHING PIECES supplementary to the grade.

> The best little beginner's book I have ever used and I have experimented with a great many.
>
> LEO OEHMLER

TESTIMONIALS

Most satisfactory to teacher and pupil and am using it exclusively in all my teaching.—Jessie D. Preston.

I think it is excellent. I believe it will be a great help to me in my music work.—Emily Hooker.

Have found truth of statements concerning it—it is practical, tuneful and cheerful.—Mrs. W. Higgins, A. L. C. M.

Consider it the most simplified and teachable book of its kind I have ever seen.—O. R. Pope.

It gives me great pleasure to tell you how much I admire the skill used in the selection of material and the finish of the whole new volume.—Mrs. Charles Lombard.

The material is excellent and the little studies are very interesting. It is also simple enough for the child mind to grasp. I am using the book with good success.—Mrs. J. W. Shores.

Am *sure* I shall like it even better than th *original*; and *that* is the best book I ever used fc a *child*, during thirty years' experience.—Fann H. Smith.

Am most pleased with the efficient, pleasin manner it presents the foundation of pian knowledge. It is the best beginner's book, i my opinion.—Grace Capen Staples.

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Single Copies.....$ .15
Subscription Price, Per Year..... 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of th's magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured,* money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew. Renewals should be sent promptly as subscriptions are not continued after the time for which they are paid.

Note.—Customers with charge accounts in good standing may have their subscription charged to their regular account, if desired.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of *The Musician.* All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of *The Musician.*

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in *The Musician,* and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

PUBLISHER'S NOTES

Geraldine Farrar: Favorite Songs. Introduction price 60 cents

THIS gifted singer shows her musical training by the preponderance of German songs in the collection she has brought together. The various numbers have been sought out with indefatigable zeal, largely from treasures of song buried or neglected in the works of great writers, and are therefore, in many ways, new to the average teacher or singer. Songs from other lands, such as Russia and Scandinavia are also included. The book is uniform with previous issues of MY FAVORITE SONGS series, with biographical sketch, portraits, with a striking portrait on the cameo plate paper cover, in the engraver's best art.

The price has been fixed at $1.00 postpaid, but for introduction purposes, in advance of publication, we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Julia Culp: Favorite Songs. Introduction price 60 cents

THE favorite songs of this highly praised *Lieder* singer are drawn from the music of many different lands, her native Holland, France, Germany, Ireland, etc., including America. This collection is made up of such numbers as have Mme. Culp's affection as well as have won her audiences. It is a collection of extraordinary interest. Portraits and a biographical sketch are included, and the portrait on the cover is a work of art. The regular price has been set at $1.00, but in advance of publication we will accept orders at 60 cents, postage paid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Percy Grainger: Merry Wedding (Cantata) 60c Introduction price 30 cents

THE picturesqueness and vigor which characterize the talented pianists' playing are shown in this brief cantata or *Bridal Dance,* as he also terms it. The words are chosen from various folk poems of the Faroe Islands, done into English by the composer and his mother. The composition is practical for either a large or small chorus, and may be accompanied by a few instruments or full orchestra. The pulsing rhythms and gay melodies are delightful in their spontaneity. The price has been fixed at 60 cents but in advance of publication we will accept orders at 30 cents, postage paid, unless to be charged, in which case postage is additional.

Cedric W. Lemont: Creole Sketches. Introduction price 60 cents

THIS collection of piano pieces is a worthy companion to the same composer's *Dream Pictures,* which has had so favorable a reception. They show the same spontaneous melody, colorful harmony and fluent invention; in addition they reproduce the picturesque special features of Southern environment justified by the title. Having lived in the Creole state the composer has caught his impressions at first hand. The cover is a splendid piece of color printing. The regular price is to be $1.25 but in advance of publication we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Cecil Burleigh: Sonnets of Autumn. Introduction price 60 cents

A COLLECTION of piano pieces from the pen of a young composer whose work is attracting serious attention. These pieces in contrasted moods display a poetic sensitiveness to impressions, while their full-throated melody and the richly woven strands of their harmonic texture evoke in the mind the images suggested by the titles. The regular price is $1.25, but in advance of publication we will accept orders at 60 cents postage paid, unless to be charged, in which case postage is extra.

With The Musician, one year, $1.75.

Deems Taylor: The City of Joy (Song Cycle) Introduction price 60 cents

IN this highly original cycle of songs both author and composer have made an effort to uncover the romance, the poetry which are so vitally present under the familiar prose of every day scenes—and have been successful. The idyls of the city's crowdeways blossom in their happy pages. Recognized as one of the most gifted among our younger composers Mr. Taylor has written songs marked by spontaneity, richly expressive in their melodic and harmonic content, and in their felicitous touches of humor. And he has further adorned the volume with a cover design and with illustrations to each song which charmingly bear witness to his skill and imagination in a kindred art. The regular price has been put at $1.25, but in advance of publication we will accept orders at 60 cents, postpaid unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Arthur Hartmann: Six Pieces for Violin and Piano, Op. 28. Ditson Edition, No. 307. Price, 50 cents. Introduction price 20 cents

THESE easy pieces offer particularly attractive and practical material to the teacher, as they are primarily of musical interest, melodious, and with many felicitous touches of harmonic ingenuity in the piano part. In style they are well-contrasted, the first three being songful, the fourth a swaying waltz, the fifth

ıe light, bright manner of a scherzo, and the a fiercely rhythmical characteristic piece. The is 50 cents, but in advance of publication we accept orders at 20 cents, postpaid, unless to be ged, in which case postage is additional.

ith The Musician, one year, $1.55.

Neo Russian Piano Music

A COLLECTION OF

FORTY-FOUR REPRESENTATIVE PIANO NUMBERS BY THE FOUNDERS AND EXPONENTS OF THE NEW SCHOOL OF RUSSIAN MUSIC.

Specially selected, edited and supplied with a biographical introduction by

ANDOR PINTÉR

Price, Paper, $1.50 net. Cloth, $2.50 net

The Russian School of Music as established by Glinka and developed by such writers as Borodin, Balakirev, Cui, Mussorgski, Rimsky-Korakov and their followers, while strangely neglected for a long period, has in a surprisingly short space of time, established itself firmly and lastingly in the esteem and understanding of the musical world at large.

Reasons for such sudden appreciation and interest may be sought in the unquestionable originality, unconventional forms, striking melodic beauty and robust character of much of this music.

The present volume contains a large variety of *Musical Russianism* as inspired for piano solo and selected from the works of Alphéraky, Borodin, Rébikoff, Rimsky-Korsakov, Pachulski, Glinka, Blumenfeld, Aleneff, Rachmaninoff, Balakirev, Bortkiewicz, Scriàbine, Glière, Cui, Arensky, Karagitschew, Karganoff, Youferoff, Mussorgski, Glazounow, Stcherbatcheff, Sokalsky, Wihtol, Nemerowsky, Amani, Liapounow, Sapellnikoff and Liadow.

The selection of the numbers incorporated in this collection, the editorial correction and amplification of the signs of phrasing and expression, as well as the addition of practical fingering and pedaling has been inspired by the intention to bring together compositions which are truly *representative* of the best impulses actuating the musical art of Modern Russia, and to present them in thoroughly *explicit* form.

FOUNDATION STUDIES FOR THE VIOLIN

A new system of elementary violin instruction by Gottlieb Federlein.

Based upon the assumption that the simplest and most logical point of beginning from which to attack the difficulties of violin technic are the four fundamental notes A, D, E, and G, and their respective tetrachords.

Its underlying logic is a result solely of the consideration of the fingerboard of the violin not of the academic system of scales.

PERFECTLY SIMPLE—SIMPLY PERFECT. Following the principle outlined in the very first lesson—without any variation of the technical process involved and without any increase in the number of perplexities or difficulties encountered, command is successively gained over nine of the major scales and six of the easier minor scales.

It begins with quarter notes and then proceeds to half and whole notes in order to avoid the opposing rhythm of beat and bow movement which imposes so great an added strain on both the physical and mental strength of the young pupil.

Profusely illustrated and containing detailed explanations couched in the simplest English it materially lightens the teacher's work.

Enthusiastically endorsed by scores of violin teachers from all parts of the United States.

If your dealer hasn't it in stock we'll be glad to send you a copy for examination without charge.

A Successful Oratorio

Willard Patton

By An American Composer

ISAIAH

By WILLARD PATTON

For Solo Voices, Chorus and Orchestra
Price, $1.25

Solo Voices: Soprano, Alto, Tenor, Baritone
Time of Performance: 1 hour and 45 minutes
Parts for Full Orchestra: $10.00

The text of Part I, *The Prophecies*, affords varied opportunities for expressional force and is a good background for the contrasted subjects of Part II, *The Promises*. Recommended for church choruses, as musically suitable and neither over-difficult nor lacking in church-concert values. The solos are grateful, simple and of clearly defined melody. The text is wholly biblical.

What Musicians and the Press Say About This Work

Everybody is delighted with the work.—S. M. Lutz, Conductor, Decatur, Ill.

One of the most magnificent musical works ever heard in Racine.—Journal-News.

Delightfully fresh, invigorating, and well written. Music to climb the heights with.—J. W. Calderwood, Conductor, Boston, Mass.

We have never given anything that held the interest of the people more thoroughly than this.—Lyman A. Perkins, Conductor, Portsmouth, N. H.

We have enjoyed studying it very much, and it was received with great enthusiasm by our people.—H. C. Kelsey, Conductor Choral Society, Cameron, Mo.

The oratorio is a beautiful musical work, and at times rises to heights of majesty.—Rock Island Argus.

The oratorio is full of nobility as well as delicacy of sentiment; and should be included in the repertory of oratorio societies.—Ernest R. Kroeger, St. Louis, Mo.

That *Isaiah* can be ranked with the more widely known oratorios by European composers, seems to be the verdict of all who heard it.—Davenport Times.

Throughout the entire rendition the audience was enthusiastic in appreciation, and at the close rendered signal approval by rising to its feet.—Moline Dispatch.

The composition is pleasingly rhythmic and full of action, making good use of the canon form, and in places rising to a point of real dignity and power.—Kingston (N. Y.) Daily Freeman.

The members of the chorus are unanimous in their verdict regarding the beauty of the work; and it is their enjoyment in singing *Isaiah* which accounts for great enthusiasm.—W. W. George, Conductor, Fargo, N. D.

The verdict is that *Isaiah* is one of the best works our people have heard, and so well written that the text could be enunciated distinctly, no matter how intricate the parts. Owing to an almost unanimous request we shall repeat the work.—J. Burt Rogers, Conductor, Delaware, Ohio.

It is a scholarly and imposing composition thematically constructed. The dramatic interest steadily climbs to a superb finale, leaving the mind of the listener in a state of profound satisfaction and delight.—Omaha Bee.

If applause means anything Mr. Patton has brought into existence a work worthy the most serious consideration. It is musically excellent, and must appeal, not only to lovers of good form, but also to those who delight in melody that is pleasing and satisfying.—The Progress, St. Paul.

It is a work that ought to live.—Concert Goer.

The performance was a great success, and at its close the composer was overwhelmed with congratulations. It will take a place with the works of Gaul, Stainer, and other modern composers of recognized value.—Minneapolis Journal.

The Dorchester Choral Society produced a beautiful melodious work. Many of the eleven choruses are difficult and complicated, but they were rendered brilliantly. The audience was unbounded in enthusiasm and demanded a repetition of *But when He seeth His children*.—Dorchester (Mass.) Press.

Oliver Ditson Company, Boston

Chas. H. Ditson & Co., New York :: :: Lyon & Healy, Chicago

George E. Shea

recently Leading Baritone of

The Royal French Opera The Hague

Opera-lovers whose enjoyment of a favorite opera has at times been marred by awkward acting, even though the various roles were vocally satisfying, will be interested in this side-light on the singing-actor's art.

Teachers and Students of Opera who realize that many an operatic aspirant, after years of vocal preparation, fails to secure an engagement because unable to act, will welcome this book as a veritable boon.

ACTING IN OPERA

By GEORGE E. SHEA

With Descriptive Examples, Practical Hints and Numerous Illustrations

Bound in Cloth. Net, $1.25

Acting in Opera requires a distinct dramatic technique of its own. The singing actor labors under difficulties from which the speaking actor is exempt. In the drama, as it has been well said by an eminent actor, sometimes "everything may be conveyed by a pause." In opera, however sympathetic the conductor, the orchestra goes relentlessly on. Not only the flow of words but gestures and attitudes are necessarily governed by the tempo of the music. Another great consideration is position upon the stage. Although the speaking actor thinks less and less about "talking to the house" the opera singer must keep a weather eye toward the conductor's baton even in a scene which might be dramatically strengthened by turning his back to the audience. As leading baritone at The Royal French Theatre, The Hague, for three years, Mr. Shea is exceptionally qualified to discuss the peculiar problems of the singing actor. He points out that while training "on the boards" is of course essential, the opera student is frequently unable to get this experience until actually in rehearsal. Nevertheless the rudiments of rhythmic acting can be acquired from a text-book and the student thus enabled to put theory into practice instantly opportunity arrives. Mr. Shea himself posed for the illustrations in his book.

Edition Wood

825 VOLUMES

THE Best Series of Standard Musical Works, including Studies, Recreations and Classics. Carefully edited, perfectly engraved, printed and bound. Teachers, Students and Music Lovers admit the superiority of this edition.

EDITION WOOD is pre-eminently the Teachers' Edition,---planned for teachers, built up to meet the requirements of teachers. The best evidence that the efforts of its publishers have been in the right direction is the large number of teachers now using it,---a number constantly and rapidly increasing.

The high position it now occupies has been attained only by virtue of consistently giving the Teaching Profession the maximum of *practical value.*

THEODOR LESCHETIZKY

A RETROSPECT

BY HELEN HOPEKIRK

THIS beautiful little melody I shall always associate with Leschetizky's passing. One time, many years ago, in his class, when giving a lesson, on the piano arrangement of it, he said very earnestly, *"Eine himmlische Melodie, Ich möchte sie beim sterben hören."** After saying that he played it through and a deep silence fell upon us all. His playing of it was exquisite. I often wish that any who entertain the idea of Leschetizky as a mere technician, with a predilection for bravura playing and exaggerated tones, could have heard him play a simple melody such as this. It is especially impressed on my mind by a curious coincidence. The evening before the death was announced, I was talking to a pupil about the *Cygne* of Ravel, which seemed to me to have the same other-world atmosphere, and, apropos of that, told her what the Professor had said about the Gluck aria, little thinking that possibly at that time he was on the borderland of a new life!

Many hearts would be saddened by the news, many hearts in Europe and over here, and many would find themselves going back to old days in Vienna beside the genial old Master, the ideal friend as well as teacher of those who were sympathetic to him. He always regarded those as his real family, as he said once in a letter to me: *"Meine Familie, die wahre, das sind meine Schüler, unter denen ich treue Anhänglichkeit im grossen Maase gefunden habe und noch immer finde."†*

LESCHETIZKY'S MUSICAL FAMILY

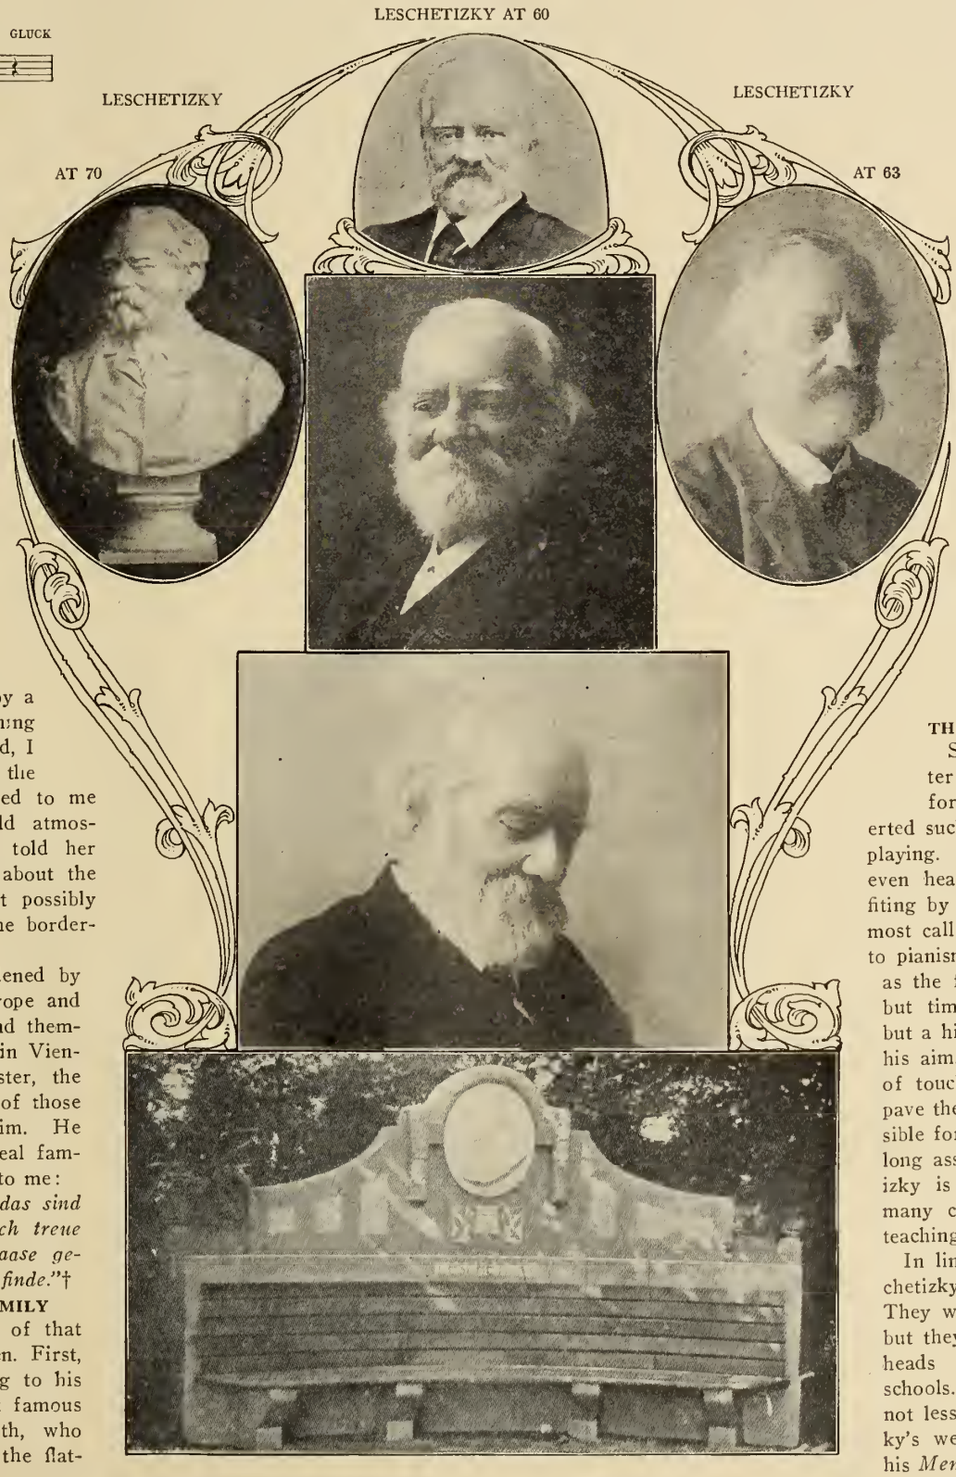
And how many generations of that musical family there have been. First, the many fine artists belonging to his early Russian period, the most famous of whom was Mme. Volborth, who drew from Anton Rubinstein the flattering remark that "to hear that woman play might make us all despair." Annette Essipoff was of a later period, and was for long the principal representative of his school.

Then came his Vienna life and the appearance of Paderewski, who soon made Leschetizky world renowned. Fannie Bloomfield Zeisler had already made her great success in America. Year by year other artists emerged from the Leschetizky school, and of the younger ones Ossip Gabrilowitsch and Katherine Goodson now lead the van; while the youngest, Ethel Leginska, whom I have just heard for the first time, is rapidly making a name for herself. Seldom have I been so impressed by the musical and poetic individuality of any young artist.

THE "NEW THOUGHT" IN PIANISM

Since the death of Liszt no master has provided the concert platform with so many artists and exerted such world-wide influence on piano playing. Many who have never seen or even heard much about him are benefiting by his ideas, which one might almost call the "New Thought" as applied to pianism. He was and is still regarded as the founder of a school of technic; but time is showing that not technic but a higher ideal of interpretation was his aim. He did have certain principles of touch, etc., but these were only to pave the way. Liszt was hardly responsible for the eccentricities that were for long associated with his name. Leschetizky is even less responsible for the many crude misrepresentations of his teaching.

In linking the names Liszt and Leschetizky, I am not comparing them. They were very different personalities; but they stand before the world as the heads of two widely represented schools. Liszt's lessons, however, were not lessons in the sense that Leschetizky's were. As William Mason said in his *Memoirs,* "Liszt never taught in the ordinary sense of the word; during the entire time I was with him I did not



THE UPPER OF THE TWO CENTER PORTRAITS SHOWS LESCHETIZKY IN 1908, THE LOWER IN 1906. THE BENCH IS THE LESCHETIZKY MEMORIAL, TURKENSCHANZ PARK, VIENNA

* "A heavenly melody. I wish that I might hear when I am dying."

† "My real family is my pupils, among whom I have found and ever find a true and intense attachment."

see him give a regular lesson in the pedagogic sense." Many artists collected round him for inspiration and criticism, and wonderful must the life have been in Weimar.

But Leschetizky's was a training school in addition of the severest kind. Work with him was thorough and uncompromising. No allowance was made for moods; in fact sometimes before a lesson he would suddenly say something to worry or embarrass one just to see how much control was there. If the student did not begin to play as if nothing had happened, Leschetizky would ask him how he was to stand the sudden frictions of public life! The Master was often heard to say that one must play well with the front row full of enemies. But this meant that nothing that work could do should suffer by nervousness; that rhythm, phrasing, clearness, good pedaling, and confidence must be always present, and not only when one was feeling in the vein. With the work all done, a good mood would intensify everything, while a bad one would be dominated by knowledge and routine. Nervousness must always exist where there is art work; but one must make nerve a servant, not allow it to be a master. The same with temperament; one must learn to use it.

A TEACHER FOR ARTISTS

He was preëminently a teacher for artists. No born amateur could go through the strain of study with one who was such a sworn enemy of *Dilettantismus*. Phlegmatic people either irritated or amused him; generally the former.

I remember once taking a young musician to him who at that time was unawakened and rather heavy. He played to the Master without the slightest excitement, hardly, indeed not at all, realizing the test he was undergoing. After he finished, Leschetizky said it was good, but without temperament. He then suggested that I should give him a few lessons till he could take him; but when we were leaving he pulled me back and with uplifted finger, and a comically serious face, he laid a heavy responsibility upon me. I was to ruin his nerves or he would never play!! Perhaps I did not quite reach the Professor's ideal in this respect; but before the young man played again in that house he had begun to be aware of the exciting life that he had entered. After the second interview there were the characteristic burning spots on each cheek, and a queer light in his eyes, as he confessed that he was "all tired out."

Most pupils were, after a lesson in those years; one had to be on the *qui vive* all the time; to be pliable, able to change fingering at a moment's notice, almost to foresee what was coming; for only in that way could one avert the storms. A tactful remark at the critical moment would often save the situation, and turn what might have been a "bad" lesson into a delightful one. The mental strain was not inconsiderable; because one had more than music to think about; none were safe from explosions; we all took them, because we had to take them, as part of the day's work. As a charming little Viennese artist said one day after a violent class lesson, "Ah, well, we don't come here to shine."

THE LESCHETIZKY TEMPERAMENT

If at any time he was especially meek we almost began to fear for his health. One day I had such a mild and gentle lesson that I went home quite sad, and, as he was slightly ailing at the time, wondered if he would really live long. We positively preferred lessons with a dash of risk and excitement in them. As for the health, I was entirely reassured some days afterwards, when, as I entered the house, my ears were assailed by shouts, and presently a scared pupil emerged from the room, followed by the whizz of music that landed on the floor! "It will be all right next time," I comforted him, as I went in to face the irate Master. The prospect was not good and I racked my wits to think how he might be calmed before beginning. In Vienna one learned to have a smiling face and be ready with a light remark, as nothing put him out so much as a melancholy expression coupled with the inability to speak. He loved to be asked questions. Newcomers had hard times; it was not easy to understand the sudden changes of his mood.

SUMMER AT ISCHL

In the summer, in his little villa at Ischl, he was at his best. The strain was off him for a while; his whole nature seemed tranquilized by the beautiful surroundings and the long association he had had with the place, which he first visited with his mother in the early days. In the woods he was like a child, picking cyclamen, his favorite flower, and looking bright and happy. In the afternoon there was usually a *Jausen* at some little *Gasthaus* (inn), followed by a visit to the "Kaiserin Elisabeth" or a simple homelike supper. Then talk would surely turn on music, and I think I learned more, unconsciously, in those quiet evenings than even in the lessons. Often he would illustrate by playing, and I vividly remember one talk over melody when, sitting near to the piano on a low stool, he reached up his hand and played the melody of *Die Forelle* with a perfection that will never leave my memory, as an instance of Schubert's wonderful gift of song. For that composer he had a deep affection and every year on his birthday took a little offering of violets to his grave.

FAVORITE COMPOSERS

His tastes in music were rather baffling. Chopin and Schubert he loved, while for Beethoven and Bach he had the deepest veneration, as he often illustrated by the marvelous lessons he gave on these composers. About Mozart he wrote me, after the Salzburg Festival of 1910, as follows:

*"Es konnte aus einem ruhigen Mozart Verehrer in diesen acht Tagen, wo man nur seine Werke hörte, ein enthusiastischer und glühender Verehrer und Bewunderer erwachsen, den er erschien, mit seinen viel und vielseitigen Werken als grossartiger Riese im Reich der Tonkunst, wie kaum ein anderer. Uebrigens habe ich eine schönere Aufführung des "Don Juan," unter Leitung von Muck, in meinem ganzen Leben nicht gehört."**

Brahms' music he really did not care for, though I think his respect grew in the later years. It is not generally known that his was one of the first performances of the D minor concerto and he used to tell how he and the composer had an exciting time over it. He objected to a certain ponderosity. Brahms thought his criticism flippant. When they next met, Leschetizky illustrated and suggested. Brahms grumbled, but began to listen. Finally the concerto was published with the alterations; but, although his point was gained, Leschetizky only played it once in public. For Brahms, the man, I think he had quite a strong regard; so strong indeed as to prompt him to ask permission to sit for a time alone with the dead Master before the funeral. He tried to tell me of this later; but emotion overcame him and he lapsed into meditative silence.

THE NEW FRENCH SCHOOL

The music of the modern French composers did not appeal to him, though he was at least a little more eager than the rest of Vienna to make its acquaintance. Of *Pelléas* he would only say that it was a good opiate. Not surprising, perhaps, we remember that Vienna has not had the oppo tunities that we have in America of becoming a customed to the language of the moderns. In t year 1908 I talked of César Franck to some Vie nese musicians with but little response; his D min symphony had been done only once; D'Indy w still a stranger; while Debussy was unknown most of them. Certainly nowadays a young musici can learn more of the new music over here th he can anywhere in Europe.

OPEN TO NEW IMPRESSIONS

To the last he was open to impressions and i tensely interested in everything that had to do w art. So recently as the 14th of July of this pres year, in a letter to me dictated by him but writt by his faithful nurse, Pepi (he being almost blin he speaks of visiting concerts, associating w colleagues, and finding life not without *Anregu* (incitement). A few years ago in Ischl I fou him weak and changed in appearance; but wh talking of music suddenly the old fire came i his eyes and he told of a unique experience.

All the previous winter he had felt very bl musically, nothing in public performance plea him; everyone played well, but none interested h until one night, at a private soirée, a quiet little m with a 'cello sat down and played a suite by Ba It was Pablo Casals. At once, he said, he felt solutely rejuvenated. After that he lost no opp tunity of hearing him play, the difference betw him and others being, he said, the difference tween people who *spoke* well and those who *claimed* freely and beautifully, making every w significant. That living quality, he always said, possessed by Essipoff to a great degree; and was always insistent on its being the one that h the public. Mere virtuosity dazzles for the m ment; polish, refinement, beautiful tone, and fe ing are lasting in their effect.

CRITICISM IN THE CLASS

In the Class one day (and in these days lessons were given in the Class) when the subj was Schumann's *Warum,* nearly half an hour devoted to the seventh and eighth measures o Subtle nuances were needed and if they were produced clumsily he would ejaculate *"Norddeutsche Schule"* (North German School) with a w ering contempt, similar to that he applied to a c tain sort of staccato playing as "belonging to time of Shakespeare."

"A touch like a Protestant pastor" was anot expression of impatience. He would try every pedient to draw out the desired quality from pupil.

When the touch was heavy, *"die Finger müs auch Ballet tanzen"* (the fingers must also ba dance), he would say, and then proceed to dem strate with his feet.

When talking of the *Polonaise* and its rhyth peculiarities he would show how it was dan heels with spurs clinking together, waving of h chief, and so on, gracefully dancing all the tim

For a *Barcarolle* of Rubinstein he would how the Russian peasants sang, *"mit einer gewis Derbheit"* (with a certain roughness), which q ity he said should be brought out on the pian

He had great dramatic and magnetic power, the presence of a sympathetic audience was inspiration to him always. The classes betw 1887 and 1892 were certainly exciting both listeners and players, the latter more especi Finally it became such an ordeal that one day decided in future to give general criticism o and as time went on they became more perfo ances than lessons.

He regarded his Class as a great test; fo one could do himself justice at that, concert p

*"In these eight days, hearing only his works, a quiet Mozart lover can become an enthusiatic, glowing admirer and devotee; for in his numerous and many-sided works he appears a magnificent giant in the Art kingdom as few others do. And never in my whole life have I heard a finer performance of *Don Giovanni* than was given under Karl Muck's direction."

s would be easy. At a Class one never knew exciting thing would happen. If a pupil ed nervousness he would commence with, v begin; the eyes of Europe are upon you," ome such inspiring prelude. If he pleaded any of indisposition, he was told that if he were to sit upright on the stool that was the very to show control of rhythm and phrasing, etc., *they* must not depend on mood. There must no hoping for miracles to occur. One must to make effects consciously and be independ- of conditions. An ideal training; severity and pathy; feeling and common sense!

s exhortation to think ten times before playing is well known if seldom acted on. Above all pposed the mechanical repetition of passages tudy, as every difficulty can be conquered by ng out first wherein it lies and then devising eans to meet it. So often all difficulty vanishes the suitable fingering is discovered, even if heterodox; or it may be that an adroit turn he hand, or wrist, will "oil" the passage.

THE LESCHETIZKY FINGERING

ie Leschetizky fingering is unique and is not id by any conventions; I do not know of any ol that is so eminently practical. The finger- that *can* be done is not necessarily the best. e orthodox methods stretch the hand in the ng parts and produce stiffness and unpliability. d fingering allows the hand to work in an easy, ral position, and at the same time assists the ntuation, the phrasing, and the rhythm. Many pted ways appear to me to be chosen with r indifference to such important things.

eschetizky's use of the thumb and fifth finger very characteristic. It assisted enormously in ng variety of color and depth of tone. Fine- and roundness in tone were also insisted on; r pounding or striking. A chord struck harsh- as enough to upset him for a whole afternoon; I must confess that we were all so excited that y tones were not infrequent.

HIS IDEAS OF TONE

oncert players, fresh from Vienna, have been etimes accused of harsh and even acrid tone. s I put down to the certain feverishness which liable to remain for quite a time after leaving , the inevitable result of his exciting guidance dominion. He insisted on large tone, and if the inction between that and merely noisy attack not at first appreciated, the latter was liable ppear. He was an autocrat *premiére classe,* and had to do, or try to do, exactly what he want- when studying with him. Afterwards, when in- endent, the time came for gradual assimilation all that had been received, and harsh tone dis- eared or remained according to the individual- of the player. He abhorred harsh tone, but it eared from time to time. Indeed, strange to it was not always absent from his own per- mances, owing to his extreme nervousness when ore the public. He had almost given up public earance when I went to him, but twice or thrice eard him. He was magnificently electric; his cato almost excited one to laughter, it was so nly crisp and vital. But the beautiful tone, re- e, and freedom he showed when playing to his mates was not always present. I remember criticism the morning after he produced the wratil Quintet at Bösendorfer Saal: "After all cannot fairly judge of a quintet when the ings have not been heard!"

oseffy, he used to say, was one of the few o treated the instrument affectionately, to whom e was everything, and who thereby won his au- nces.

FREEDOM IN PLAYING

"Ein freies Spiel" was another point on which he laid great stress. That, he said, was a something seldom heard in the typical North German playing of the type of Clara Schumann, whom, in spite of her noble qualities, he frequently criticised. The North-German playing of Bach also roused his ire; the lack of pedaling, the want of color, the stiffness of it all. For Von Bülow, as an intellectual musician, he had high respect, but found him inelastic and his tone lacking in beauty. He said he had been brought up in a bad school and that later in life he had attempted to change, but it was too late.

In pedaling he opened fresh vistas. One had to study the art. It was not sufficient to say that the instinct was either there or it was not; instinct, if there, must be cultivated and knowledge added; if not there, better not play piano. It is not enough to seek refuge in reckless use; there must be color effects to enhance the rhythm and give variety to phrasing, while, if too sparingly used, the resulting effect is thinness. Pronounced rhythm is also a strong feature of the Leschetizky school; *ab initio erat rhythmus* (From the beginning was rhythm) he often quoted.

THE POWER TO DIAGNOSE

Was there ever another who so unselfishly strove to make interpreters of his pupils? When I think of the way he would work over a single phrase I realize what a powerful example he has been. His face would tell how he felt if anyone showed a tendency to "go easy," to slacken, either in playing or in teaching. Long sitting at the piano encouraged this, he used to say; no four or five hours for him; short spells but hot ones while they lasted; high pressure, intensest concentration. Wonderfully alert, he was constantly thinking out new ways of doing things. Once he said:

"As we go on, we learn to do things in simpler and better ways; there are no fixed rules; technic is individual and my task is to diagnose and find the means to suit the different people. That is my method, if I have one."

Like a doctor he would lay his finger on the weak points and work unremittingly to remedy them by every device that he could think of. Most of his pieces were written for special cases; the *Papillons,* for example, for an aggravated one of what he called "sick thumbs."

Sometimes, in desperation, he would propose some ridiculous remedy, which, like the boomerang, came back upon him later, as in the case of a pupil with whom he lost patience. "Do something," he said, "for Heaven's sake; put corks between your fingers if they won't separate." Years afterwards, when he heard of this being seriously taught as part of "the method," he said with a quizzical look: "Think what I have to stand; my 'cork method' in Kalama-Oshkosh!"

Much stress he always laid on teachers being able to illustrate on the piano; only in this way could the best instruction be imparted. When a pupil has striven and failed, then the teacher must step in and show that it can be done, and how. It is not the individual who has failed in public playing who can best instruct; and no teacher should ask for anything to be done that he cannot do himself.

Leschetizky was a great artist first, and in addition a pedagogue, but never in a narrow sense. He believed in there being many roads, only some were straighter than the others. And for each the road must be somewhat different, though the underlying principles are the same. Even with those of limited talent, brought by their preparers to have occasional lessons, his one aim was to draw out the little that was there. This faithfulness to an ideal was very inspiring; he did all so unconsciously; never was a man so free from pose, so perfectly natural; the slightest sign of self-importance was instantly put down; *"Ach, nicht so wichtig"* (Ah, not so high and mighty) he would say with a tired air. He had no pianistic secrets from his pupils.

CRITICISING PUPILS BEFORE A CONCERT

I do not think any one of his pupils ever appreciated the Professor's insistence to hear them play immediately before a concert or recital. I was innocent enough to play to him two days before my first appearance in Vienna. He walked excitedly round the room, criticising first this, then that, until it seemed that nothing less than a fiasco awaited me. But, as the concert time drew near, I regained my balance, and, although he came into the hall just as I was going on the platform, I dismissed the thought, with the result that all went well, "by great good luck," as he said afterwards with a laugh.

Mme. Bloomfield Zeisler has often told me amusing tales of how she, with all her veneration and affection for him, had to avoid appearing in the Karl Ludwigstrasse before important concerts. Even after the years of experience, and the great success that she has had in Europe as well as America, she knew better than to gratify his desire to "go over the program" with her.

His *bonhomie,* his great sincerity, his enormous generosity endeared him to all who really knew him. It would be hard to count the number of us from whom, after a certain period, he refused to take a fee, and who therefore have had the bulk of their instruction without cost at all; as for his minor kindnesses, no poor musician ever wanted when he was near. The Währing beggars knew him well and I know of many an Ischl peasant who has lost a helpful friend. His friendship followed one through life; he was in close touch with many of his old pupils and took a sympathetic interest in their lives, always rejoicing in visits from them and in making festivals of some kind or other in their honor when they came.

My last sight of him was in Ischl. I had said goodbye that morning at his villa with a heavy heart, for he was aging fast; but in the afternoon we met him coming from an organ recital in the old Pfarrkirche with some friends, dressed in summer garb, fastidious as ever, almost like himself again. It was hard to part, harder almost to remain; so we said a hurried word or two and separated; he waving his hat in his old enthusiastic way and calling out *"Auf Wiedersehen!"*

———*———

THE SIGNOSCOPE: A NEW AID TO PIANO STUDENTS

A PRINCIPLE in the theory of music which puzzles many students in that of the related system of keys, especially the minor and major relations. Teachers explain and demonstrate this point, pupils memorize the principles expounded to them, and, in spite of all this, turn to their music and play as if they had never learned anything about the relations of one key to another.

The majority of piano students are eye-minded. A statement to be apprehended enduringly must be presented graphically. The man who devised the signoscope, which is pictured on a page preceding this, evidently understood that eye impressions are often strongest. The signoscope fixes in the pupil's mind the theory of major, and minor diatonic scales with perfect clearness.

It consists of two discs which can be shifted so as to show the degrees which make up the major diatonic, the relative minor, and the chromatic scale, starting with any degree as the tonic, with the signatures proper to the scales.

Literary Methods as Applied to Music Study

A Method for the Appreciative Study of Piano Music, Adapted Either to Individual or Class Work

BY CLARENCE G. HAMILTON, A. M.
Associate Professor of Music, Wellesley College

I

THERE is a certain atmosphere of mystery about music which is not shared by the other fine arts. A beautiful painting or piece of sculpture says something comprehensible to us; a well-proportioned building shows its fitness for its designed purpose; and a piece of literature conveys a definite line of thought. But the message of music is less easy to fathom. To one person, for instance, a musical composition comes as a gorgeous revelry of sound; to another as simply an ear-tickler which incites to physical motion; and to a third as a problem for complex finger motions. All three, however, miss its real significance. For music, like the other fine arts, is, in its higher phases, a genuine expression of the life, thought, and emotion of the composer, brought into the limits of symmetrical form.

But this wealth of meaning which lies at the core of music, is apt to be entirely overlooked, between the extremes of technical study or no study at all. The plodding pianist, for instance, pores over details of finger action and notation marks until he is thoroughly absorbed in the mere mechanism of performance; while the ordinary listener is content to let the sounds drum upon his ears with only a general impression of their soothing or irritating effects on his nervous system. In his definition of music as "the least disagreeable of all noises," the worthy Dr. Johnson aptly voiced the sentiments of this latter class of listeners.

Is it necessary, however, that music should so frequently miss its mark? Is it not possible for the player so to center his attention upon the essentials of musical expression that all the details may serve their rightful purpose of a means rather than an end? And, on the other hand, cannot the non-technical music lover be brought into close communion with the hidden secrets of the art?

A PARALLEL WITH LITERARY STUDY

Let us seek enlightenment from music's sister art of literature. No one would think, in reading George Eliot's *Romola,* of exhausting his thought upon the grammatical construction of its sentences or the derivations of words employed. All such details are simply means towards the presentation of the thread of the narrative, which is what the reader is in search of. Just so, in music, all details of accents, fingering, chord sequences, and the like are merely the composer's tools for laying bare the inspiration that is in his soul.

Literary study is a common factor in our educational institutions. Our boys and girls are taught to scrutinize carefully the works of the great writers, and, in so doing, to trace the development of their thought, to note how it is brought within a logical plan, how its subtle distinctions are revealed by a nice choice of words, and how the interest is made to grow by the cumulation of details. Then, too, the writer's environment in time and place is considered, and the peculiarities of his style are made the basis of comparison with that of other literary lights.

I have before me a clever little text-book on *How to Study Literature,* by Benjamin A. Heydrick, in which each type of writing is subjected to a series of questions which, though individually simple, yet in their collective import lead to a surprising sympathy with the motives of the work to which they are applied. Why cannot such a method be employed equally well upon a musical composition, with the direct object of obtaining a clear insight into the mind of its composer?

Let us approach this problem in a practical manner by formulating such a list of questions, based upon various types of music.

Inasmuch as the ubiquitous pianoforte is the readiest vehicle for performance, our attention will be focused upon compositions written for this instrument. Questions relative to each composition which comes under a given group will be propounded, and the application of these questions will be shown in connection with typical examples, of moderate difficulty. Finally, other compositions of similar style will be suggested, upon which the student may try his own skill.

And now a word as to ways and means. Our study must begin with the complete performance of a selection, in order that a proper perspective may be obtained. If one is working alone, let him first master the technical details, so that he is able to perform the whole piece with clearness and accuracy. He is then ready for the outlined "literary" study.

Team work, however, is highly recommended. A group of students, with or without the guidance of a teacher, may hold regular meetings, at which selections prepared by individuals are played, classified, and treated in due order. Too much importance, indeed, can hardly be attached to such a system of class investigation, which can be conducted in connection with groups of pupils by progressive teachers, who will reap ample reward in the enlightenment of their young charges as to the true function which their music should fulfil.

Such study, too, is highly stimulating to original ideas. The pioneer character of this work suggests that it is capable of unlimited amplification. Hence the questions as given may be regarded as but the beginning of a long list of similar queries which will arise in the minds of teacher and students, and which will tend toward a more and more minute appreciation of the fine points of the music. Let such ideas freely circulate; let them be reinforced by reference to books on form, interpretation, and history; and the vitality of the work will increase by leaps and bounds.

We pass now to the practical details of our course. This begins, in the case of each composition under review, with a fixed method of presentation, which we may call

CLASSIFICATION

1. Note (*a*), the title and opus number of the composition;

(*b*), the name of the composer, with dates of his birth and death.

2. Play the entire composition through *twice,* waiting an interval of three minutes between the two performances, in order that the student may have time to think over what he has heard, and to jot down any important points regarding his impressions. During the question work, parts or even the whole of the selection may be played again.

3. Classify the composition as belonging to one of the types that are listed, and proceed along the line of study presented under this type.

TYPE I: THE DANCE

FOREWORD. In the time of Queen Elizabeth, whose reign extended from 1558 to 1603, English composers became pioneers in the art of composition for the weak-toned little virginal, one of the predecessors of our modern piano. For themes they often used popular dance tunes, to which they gave settings in accordance with the musical art standard of their day. Thus they started the long lists of idealized dance music which has continued to our own times. In France, Germany, and Italy many composers soon devoted their attention to this style and in the works of Bach and Handel the climax of the early school was attained. When the great Viennese composers of the eighteenth century were elaborating their harmonic forms, the *minuet,* the fashionable in Viennese society, became incorporated into sonatas and symphonies; and its successor, the *waltz,* was also cultivated by Beethoven, Schubert, and von Weber.

The power of dance music to express national characteristics was not fully revealed, however, until Chopin, in his *mazurkas, polonaises,* and *waltzes* glorified the popular styles of Poland. Many other composers, such as Grieg, Brahms, and Dvorák, following in his footsteps, have exploited the traits of the music of their native countries in graceful and spirited measures, and in compositions which, for the most part, are in short and simple form.

Our study of the compositions of each type will be conducted under several headings, which will be listed alphabetically.

A: FORM

1. To what school does the piece belong?

The prevailing style employed by a group of composers in any given epoch is called a School. Such Schools embrace the *Early-classic,* the *Late-classic,* the *Romantic,* the *National,* etc. The *Early-classic,* which reached its climax in the works of Handel and Bach, was based on *voice-writing,* by which instrumental music was written as though it were intended to be sung by two or more voices. Hence, instead of being grouped into chords, the accompaniment was treated as though it were a distinct melody in itself. Composers of the Late-classic School, of whom Haydn, Mozart, and Beethoven in his earlier style were leaders, wrote in a more modern fashion, but with the emphasis placed upon *beauty of form and tonal combination.* The Romantic School, which flourished in the nineteenth century, made the expression of personal emotion its principal object, achieved by striking contrasts, vivid climaxes, and the like. In the National School the traits of individual peoples are made evident.

2. How many divisions are there, and what is the proportion of each? Do any seem too short or too long?

In answering this question, indicate the divisions by letters, A, B, C, etc., repeating a letter when the division which it represents is repeated, and pointing out, briefly, any changes which are incurred in such repetition.

3. Are the different divisions written in the same, or contrasting keys?

B: MOVEMENT

1. What is the meter?

Meter refers to the number of beats or pulses grouped into a measure, about one central pulse. Thus in 2-4 meter we have the grouping 1 2, 1 2, and in 3-4 the grouping 1 2 3, 1 2 3, etc. All meters are fundamentally either *duple* (two beats to a measure) or *triple* (three beats to a measure); though we have compound groupings in such meters as 4-4, 6-8, 9-8, 12-8, and the like.

2. What is the pace? Does this vary in the course of the piece, and, if so, what changes take place?

Pace is technically known in music as *tempo.* Beats are not fixed quantities but, in the case of a given composition, are generally indicated by Italian terms, such as *andante, moderato,* or *allegro,* meaning respectively *slow, moderate,* or *fast;* by these terms the tempo is at least approximately determined. But while in some compositions, re-

those of the classic schools, the original pace lhered to with considerable strictness, in com- tions of a more emotional kind the tempo be- es changeable and elastic.

Is the piece adapted to dancing, or is it urely ideal conception, based upon a dance thm?

order to fulfil the former condition the piece ld be best interpreted when played in strict time, at the pace which the dance demands. In the lized dance, however, these rigid conditions are ly observed, since they tend to fetter the emo- al freedom of the whole.

What is the nature of the rhythm?

hythm refers to the time pattern which is made the subdivisions of the beats, and which is used eatedly, to give a sense of unity to a composition. lerally there are several rhythms in evidence, either similar or contrasting styles.

hythms may be described as *regular,* when the ger notes come on the first or other principal ts; as *irregular,* when the contrary is the case; *even, smooth, jerky, varied,* etc.

. Does the rhythmic element predominate r melody and harmony?

n a simple folk dance, the rhythmic pulse is the st necessary feature, since the emphasis of this se is the one needful element for dancing pur- es. Composers of the art dance, however, exalt er elements such as those mentioned, sometimes ve the fundamental pulsations.

C: MELODY

. Are the chief melodies song-like, or in- umental in character?

Melodies are song-like, or *vocal,* when they move ng smoothly, more often from one degree of the le to another, and in flowing rhythms, which uld not be too rapid for a singer to manage ily. Naturally, also, they would not go far be- nd the limits of the human voice, which normally tends only for about an octave and a half. In- umental melodies, on the contrary, may involve ig or angular leaps from one note to another a chord, together with quick or jerky rhythms, ccato notes, strong accents, or short, broken oups of notes.

2. How would you describe the melodic out- es of the principal subjects?

The chief melodies, alluded to above, are called *bjects* or *themes.* As these subjects rise and fall pitch, an up-and-down movement is suggested nich may be represented graphically by a wavy e. This line is known as the *melodic outline.* If e tune winds closely about a single note, its out- e is said to be *horizontal;* if it rises or falls by ale degrees it is called *scale-wise;* and if it skips or down the notes of the chord it is *chordal.* ombinations of these motions may produce a *va- ed, jumpy,* or *angular* outline.

3. Are the melodies above, below, or within e accompaniment?

Simple styles of music generally have the mel- ly on top. But when the accompaniment becomes ore elaborate it frequently plays about the mel- ly, or, for special effects the latter may occur in e low register.

4. Are there any subordinate melodies or elodic fragments, and, if so, where are they cated?

Sometimes the interest of a composition is vastly creased by snatches of melody which peep out ere and there in the accompaniment. Often these natches are parts of the principal subjects.

D: ACCOMPANIMENT

1. Is the accompaniment chiefly melodic or armonic?

That is, is it really formed of secondary voice arts, as in the Early-classic School, or is it grouped nto chords or parts of chords?

2. If the accompaniment is formed mainly of chords, are these massed together, or arpeggi- ated?

Chords are said to be arpeggiated (played like a harp) when their individual notes are sounded quickly in succession, instead of together.

3. What is the range of the accompaniment?

Some accompaniments are narrow in range, for instance, such as are comprised largely within the limits of an octave. Others spread over a much more extensive portion of the keyboard, and are therefore wide in range.

4. Is the accompaniment thin or full?

Some accompaniments are very slight and deli- cate, while others are rich with many notes and complex texture.

5. Are there figurations?

Often the accompaniment involves a frequent repetition of some little group of notes or rhythmic figure, which winds about through the varied har- monies and gives a distinct flavor to the whole.

6. Are the phrase-endings precise? Do any of them repeat or resemble one another?

Formal music is divided into *phrases,* which gen- erally consist of two or more measures each, and resemble a succession of lines of poetry. Some- times their endings are clearly defined, and some- times they are purposely covered up, or connected to the next phrases. The endings of the large di- visions are more apt to be clear and decisive.

E: STYLE

1. What is the general mood of the piece?

Characteristic moods in dance music are *happy, joyous, rollicking, dignified, stately, dreamy, mar- tial, changeable,* etc.

2. Is the piece pleasing as a whole? Are any parts commonplace or tedious?

3. Are there important contrasts of color? If so, cite examples.

Color in music, refers to the different kinds or *qualities* of tone. Piano music does not admit of great variety in tone-color, but this may be sug- gested by varieties of force, staccato, and legato, pedal effects, and the like. Hence the question con- cerns the vividness of the contrasts in styles and moods that occur.

4. Where are the chief climaxes? Which one is most important of all, and how is it attained?

All music is composed of a series of tonal pro- gressions, each of which mounts up to a culminat- ing point, just as a wave breaks, after rolling slow- ly in upon the sands. Each large division has also its own point of greatest intensity, and, finally, the composition as a whole should grow to a climax, generally near the end. What is the exact nature of this climax is the problem for the student to solve.

5. What other features are especially note- worthy?

Any special effects of rhythm, melody, or har- mony, to which attention has not already been de- voted, should be cited under this heading.

6. Compare this composition with another of the same type.

F: COMPOSER

1. Mention a few details of the composer's life or surroundings.

2. Do any traits of his nationality appear in this piece? Cite examples.

The character of peoples of different nation- alities is invariably apparent in their folk-music. Hungarian music, for instance, has jerky rhythms and fitful tempos, characteristic of the emotional race; while German music is regular and clear in structure and harmonies.

3. For what other kinds of music is the com- poser noted?

THE COMMUNITY AND EVERY-DAY MUSICAL ACTIVITY

BY LESTER S. BUTLER

THE idea seems prevalent among some musi- cians that the great musical undertaking is as important to the community as the expenditure of time, energy, and money should make it. But facts do not sustain this position; on the con- trary, the community gets too little in perma- nent musical results from these affairs, because the participants and promoters exhaust them- selves by their exertions, and are compelled to rest for so long a time before again kindling the spark of musical interest, which lies smoldering in the community mind, into another brilliant flame.

The stone is worn away by constant, steady falling of waterdrops upon it; and every-day musical activities, persistently kept up, is the best means to produce perpetual musical har- vests.

These activities, concerts, recitals, lectures should receive the hearty support of the profes- sion and the community, but the private and public music teachers, program-givers, and man- agers should discourage the idea that the com- munity is a source of revenue from which to draw as much money as possible, while little in equivalent value is returned.

And sometimes the attempt is made to instil in the community mind that the success of a concert, etc., should be measured by its financial returns. The practice is an unworthy one. Con- certs may be most successful from an artistic, musical standpoint when the box office pocket- book is sadly depleted and expenses cannot be paid. Apathy on the part of the profession may be the cause for the inadequate receipts.

But every-day musical activities should have an educative purpose, as well as be entertaining, and the programs should be compiled so as to meet the wish of that part of every community which is desirous of being instructed as well as entertained. Many programs are open to the criticism, "ill-prepared." Too little time is given in selecting and arranging the works, and a lack of care is manifest in the composers chosen, and whether variety, unity, beauty are conserved by the order of their appearance.

All this has much to do with the effect upon the minds of the audience, and the subject is worthy much careful, thoughtful study, to the end that the community shall recognize the ef- fort to give value for its patronage, and respond by according its unwavering and loyal support to its common musical happenings.

And, then, by this and other ways, music will eventually be placed in the community mind as an indispensable factor of its educational régime, and, while contributing to its entertainment, will also help all to remember that time is short, art long, and the ebb and flow of its restless rhythms will teach us to work and to wait.

———*———

AIM IN MODULATIONS

ONE should have an aim in the progressive march of modulations. The reason, instincts, and faith which guide a man in the troubles of his life also guide the musician in his choice of modulations. Thus, useless and contradicting modulations, an un- decided balance between light and shade, produce a painful and confusing impression on the hearer, comparable to that which a poor human being inspires, when he is feeble and inconsistent, buf- feted between the East and the West in the course of his unhappy life, without an aim and without belief.—*D'Indy.*

THE COMMUNITY AND ITS MUSIC

BY THOMAS TAPPER

An organist said: "Music in our town went 'dead' ten years ago, and it is still 'dead.'" "How long have you been here?" he was asked. "Six years." Evidently he saw NO MISSION in the community. Here follows the story of a man who saw opportunity during his first year in a new field.

I

NOTHING is more natural to us than the spirit of Wandering (*Wanderlust*). Like Björnson's *Arne* we wonder what wonderful things there are to be found beyond the mountains. And so we go, as soon as we can, trudging over the mountains. But—

Never suspecting the wonderful things we leave behind us at home.

Now, by our wandering, we may get away from the old home town and its familiar sights; but the essential thing we must keep in mind is that, go where we will, we can never get away from ourselves. It is for this reason that so many of us meet with the same fortune in the New environment as in the Old. It is all a question of **Our Own Inwardness.**

Here and there we find a propaganda through Boards of Trade, influential individuals, and civic bodies to make citizens comprehend the full value of the home town as an undeveloped personal asset. They are all endeavoring to show that if men and women will stay at home with the same seriousness, vim, and energy that they seek pastures new they will be amply rewarded.

Therefore to the frequently made inquiry: Where is the best place to apply the practice of Community Music, there can be only one reply:

Right at home; the one place you probably know least about, and the place that perhaps knows the least about you.

If in you there is the capacity to do things the Home Town needs you or should be made to want to know that it needs you.

II

At the University of Kansas there is a man who has elected to serve a wide environment, no less, in fact, than the entire state. His task springs from the recognition that he needs the state and that the state needs him. Mutual needs have, by the way, grown the fairest flowers of all civilizations. With Harold L. Butler, Dean of the School of Fine Arts, there rests the music future of a great territory. Here is the way he looks at his elected task (the humblest piano teacher can take the same view of the main street of the town or of the town itself):

"As this is a state institution, we regard the whole state of Kansas as our campus, and we are trying to help every city and town in the state that needs help, to put its Community Music upon a solid foundation. We are not crowding the people in this matter, but when asked to help, we go, give them the best advice we can, encourage them to try for themselves the Community Music idea, and then let the leaven work. And I can say that we have had gratifying success. We have had dozens of letters asking for advice. We have visited eighteen places and have established Community Music organizations in nearly all of them. I now have eleven engagements to speak to business men, high schools, women's clubs, and other organizations. Before the winter is over I expect to visit most of the larger places in the state in the interest of Community Music. Mr. Nevin (associate in the music work) is now away from Lawrence aiding the women's clubs in the organization of five different choruses. This work is done entirely at the expense of the University.

"We offer to send free of charge to any school or club four sets of fifteen records each, each set accompanied by an informal 'talk' explaining what might be heard by the attentive listener. These are sent out for the purpose of increasing knowledge in Music Appreciation. Over forty places have already made application for these records and they will start their tour of the state in a week from now."

The reader will note that Dean Butler is feeding the hungry. He is not attempting to force food down the throats of those who, like the little lad of the story, "Can still 'chaw' but cannot swallow."

People are hungry for good music, but they do not know how to go about getting it.

To such people there is apt to come that kind of music which, though it may not be 100 per cent bad, is still about 100 per cent useless and undesirable. Entertainments and lecture courses everywhere are still replete with whistlers, bell-ringers, xylophone thumpers, and the like. Dean Butler says that when he has criticised such courses it is said in reply that:

"We have so little money that we can't afford any better." So we are showing them that they can get better entertainment, if they are not able to engage high priced talent. I am trying to get them to co-operate in buying their talent so as to save money for themselves and for the people they engage.

"We are encouraging the young men to take up the study of band and orchestral instruments; the children of one family to study different instruments rather than all to study the piano. We are encouraging better and more suitable music in the churches; music in the home life; and we are opposing the cheap, the vulgar, and indecent in music."

To any community desiring to be put on its feet musically, the University of Kansas sends out first a brief, readable letter entitled

"More and Better Music for Kansas."

If anything can be more useful, practical, logical, reasonable, sensible, convincing than the following will the reader kindy send it to the Editor:

"The desire for a true understanding of music is strong in many communities where, for lack of proper leadership and a knowledge of how to gain this understanding, the desire must remain unsatisfied It is just these communities the School of Fine Arts wishes to aid.

"For this purpose it will send to any school or club that has or can borrow a Victor Talking Machine or a phonograph, four sets of fifteen disc records each, to be used for instruction purposes, each set of records being accompanied by a typewritten 'talk' explaining the music about to be heard, and giving a few interesting facts regarding its origin, etc.

"These 'talks' are entirely informal and devoid of technical terms, and while educational, are primarily for the purpose of making the music understandable and therefore more enjoyable. The records will follow each other in such order as to show the development of music from its beginning to the present day. When the song or air is sung in a foreign language a translation will be found in the 'talk.'

"In short, every effort has been made to aid 'intelligent listening to music,' and to give a liberal amount of instruction along with a fine entertainment. These sets of records will contain some of the finest and most expensive from the Victor, Edison, and Columbia catalogs.

"We ask you, 1, to give these entertainments in the evening so that parents as well as children may attend; 2, that no admittance fee be charged; 3, that you use a Victor or a Victrola and that only half-tone or fibre needles be used; 4 that you use care in unpacking and packing the records to avoid breaking or scratching the records; 5, that you pay transportation expenses on the records which will be sent you collect; 6, that you send them collect to the address furnished you by the School of Fine Arts.

"The arrangement for these four entertaining and instructive evenings will bring children and parents together to the school; will interest the parents in all phases of your work as an educator, and will make more effective and efficient your endeavor to take part in the great movement of Community Music and Music Appreciation."

Now all this is being done by a University and the individual reader is apt to conclude that only a University can attempt and accomplish anything like it. The conclusion is absolutely wrong.

I have personally known an elderly gentleman in a New England village whose phonograph was set going regularly every evening for the benefit of the neighbors. He had no university equipment, spoke English rather originally and was simple and single of heart and mind. But he loved music, learned a little about it, spent a little from slender means for it, and kept passing out to the uninitiated everything he had. He never bought or played an unworthy piece of music. With his keen eye he would bore a hole through anyone who failed to listen attentively and with decent enthusiasm. It was not long before they all loved what he provided. He is now no more, as the saying goes, but he is beloved over the whole area of his sphere or influence. When a man comes to check up his assets on the last day, this is a good one.

Here are, then, the two extremes: The one an expensive and well equipped organization, the other a limited and unequipped individual, the one a center of learning, the other a sort of "poor earth born companion"—both are to be reckoned with as valuable initiative means. (Oh, that word Initiation with its four I's, how little we make of it, as good sharers, good dispensers!)

And the rest of us?

Let us not sit at home in our corner, forever playing Little Jack Horner, forever watching that thumb of ours, speculating on how often it may investigate the Christmas pie and pull out a plum FOR US.

III

The truth is everybody can do something.

Efficient organization augments value wherever applied. Therefore the result is always in proportion to the desire plus the impulse, plus the applied efficiency. In some degree Commun-

Music is possible anywhere. As an asset
king for civic betterment it is recommended
the attention of Boards of Education, Boards
Trade, Schools, Churches, and Municipal or-
izations of any kind.
have just received a letter which says that
ayor Preston of Baltimore, Maryland, is at
head of an organization to promote the for-
ion of a symphony orchestra for the city.
e tax budget (of Baltimore) for the next
r will incorporate an appropriation of $6,000
this orchestra."
o far as I know this is the first instance of
nicipal appropriation for such a purpose.
Irs. Mary Austin voices the gist of the whole
tter when she says of the drama: The drama
the people has another service, that of so
ionalizing a country, so welding the people
ether in a bond of sympathy and co-opera-
n, that when national crises come they can
and feel together and understand each oth-
We haggle too much; we need a medium of
lerstanding. Talk about preparedness! This
he greatest kind of preparedness except that
actual military enforcements.
Community drama always embraces the com-
n experience of the race. It must be, in fact
s all permanent drama must be—the least
mon denominator of average experience; it
ls with the past; it cannot speculate with
future; though, if it is deeply rooted in the
mmunity life, it may continue that past into
future.
And thus, touching the lives of most of the
ple, the community drama will bind them to-
her into an association so close that they
l be a great national, unanimous group.
But the one great community activity of value
the Oberammergau type; that of the people,
the people, and for the people, and so in
sequence (when well done) for all the rest
the world.
And so, to return to the opening lines of this
ject,
**The one best place for successful action is
ally right there where one chances to be
en the big idea takes possession of him.**
n a comparatively small country town in
w York a clergyman conceived the idea of
tructing men, by means of blackboard talks,
the Bible. His friends and associates com-
nded the idea, but assured him that there
re far too few men in the congregation to
ke the effort worth while. One man offered
procure for the clergyman a chance to try
his idea in New York City. But the clergy-
n had a department in his brain where he
ught out his own ideas and made his own
clusions, and so he began one Sunday morn-
at 9.30 with three men and two grown-up
s. Now, a few months after the inception of
plan, he regularly meets over ninety men every
nday morning.
Note the essential point:
**THE PLAN SEEMED TO PROMISE
AILURE FOR LACK OF MEN, BUT PUT
OPERATION IT PROVIDED THE MEN
NEEDED.**
The work of Dean Butler and of others who
ch out to spread the "glory 'round" is work
sed upon this idea of Increase from Within.

USICAL GROWTH IN LOS ANGELES SCHOOLS

The following is taken from a report on music in
public schools of Los Angeles, by John H.
ancis, superintendent, published in *The Musical
onitor*, of Chicago.—Editor THE MUSICIAN.]

SELF-DISCOVERY and self-expression are fundamental requisites for self-development. Probably no other subject in the school curriculum lends itself so universally to these as does music.

The growth of music in the Los Angeles city schools within recent years has been almost phenomenal. The elementary grades are now divided for supervisory purposes into orchestral and vocal music. The former has one supervisor and two assistants while the latter has one supervisor and four assistants.

Within four years our elementary school orchestra has grown to seventy in number, enrolling over a thousand elementary school boys and girls. Parents are sacrificing in order to purchase instruments and children are devoting extra time to their music in order to be able to join the orchestra. All of our larger elementary buildings and most of our smaller ones now have special music teachers.

Our intermediate schools, consisting of 7th, 8th and 9th year pupils have their own special music teachers, orchestras, glee clubs, choruses, and music classes.

Our high schools are doing remarkable things musically. In addition to work of the ordinary type for high schools, they are doing some special piano and voice teaching, much advanced work in harmony and some work in musical composition.

Much aid and co-operation has been given us by the musicians of the city.

———*———

MUSIC CREDITS IN A KANSAS CITY

THE Board of Education of Salina, Kan., a thriving city in the central part of the state, the home town of former Senator Bristow, has passed a rule granting credits to students in the High School who are studying music under the instruction of responsible private teachers. Three credits are allowed toward graduation if the pupil receives two lessons per week and a stated amount of practice is regularly carried out.

This is an evidence that if one or two cities take the lead in a desirable movement others are ready to follow. The state of Kansas has a live, aggressive, and progressive company of workers in public school music who have been able to secure the co-operation of the music teachers and thus accomplish big things. But it must be borne in mind that the start is always made by one, two, or three persons at the utmost.

What the educators of one state and a number of cities do other states and other cities can also accomplish.

———*———

REGULATION OF MUSIC TEACHERS IN GERMANY

THE agitation for state regulation of music teaching has not been confined to the United States. The Berlin correspondent of *The Musical Courier*, of New York, sent to his paper a report of the attitude of Prussian musicians on the question. Those who favored the examination system claimed that the result would be a much better and more thorough preparation in the elementary stages in all branches of musical instruction. Another advantage claimed is that the overcrowding of the profession will be prevented since persons who are obviously unfit would not even undertake the examinations.

On the opposite side the following is urged: The Ministry of Education could not keep sufficiently in touch with the musical art to be justified in fixing arbitrary standards. They could depend on experts as advisers, who might easily get into ruts, and the net result would be to place fetters upon the most universal and the freest of all arts. It is also a fair inference that musicians of high reputation who should wish to locate in Berlin or other Prussian cities and teach would not do so because of unwillingness to submit to an examination.

It was also urged that Saxony has in force, at the present time examinations for persons who are to occupy official positions at state institutions, and that the system has by no means proved a success.

It is stated that the Prussian ministry has postponed further consideration until after the close of the war.

———*———

KEEPING IN TOUCH WITH PATRONS

[THE MUSICIAN has repeatedly urged upon teachers the advisability, even the necessity of keeping in touch with patrons. Below we reprint paragraphs from a letter sent to leading persons in his community by Mr. Arthur Schuckai, a Connecticut teacher. Have you ever thought of addressing a letter to your patrons about your work?—The Editor.]

1. ENERGY is the first requirement. I expect my pupil to have energy equal to my own.

2. I accept pupils only on trial. If a reasonable amount of progress is not made in a reasonable amount of time I admit there is something wrong either with the pupil or myself, and consider it extremely bad business to continue.

3. I never say a word to discredit any other teacher.

4. I ask the student to do exactly as I say. If a dentist tells a man: "Do *not* bite hard on this tooth," and the man goes home and bites hard, what can he expect except pain?

5. My method is PRACTICAL, THOROUGH and INTERESTING. That which is not practical is wasteful; that which is not thorough is useless.

6. I appeal to the *imagination* of the younger students. I use picture phrases, symbols, and figures of speech.

7. I appeal to the *reason* of the older students. All my assignments have a definite purpose. I insist on intelligent study.

8. I teach according to problems. As the various difficulties and problems appear before the pupil—those problems and difficulties I try to solve. You see, they do not occur the same way or at the same time to all people.

9. I have no fussy notions about my own importance in the world. I am not a great genius, but I can teach music.

10. I like to argue about things, and many a pupil has been sent to the library for data to back up some of their own more or less vagrant ideas. In fact, I like to work with folks who have ideas.

11. I teach expression even more than music. Music is an Art used to express what we feel. It is not enough to have ideas; one must be able to express them. A feeling is a thought of the soul.

12. I believe music to be worth while. I could not be happy without music, and I believe many people would be much happier if they had a little music—understanding to listen, ability to play.

———*———

EVERY teacher of long experience collects ideas in regard to his work. It is a good thing for several teachers to get together and EXCHANGE IDEAS. Out of this exchange comes a BIGGER IDEA and BETTER WORK. The articles in THE MUSICIAN are intended to carry to many the observations and experiences of others. Be open minded to recognize a good idea when you meet it. THEN TRY IT.

THE CHOPIN ÉTUDE, OP. 25, NO. 9

(THE "BUTTERFLY")

HOW TO STUDY AND PLAY IT

BY MARGARET ANDERTON

[It was Miss Anderton's invention of these means for her personal use, in this particular étude which first interested Joseffy and caused him to confide a share of his work and pupils to her. The illustrations for Ex. 6 are exclusively Joseffy's, given Miss Anderton by him. All the preceding ones are her own—The Editor.]

THE ultimate achievement of this étude, Op. 25, No. 9, commonly spoken of as the *Butterfly*, with the elastic, light, fluttering wrist action needed for its best interpretation, is no light task; nor is this acquired by either rapid or "fluttering" practice.

Unless some good octave technic and wrist work has first been done I would not advise a student to take it up. Assuming this has already been acquired, one important point should ever be borne in mind, namely, that in all octave work the upper note must predominate with a crystal clearness, and a too ponderous bearing down of the thumb must be guarded against. Of course rigidity is always the unpardonable sin.

Now how best shall we set about the practising with as little waste of time and energy as possible in working this étude. We will assume you have never seen it. Get a *good* edition, fingered, and with clear type. First: Read it through carefully, several times, until you have assured yourself of the FOUR ESSENTIAL RIGHTS.

Right notes; including all accidentals.

Right fingering; very important.

Right time; *not* speed, but the correct values of the notes.

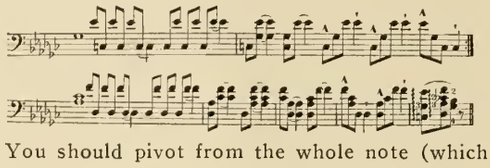
Right technical expression.

Mark that word technical. I mean the expression given by the attack, the phrasings, the alternation of legato and staccato, the slurs, those points which make or mar the clarity of your music enunciation, and *not* sentiment or emotional interpretation yet. A lisping woman or a stuttering man—no matter how exalted the emotion—have a hard time expressing it. See to it you are not a musical lisper, stutterer, or fumbler.

Second: You should get down to business with the especially difficult measures. You must not only pick out these difficulties, but also let us make new combinations of these. It is time well spent, and you will really learn it more quickly by so doing. Remember "A chain is only as strong as its weakest link," and while all piano students may not find so great trouble as others in certain measures, the snare lies there; for bear in mind these études were all devised by Chopin, the *pedagogue* as well as the poet.

For convenience, both in studying, memorizing, and for reference, let us now mark off this entire étude into subject-sections—mark these off in Roman numerals. You will find there are seven. We will also number each measure; you will find exactly fifty-one. All subsequent explanations and advice for the technical mastery will now be made on this basis.

The *Subject-sections* occur in their Roman numeral sequences at measures 1-9-17-29-33-37-45, respectively. (At measure 25 you will discover a repetition of Subject I.) In this étude, as a general rule, the troubles lie in the right hand. (Needless to say, much work with separate hands must always be done when studying new pieces, with a few rare exceptions.) An exception to above assertion is found in Section I, measure 8, in which the left hand, particularly with those for whom the span of the tenth is hard, must have immediate attention. Take this, and, by way of an acquisition of motor-control in the left hand, work thus:



You should pivot from the whole note (which should not be struck). Merely take a steady hold on this key, letting it act rather as does the hinge of a door, while fingers 1 and 5 swing back and forth until, with sureness and avoiding all stiffening, they land on their own keys freely. The swinging and leaping should be done rapidly; ponderous or slow work here will not give you your result. The pause supplied by the tied notes will give a sufficiency of repose to gather both mind and hand for the next attempt to make the quick sure leap.

The entire étude may now well be gone through with left hand only. Use a light wrist staccato stroke. Your attention is particularly called to the last eighth note in measure 32. Make a strong slur there, impinging on to the staccato D flat. It is where your climax comes (V). That left hand pressure on the C natural octave will be of infinite value to you later, in the gathering impulse needed for the right hand during the *ff appassionata* (measures 33-37). Again at measure 37 look out for the dotted quarter note of the D flat. Take it with a flat stroke of the third finger, and hold on to this sheet-anchor until you reach the opening chord of measure 38. Be thankful. This is a great balancer.

To secure sureness in the many leaps the left hand has to make, try plenty of silent strokes and backward leaps; for example, playing the last chord of measure 15, making a lightning leap to that low A flat of measure 16, merely *touch* the key, but do not either press or sound it, merely alight on it, as would a butterfly on a petal. This is not easy to do. A word to the wise is usually sufficient. You may try this any place where your left hand is unsure; it will likewise save your own ears, and those of a suffering public.

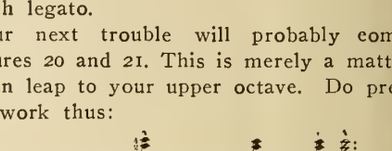
Now for your right hand troubles. Before entering specifically into these, I would call your attention to the general structure of this étude. Note, for example, the delicious "upside-down effects" Chopin has made throughout. Each new section you will find is treated this way. Compare now and play Section I, measure 1 with 5; Section II, measure 9 with 13; Section III measure 17 with 21; Section VI, measure 37 with 41.

Not only is this a tonal variant as delicious as it is simple, but also this is where the master tempers technic with mercy; for the balance of weight thus thrown from first the thumb-end of the right hand (measure 1) to the fourth finger end (measure 5) is a restful change, and an obvious means of preserving the elasticity of the wrist, and preventing the pounding of that ponderous thumb. Most delightfully does it also follow out the esthetic conception of the butterfly leaving the blossom for its upward flight; and again alighting, its delicate weight causing the flower to rebound and sway. Form a mental picture of this as you work. Such fancies, if not carried to excess, will ofttimes aid you in that which Liszt called technic, "A pianist's accursed duty, no credit to do, but sinful to neglect."

Now as to the right hand pitfalls. These should all be carefully worked on, before practising on the entire piece.

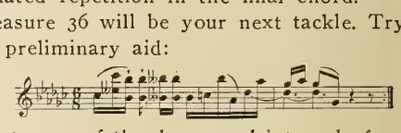
Measure 12 contains an awkward span for many right hands in that opening chord throw. Tip the hand here at a sharp angle toward the fifth finger, which member extend flat (not curved at *all*). Now dip your wrist freely down on the opening B flat, and let it flex easily upward with the staccato of the A flat octave; render the remaining notes in that measure with smooth legato.

Your next trouble will probably come in measures 20 and 21. This is merely a matter of a clean leap to your upper octave. Do preliminary work thus:



In working the above, at first make the highest octave stroke silent, later sound clearly, with especial care to that alternating staccato and accentuated repetition in the final chord.

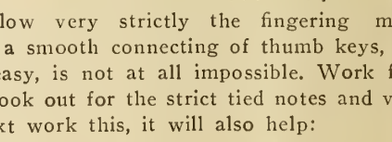
Measure 36 will be your next tackle. Try this as a preliminary aid:



That span of the downward interval of a ninth (B flat to A flat) will be hard to achieve in the smooth clinging touch needed. (The small-handed piano student is especially warned here. If you cannot connect those keys without strain or stiffening, let them alone. Never force a span or you will be sorry.)

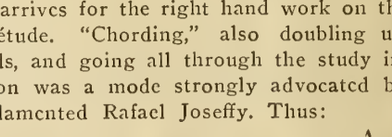
I would call attention to that tied D flat. Make of it indeed a "point of repose"; do not screw down your finger into that key; just sink down as into a comfortable pillow. Students get so very tense, it is in the U. S. air. Relax! relax often!

Now comes the tackling of the passage embraced in measures 45 to the end. This you may find helpful:

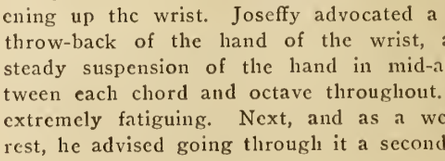


Follow very strictly the fingering marked here, a smooth connecting of thumb keys, which not easy, is not at all impossible. Work for it and look out for the strict tied notes and values.

Next work this, it will also help:



These preliminaries all attended to, the time now arrives for the right hand work on the entire étude. "Chording," also doubling up the chords, and going all through the study in this fashion was a mode strongly advocated by the late lamented Rafael Joseffy. Thus:



Any one, or all of the above will aid in loosening up the wrist. Joseffy advocated a sharp throw-back of the hand of the wrist, and a steady suspension of the hand in mid-air between each chord and octave throughout. It is extremely fatiguing. Next, and as a welcome rest, he advised going through it a second time

a downward, floppy movement from the
The automatic and *perfectly uniform* rais-
nd lowering of the hand for these wrist
ns neccssitates, even with quite practised
s, the taking of the étude *very slowly*. Later
me work is done at much increased speed
sig—of whom Joseffy invariably spoke
a reverence amounting to idolatry (he had
d under him, as well as shoulder to shoul-
ith him) had a way of making his pupils
eir wrist work holding the elbows in front
e body, and the upper arm close against it,
preliminary.
wadays much talk is heard as to the supe-
y of a high steady wrist, a low wrist, or a
flexing, as it plays octaves. It is largely a
ion of the individual and the hand require-
s, also the initial training in whichever
has been the adopted one.
xt, you must work the étude strictly as
n, with due and careful regard to the al-
ting staccato and slurred marks. Make a
dipping motion of the wrist on all these
d marks, very slight, and as you begin to
up on the study, this should grow almost
rceptibly; in fact, it is more a mental than
ysical aid. In this dipping motion you can
and take advantage of those alternating
t-balancings to either side of the hand.
ese alternating "weight-balancings," you
note, cease from measure 25 through to
ure 37 and beyond, in favor of the "thumb-
weight" of the hand. By their absence you
realize how the previous alternating miti-
l against both stiffening or pounding. Now
does it here cease? Ah, clever!—it is for
LIMAX. Those iterated and reiterated thumb
es gathering power and impetus as they
p you forward and through measure 33
a kindly ritenuto at measure 36) are your
r CLIMAX. You must husband your resource
his. So do not start measure 25 with a too
nt *forte* or there will be no contrast left for
ure 33, or for that long sustained passion-
fortissimo. Test yourself. Start at measure
working into your biggest tonal capacity
gh the passage. Now go back and start at
ure 29 through to the same spot, always
ning keenly for, and working up to your
carefully graduated crescendo, finding out
own dynamic capacity in other words, and
ing your tone accordingly.
w you may try out the whole passage, but
at measure 23, softly. Thus shall you make
ooth entry into measure 25 which you will
gnize as a repetition of Section I, though,
ad of rendering it with the fairy lightness
e start, this time we attack it *forte,* and well
ed.
e frail-handed pianist has to be especially
ful to avoid a hard, wiry *fortissimo*. Do not
o make too big a noise. Chopin himself was
Sandow at the keyboard, and for you husky
anded players your touch must be always
y in your *fortissimo*. No sledge-hammer ef-
s here, if you please, particularly when also
ked *appassionata*. Remember neither iron,
, nor wire possesses any of those elements
h make for passion.
nally, your practice has reached its ulti-
e. So with both hands you will now work
ards toward your speeding and interpreta-
. Your hands, sternly drilled as they have
by what you have done, will now well-
unconsciously and automatically do the
t thing, and, like well-trained servants, flut-
obediently and joyously at your command
iding you to "express yourself."

ELIMINATING WASTE IN STUDY

POINTS ON HOW TO STUDY TO THE BEST ADVANTAGE

BY GEORGE VAN NESS DEARBORN, M. D.

[It is a matter of frequent remark that our schools supply pupils with material for study and offer the opportunity to acquire knowledge of various subjects, yet seldom are the pupils taught how to study. It is a fact that comparatively few students know how to study efficiently. For this reason Dr. Dearborn addressed a class of students at Tufts College Medical School, Boston, giving them most practical and pertinent advice. The remarks are eminently applicable to the student of music, and it is with much pleasure that we quote the following paragraphs from the full report of the address as published in *The Scientific American Supplement* for July 17, 1915.—Editor of THE MUSICIAN.]

INTEREST

If you are naturally of a scholarly disposition it is much easier to study effectively than it would otherwise be. But whether scholarly or not you must first have a real interest in that which you wish to study. . . . Furthermore you must have a continually changing and a continually developing interest. . . . It is absolutely necessary to have interest, natural or acquired.

The best way to develop interest is by collateral reading, on subjects allied, more or less, to what you are studying. Another way is by thinking for yourself of those relations. A third way is to associate with people who already have an interest.

ENJOYMENT

Whatever you have an interest in, you enjoy doing; and that is the reason why well-adapted work, in the long run, is the most certain. if not the greatest, of human delights. Many persons think of work as a necessary, something disagreeable rather than agreeable. But I repeat that it is certainly one of life's most permanent and substantial satisfactions and delights. All great, useful, and original work ordinarily is done under conditions such that the work is enjoyable, there being always enough interest about it to make it pleasurable.

TWO PROCESSES

There are two kinds of learning as a procedure, one of which is a conscious process, conscious, deliberate study; while the second is another mode of learning, of which most of you are not even aware, namely, subconscious learning; in short, by observation and association, more or less unconscious.

CONSCIOUS STUDY

When you think of study most of you consider only conscious deliberate study, reading, or "grinding," usually in some book or other. This process is essentially a checking or restraining process, inhibitory in nature. In the first place, you have to inhibit fatigue when you "grind." Your work should be so arranged, alternating with rest and exercise and eating, that there should be no appreciable and depressing fatigue. Then there are many distractions which have to be inhibited.

Study, so far as it is deliberate, is the forcing of the mental processes along new pathways. When interest is acquired and other things are right and you are in good physiological condition, it is a real pleasure to grind.

Beware of false study, dozing: trying to hold your eyes open while your brain is shut tight. In such cases your brain is not open, for the sensory paths and the association paths are closed. If your interest or your attention cannot be forced on what you are studying, you should wholly rest for a few minutes or else open the windows, stir about, and force the issue. Unless you give your whole attention to what you are studying it is of little or no account to you.

There should be no rote learning. There are only an extremely few things which are properly learned by rote, and it is well to avoid attempting to learn in this way. In the long run it is a great waste. Facts and principles should be learned by concept, not by word.

PHYSIOLOGICAL REQUISITES

Five requisites of a hygienic physiological nature must be mentioned: 1. Good health; 2. Abundant outdoor muscular exercise; 3. Abundant natural air; 4. Abundant proper food; 5. Abundant sleep.

It is necessary for a student to have good health, else he is inexcusably wasteful. One cannot possibly study, for example, with eyestrain, for this inflicts a continuous strain on the brain and the whole nervous system, which depresses the vigor of the mental action. Students should not think of studying when they have headaches, in which condition the brain is congested with blood. For a like reason one should not try to study when he is ill, say with a bad cold in the head.

Take abundant gross muscular exercise. The reason for this is that exercise stimulates the circulation, and keeps the cobwebs out of the brain, the spinal cord, and other important nerve-masses. Muscles, as well as brains, are used in thinking. Too much exercise, on the other hand, must be avoided, since it employs the brain, and so tires it beyond use for study.

It is not necessary to study out of doors, as you can have plenty of outdoor air indoors by the simple expedient of opening the windows. Moving air, properly moist and properly cool (68 degrees Fah.) is the ideal.

Have abundant food, but not too much. The ideal is food that is easily digestible and taken often. Coffee may be taken if necessary for successful study. Many authors do good and abundant creative work under the influence, in general, only of tea or of coffee, essentially alike in their stimulant action. I do not suggest alcohol, for it is a poisonous depressant and not a stimulant at all, save indirectly on the heart.

To be efficient students must have abundant sleep. Ten hours is little too much. There must be no study within an hour, at least, after eating. A short nap, even of five or ten minutes, gives one a large amount of cerebral rest; even a five-minute nap takes the blood for a moment out of the brain, stirs up things there generally, and makes one ready for a good siege of study.

Attention to a book should not be too long concentrated without a pause. It should by habit be concentrated vigorously, but only for relatively short periods at a time. Every twenty minutes or so you should walk around the room for a minute or two, for this activity draws some of the blood out of the brain into the legs; moreover it relieves the injurious long fixation of the eyes.

Grammar schools and high schools almost never as yet succeed in teaching their students how to think, and yet that is what counts most. A momentary, thoughtful idea often is worth a week of fruitless, mechanical grind. Quality, not quantity, is what counts in study as well as in other things. Make a serious business of it, then, when you study, remembering that real learning, that is, understanding and constructive power, comes only through thought.

AN OLD SONG=SUNG IN THE MOONLIGHT AND THE MESSAGE IT CONVEYED

WE sat one evening in the moonlight, singing old songs. There was just the gentlest motion in the leaves over head. The lake, a mile or so away, looked like a sheet of silver. I felt that there was not an evil thought, that night, within a hundred miles of us; and there shouldn't have been one anywhere on earth.

Some songs were rollicking and boisterous; others were just happy and free; but one, CARRY ME BACK TO OLD VIRGINNY, was reverent. I can find no other word to describe the spirit which came to us from that wonderful melody.

At my right sat a little wizened creature not a minute under seventy-five nor an ounce over ninety-eight. He didn't sing two notes in tune, nor one for that matter; but he simply could not keep back the impulse to try to hum the melody along with the rest of us. He made me think of a tuneful Dormouse. When the song was done he coughed suspiciously loud, wiped his eyes and said: "It's funny how this night air takes hold of me."

Nearby sat a tall, bronzed, sterling son of the ages. He looked like a Viking for courage, and a Greek athlete for power. When we came to the words: "*No place on earth do I love more sincerely*," his vigorous, tuneful voice just crumpled up and slipped down his throat. I was sorry he felt compelled to drop out for he was a sustaining power to the chorus.

When the last notes had died away, there followed the stillness of a silent prayer. I was as sure as I am of my existence that we all lost for a moment the moonlight and the lake and saw once again the flowered fields of our childhood, the starry sky, and the smiles of the loved ones at home.

Well, somebody had to break the spell, so I said to the Viking: "Born in Virginia?"

"No, sir," he replied, "I come from Australia, but for fifteen years past I have been in business in Winnipeg. No," he went on, rather wistfully, "I have never been in Virginia."

Then I said to the Dormouse: "Are you from the South."

"Why no, not exactly," he answered, "Berwick, Maine, is my home town. But most of my life I've lived in Massachusetts. In fact, I always sign myself from Boston. Big place, you know, and quite well known. But what difference does it make where a man comes from. Home is home for everybody."

"And thank God for the memory of it," said the Viking.

* * *

I am glad I do not get used to marvels and mysteries: the sea, the stars, the loving kindnesses of people, and man's inventions. When these cease to touch me with their infinite wonder I shall know that death is slowly enfolding me.

Now—here is that Aladdin's lamp of music magic. It brings to me the songs and singers of all the world: Caru Farrar, Sembrich and every other great one. Then th are Paderewski and his piano, Kreisler and his violin, a all the noble company. Think of being admitted to su an Academy of Immortals!

And among them I come upon one bearing the mess of a colored lad of the South who loved Old Virginia w a love so true that it echoes around the world like the verberations of a bell that is never still.

When I heard the Viking and the Dormouse and rest of the chorus sing, James Bland's song, CARRY Back to Old Virginny, I could not help wonder what a great artist would make of it. I have just hear in the wonderful voice of Alma Gluck. Simple as melody is she touches it with the magic of great art it responds *because it is itself great*.

I defy anyone to be unmoved by the way she utters words: "*There's where the birds warble sweet in the Spri time.*"

Every tone is an awakening bird voice, singing its fr dom at dawn to the blue Southern sky.

And when the line comes: "*Old Virginny, the state w I was born,*" it hits every man equally hard whether come from Australia or Berwick or from Richmond its

Now the mystery of man's invention has made it p sible for Alma Gluck to sing this melody for you as has just sung it for me. But before she begins, let me that you will enjoy the artist's singing of CARRY Back to Old Virginny, much more if you have music in hand and follow words and melody as they bl som from the throat of the singer. Even if you cannot r music, you have only to follow the words with an oc sional glance at the notes and it won't be long before catch the way that word and note are joined by the sin to come forth in the lovely tone that enchants you. I half the pleasure to follow the printed music page as record liberates its invisible message to the magic tou of the needle.

Well, do it your own way.

But listen intently; not with the ears alone but with very heart and soul of yourself, for what you are about hear will be a precious memory all the rest of your da Close your eyes just a second or two, here and there you listen and the joys of childhood will come troop back to remind you how many riches of long ago y have forgotten. They come rushing out of the House Memory like little children happy to have their holi freedom. And these joy children that romp about yours, every one of them. And I venture to say that th will make you listen to CARRY ME BACK TO OLD V GINNY very often in the future.

And every time you do it you will feel a bond of sy pathy that makes you understand the Viking; and no the delicately excused embarrassment of the Dormo who couldn't sing in tune in the night air.

See advertisement on page 1.

DEVELOPING THE ARTISTIC SPIRIT

BASED ON TALKS WITH JOSEF HOFMANN, PADEREWSKI, KREISLER, GODOWSKY, BAUER

II

BY OLIN DOWNES

METHODS OF BAUER

AROLD BAUER is frankly a heretic about this fetich of practice, method, and all the rest of it. The objectionably overworked term, made" might be applied to Mr. Bauer. He is a self-made pianist. He was originally a vio- and then he worked out his ideas of tone on iano in his own way, and, one must sup- largely against the precepts of his pianisti- educated colleagues.

gave me especial pleasure to hear Mr. Bauer because I have myself often felt hot under ollar when confronted with what I will term ndlordism of music. It is unfortunate that w musicians realize that music is neither led as their exclusive property, nor as a r of dogma. They would like to put s around the art. They would like to be to say that they and they alone are masters e rules and holders of the keys. If they only, at will, place an embargo, and say to one, if he follow in the footsteps, "come," to that one, "go!" But music, which pre- no material resistance to our most deter- d assaults, remains a strangely mysterious independent art. No one has captured or ed it as yet or succeeded in confining it to ethod" or "school" or any other kind of ly established precedent.

hen I commenced my piano practice," said Bauer, "I was past my twentieth year. I d ask from time to time how this or that to be done at the keyboard. Those whom estioned would tell me what they knew and they believed. One thing that they kept g me was that the only possible basis of pianism is an even scale. Now I could of nothing more essentially unmusical, as emed to me, than a scale played with abso- evenness—were such a thing humanly pos- —and I decided, not only that this would ry difficult for me to attain, but rather use- for my purposes when I had attained it. So cted to study the interpretation of music, so s this was compatible with the lack of an scale!

y piano playing," Mr. Bauer went on, "de- ed as a direct result of the force of cir- tance. Others had practised for years, go- slowly and systematically, each composition mastered a little more difficult than the ding one, and so on. I could not do that. ew that if I wanted a hundred francs the Saturday I had to learn to play my sonata hat time.

think that my violin training was invaluable, use it had taught me to listen so attentively he tone itself—as a pianist, whose tone is for him, is less quick to learn to listen. by virtue of my necessity, I had to study music, rather than the notes. I mean that years there were passages which I knew I d not perform as they were written. What d to do, then, was to discover the essential ing of that passage, play the notes which d not be spared, at any rate, and emphasize broad lines and the characteristic nuances of music. As a rule I was successful. Of course gs did not always go satisfactorily. We all have our discouragements. But that was the way I grew. Engagements multiplied, and—here I am."

Of all the men with whom I talked, no one gave me a more satisfying sense of the world being his oyster than Mr. Bauer. He is a delightful talker, a man at home anywhere, and a man, I am sure, who finds the kernel of life sweet to the taste.

GODOWSKY'S ARTISTIC GROWTH

Mr. Godowsky's career has striking analogies. It is known to musicians, if not to the world, that Mr. Godowsky is a composer of the most serious aims and of very exceptional accomplishments. In fact, his labors during these late years have been almost entirely in the direction of composition. I had the advantage of examining with him a number of his works in various forms, from his imposing piano sonata to his wonderfully felicitous harmonizations and arrangements of folk-songs, old music for the claveçin and clavichord, etc., and as each page turned I marveled the more at the man's mastery of his art. "Here," said I, "is an example of what a thorough musical education and the European environment means to a man" I said this because of what appeared on the printed pages, and also because of the fact, which I knew, that not only pianists, violinists, and the like, but also many composers of orchestral as well as other music have gone respectfully to Mr. Godowsky for his advice.

Imagine, then, my amazement, when he told me that neither as a pianist nor a composer was he anything, practically, but self-taught. It was almost impossible to believe. Harmony and counterpoint and composition, with his astonishing mastery of all technical devices and of form have been learned with practically no assistance by Mr. Godowsky himself. Similarly with his pianism. At a very early age, he told me, his unusual precocity and ability at the keyboard caused a wealthy music patron to obtain for him an examination for entrance to the *Hochschule* in a principal German city, with the promise of financial support through a period of study. Some of the most celebrated musicians in Germany were present, including Joachim, the violinist; Bargiel, the composer, and others whom I have forgotten. The young Godowsky passed his examination with the highest honors and Joachim immediately interested himself personally in him. "Then I had some lessons at the *Hochschule*," said Mr. Godowsky, "and these lessons were so dull and pedantic and old-fashioned that I soon fled the place and refused ever to return." Now Mr. Godowsky has *Hochschuler* of his own. His repertoire is monumental. The list of his compositions is hardly less imposing. But I have reason to believe that in days past he practised very hard.

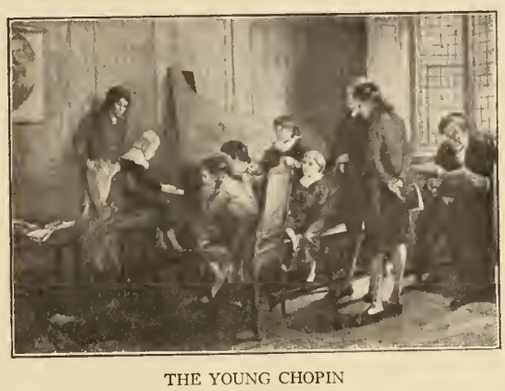
TALENT AND GENIUS

Musicians are doubtless as various in their dispositions and necessities as any other persons. Fritz Kreisler probably confuses others with himself when he says, as he said to me, that he believes each person with a talent for playing has also a technical talent for his instrument. On the other hand, Mme. Olive Fremstad, who, as a superb interpreter of Wagnerian roles, needs no introduction to the American public, and who certainly owes her eminence to one person—Olive Fremstad—said that she estimates the talent of the individual by the strength of his desire, his ambition to attain a given end. It is that, and only that, said Mme. Fremstad, which proves the ultimate measure of the accomplishment.

But what is talent? It was with something not unakin to despair that I listened to Josef Hofmann's definition of talent, or rather, that extreme of talent which we call genius. "What," said Mr. Hofmann, "will bring the brain of the genius into existence—the brain which is superlatively creative, and at the same time so strong and so solid in its texture that not all the intensity of the creative impulse will be able to push it from its pedestal?" We had previously been speaking of genius and madness. "We like to talk," he continued, "of heredity, predestination, and all sorts of other fine things; but as a matter of fact, is not genius purely an accident? How explain the sudden appearance of a great mind in a family which has shown no great minds for generations.

"The parents of the genius have often been personalities of quite a negative and harmless character. Their union is for me only another admirable illustration of certain chemical principles—of the results which develop from the combination of two elements acting powerfully on each other. Here in my laboratory are two jars of liquid. Separately, each is static and perfectly harmless. I mix them and there is an explosion. Similarly with the man of genius. Only the mysterious alchemy which resulted in his intellect, the exact proportions of the ingredients which gave him his ideas, and his exceptional energy to develop them will in my opinion never be known."

What is proved by the foregoing? One thing, which was admirably expresed recently by Mr. Ernest Newman, the English music critic. If you wish to succeed, said Mr. Newman, as a composer (and I think the remark applies almost equally well to the performer, whose work is also, in the last analysis, eminently creative) you may study the rules—I am quoting the sense, not the letter, of Mr. Newman's remarks—all you like. They will teach you comparatively little, unless you have the intellect, the will, the force of character to understand clearly your own purposes, and then work them out to the bitter end. And to do this, only one thing is necessary. Be a genius!



THE YOUNG CHOPIN

This picture showing the great composer as a boy, in photogravure style, 8 x 12 on mount 12 x 18, is an attractive addition to the decoration of a music room. It may be secured from THE MUSICIAN for 35 cents, postage paid.

THE EFFICIENT MUSIC TEACHER

BY THOMAS TAPPER

V. The Efficient Lesson Hour

I

THERE are more factors in the lesson hour than we ordinarily consider. And we ordinarily fail to consider them because, like most other things in daily life, we take them for granted. Some of these factors are minor and individual; others are major and common to every lesson period. I asked a teacher distinguished in the highest degree for skill in her calling, what these essential major factors are. Here is her reply:

1. Punctuality.
2. Concentration during the lesson period.
3. Definite assignment.
4. Definite demand based upon the assignment.

"I regard the definite assignment and the definite demand to embrace everything," she said, "but I have included the first and second items so as to be certain they shall not be overlooked."

THE DEFINITE ASSIGNMENT

Nothing is efficient that is not explicit even to its details. If anything in the process of education should be explicit, it is the list of items which enters into the lesson assignment, every one of which should be so well understood by the pupil that he can go to work intelligently and discover for himself what the teacher knows he must discover.

On the part of the teacher a definite lesson assignment will consist of a clear and precise statement of everything to be done, item by item, and in order.

It should also include, to the extent that judgment dictates, the method or system by which each item of assignment may best be performed.

A distinguished theory teacher, explaining how rapidly he was compelled to work with his class, said that he regretted his inability to discuss with his students the best way to go about working and perfecting the lessons which he assigned. He recognized that a lesson assignment must be definite as to the factors requiring the pupils' attention. And he also recognized that the best way to go to work, the straightforward order of procedure which shall insure direct and satisfactory results from a minimum of work is quite as desirable and necessary an accomplishment as the musical phase of the work itself is. But having no time in the rush of the lesson period, he has to let this go by and trust that the pupils' sense and experience will, like love, "find a way."

Now, taking pupils by and large, we must reckon with some degree of Inertia in them as in ourselves, and we must also reckon upon the tendency to inhibit Initiative.

What percentage of pupils, who are left to their own resources to find the best way to work, ever find it I do not know; but doubtless the number is infinitely smaller than it would be if we could devise a means for including it (a study of the best way) in our assignment.

Perhaps, then, we may say that:

1. Some teachers recognize that a part of the lesson assignment should be devoted to methods of procedure during the study hour.
2. A few give it their exact attention.
3. Most give it none.
4. Consequently, most pupils, like Topsy, just grow up.

The lesson factors should then be stated definitely. There should never be between teacher and pupil the slightest doubt as to what is assigned. Hence,

(a) Make the assignment.

(b) See that the pupil writes down the assignment.

(c) The pupil works on the assignment and brings it back to the teacher.

(d) The teacher demands the assignment.

So much for the teacher.

What about the pupil's part?

If it is desirable that the pupil shall have from the teacher an itemized assignment list, he must be willing and even anxious to be able to go out of the room carrying not the slightest shadow of misunderstanding as to what he is to do. His motto must be:

STOP, LOOK, LISTEN, AND ASK QUESTIONS

When the pupil goes home knowing exactly what he is to do, he will go home happy.

But the teacher may not have the time to tell him how best to go about his study. And frankly it does not always require a supreme order of intelligence on the part of the pupil to investigate the matter for himself with some degree of success.

Let us assume that the pupil takes a theory lesson today to be returned a week hence. Before he leaves the teacher he asks himself or the teacher.

1. What must I bring next time AS FINISHED WORK?
2. How many items?
3. Is the assignment clear enough for me to go about it intelligently?

Then he goes home and takes account of stock.

1. Six examples, free counterpoint.
2. Four modulations to be worked out, four voices, keys clearly specified.
3. Analysis of Beethoven sonata, Op. 7, first movement.
4. Study of chapters so and so in Form book.

Any pupil who can specify his work in such items certainly knows WHAT he has to do.

Does he know HOW he should go about doing it?

II

The housewife, who, setting out to make a cake, has to stop in the midst of things to borrow a cup of sugar over the back fence is not a type of the highest efficiency. We would not praise her over much if we discovered that she has no definite place for cooking utensils; that sometimes she gathers them in the parlor and against that she cannot find them at all. And we should not expect her to go about baking the cake without the ingredients in hand; or doing it, say, after 10.00 P. M. All of which means that the cook and the pupil must first be provided with:

1. An assignment and a recipe.
2. The necessary equipment.
3. A place favorably adapted in which to make the cake, or the lesson.
4. The proper time to do the work.

Bad home managers never keep up t equipment. Hence the sugar over the b fence. Not a few students and teachers are same—they are under-equipped. To be prop equipped to perform the theory lesson assig above the pupil needs all the text books inv ed, pencils, paper, erasers, reference mate and the like. Let him once in his life sit d AND COUNT THE ITEMS OF THIS EQUIPMENT. T let him repeat the motto of the Boy Sco **"BE PREPARED."** From that day on he increase in wisdom.

To have all work equipment ready at h in a good place and at a predetermined time quires thinking about these things as Prep tion. As a teacher assigns the lesson matter the pupil, so the pupil assigns to himself eq ment, time, place, and purpose.

It is easy to understand that the youth burns (or who hopes to burn) with the fir genius should feel above these systematic tions. No efficiency lecturer has ever esca being asked if efficiency is not unnecessary the genius. The answer is, "No." Every ge the world has ever seen has gradually built his own scheme of efficient action, none the efficient because it is his own.

All the truth of the matter is that we suc in proportion as we learn to overcome co tions, and, conversely, we fail in proportion we permit conditions to overcome us.

When the pupil needs an eraser on the t before him he is 100 per cent efficient in eq ment if it be actually at hand. If it be upst in a pocket of his other coat, he is 100 per efficient in Possession, but zero in Preparat

To fix the time for study and the place study, to know exactly what the teacher's signment calls for, and to have everything hand with which to do the task constitute best way for accomplishing any particular th And there is no other way. It appears sir and childish to specify the items, but the y who cannot so run his study period is infini more simple and childish. Which no doubt h his feelings.

But what are feelings for?

(This topic will be continued in the Febr issue)

INSPIRATION

This beautiful picture makes an attractive decoration for a music room. Large size copies, 6½ x 11½ on mount 12 x 18, photogravure finish, may be secured, postpaid, for 35 cents, by addressing THE MUSICIAN.

THE SONGS OF IRELAND

Sixty Irish Songs. Edited by William Arms Fisher. For high ce. For low voice. Price, paper covers, $1.50. Cloth, Gilt, $2.50

When the musician is studying the subject of ksong he will devote a considerable part of his or to the songs of Ireland, whose poets and gers of past generations have left a wealth of terial for the music lover of today.

Few are the programs of vocal music which do contain one or more Irish songs of the folk- ig style. And the endeavor of many singers has en to seek out and to present to the listening pub- gems of Irish song which merit a permanent ce in the repertoire.

This demand for hitherto unused material, for igs which are worthy a place in the artists' rep- oire, and for songs which are truly representa- e of the finest and best in the Irish folksong erature has been admirably met in a volume of sh songs recently issued by the publisher of The usician, one of the famous Musicians Library lumes.

In compiling this volume the editor has taken a ferent plan from that usually followed. First examined upwards of 2000 recorded folk-tunes, ost of them without text. After the selection d been made he turned to the modern Irish lyric etry choosing about 200 with marked song qual- . The next stage was to select from these verses e most appropriate for tunes which were not tra- tionally identified with certain texts.

A question of great importance in the prepara- on of folk music is the style of the accompani- ents. The student is familiar with two methods fitting an accompaniment to an old melody. Mr. sher describes these as "the way of the arranger, d the way of the composer. The first manu- ctures a conventional part as unobtrusive as pos- ble and therefore colorless and dull; the second, th careful regard for the character of both mel- dy and text, creates a colorful accompaniment hich enhances both, gives them fresh significance, d, when perfectly done, charms the listener with e impression of a fresh and spontaneous creation. he danger in the second type is lack of forget- lness of the beauty of simplicity."

In commenting upon the accompaniments pro- ded by the editor it is worth while to call at- ntion to the very evident fact that in *Sixty Irish ongs* the various numbers have been prepared for ngers to use and not for the antiquary or the udent of folksongs who is generally more or less edded to methods endorsed by unsafe tradition. elody, text, and harmonic scheme have been as refully studied and developed as if each song, as a hole, were an original work.

To quote from the editor's *Preface*: "Few but owed Celticists know with what lavish richness eland has poured out her heart in both melody d poetry." For example, one investigator states at more than 3000 different Irish airs are now print, and from known sources this number can increased to 5000. Sir C. Hubert Parry speaks Irish folk music as "probably the most human, ost varied, most poetical in the world." Ernest Walker writes: "Irish folk music is, on the whole, e finest that exists. In their miniature form the st Irish folk tunes are gems of absolutely flaw- ss lustre. In form, as well as in melody, the best ish folk melody is exceptionally polished.

Here then is music which no singer who wishes reach the hearts of the great music loving public an afford to overlook. It has all the qualities which re wanted, namely, charm of real vocal melody, mplicity of style, haunting appeal in the turn of hrase, tenderness, sympathy, enhanced by the re- ources of the practiced composer in furnishing the ackground, atmosphere, and support of an artistic ccompaniment.

NOTES ON THE MUSIC IN THIS ISSUE

January begins a new calendar year, but represents nearly the middle of the music season, with teachers about the maximum in the matter of the number of pupils at work. Of course this means that teaching music is in demand, both new issues and new editions of standard compositions.

The object of The Musician is to accustom its teacher readers to look to its pages for helpful suggestion in the way of teaching material. It is worth a number of times the subscription price to be able to rely on getting, month after month, new and useful pieces to assign to pupils as lesson material. The building up of a fine repertoire of teaching pieces for various grades is a part of the teacher's work which calls for constant attention and selection. To discard some pieces for newer and better is manifestly the only way. The Musician brings just the kind of music, month after month, which the alert minded teacher can turn into his repertoire. Watch the music for 1916.

Valse gracieuse, by Miner Walden Gallup, is a new work by an American pianist and teacher who is winning recognition as a composer as well. Here is a piece in waltz rhythm, just between the average degree of difficulty and the first stages of artist playing. In fact, a player in Grade IV or V will find this composition worthy of his study. An advanced technic will make it possible for the player to deliver the piece at a rapid tempo, such as is used in the waltzes of Chopin. The themes are tuneful and thoroughly pianistic, all passages, diatonic or arpeggio in form, lying comfortably for the fingers. Note the use of the adjective *gracieuse* in the title. Play it in a light, graceful style. As a rule the strong accent comes on the first beat of every second measure.

Gavotte in G minor, from the third *English Suite,* by J. S. Bach, will be discussed by Prof. Clarence G. Hamilton, of Wellesley College in the February issue in connection with studies in analysis of compositions, and it is therefore unnecessary to consider it in this column. We advise our readers to take every opportunity to become acquainted with the easier compositions of the great master.

At vespers, by Carl C. Müller, is for our younger readers. It is a grade II piece largely on account of the somewhat free use of chromatic notes. Learn it slowly, a phrase at a time, just as a recitation will be learned for school.

Ancient chivalry, by H. Engelmann, is a typical piece by this favorite composer. It is in the gavotte rhythm, one which is always effective and suited to pieces of easy grade. Note the accent marks and observe them, as they vary the rhythmic effect preventing it from becoming monotonous and wooden.

Neapolitan serenade, by J. W. Lerman, is in a rhythm approximating that of the famous Italian dance, the tarantella, but not to be played at the extremely high speed which usually characterizes that wild dance movement. It may be thought of as a fast two-step dance. Keep the touch light, and especially be careful to observe the rests which frequently follow eighth notes, for example, in the fifth measure. The attack for the two successive two-note chords, F♯ and D, is, as it were, snapped or vibrated from the wrist, a light stroke. Do not pound them. When the degrees forming these successions are different as E-C and D-B, make the joining legato largely finger action, in contrast to the chords played by the wrist. The atmosphere of this piece is that of light-hearted joyousness.

Seven o'clock in the morning (Overture), by Charles Wakefield Cadman, Op. 35, No. 1, is a most attractive little piece in the descriptive style, the accompanying verses indicating the thought which the music is to express. It is the opening number (hence the Overture) of a set of little pieces entitled *Saturday in Town,* telling of the adventures of two children from morning until bed-time, ten numbers in all. In the theme for the left hand, be sure to give the dotted eighth note its full value. In practice imagine four sixteenth notes to a beat; the dotted eighth then gets three-fourths of the allotted time, the sixteenth one-fourth. Frequently this figure is played as the succession, a quarter and eighth, forming a triplet, in which the first note gets only two-thirds of the time to a beat, instead of three-fourths.

Clowns' parade, Op. 175, No. 1, by Leo Oehmler, is a little piece in march time for little players who are ready to pass from Grade I into Grade II. Give it a definite march swing.

Brave boys' march, by Emil Otto, for four hands, is an especially fine number for school or gymnasium use on account of its strong march rhythm. We suggest that each player should learn both *Primo* and *Secondo* parts. The rhythmic succession of a dotted eighth and a sixteenth occurs in this piece. Give it correctly, according to remarks on *Seven o'clock in the morning.*

Hot cross buns, Op. 17, No. 1, by Eber C. Hamilton, is a delightful little piece for young violin players, one which does not pass out of the first position. The accompanying nursery rhyme furnishes a clue to the composer's ideas as embodied in his music. The player will get good practice from bowing the melody in several different ways. This applies especially to passages in sixteenth note values. Notice that the strong accent is frequently on the second instead of the first beat of the measure.

Saviour, breathe an evening blessing, by Emil Rhode, is a setting of a favorite hymn, and is best suited for use in the evening service. Generally speaking, the style throughout is to be quiet and restrained; even the climaxes are not a loud *forte;* only in the last line is the voice to break out into joyous exultation, with a pronounced crescendo. This song may also be had in C for a low voice.

A southern lullaby, by Philip Greely, presents an attractive song in southern negro dialect. There are times when every singer can use a song of this style to good advantage. *A southern lullaby* has stood the test of use as solo and as a concerted number for male or female voices. Be sure not to sing so fast as to make the words obscure; diction is a matter of prime importance in this number. For medium voice in C.

Winter, song by Fay Foster, is a melody of broad singing quality, in which the voice has plenty of opportunity to work out strong effects, for the text is full of contrasting moods which the composer has most effectively paralleled in the voice part as well as the piano accompaniment. The theme is that in a winter setting "the woman" comes in like spring, changing the mood, but as she passes by carelessly the feeling changes again to the ice of winter, a varied sentiment reflected in music.

Mazurka, Op. 43, No. 3, by R. Glière, is from a set of charming little pieces, of medium grade of difficulty, by a Russian composer. Several others of the series have already appeared in The Musician. This should be given with delicacy and grace, and calls for but little use of the pedal, unless the teacher wishes to take pains to instruct a pupil in the various methods employed by the great artists in their use of the pedals to produce certain desired effects. The left hand melody should be given with a broad, singing tone quality. The pupil who has had harmony will enjoy the rapidly shifting tonality between measures 17 and 30, with the return to the principal theme through the dominant seventh chord. In the fourth measure from the end be sure to play E♭ in the chord for the left hand, not E♮. This is an inverted augmented sixth chord, and not a diminished seventh.

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

A FEW WORDS ABOUT 1916

WHAT do we need most in music in the United States during this year of 1916?

Is it more teaching, more pupils, more concerts, more music festivals, more compositions, more methods, more of a dozen different things beyond those enumerated?

Quantity of product is desirable for it implies activity. But we must not forget quality.

And that word QUALITY is a good slogan for 1916. The musician, no matter what his specialty may be, should aim for QUALITY in all things musical during 1916.

Quality comes not from merely wishing to have it, but from working to secure it in the product of one's activity.

Hence 1916 ought to be a year of doing things to improve the quality of musical work.

And in this doing two factors are essential, namely, *One's own activity,* and *One's co-operation with others.* Expressed in other words, Quality can be secured through an increase in Personal Efficiency, and then through a More Efficient, Purposeful Organization.

These two ideas for 1916 are embodied clearly in two departments of THE MUSICIAN: THE COMMUNITY AND ITS MUSIC, and THE EFFICIENT MUSIC TEACHER.

The one records things that can be done, because they have been done by others.

The other tells how to increase one's power to do things.

This offers a thoroughly worth-while program to the music teacher and the music lover.

The president of the Louisiana Music Teachers' Association writes of the COMMUNITY MUSIC DEPARTMENT:

"It is a Department which is a great help to the cause of good music, another feature of your invaluable magazine. It seems to me that THE MUSICIAN is becoming greater with every issue both as to articles and the class of music it contains."

In regard to the articles on EFFICIENCY a prominent teacher writes to us:

"If every teacher in the land could have copies of these essays and then work along the lines laid down the highest level of efficiency ever attained among music teachers would be reached. I shall stand better and higher as a teacher for having read them and done my best to apply them in my work of teaching."

THE MUSICIAN aims to help its readers to make the best of themselves, believing that here lies the most important duty for this new year of 1916.

———*———

A MUSICAL INSTITUTE

MOST of us are familiar with the plan of the public school teachers' institute, in which the educators of a city or county meet for discussion, lectures, and practical demonstration of the problems which arise in school work.

THE MUSICIAN has previously presented this idea to the readers in connection with the formation of county and city organizations of music teachers. We are glad to have a practical demonstration of the suggestion in a program of "a musical institute for musicians and lovers of music in Niagara County, N. Y.," consisting of an afternoon and an evening meeting.

The afternoon program consisted of papers on "The recognition of the American artist," "The musician and his relation to the community," "Music from a minister's viewpoint," "Musical progress," "Music in public education," by persons representing various phases of musical work, the addresses being followed by discussion. The evening meeting was a concert program.

A gathering such as that in Niagara Falls is possible in every county. It is not worth while to say that musicians will not work together amicably. They will, and they do. And the proof is found in various cities and towns.

Initiative is the thing especially needed. And it may be that initiative can effectively come from you. Think it over and decide to take the matter up with some of your friends in the profession.

And if you do form an organization write a letter to THE MUSICIAN and tell us of the fact, what you propose to do, so that we can show our readers how the movement is spreading.

———*———

AN IDEA is one of the biggest things in the world.

IDEAS are worth money to you.

ARTICLES published in THE MUSICIAN are selected for the IDEAS they contain.

IF you are looking for IDEAS you will find them in each issue of THE MUSICIAN.

WHAT IS A MUSIC TEACHER WORTH?

CAPITAL is generally considered to represent money or other visible evidences of wealth. It is also correct to think of it as earning power, for money is not capital unless it is used to produce earnings.

Therefore a music teacher's earning power may be taken as a basis to figure his personal capitalization. It often happens that a man of business aggressiveness and sound judgment creates a flourishing and profitable concern, earning large dividends on a comparatively small capital. If he is incapacitated for business an immediate decline is noticed in the earnings of the company. It is evident that brains can be counted as capital.

Let us suppose that a teacher of music earns $2,000 a year through his professional work. This represents the dividends at 5 per cent on $40,000. Similarly a musician who earns $5,000 a year is receiving dividends equal to that paid by an investment of $100,000 at 5 per cent.

It is not likely, however, that a court of law in passing on a suit for compensation for the death of a professional man who earns $5,000 a year would allow a claim for $100,000. The defense would probably claim that because a man earns $5,000 one year it is by no means certain that he can keep it up. He must wear out in time. An article in the issue of *The Illustrated World* for October throws some light upon this question, basing the conclusions on parallels with machinery which has earning power, but which, like a man, also wears out, and in course of time is scrapped.

The sum of the argument is that anything which earns $1.00 per day, and has a life of ten years, is worth $1,000. In the case of a man who earns $5.00 a day (at 300 working days, this equals $1,500), the value was estimated at $12,500. (It must be borne in mind that the working life of a man is at least three times greater than that of a machine.) Perhaps this is a fair average income for a music teacher the country over, for the large towns and cities.

But there is another side to the question. Going back to the thought of the machine, we recall that a manufacturer is always seeking to improve the efficiency of his plant. And for the same reason the music teacher, who is worth, as said above, $12,500, by increasing the efficiency of his work may increase his earning power, and therefore his personal valuation. Or, if it be claimed that the community in which he labors offers no opportunity to increase his earnings, he can earn the amount in less time. The time thus saved may be turned to account in self-improvement, or in doing work for persons at a distance, writing, composition, etc., which, sooner or later, will show earning power.

The music teacher owes it to himself, to his family, and to his community to increase his personal valuation

SEVEN O'CLOCK IN THE MORNING

OVERTURE

One-two-three-four-five-six-seven.
Get up, get up, you sleepy-heads!
The sun is shining high in heaven
And you lie dreaming in your beds,
At seven o'clock in the morning!

One-two-three-four-five-six-seven.
Ho, Donald! Constance! Wake and rise:
Your work should all be done by eleven,
And still you lie with drowsy eyes.
Come! this is Saturday morning!

The SINGER and His ART

MME. TAMAKI MIURA

A JAPANESE BUTTERFLY

BY ALICE WOODROUGH CHAPMAN

"Almost transparent, fragile, and slender,
Dainty in stature, a quaint little figure,
Seems to have stepped down straight from a screen—
But from her background of varnish and lacquer
Suddenly light as a feather she flutters,
And like a butterfly hovers and settles."

THIS description best describes Tamaki Miura, Japan's one and only prima donna, who is singing with the Boston Grand Opera Company this season.

In wonderful blue silk kimono, heavily embroidered with cherry blossoms shading from the deepest rose to softest pink, finished with a blue obi scarf around the tiny waist and with fluttering fan constantly in motion, this almond eyed bit of Orientalism was *Cho-Cho-San* reincarnated as she bowed me into her presence and inquired for the health of my honorable parents. After a mutual exchange of courtesies as to the state of health enjoyed by our various relations, I turned to the more interesting subject of Tamaki Miura herself.

With a half-shy side glance she looked up at me as I asked her what she thought of New York. "Your land most wonderful; your people most kind. I like America," she replied; "I hope to sing here long time."

"Will you tell me something of your work, Madame Miura?" I asked. "You know the public is very much interested in you."

"I so glad they like me, yes—I tell you much," the prima donna replied, as with a bird-like motion she fluttered into the depths of a great armchair.

"When I was little baby, I love music always. Japanese music not like Western music. Japanese music much more sad. When I was four I begin dance; I like dance much. Then people say I can act. I want to study music." Here she clasped her tiny hands and gazed straight before her rapturously. "My honorable parents say no—Oriental, especially girls—could not understand Western music, and my honorable grandparents, my aunts, and uncles are grieved that I desire to sing before the public. They say no nice Japanese girl show love for man, no matter how much she love. But I very much in earnest, and at last I go to conservatory in Tokio. Here I study all music—Italian, German, French, and English. I work years till I grow up; it so much easier to understand your emotions than to ex-ex-press them. To phrase in your languages is most difficult. I am not stupid, and Western languages very much alike, but Japanese and Chinese not at all. I teach when I leave Tokio Conservatory, and 1903 make my début in opera at Imperial Opera House, Tokio, singing title rôle in Gluck's opera *Orpheus and Eurydice* at first grand opera ever given in Japan. My people now very pleased. I also sing Santuzza in *Cavalleria Rusticana,* but not like so well as *Butterfly.*

"I then go to Berlin and London. People most kind always. I get first kiss London, Mme. Patti she give to me." Here with a shy glance from her soft brown eyes and a dimpled smile, she sighed and said, "I like Western kiss much. We not kiss in Japan; some day maybe I try kiss again.

"My doctor husband watch me most careful, teach me much about how take care of my voice. We very happy, some day I teach him kiss, yes—"

Here with repeated wishes for our honorable family, many bows, and flirting of fans, I took my leave in order that the little prima donna might rest before the afternoon performance, and with a rude awakening dropped from the oriental atmosphere of her apartment to the cold occidentalism of a New York hotel rotunda.

THE FALLACY OF THE NASAL RESONANCE THEORY

BY BERNHARDT BRONSON

SONORITY, Resonance, Timbre, *Metallo di voce, Wiederklang,* these are synonymous terms in different languages, and are used to designate a certain quality in the voice without which it would be valueless.

It is this quality which gives carrying power to the voice, and the development and control of it constitutes one of the chief reasons for vocal study. It has been the cause of more controversy and is the subject of more theories than any other point connected with the singer's art, with the possible exception of breathing.

During the past ten or fifteen years the theory of the nasal cavities and their importance has been widely discussed by scientists, physicians, and vocal teachers. Seemingly incontrovertible arguments have been advanced to prove that resonance depends upon the cavities of the nose and head, and, as a result thereof, the majority of present-day teachers have come to lay great stress upon the resonating space of the nasal cavities. Many singers who have acquired resonance believe that it is largely due to the nose or the head (it is all the same).

"How can it be otherwise," they exclaim! "Is there not a distinct physical sense of vibration in the frontal bones of the face, and just over the bridge of the nose, when the voice is placed right?"

And the doubter, who is perhaps also a singer, is forced to answer: "True enough, there is." Incontrovertible argument!

Books written and charts drawn by eminent authorities (who were not singers by the way) would seem to clinch the argument and settle the question for all time, especially for those who are willing to take things on trust.

Yet withal there was never a greater fallacy than the statement that "tone depends for reinforcement (resonance) upon the vibration of the air in the nasal cavities," and those who cling to these theories betray an utter unfamiliarity with the conditions under which ideal tone is produced.

The present-day advocates of the nasal resonance theory are so enamored of the idea that they undertake boldly (in order to make conditions square with their theories) to upset one of the first requisites of resonant tone, namely, the elevated soft palate.

Because, as they themselves declare, it is impossible to set the air in the nasal cavities in vibration except through the naso-pharynx, the soft palate must *not* be allowed to ascend; it must be "lowered" so as to allow the tone to pass up behind it. In their minds the THEORY is always uppermost; the conditions must be made to fit.

The fact is, however, that the soft palate rises spontaneously and remains elevated during the production of every resonant tone, and that every good singer, every great artist, who produces the kind of tone which is most admired by the discriminating public, stands as a living contradiction of the nasal resonance theory.

All of these, whether they know it, whether they believe it or not, perfect their tone through the subtle adjustment of the size and shape of the buccal cavity, and, so far as sonority is concerned, their noses have about as much to do with it directly as their elbows or their ankles.

The interior of the mouth is lined with elastic tissues capable of being stretched and contracted into innumerable sizes and shapes through the muscular activity of the lips, cheeks, soft-palate, tongue, and jaw, and, guided by the ear and aided by the hard palate and teeth, these various organs combine subconsciously (in the trained singer) to perform

those functions required to perfect and augment the tone in all of its various qualities.

Perfect "tone placing" is, therefore, nothing more than the perfect coördination of these muscles and the ear, and it is the mouth cavity that is responsible for resonance; for any tone, the least part of which is allowed to escape into the nasal chamber, is impoverished through that much loss of resonance, the *lowered soft palate constituting a veritable trap to catch and kill* the initial voice as it issues from the vocal cords in both speech and song.

Some very interesting tests to prove this contention are advanced by Mr. George E. Shea, of New York, and singers who think they have resonance or that it is dependent upon the nasal cavities will see a great light if they will apply them. They are given herewith:

1. Sing on "aw" frankly in the nose and observe the lowered uvula.
2. Continue so to sing while stopping the nostrils and remark the extinction of the tone.
3. Sing the nasal tone with lowered uvula and pass from it to a sonorous tone without tinge of nasality; immediately the uvula rises.
4. Continue this latter tone and stop the nostrils; no diminution, deterioration, or alteration of the tone results. Therefore, in a pure tone the nasal cavities do not form part of the resonator.

These directions are concise and to the point, and are demonstrable (with the aid of a mirror) by any singer who has the right kind of tone production.

I repeat: No singer of note produces resonant tone with "lowered" palate. To insist upon "lowered" palate is to impose an impossible task upon the mechanism. The rising of the soft palate is a perfectly natural and spontaneous movement, when it is understood. Moreover it is an indispensable condition of the "open throat."

The fact, then, that the soft palate rises when we sing upon the sonorous voice ought to be in itself sufficient evidence that the nasal cavities are not concerned, for by the very contentions of the nasal resonance enthusiasts the rising of the soft palate interferes (according to their theories) with "full use of resonance space by shutting off the passage leading to the nasal cavities."

However, should there remain any doubt as to the truth about nasal resonance, let the resonant singer use this test:

Every resonant tone is or should be accompanied by an apparent physical sense of vibration in the front of the face just over the bridge of the nose. While singing such a tone in full voice cover the ears firmly with the hands; immediately the sensation ceases! Upon uncovering the ears it returns. This proves that our sensation of tone is purely auricular, and that physical sensation of tone is only an auricular illusion.

There is no such thing as nasal or head resonance in any other than an empirical sense, and I know of no more pernicious practice than that of students trying to "localize" the voice in the nasal cavities.

That wonderfully subtle organ, the soft palate, is doing its best to act right in response to the call of the ear; by trying to localize the tone in the nose its purpose is defeated.

The nasal passages have only two important functions in singing: One is to allow free and unobstructed passage to certain subvocal consonants; the other is to insure perfect respiration. These are all with which the student need seriously concern himself.

In actual singing (on words) the soft palate acts in its twofold capacity of tone reflector and articulator. In order to sing perfect "legato" as wide and free a passage through the nostrils as possible is necessary. There must be no stoppage on those subvocal consonants which require sealed lips or where the tongue cleaves to the roof of the mouth. In such cases the soft palate relaxes spontaneously to allow the sound to escape through the distended nostrils.

But the *resonance at any such particular instant is of a very negative character,* and if prolonged beyond an instant the loss is immediately detected by the ear. It is only when such consonants are disposed of instantaneously that any decent singing is possible. Even in certain French nasal vowels the greater part of the sound is reflected into the buccal cavity, so that the question here is one of color rather than of resonance.

The question now arises: If the nasal cavities play no important part in resonance why does a "cold in the head" interfere with resonance, and why do such maladies as adenoids, polypus, enlarged turbinates, etc., affect the voice?

A "cold in the head" does not always result in deterioration of resonance. Indeed it often imparts an abnormal "ring" to the voice throughout its entire range. It is only after it reaches the stage during which it affects the delicate membranes of the soft palate, throat, and larynx that a cold seriously affects resonance. Adenoids, polypus, and like maladies affect the health of the larynx and soft palate, preventing free vibration of the vocal cords, and interfering with the free lift of the soft palate. Elongated uvula has the same effect.

A renaissance of the vocal art seems to be fairly upon us. With all due regard for what we owe to science, let us not forget that singing is still an art and as such the all important factor is the EAR.

Show me a fine singer who produces the world's ideal tone with all its varying colors and I will show you one with a delicately trained ear. The ear teaches us everything in singing; our tone quality, interpretation, enunciation, even our breath control is perfected through the ear. A vocal student's progress is therefore measured by his ear experience. His teacher must be a good singer, in addition to which he needs models of all kinds, not only to imitate but to compare.

Absorption must be the keynote to which his education is tuned and absorption is a process of ripening which requires time.

Teach your pupils how to use their ears and they will shoulder the major portion of your burdens of teaching them to sing.

"Hush! a voice from the far-away
Listen and *learn,* it seems to say."

Surely this application of the familiar lines of the old song is not amiss in this age of sophistry and mechanical research.

DICTION IN SINGING

THERE is a thought in connection with diction in singing which is worth keeping in mind. In a way singing is really more distinct than speech, the vowels are carefully brought out, and a careful teacher will insist upon an enunciation of the consonants more vigorous and positive than is the custom in speech.

Why, then, is it that the text of a song is less intelligible than the same words in a recitation?

May it not be that our ears are not so accustomed to the effect of the various combinations of vowels and consonants in singing as in speech. We experience difficulty in following the speech of a person whose voice and style of expression is unfamiliar.

It is evident that both speech and singing have different principles. The singer cannot make sound like speech and make it artistic. It is true that in songs which have the words or syllables in rapid succession, it is possible to parallel speech quite closely. Not so, however, in songs in which the voice's part is sustained in character.

In his book *Success in Music,* Mr. Henry T. Finck, music editor of the New York *Evening Post,* refers to these differences between speech and song and illustrates his point by the following lines:

Yet nightly pitch my moving tent
A day's march nearer home.

He comments thus: "In singing English we must largely abandon the characteristic English procedure of ending syllables on consonants and approximate to the Italian practice of beginning as much as possible with a consonant and ending on a vowel." And here is what this method does to the two lines quoted:

Ye tnigh-tly pi tchmy mo-vi ngten
Ta day' sma rchnea-re rhome.

Absurd as it looks it represents fairly the diction of a singer. The problem is to prolong vowels to get a good legato and to pronounce consonants easily and accurately and not disturb the flow of tone. If this is accomplished the hearer can follow the sounds and separate them into intelligible words.

TILLY KOENEN

TILLY KOENEN, A MISTRESS OF LIEDER SINGING

IT was several years ago that Miss Koenen first became known to American audiences, and earned a full measure of appreciation for her splendid artistry as a singer.

She is of Dutch parentage, and was born on the Island of Java, where her father was commander of a regiment of artillery. While she was still a child her parents returned to Holland, where her musical education was commenced. The first studies were on the piano, the expectation being that she would enter upon a musical career as a professional pianist. At the age of eighteen she won first prize at The Hague for piano playing. But about this time the unusual quality and beauty of her contralto voice became evident and it was decided that she should prepare for concert singing under

THE HERMAN KLEIN PHONO-VOCAL METHOD

Based upon the Famous

School of Manuel Garcia

Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

Mme. Cornelie Van Zanten. Today she is ranked as one of the foremost concert and lieder singers of Europe, not only because of the beauty of her voice, but because of her evident musical intelligence, breadth of delivery and temperament.

Miss Koenen is again in the United States and but lately returned to the East from a trip through the Western States. During this tour she gave a concert at Hutchinson, Kan., a city which is distinctly musical, the seat of an annual music festival and competition which has drawn noteworthy artists and choral organizations. One of the local papers, after Miss Koenen's concert, discussed her work in terms of the warmest encomium. "She is the finest contralto Hutchinson has ever listened to. . . . Besides perfect method, this Dutch singer, from a land that went mad over the gayest of spring flowers, has temperament, spirit, and personality. Only one with a merry heart could have sung the Dutch children's songs as she sang them. She sang to an audience that loved and warmly applauded her wonderful gift of song, her big, warm, golden tones."

ON THE ART OF SINGING

BY MAX HEINRICH

The art of singing and the art of teaching or training the natural voice is precisely what the name implies: An "art." It is not an exact science, else all voices could be trained alike.

Nature, however, makes the thorny path of the student of singing easier, insomuch that she places some of the first essentials at the instant disposal of the possessor of the "natural" voice. These are: An ardent desire to sing (and to sing in tune), the gift to acquire a correct management of the breathing apparatus (thereby developing an artistic emission of tone, in volume and sonority), and the capability of distinct and finely artistic enunciation.

There are, however, three far more important factors still wanting, which are not so frequently bestowed by Nature, namely; Intellect, poetic conception, and musical ability.

Can a teacher develop those greater essentials in a student if he himself possess them not? Certainly not.

It is a grievous pity that the aim of so many students and teachers at the very beginning lies in the direction of developing a voice of volume, imagining that a loud voice is the most important goal to be reached, is, in fact, the very alpha and omega of great and artistic singing. But a powerful voice does not always imply a powerful brain or a fine intellectuality.

Least of all is too powerful a voice the best vehicle, the finest material for the cultivation of the highest form or art of singing, which is—and always will be—the cultivation of the classic song.

Nor, indeed, is the voice of greatest volume always the most highly admired voice in opera, oratorio or concert, or the most virile and resonant one, capable of greatest carrying power.

The classic song (and be it here stated that all good songs are "classic," be they ancient or modern) awakens and develops in the student the finer characteristics of his art and his personality; it develops in him a noble expression, a refined and poetic, as well as musical, emotion, and a truly artistic temperament. And the control of it!—*Musical Courier.*

INTERPRETATION BY MEANS OF SONGS

BY FLORENCE EUGENIA EDWARDS

Last year I removed from an eastern city to one on the Pacific Coast. I had been teaching the piano in the former city for some years, but feeling the need of a complete change in climate and environment I decided the Pacific Coast would be the best place for carrying out my purpose.

At first the wonderful natural beauties of Southern California and the newness of everything proved a sufficient stimulus to work; but after a time I began to miss the musical atmosphere of a conservatory town and the many advantages of a great eastern city in the way of concerts, lectures, etc., to which I had always been accustomed.

One day I happened to read an article on Russian music and musicians in an old copy of The Musician, and became so interested that I procured a book of Russian songs and immediately proceeded to study them. Behold the wished-for inspiration! I played and sang those songs until I was fairly steeped in them, and to my surprise I found that I could interpret the "old masters" with a clearer and deeper understanding of their meaning and beauties than ever before.

So I determined to try an experiment. One of my pupils is a child eleven years of age, very gifted and intelligent. I began with her. I chose Schubert's song, *Hedge Roses*, as the music is simple and the words easily comprehended by a child. First I read the words very carefully to my pupil; next, although I have no voice worth mentioning, I sang the song through without accompaniment. Then I had the child play the melody until her interpretation of the words of the first verse was quite satisfactory. After we had played it together, I playing the accompaniment and my pupil the melody an octave higher than written so as not to conflict with the accompaniment, we proceeded to study the *words* of each verse in turn and interpret *them*. The result was most gratifying.

CONDUCTED BY HELENA MAGUIRE

A CHEST OF VIOLS

Until late in the 17th century, the stringed instruments used for the highest types of chamber music all belonged to the family of viols. The violins, at first, were only used to play dance tunes and light music, to make people "jocund and sprightly." They proved better adapted for orchestral purposes than the viols, because their stringing and tuning is simpler, their tone more pungent and powerful. With the growth of the orchestra and the resultant demand for violin players, professional musicians abandoned the viols, which became obsolete. Still the viol had a clearness, a charm and technical resources which the violins do not possess, and which render it imperative that the viol should be revived. A complete "chest" of viols consists of six instruments: two trebles, two tenors, and two basses.

A poem by Mr. John Todhunter, inscribed to Mr. Arnold Dolmetsch, who has labored for years to revive archaic instruments, gives a very delightful picture of viol music. Below are three of the seven verses of which the poem consists.

"Old Music, and old Instruments....and O
The harmony they make,
As, touched by Music's magic wand, the Bow,
One after one they wake,
Voice after Voice, as Sister answers Brother,
Answering each the other,
Sedately as the Muses on their lawn
Under the Pines of Helicon!

"A Chest of Viols, every one the dream
Of some old craftsman's heart!
And each a well-trimmed Argosy doth seem,
Planned by his careful Art.
Her burden rich to bear, of mellow sound,
From the profound
Abysses of the Spirit, where Music dwells
Beside Delight's most hidden wells.

"O rare old Music, brave old Instruments,
And quaint old masters writing,
Whose art in that severe old style invents
New methods of delighting!
Here Harmony waits on fair Melody
Most sisterly;
And nobler, tenderer, lovelier Music, none
Hath ripened under English sun."

THE LITTLE "NEW YEAR SPIRIT"

BY ELIZABETH A. GEST

It was the last day of December and Polly had just finished her practising.

"Well," she said, as she put away her music, "this is the last day of the year, and I cannot play much better than I could last year."

She threw herself in the big armchair, and looked out the window at the falling snowflakes, and the room was very quiet.

"I wonder if I will ever learn to play perfectly? Oh, I simply must, and I *will*."

"Good for you," said a small voice. "You are just the person I want to see," and a tiny elf came towards her, with a notebook under his arm, and a pencil over his ear. "May I stay and talk to you?" he asked her.

"Certainly," answered Polly, "but do tell me who you are?"

"Oh, don't you know me? I am the New Year Spirit, and I am very, very busy today," he said, as he seated himself beside her. "I am collecting New Year Resolutions, and cannot stay more than a few moments. So hurry up, and give me yours," he said in a very businesslike way.

"Oh, I do not believe I have made any," answered Polly.

"Well, make some then," he said, as he opened his big notebook and took the pencil from behind his ear.

"But I do not know where to begin," complained the little girl; for the elf had taken her so by surprise that she could not collect her thoughts.

"You take music lessons, so begin with that. Hurry up," he commanded. And Polly made Resolution No. 1.

"I promise to practise scales every day."

"Good," said the little elf as he wrote it down. "Now, No. 2."

"I promise always to practise before I go to play," continued Polly earnestly.

"Good," said the little elf. "Go on."

"I promise to do just what teacher says."

"Fine," said the little elf, as he wrote.

"I promise to memorize all my pieces."

"Fine," said the elf. "Fine. Do you think you can keep all these resolutions?" he asked her.

"I certainly intend to," said Polly solemnly.

"Good. You will learn to play; don't worry. Your teacher will not know you when you go for your next lesson. But, dear me! how late it is, and I have much to do. Really I am as busy the night before New Year's, as Santa Claus is the night before Christmas. But then, you see, we both have all year to rest," he told her.

"Don't you ever come to see people at other times?" asked the little girl.

"Well, no. People don't want to be bothered with me at other times. Would you like me to come to see you?"

"Indeed I would," said Polly.

"All right. I will come in a month and see how you are getting along. Good-bye."

And Polly opened her eyes and found that it was tea time, and she wondered if she had been dreaming. "Perhaps I have," she said, "but I certainly *will* keep my resolutions, and then I know I will learn to play beautifully."

———*———

BETTY'S DEBUT

BY M. R. BURGESS

Betty was at the piano, practising hard. Her short chubby fingers were flying over the keys, and her fat little legs were stretched to their fullest extent to reach the pedal. Her two stubby, yellow braids kept bobbing up and down her back, and her whole active little body was in motion with her great efforts to play her piece well. For Betty was practising for her first recital, and her papa had promised her a dollar if she played her piece through without making one mistake.

Betty was eight years old, and had been taking music lessons almost a year, but this would be the first time that she had ever played in public, before grown-up people.

Betty's papa and mamma had received invitations that morning which read like this: "The piano pupils in Grade I will give a recital at the home of their teacher, on Friday afternoon, from four to five o'clock. All parents and friends are invited to be present." Then came the program; Betty's piece was the third number, *The Minuet of the Disobedient Fairies*. Miss Elizabeth Brown.

When Mr. Brown, Betty's papa, came home that night, Mrs. Brown showed him the program and invitations. Then it was that Betty's papa had taken her on his lap and had told her that he would give her a silver dollar if she did not make any mistake when she played her piece, for Betty's father was very proud of his little daughter, and nothing pleased him more than to have Betty play for him the little melodies she had learned.

So Betty practised harder than ever from then until Friday. A whole dollar all her

own! Why, she could get anything she wanted with so much money!

Betty's teacher had told her a little story about her piece; how the fairies had once been naughty and the fairy queen had forbidden their dancing that night on the green, but the little fairies had disobeyed her, and had all crept out when she was not looking, and while they were dancing so lightly and so softly that not a blade of grass stirred, suddenly their queen had rushed out upon them and had sent them all back to their home in the dell.

Then Betty's teacher had played the piece and Betty could see the fairies dancing just as plainly as could be, but when she played it herself, it seemed to sound far more like an elephant's dance than a fairy's. But she practised so faithfully, that at last anyone could tell that little fairies were dancing that minuet, so lightly and gracefully did they trip.

Friday afternoon soon came, and Betty and her papa and mamma, together with other little girls and their papas and mammas, were in the big room with the big piano at one end. The little girls all in fresh white dresses sat at the front, in the order in which they were to play.

Then the program began. The first little girl went to the piano, played her piece and came down again, all in about half a minute, and everybody clapped their hands. Then came the next little girl who sat by Betty. "Oh, dear, I'm so scared," she said to Betty as she started to the piano. Then such a queer thing happened, Betty thought, for after the little girl sat down on the piano stool she did not play, but jumped down all of a sudden and came running to her seat. "Oh, I forgot what to play," she sobbed to her teacher, who took her in her arms and tried to comfort her; Betty herself felt very sorry for her, but she could not understand what made her forget her piece.

It was her turn now, so she marched up and took her place on the stool, not forgetting first to spread her white skirts on either side, as her mamma had told her. But she felt very strange all at once; her fingers seemed so stiff and cold, and her feet trembled so that she would certainly never be able to pedal. What could she do? How awful it would be if she should cry like that other little girl!

"Think of the fairies," she heard her teacher whisper.

Oh, yes, the fairies! Betty began to play and forgot everything but making the people see the little fairies come stealing out and dancing so quietly together; and how right there, at that big chord, the fairy queen caught them and sent them all home to bed.

Then Betty was through and ran straight down to her papa and mamma, while all the people clapped their hands as if they never would stop.

"Oh, papa, tell me, did you see the fairies dancing?" Betty cried.

She had forgotten all about the dollar.

AN HOUR WITH SCHUMANN

BY ELLA M. POWERS

To many teachers of the piano, the thought of a recital seems like a mountain. To other teachers the time required for the preparation almost gives an attack of nervous prostration. Many teachers never give a recital because they say, "It does not pay." Others say, "It takes too much time."

My experience has been that it does pay, and that a quiet hour with one's pupils does not take such a nerve-racking amount of time and strength. The pupils will remember and appreciate any little program you may plan.

My method may be interesting to some teachers who have never given any thought to the subject.

I decided to observe the birthday of Schumann with my pupils on September 13th. Note that I said "with my pupils," for no parents or friends were to be invited to the first recital. Several of the pupils had little self-confidence and, to them, it was enough to render a solo to each other. One of my pupils had been studying Schumann's *Träumerei* and *Romance;* a little fellow had attempted to master the *Merry Peasant;* a third had finished work on the one page *Clavierstück,* while another had devoted time and completed the *Spring Song.* These four short selections would not make a very long program so I decided that I would play to them the little *Slumber Song,* a selection from the grand cantata, *Paradise and the Peri* (I chose *Sleep on in visions of rest*). Then I also planned to play the brave, strong *Northern Song,* the *May Song* and *Convivial Song.* The selections which I chose were all simple, but they would give my pupils some idea of the character of the music composed by Schumann. Then, too, as Schumann was instrumental in bringing Schubert's works before the public, I added Schubert's *Rosamonde* to my own list.

I made no nerve-racking preparations. The day before the event I telephoned to the various pupils that the anniversary of the birth of Schumann would be the next day and I asked them if they would like to come to my home and hear some music written by Schumann. They were all delighted, especially the boy who was asked if he would play his *Merry Peasant.*

"Gee! I'd just like to play it, but it's a long time since I had that. I'll try it though. I guess I can do it all right."

Apropos of his remark I will say I have always urged my pupils to be ready at any time to play any solo which has been once completed.

In the meantime I prepared a short sketch of the life of Schumann—just a few facts to remember—similar to: "Schumann was born in Germany, September 13th, 1815. He composed many symphonies, sonatas, and pianoforte compositions to be played with and without the orchestra. His most famous cantata was called *Paradise and the Peri.* He died in 1856. His influence on the music of the present day has been wide." A few more facts were typewritten and ready to distribute to the pupils when they came.

I found in one of my Schumann books a list of rules for musicians. These were written by Schumann. I copied off several among which were: "Dragging and hurrying are alike great faults."

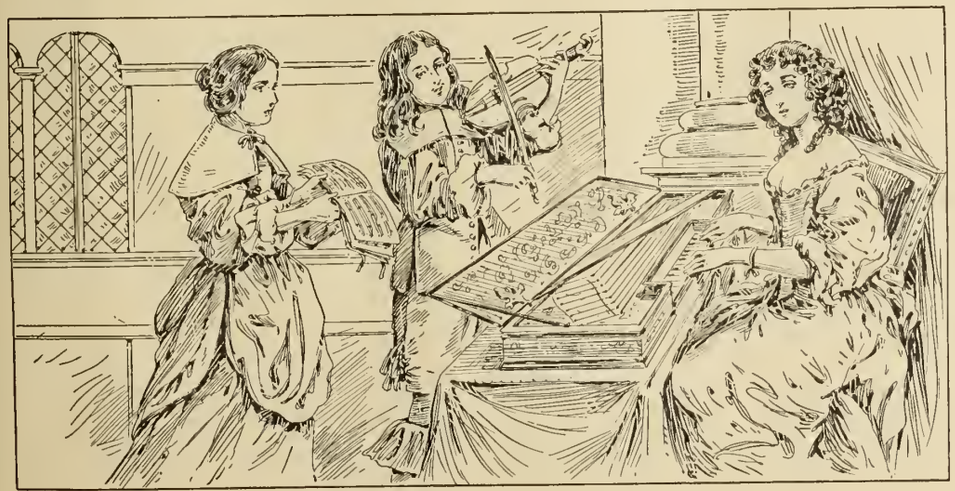
"Take pains to play easy pieces well and perfectly; this is far better than to render difficult ones in a middling fashion."

"Play always as though a master were listening to you."

"You must by degrees become acquainted with the more important works of all great masters."

About a dozen of these wise sayings were copied and I marked upon the slips the names of various pupils who were to read them.

How many of the young readers of THE MUSICIAN know the names of the instruments shown in the illustration below? To what period do they belong?



The children came and we had a delightful hour—at least, they said they enjoyed it. They were quite natural and free from the nervous strain which usually accompanies the formal recital. The parts assigned were read well and we talked informally about the composer's life and his good advice to musicians. The four children played their piano solos and I played mine. I rendered my own solos without notes except the number from *Paradise and the Peri*. I fully believe that example gives a far more lasting and deeper impression than hours of talking, and we know children and young people are all great imitators.

I placed a photograph of Schumann upon the piano and I passed around a large book which I own in which are many pictures of Schumann, his home, manuscripts, Clara Schumann, his room, etc.

At the next recital of that character we invited the Junior Class, then later some of the parents were invited, and at last all the parents were invited to the informal monthly recitals, the pupils doing more of the playing at each recital.

A MUSICAL DIALOGUE TO TEACH DEGREES OF THE SCALE

(Book rights reserved)

BY LAURA ROUNTREE SMITH

THE children stand in a semicircle holding cards upon which the names of the degrees are written. The Music Master enters.

MUSIC MASTER: Oh dear, oh dear, I am so tired.

ALL: Welcome, Music Master, why are you so tired?

MUSIC MASTER: I am so tired trying to teach the children, for some of them will not learn their scales. They do not know *do* from *sol!*

ALL: Oh, oh, oh, what strange children!

MUSIC MASTER: One little boy will not keep time, one little girl cannot tune her violin, one little boy will not learn to read notes, and one little girl cannot sing a scale farther than *sol!* When the teacher talked about degrees of a staff one child said, "*Tonic* is something you take out of a bottle!" How can we teach such children the names of the degrees of the scale?

ALL: We all will help you teach the children.

Sub means below, super above,
Musical things the children love,
Supertonic is above the tonic,
Subdominant is down below,
Musical names and musical signs,
The children like to know.

MUSIC MASTER: That is fine. Tell me all you know!

TONIC: I am the first degree of the scale.

DOMINANT: Here I come, here I come. I am very important in any key!

ALL: Go back, go back, you are out of place!

SUPERTONIC: Super means above and so I am the second degree, the tone above the tonic.

MEDIANT: I am the third degree, I stand mid way between, between—between—

ALL: Poor Mediant stutters so you will have to excuse him.

SUBDOMINANT: I am the fourth degree.

DOMINANT: Now it is my turn. I tell you I am very important.

TONIC: And so am I important, so am I!

LEADING NOTE: I am important too.

MUSIC MASTER: Hush! let Dominant tell his story.

DOMINANT: I am the fifth degree and a dominant chord is founded on my note.

SUBMEDIANT: I am the sixth degree.

LEADING NOTE: I am the leading note. I lead to the tonic. I am the seventh degree.

OCTAVE: I am called Octave or Tonic. I feel important for I have two names.

MUSIC MASTER: Very well said, but dear me, here comes the boy who can't keep time, and the little girl who can't tune her violin, and the little boy who won't learn his notes, and the girl who can sing only to *sol!* What shall we do?

ALL:

We have names 'tis very true, sir,
And we'll tell you what we'll do, sir,
Every day we'll sing and play,
Till children learn our names to say.
(Run off the stage.)

———*———

SKETCH FOR TWO LITTLE GIRLS (AGED 8)

BY ADELE SUTOR AND CAROLINE NITZKY STINE

BETTY: At our last musical party, Janet, you gave us a lesson in ——

JANET: *Concentration!*

BETTY: Yes, that was it. Thank you. What are you going to tell us today?

JANET: Shall I just talk about what I've been learning?

BETTY: Please.

JANET: Well, mostly, I've been thinking about phrasing. I think I can 'splain to you this way. A phrase is a part of a sentence. In a verse there are a number of phrases and you must learn to say them intelligently. That is you must not run your phrases together, or break them—if you can help it. Now—listen!

R. L. Stevenson wrote some little lines which I guess you know. I'll say them for you two times and two ways. Now see which you think is the right way:

A birdie with—a yellow bill
Hopped upon—the—window sill
Cocked his—shining—eye and said
"Ain't—you 'shamed, you—sleepy head?"

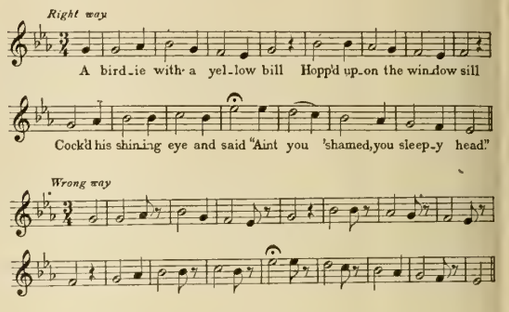
Now this way:

A birdie with a yellow bill
Hopped upon the window sill,
Cocked his shining eye—and said:
"Ain't you 'shamed, you sleepy head?"

BETTY: Oh; yes—I see now. What a difference it makes! Does it matter so much in music?

JANET: Just as much. I'll show you.

(Sings following tune or any other suggested by the teacher.)



Right way
A bird_ie with a yel_low bill Hopp'd up_on the win_dow sill
Cock'd his shin_ing eye and said "Aint you 'shamed, you sleep_y head"
Wrong way

BIRD CORNER

RUSKIN'S BEAUTIFUL CONCEPTION OF THE BIRD

IN *The Queen of the Air,* which is a study of the Greek myths of storm and cloud, Ruskin gives us the thought of the bird as a combination of cloud and wind; he says—

We have two orders of animals, the serpent and the bird; the serpent in which "the spirit" is less than in any other animal, and the bird in which the spirit is more full than in any other creature.

"The bird is little more than a drift of the air brought into form by plumes; the air is in all its quills; it breathes through all its frame and flesh and glows with air in its flying, like blown flames; it rests upon the air, it surpasses it, outraces it;—*is* the air, conscious of itself, conquering itself, ruling itself.

"Also, in the throat of the bird is given the *voice* of the air. All that in the wind itself is weak, wild, useless in sweetness, is knit together in its song. As we may imagine the wild form of the cloud closed into the perfect form of the bird's wings, so the wild voice of the cloud into its ordered and completed voice; rippling through the heaven in its gladness, interpreting all passion through soft spring nights, bursting into acclaim and rapture of choir at daybreak, or twittering through the heat of day, like little winds that only make the cowslip shake, and ruffle the petals of the wild rose.

"And so the Spirit of the Air is put into, and upon this created form, the bird; and it becomes, through twenty centuries, the symbol of divine help, descending, as the Fire, to speak but as the Dove, to bless."

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

THE MICRO-STRUCTURE OF BOW HAIR

BY JAMES SCOTT

THEORETICALLY the hair from which violin bows are prepared should be as durable as horn, yet, as readers are aware, frequent renewal of them has to be maintained. It will, therefore, be informative if I ascertain the reasons for the liability for such hair to disintegrate. Most of the hair used is from horses bred in Russia, and the remarks in this article refer to that kind.

A hair is derived from a cellular bulb situated deep down in the under skin. The cavity containing it is lined with a layer of skin cells, and these furnish the material—which is elaborated by the blood—for the development of a hair. New cells are continually being created on a level with the surface of the surrounding main skin, and the point of the hair is being meantime pushed outward. The oldest part of a hair is always the free extremity; and the newest is the neck just above the bulb.

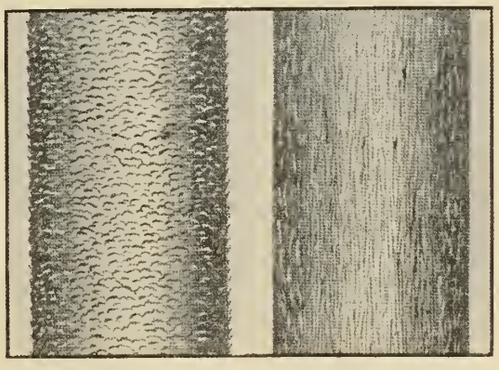
All animal hairs, no matter what may have been their source, are derived from the skin, the basic compound of which is a substance called keratin. This also constitutes the principal ingredient in nails, hoofs, horns, and bristles, and is susceptible to only a very slight extent to bacterial, chemical, and atmospherical influences, which are capable of rapidly destroying many other organic matters. The structural formation and cohesion of the particles of anything composed of keratin is responsible for the wearing out processes. In horn and nails the flattened cells are so densely compacted together as to comprise a permanent, almost indestructible substance. In hair the particles are not so rigidly fixed, and the whole object is flexible.

Upon magnifying a fresh clean hair we find that it appears as in No. 1. The effect of light and shade is responsible for making the sides appear dark, and the middle light. In the ordinary a pale hair looks like a fine, uniformly tinted object, but when it is examined under the microscope it discloses very distinctly the variations indicated.

The first obvious structural feature is the covering of scales, represented by the small curved cross lines which together constitute a kind of delicate mesh or network pattern. These scales are separable and infinitesimally minute, yet the utility of the bow depends on their presence.

Along the sides of the hair the free edges of these scales form a row of teeth-like projections not unlike, in figure, those of a saw. Of course, the hair is cylindrical, not flat; so that when it is turned sufficiently some of the lines which represent the net in top view become the teeth in side view.

Beneath these scales the material of the hair consists of fibres compacted in between one another. They can be seen if the hair is cut or torn lengthwise; but the best manner in which



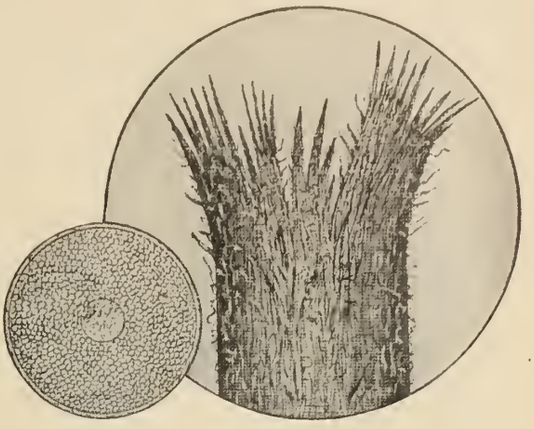
NO. 1 NO. 2

to disclose them is to lay a hair for a few minutes in a solution of caustic soda. Eventually the scales are dissolved off, and leave the under strata of fibres showing as in No. 2.

These fibres constitute the chief portion of a hair, and along their middle area—the part corresponding with the longitudinal center of the entire object—runs a tubular channel which may, or may not, be filled with pigment granules, pulp cells, or minute bubbles of air.

The core in either of these circumstances would be dark, but it often happens that the tubular portion is quite empty. In the case of the pale tinted bow-hair examined, some of them contained pulp, while others appeared to have a content of clear, horny matter. They were all semi-transparent or translucent.

Upon cutting a hair crosswise into thin slices we can verify the observations conducted upon the longitudinally placed hair. One can also gain a good idea of the structure by gluing several hairs to a glass slide, and cutting the ends with a sharp razor flush or level with the edge of the slide. By then magnifying and examining the latter in a strong light the details are disclosed as in No. 3. In that illustration we see the space indicating the core, or central tube, surrounded by the sections of the fibres which collectively resemble a sieve, but are solid and



NO. 3 NO. 4

transparent. Outside of all is the thin ring representing the scaly layer on the surface.

Reverting to the scales it ought to be pointed out that their free edges are directed away from the skin whence they grow. They can be felt during the following test: Grasp the ends of a long hair, and while holding it taut, drag it slowly and firmly across the lower lip, and you will distinctly notice a rasping sensation as the hair passes in one direction, but while it is drawn in the opposite one this will be absent. The feeling, which is strikingly pronounced considering the extreme minuteness of the scales, is occasioned by their edges catching in the sensitive skin.

Care must be taken during the experiment to avoid cutting the lip by moving the hair too quickly.

Elasticity may be noted by gently pulling the two ends of a hair away from one another.

It is the myriads of minute scales which enable bow-hairs to grip the strings. The scales, being hard and firmly set, act with ease, but they get torn away a few at a time, and expose the underlying fibres, which are loosened and hang outwards as limp and useless parts. Suppose a hair, fresh and prim, is passing with the scales perfect. As the edges meet the strings they serve as a rasp. In reverse order the hair travels smoothly; but there are always some with the teeth facing the strings. When the scales have worn off, the exposed fibres simply dangle against the strings and flop to and fro, as the bow is drawn backwards and forwards, without affording any particular amount of grip. In time they fray so much that the natural cement which has hitherto held them together is destroyed, and the entire hair snaps in the manner shown in No. 4.

Rosin, by getting beneath the edges of the scales, furnishes additional firmness to them.—*The Strad.*

WITH HUBERT LÉONARD

BY PAUL STOEVING

SOME PERSONAL REMINISCENCES

THE name of Hubert Léonard will be familiar to most violinists, not only as that of the composer of two fine works of studies (*Etudes classiques,* and *Etudes harmoniques*) and of many once very popular solos for the violin, but by reason of his having been the master of some of the most famous violinists of this generation, such as César Thomson, Henri Marsick, Henri Marteau, Ovide Musin, Henri Schradieck, and others, and among the dead, Maurice Dengremont, perhaps the most remarkable of the pre-Franz Veczey prodigies of the violin, who died after a brief and brilliant career in Rio Janeiro, in 1893.

At one time, with Massart, the chief representative of the Franco-Belgian School of violin playing in Paris, Hubert Léonard was indeed, thirty or more years ago, an outstanding figure in the annals of our art, tracing, as he did, his violinistic antecedents through his teacher Habeneck (a pupil of Baillot) directly back to Viotti himself, and representing in his style, perhaps in greater purity than any other famous teacher of his day, the best traditions of this incomparable artist.

As a youth of nineteen, after having completed the usual three years' course at the Leipzig Conservatorium, I arrived one morning, in October, 1880, in the French capital where my parents had sent me for the further pursuance of my violin studies under whichever celebrated master I should choose.

Being barred by my nationality from entering the Paris Conservatoire (it was but nine years after the Franco-Prussian war, and French national feeling still ran high against the victorious enemy, although I was not a Prussian, but the son of a staunch Hanoverian of the ante-1866 days), I had the choice of studying privately only with one of the three men most familiar to me by name, that is, Léonard, Charles Dancla, or Massart, providing either one accepted me as a pupil.

Although inclining to Hubert Léonard, the choice did not seem an entirely easy one until a week or two after my arrival I met an old French musician who said at once to go to M. Léonard, because, as he put it, *"Léonard est grand maître et musicien, et aussi fort au talon qu' à la point."** I may not have fully realized the significance of the second half of this comment, which expressed in a few words of an old practical violinist the technical features and versatility of the master's style. But I went the next morning to the *rue des Martyrs* in Montmartre and after a short interview became Léonard's pupil.

Henceforth, for a whole year, regularly once a week, I boarded one of the old horse 'buses which rumbled along the Paris streets from *le Quartier Latin,* across *le Pont du Michel,* through *le rue St. Denis* to *la Bourse,* and from there to Montmartre. It was before the days of electric trams and underground railways; only in some of the broader streets could be heard the foghorn-like signal of the horse trams; and unforgettable are the equilibristic feats necessary to climb the steep ladder which led to the *Imperiale* of the vehicle when the inside was full, particularly on rainy days. One had to hold on to ladder, umbrella, violin case, and music roll, and, sometimes, the hat too, at the same time and while the 'bus was in motion, and thus for some anxious seconds hang suspended between heaven and slush.

The lessons took place in a tiny study with one window facing the court yard, and sparsely furnished, with a good-sized table, a few chairs, a music stand, and a chest containing in its lowest receptacle a number of violins, put in *pêle-mêle,* with and without cases.

* "Léonard is a great master and musician, equally strong at the frog and the point."

The maitre would sit by the table, violin in his hand, before him a thick manuscript volume in which seemed to be entombed the second violin accompaniment by himself of every conceivable solo and study. I often wonder what has become of this foliant; into whose hands did it fall at the master's death! It should be a valuable possession, not only from an autograph hunter's point of view, but as a contribution to violin didactics.

I do not know whether Léonard played the piano at all; I do not recollect one as being in the room. At all events he never used one for accompanying, but sat as we would picture to ourselves the old maestros, Tartini, Pugnani, Viotti, and Spohr, etc., in the intimacy of their teaching studios, before the days of a many-sided conservatory training. He believed in, and confined himself to a second violin accompaniment when a solo or étude was, in his opinion, ripe for being rendered thus. Until then, with the violin in his hands, he unceasingly watched every movement of the pupil, commenting, correcting, and demonstrating. So fastidiously scrupulous was he on the point of demonstration that one day, having squeezed a finger between the door which prevented him from playing as well as he thought he should, he sent me home without a lesson amid profuse apologies on his part for causing me the inconvenience and disappointment, although he was financially the loser by this accident.

And this reminds me of the sensitive pride with which he would treat the monetary side of our relation. When first I handed him his fee (the gold pieces neatly wrapped in paper), with a kingly bow of the head he motioned me to leave it on the table. After that I made a point of depositing it there with something of a clandestine, motioning look. By his affable smile I learned that he appreciated this little regard for his artistic foible. In my teaching experience I have become accustomed to other methods: some of my American pupils would count before my eyes, with painful thoroughness, the dollar bills and beg me to re-count them and give a receipt for the amount.

Once a week, on Saturday nights, the Léonards had their *Soirée musicale,* to which the Maître invited me after I had studied with him for some time. About half past eight the guests, many distinguished in the Paris musical and artistic world, would drop in, not in evening dress but informally, and assemble in the salon for the musical treats which their host, with a few artistic associates, invariably supplied in the form of chamber music quartets, trios, and sonatas, etc. I remember hearing the master play, among other things, the *Rondeau* by Schubert, and the more important sonatas of Beethoven. But he was especially fond of the larger, then modern, works of Raff and Brahms. Among the frequent guests and contributors to the programs was Mme. Pauline Viardôt-Garcia, whose singing of *Ich grolle nicht,* and the *Erlkönig* still linger in the memory of those who heard her in these songs; also her son Paul Viardôt (also a pupil of Léonard); Arabella and Benjamin Godard, and others whose names I have forgotten or was too careless to ascertain. It was at one of these

evenings that I heard for the first time, then just published, Gabriel Fauré's charming little *Berceuse,* played on the 'cello.

At about half past ten o'clock coffee and cake was brought in to the cosy little parlor adjoining the studio, and Mme. Léonard *née* Garcia (a sister or near relation of Malibran-Garcia), a charming and still very handsome lady, posted herself at the head of the long table and poured the coffee, with a smile and a kind word for everyone who came crowding around her for his share of the aromatic drink. It was all so simple, unceremonious, and hearty. Everybody chatted, laughed, and seemed happy. The master himself was perhaps one of the quietest of the company and rather in contrast to the vivacious Mme. Léonard. But then he was sixty-two years old and rather troubled with gout. Judging from his luncheon of a glass of claret and a sandwich which, as I had my lesson at one o'clock, usually was standing untouched on the mantelpiece, awaiting his pleasure, his habits must have been frugal enough, at that time of life at least.

As a teacher he was unfailingly courteous and kind, not given to much talking, but taking pains, nevertheless, to make his meaning clearly understood. To unresponsive students, however, I could imagine him to have been stern. His face and manner expressed something of a military sternness, not to say hardness, in the man, anything but *bonhomie,* and his faultlessly stiff, erect attitude in playing was in perfect keeping with this impression.

From his compositions for the violin (except a few like the *Études harmoniques* and his fine edition of Corelli's *La Folia*) one might infer that he leaned altogether to the virtuoso side of his art. In his younger days, the time of his concert tours in the forties and early fifties, he doubtless did; but at the time of which I write just the reverse was the case. With seeming reluctance, as though he were half ashamed of the dubious early fruits *à la Prûme* and *d'Artôt* of his music, he consented to my studying with him two or three of these solos, among them the *Souvenir d'Haydn* in a revised edition published by Richault in Paris (the one formerly played a great deal by Ovide Musin).

Like so many Frenchmen of all musical creeds and convictions Léonard entertained an unbounded admiration and reverence for J. S. Bach, whose works, in the words of Schumann, he call *le pain quotidien du violiniste.** An excellent edition by him of Bach's six solo sonatas, also published by Richault, which deserves to be better known than it is, bears testimony to this loving respect for the genius of the great Leipzig cantor.

But besides these and of course the classical master works for violin, the concertos by Beethoven, Mendelssohn, Bruch, etc., he cherished in a special degree, the name, memory, and works of Viotti. And I must say he succeeded splendidly in kindling a like love and admiration in me. Among my most vivid recollections of that time are his demonstrative renderings of portions of Viotti's concertos, No. 24 in particular, and No. 20, both with his own brilliant cadenzas (published by Schott and Son). With these and similar works he seemed to be most in sympathy; in them his style shone to its greatest advantage

OLIVER DITSON COMPANY
150 TREMONT STREET, BOSTON, MASS.

For compositions like the concertos and solos by Paganini or the lesser fireworks of Ernst and Bazzini, etc., he perhaps lacked the enormous, dare-devil technic to which we have since become accustomed through a younger generation of violinists. Although even in his advanced years and after a long abandonment of the concert stage his left hand technic was still quite adequate to any demands laid upon it by such works, and his intonation in the most difficult double stopping scarcely ever at fault, his main strength lay, as I now think back comparingly, in his consummate command of the bow, especially in the sense of the older classical French School of violin playing and its traditions which looked to Viotti and his immediate successors for the embodiment of violinistic perfection.

His *sautillé* was not so scintillating as I have heard it with far inferior players, and he used it rarely, preferring the short, crisp *detaché* which Vaillot calls *le perlé.* His spiccato sounded less brilliant than that of many other violinists; but his accentuation of broad passages, his easy mastery of the bow at all parts and in every tone-shade, in *detaché* (*grand et trainé*) and *martelé* his *vervé, élan,* and finish were incomparable and fully justified his violinistic fame. His springing arpeggio, tremolo, and *à ricochet* likewise had more than ordinary power and clearness, and he played with the utmost delicacy when needed. In addition he commanded a staccato with both the up and down stroke, which, in such perfection, I have rarely heard before or since. When tuning up, by way of an improvisation (for he always seemed to make light of this particular accomplishment), he would occasionally roll up and down the whole length of the bow, a string of pearls, one like the other, without a perceptible jerk or break at any part of the stick. It was not like the staccato of Henri Wieniawski which, I remember well, sounded more *martelé,* more compressed, *serré,* "steel-like," as it were. Léonard's staccato was more elegant, easy, natural, without any suggestion of effort from beginning to end, such as I imagine De Bériot, Ernst, and Sivori to have had, and of modern players very few can claim.

In talking one day of the difference between violinists of the German and French and Franco-Belgian Schools, he made the interesting remark: *"Les violinistes Allemandes ont beaucoup de méchanisme et jouent avec d'expression, mais ils manquent du stile et de l'accent."** He did not mean by German violinists Joseph Joachim, for whom he had the greatest admiration and who, it will be remembered, had Joseph Boehm for a master, a pupil of Rode; nor did Léonard refer to any of the best pupils of Joachim. He meant rather the old school of Spohr which this comment of the Belgian maître fits indeed admirably, if by style and accent be understood what Léonard wished to convey, that is, the traditions from the great classical old masters made, as regards bowing, the means of interpretation and expression. The work of the bow was ever uppermost in Léonard's sympathies and consideration. Typical of this attitude was his saying to me one day in pointing to his right arm: *"Viola l'artiste,"*† and pointing to the fingers of the left hand: *"Ce ne sont que des artisans."*‡

He always insisted on a comparatively low position of the elbow, but while advocating flexibility of the wrist without too great looseness, which is incompatible with a ready and effective accentuation, he endeavored to develop to the utmost the strength and efficiency of the forearm as the prime factor in the art of bowing. There was, I must add, nothing of the drill-master in him; he always subordinated technic to, and made it serve musical ends. For the acquisition of mere technic, therefore, other teachers might have been considered better, in the earlier stages of a student's development.

Nor was he in any sense pedantic. Whether old or new, classical or romantic, deep or shallow, easy or difficult, the good in every class of composition, even if it did not exactly appeal to him, found in him an unbiased, faithful, and eminently fitted interpreter. His teaching material for this reason was drawn from all schools and all masters, the old Italians, Corelli and Tartini (of whose *Trillo di Diavolo* he issued an especially fine and historically correct edition), with Viotti, Rode, Kreutzer, Paganini, and Bach, etc., following, as well as Vieuxtemps, Wieniawski, and Sarasate, etc. With regard to Wieniawski's *Souvenir de Moscou* (second variation), by the way, he claimed, with just a little justifiable pride, in his *Souvenir d'Haydn* the priority for the effective use of interspersed harmonics which mark the theme.

Among the many things for which I have reason to be grateful to this master of style was also his having taught me the use of *mezza voce* playing in both cantabile and passages, an art which is scarcely understood, much less practised, by the majority of players nowadays, although it is one of the most highly to be esteemed of the Viotti traditions. A large, loud tone at all cost has become the war cry of violinists, instead of a tone which aims higher at beauty and variety, and reveals in the subdued quality of the true *mezza voce* an effect as exquisite, intimate, and restful to the ear as to the eye the *clair obscure* in a Rembrandt picture.

* "The German violinists have very much mechanism and play with expression; but they lack style and accent."

† "Behold the artist."

‡ "These are only artisans."

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

THE PHOTO-PLAY ORGANIST

BY H. C. GERWIG

HIS WORK

[The following article is enough to turn the orthodox organist's hair white; it will serve its purpose, however, if it sets him to thinking. A new instrument and a new style of playing are here sketched. While it is not at all likely that the church organist will ever steal the tricks of his (at present) outcast cousin, there will be a definite reaction of some sort on the staid and decorous church organ and on the amiable, placid, and dignified gentlemen who play it. Just what that reaction will be no one of us is clever enough to forecast.—H. C. M.]

In this era of enlightened life all roads lead to the "movie show." Modern theatres, throughout the land, are offering the silent drama as a more popular mode of entertainment than the legitimate. Moreover, they are successfully catering to all classes of people. Witness the long double line of motor cars outside the place where Mary Pickford cavorts in her latest vehicle. Go inside and notice the many empty dinner pails and lunch boxes awaiting their owners' exit. The beauty of it is that all sorts of people housed at one and the same time forget their own importance, so absorbed are they in the problem on the screen, be that what it may.

Truly there is no more democratic institution than the modern photo-play theatre. And all this at a cost of ten cents or thereabout.

The modern house of the lighted screen spares no expense in equipment. There are seats in excess of a thousand; there is every convenience for patrons, the most expensive projecting machines, aluminum screens, and feature films are used; and, last but not least, a modern pipe organ, frequently with special registration, is installed.

The use of this king of instruments with motion pictures is one more proof of Spencer's "survival of the fittest." In the early days an automatic piano sufficed to relieve the silence of the drama; then came the male or female pianist whose chief claim to fitness was an ability to "rag" all sorts of music from Tosti's *Goodbye* to Handel's *Largo*. After that was added a vocalist or a violinist who rendered occasional pathetic solos in weeping parts of the picture, and, finally, some places adopted an "orchestra" of five pieces or more—an expensive item on the pay roll—consisting usually of players unable or unfit to secure employment elsewhere, and ordinarily very unwieldy for co-operation with the pictures.

At this juncture some brilliant mind, working on the basis that all of the aforesaid music was too conspicuous, detracting from the picture rather than adding to its realism, conceived the idea that a pipe organ would serve, if properly handled, to enhance and beautify many episodes in motion pictures.

The success of the pipe organ as an "intensifier" of photo-plays is even now a matter of history. In the present writer's city alone not less than a dozen instruments of no small dimension have been installed. Many more houses possess "near" pipe organs which, of course, are advertised as the real thing.

But not so great is the history of the real photo-play organist, although his "near-so's" can be found in abundance. The real photo-play organist is one of a rare species, a combination of artist and student, knowing much but able and willing to know more, a good memorizer and improviser, with a quick eye for the picture and another for his music, and, above all, temperamentally nervous and susceptible.

He should be able to interpret the music score for any instrument or set of instruments. Above all, his organ translation of piano music should be a subject of special, constant study that it may lose none of its original character and yet be organistic and attractive. Impossible as it may seem to the church organist—and ridiculous—this can be done on the modern organ with almost all piano music from the syncopated songs and "rags" of the day, through Chaminade to Chopin, and even much of Liszt. Certainly much change must often be made in the figuration and ornamentation of the original text, but not necessarily at the cost of its original character. Perhaps seventy-five per cent of all music suitable for photo-play accompaniment can be obtained in score for piano only.

Again, the real photo-play organist must have at his instant command a great fund of generally known melodies, old and new, popular and classic, patriotic and pathetic, from opera comique and grand opera, wedding and funeral music, child songs, etc. Episodes for which such music should be used are frequent.

Just here comes the opportunity for the organist to show that he is fitted for photo-play accompaniment. Many more there are who will not "stoop to conquer" than there are who will, but the latter class constitute that rare species, the real photo-play organist. He can, by the use of just the right melody at just the right time and in just the right way, greatly "intensify" the picture. He can send his audience home with an indelible memory of the picture and, incidentally, he should earn an increase in salary.

But he must be exceedingly awake to make successful use of these opportunities, for they knock but once, then flit away.

Another suggestion which the writer of this sketch has found will particularly please motion picture audiences—a well-known melody carefully chosen for its fitness, when repeated at recurrences in development of a given episode, will contribute more and more to the realism of that episode until that episode, at its climax, will fairly "live" through the medium of that melody. This is true of episodes of various character but notably so in the development of a love affair, and love affairs are many in motion pictures.

In other words, a *motif* for the picture is just the thing, but it must be well chosen to produce the desired result. For example, Balfe's song *Then you'll remember me,* from *The Bohemian Girl,* and Mendelssohn's *Spring Song,* are both highly appropriate motifs for a love affair but emphatically not for love affairs of a similar character.

On the other hand, it is a fact that some pictures are "unplayable" from a musical point of view, that music does not exist which will contribute one iota to their realism. At such times the real photo-play organist will remember that his music must not, by undue prominence, intrude upon or detract from the picture. Many are the organists who "sin" on this point, working away with might and main, to interest the audience in his music because he is unable (and sometimes unwilling) to be musically interested in the picture.

Yet again there come periods in some picture where, although melodious music fails utterly, harsh discordant, unmusical effects will assist in a greater realism. Violent storm scenes, catastrophes, battle scenes, tragedies, etc., belong under this head. The overture to *William Tell* is an excellent number for storm or other violent effects, but the poor thing is now so much overworked that its character is, perhaps, wasted on much abused audiences. For episodes of extreme violence, particularly when of long duration, the present writer uses only a single soft reed stop (the Vox Humana answers well) with all organ coupled, and all couplers drawn proceeding to play on the Great Organ with Swell shades closed, using augmented and diminished chords in connection with rapid chromatic progressions in a *Molto agitato* manner. Frequently and fitfully the crescendo pedal should be thrown on and off, sometimes suddenly and again by spasmodic degrees. No attempt at melody need be made but rather should be avoided with the idea of producing tragic, unreasonable explosive effects from the softest organ tone to the fullest. The tremolo may well be used. Caution must be exercised that the Full Organ is sparingly and only intermittently brought into play, or the audience will gape at the organist instead of the picture.

Ability to improvise is indispensable to the real photo-play organist. On any given theme or without a theme, he should be able to offer attractive variations with modulation in various major and minor modes. He should be as familiar as possible with the rhythms and harmonics of various nations, English, German, French, Spanish, Hungarian, Oriental, Indian

. For example, with an Indian episode on e screen he should be able to invent an appropriate melody in proper rhythm. Pedal point provisation is highly fitting for an episode of stained interest. Hymn-tunes and café music ust sometimes be improvised in quick alternaon. Parodies on immortal melodies, the Lohengrin *Wedding March,* for instance, are occaonally necessary and desirable.

In the last analysis, the real photo-play organist need not be born—he can be made rough diligent application and much experience. He must be primarily a student over gain, although already an artist at the organ. e must be susceptible and always alert. He ould study his pictures through with notebook in hand before attempting to play for em, even then mistakes in cues will occur. nd finally he must be able to "live" in the cture and describe that "living" at the organ eyboard. Indeed the real photo-play organist olds a man's-size job, since his work is not utine.

—*—

THE FIRST YEAR'S ORGAN STUDY

BY WILLIAM REED

Those who purpose taking up the organ should ave had some foundational piano-training and, so, possess a certain efficiency in sight-reading. ailing such preparation, time will be lost, vexaous delay, and discouragement must inevitably folw; all this hindering reasonable progress.

Presupposing, however, some previous qualificaon, a well-systematized plan of organ study soon ecomes fascinating to those who mean to stick to ; and only such should consider it. The organ not for the *dilettanti.*

Care and thoroughness in all details during the rst year's work are all important, considering the act that slipshod habits contracted during this eriod may seldom or never be entirely eradicated. his is largely because no other instrument offers o many pitfalls to those whose enthusiasm outuns their concentration; to which may be added he temptations to experiment and amuse oneself, nore especially at first.

Here are some suggestions, deduced from my wn experience, which will interest both pupils and eachers, and will help in the laying of a pure and olid foundation. They can be applied in connecion with the use of any good organ method or ook of exercises.

THE MANUAL LEGATO

The first five or six weeks should be exclusively levoted to the manual *legato* and its acquirement *s a habit.* For the time being, a small reed-organ will be found sufficient for the purpose. Commencng with the usual 3rds, 6ths, 8ths, etc., the pupil hould proceed by way of: 1, Chants; 2, Hymnunes; 3, Chorales; 4, Voluntaries for the Manuals, o smoothly-written anthems, care being taken in he selection of all such as to the avoidance of impossible extensions.

This study of the *legato* must be regarded as the nain thing, not only during this stage, but, also, or some considerable time afterward.

AT THE ORGAN

The pupil is here told a few necessary particulars nd restricted to a specified registration for practice purposes, proceeding to learn the pedal-board along the usual lines of distances and intervals. Then scales. I have never found constant scalelaying to be, in itself, of any permanent advantage. It is advisable, of course, to *do* the pedal scales and to play them through occasionally. But f continued as a daily exercise for long, they tend to stiffen the general poise of the player, as well as to stereotype their own treatment. Organ music shows comparatively few examples of complete pedal-scales, the special treatment of such varying according to the manner of their entry in nearly all cases.

Until the pupil can, without looking, find his way with reasonable certainty over the pedal-board, no manual additions should be attempted. This restriction is in reality a time-saver. Once achieved, however, the combinations will be:—

1. R. H. and PED., 2 and 3 parts.
2. L. H. and PED., 2 and 3 parts.
3. R. H., L. H., and PED., 3 and 4 parts.

Too much importance cannot be attached to the value of exercises for L. H. and PED. This combination constitutes the crux of the independence of hands and feet, the R. H. being a more pliable addition.

In pedal work, too, the *firm tread* should be cultivated as a definite touch, the object being a controlled flexibility of the entire foot, especially as regards the pivotal facility of the ankle joint.

Once well launched on combined manual and pedal work, the pupil would do well to begin some thinking and observation for himself in regard to fingering and pedaling.

Choosing short examples of three- and four-part writing, he should, *at the organ,* make these and submit his work to the teacher.

This plan is strongly to be commended; it will bring speedy and excellent results, indicate possibilities, and the fact that individual convenience is the final test in purely technical matters.

All this time, and from the beginning, two points must be simultaneously kept in view, namely: clearness and phrasing. They are distinctly important factors in the foundation both of manual and pedal technic. The pupil will now gradually pass on to the playing of preludes, postludes, etc., in the contrapuntal style, appreciating, as he proceeds, the principles of ordinary registration and, with them, much concerning organ structure itself.

Approaching the working of the swell pedal, its use and abuse must be practically demonstrated by the teacher—its use (almost mathematically) as a graduating means of light and shade, to be kept in reserve; and its abuse as a cheap and often an unconscious habit.

If the above scheme is faithfully followed, a satisfactory year's work will be rounded up by the study of several of Bach's *Eight Short Preludes and Fugues* in the following order: F, B♭, G minor, etc.

LESSONS AND PRACTICE

During the period considered above, two weekly lessons should be taken. These should not exceed forty-five minutes. Half-hour organ lessons are insufficient, while the full-hour lessons are for the more advanced.

Practice should occupy, at least, one hour and twenty minutes daily, the lesson day included. Something, however, depends on the pupil himself and an economical use of the time. On this point, the teacher should be as exacting as on every other.

The foregoing succinct outline of a first year's organ study will, if carefully carried out, produce results of lasting value, and clear the way for not only pupils of average aptitude but, also, for those of special ability who may need some wholesome restraint to leaven their ambitions. All, alike, will

INTRODUCTION RATES — ONLY 3 CENTS FOR A SAMPLE COPY

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEM: WOMEN'S VOICES

BRACKETT, FRANK H.
No. 12,784. **Led on** $0.12
A short, easy anthem for a three-part chorus of women's voices, with accompaniment for organ. It is unusually melodious and works up with increasing interest to a strong closing passage.

SECULAR: MIXED VOICES

PETERSON-BERGER, WILHELM
No. 12,869. **Flirt song.** Op. 11, No. 7 ..... .12
A delightful number in the Norwegian folksong style, with obbligato solos for tenor and soprano, humming passages, imitative of the pipe and drone bass, making a distinctly novel and attractive choral number.

No. 12,868. **Little flower.** Op. 11, No. 5 ..... .12
In Norwegian style, with a characteristic country phrase as a "burden" and forming a rhythmic accompaniment figure to solo passages. Sure to please an audience.

No. 12,867. **In pine-woods.** Op. 11, No. 2 ..... .12
To be sung *a cappella.* The principal melody is mostly in the tenor, with soprano and alto keeping up the rhythmic flow and the bass, a rather free melodic part, coming in at irregular intervals. A very effective number for subdued accompaniment in the voices.

SECULAR: WOMEN'S VOICES

HARRIS, VICTOR
No. 12,860. **Night, and the curtains drawn** ... $0.12
A quiet song, nocturne in style, to be sung unaccompanied in four parts; the harmonies are rich and varied.

JENSEN, ADOLF
No. 12,835. **Murmuring breezes** ..... .16
A three-part arrangement by Victor Harris, of Jensen's celebrated piano solo. It makes a delightful choral number with brilliant piano accompaniment.

OLD ENGLISH AIR
No. 12,778. **Drink to me only with thine eyes** .10
A three-part harmonization of the celebrated air from the old English repertoire.

SECULAR: MEN'S VOICES

SANDERSON, JAMES
No. 12,805. **Hail to the chief** ..... .12
A fine choral arrangement of a famous old song.

GORING-THOMAS, A.
No. 12,866. **Neighbor mine** (*Ma voisine*) ..... .12
A three-part arrangement, with piano accompaniment of a favorite French song, in the attractive style of the French *chanson;* English and French texts.

TURNER, GEORGE CHITTENDEN
No. 12,863. **Hail, land of freedom** ..... .08
A patriotic song for a three-part chorus or trio of women. It is dignified and in keeping with the theme.

find themselves placed firmly on their feet, with the prospect of a constantly-widening interest and a reasonable assurance of eventual success both professional and artistic.

———*———

THE MUSICIAN has received from M. P. Möller, the well-known organ builder, of Hagerstown, Md., a description including the specifications of the splendid four manual organ which he installed in the New Olympia Theatre, Boston. It contains features of unusual interest to organists and all musicians who wish to keep in touch with modern progress in music.

The article on another page of the CHOIR AND CHORAL DEPARTMENT of the present issue, by Mr. Gerwig, mentions demands which are made upon the organist's skill, ingenuity, and musicianship.

But all this would go for naught were it not for the way in which progressive builders are making it mechanically possible to meet the new demands upon organists. We shall have more to say on this subject.

———*———

PITCH PIPES

IN England, it was formerly the custom in many of the smaller country churches to "sette the tune," as it was called, by means of a pitch pipe. This was a wooden pipe with a long, movable, graduated stopper, blown by the mouth and adjustable, approximately, to any note of the scale by pushing the stopper inward or outward.

The duty of setting the tune devolved upon the parish clerk. From Ditchfield's interesting book *The Parish Clerk,* we quote the following:

"When the time for singing the metrical psalm arrived the clerk gave out the number, using the time-honored formula, 'Let us sing to the praise and glory of God the —— psalm.' Then pulling out his pitch pipe from the dusty cushions of his seat he would strut pompously down the church, ascend the stairs leading to the west gallery, blow his pipe and give the singers their notes, which they hung on to in a low tone until the clerk returned to his place in the lowest tier of the 'three decker' and started the choir-folk vigorously."

———*———

THE ECHO ORGAN

BY H. C. M.

A BOOK entitled *Practical Socialism,* by Canon Barnett, has a discussion of the two aspects of church music which may be represented to the eye as "MUSIC in *church*" and "*music* in CHURCH." The book has an article on the "mission of music" and on this Mrs. Barnett remarks that her husband had no ear for time, tune, or harmony. Barnett goes on to say that whatever developments in church music have taken place during the last fifty years, they have owed their first inspirations to the new spirit that was born of the Oxford movement. But the broad church movement had a sense of its value, too; it was not, however, much more than what may be called a "concert sense." They used it, that is to say, to attract people to church, whereas the Catholic party used it in the service of religion, and as an expression of religious feeling. The musical services of the Rev. H. R. Haweis drew crowds to St. James's, Westmoreland St. [London], but they lacked the religious spirit essential to the act of worship; you were not sure whether you were in a concert-room or at church, and the sense of imitation rather than reality was everywhere apparent.

* * *

THE *Church Times,* from which I have taken the above, goes on to make an insidious attack on the value and spiritual power of music as "we musicians know" it. I have heard the same argument adduced by others, though, I must own always by persons who sympathized with the cause of the Allies, in the present war. As *The Church Times* puts it the argument is:—

"In the new and altered world that will come after these purging fires are burned out, it may well be that we shall have, as Nietzsche said, 'a revaluation of values.' Canon Barnett wrote eloquently of the value of the humanities as a means of social reform, and there is truth in his words. But the Germans have developed the humanities to a much higher extent than we have, and they have sunk to a lower moral level than any race the world has yet seen. Even the 'man-in-the-street' knows now that art, science and literature can be used in the service of the Devil as well as that of God, and that art for art's sake is as dangerous a principle as food for food's sake, or drink for drink's sake."

* * *

I NEED hardly say that, be as anti-German as we may, it is foolish to assert that because the Germans employ or are fond of art, therefore art is vile, and that those who love art will find themselves, if they do not beware, serving the Devil. The Germans are a home-loving people; is it wrong to love one's family? The Germans are a religious people; is it necessary to give up religion? To ask these questions is to answer them.

* * *

As to the falsity of the maxim, "Art for art's sake," I understand that much-misunderstood phrase to mean this,—that art has a value of its own irrespective of its social value or its usefulness as a handmaid of religion; that in judging art you must judge it by its own canons; that to say art has a value of its own one does not say or mean that this value is the greatest value in the world, but that it is one of the world's values.

* * *

MR. EDMUND JACQUES is continuing his noonday services at "Old Saint Paul's," Trinity Parish, New York City, beginning Nov. 24 and concluding May 9. This is the thirteenth season of these recitals of the best choral music, with organ accompaniment. Mr. Jacques has every reason to feel proud of the unqualified praise showered on his work.

* * *

"I HAVE heard Guilmant and many others give brilliant *extempore* performances, but it is a question whether any of these have exhibited so much variety of treatment continuously as Mr. Lemare," writes Arthur Blakeley in *The Diapason.*

* * *

"MANY varieties of themes were submitted and treated with astonishing facility and appropriate grace and ingenuity. No fixed plan of developing the themes was in evidence, the peculiar temperament of each subject being exploited with a remarkable play of fancy and all the resources of harmony, counterpoint, and modulation, and, with-al, rare taste and judgment in the matter of form and style, as might be expected from Mr. Lemare's world-wide reputation as a composer. Usually a dignified contrapuntal theme is preferred, but occasionally a more familiar rhythmical tune in a popular vein, a trumpet call, or even a negro melody is chosen. Once the audience was convulsed and amused for ten or twelve minutes with *Has anybody here seen Kelly?* Fine structures were built up at times from seemingly the most unsuggestive of subjects."

* * *

To continue the matter of improvisation: Mr. Bannard in *The Monthly Musical Record,* London, says sensibly:

"It is to your decided advantage if you can extemporize, although the bulk of organists cannot do so. It is a difficult art, demanding as it does both theoretical knowledge and technical skill. But it is well worthy of study.

"Don't pretend to extemporize without previous preparation. A sketching-out is necessary at first, and can only be dispensed with after considerable experience.

"Don't ramble along your keyboard in order to 'fill in' the unavoidable gaps which occur during a service. Whatever you do, do it on definite lines.

"Don't lightly regard improvisation because of its transitory nature, for it is (properly conceived) the highest form of musical culture."

* * *

I AM indebted to Thomas B. Haines, Jr., for several church calendars of the First Methodist Episcopal Church, Marshalltown, Iowa. The service-lists show a wide range of music and variety of instrumental assistance. All organists or persons interested in church music, reading this column, are invited to send copies of their church calendar.

* * *

MR. ROBERT A. SHERRARD, organist of the First Presbyterian Church, Johnstown, Pa., has organized a choral society in the church which will supplement the work of the regular church quartet on special occasions. Mr. Sherrard reports that the singing of the congregation shows marked improvement since the chorus has been organized and used in the service.

If you but knew

what a Tindale Cabinet would do for you in helping to create order and convenience out of the vexed problem of caring for sheet music and studies, you would order a cabinet before this night closes your eyes in sleep. May we not, at any rate, send you our catalog No. 2 giving particulars?

To be able to find your music when wanted in a hurry, and be relieved from confusion and guesswork will give you a surprising pleasure and satisfaction. These cabinets are also handsome pieces of furniture.

16 styles costing $10 to $100, Oak or Mahogany. Payments if desired.

TINDALE RECORD CABINETS for Talking Machine Discs give the same advantages that have made our Music Cabinets famous. There's a separate container for each record. Records are found instantly. No albums, no lost time, no searching, no uncertainty or annoyance. Send for catalog 2B. Cabinets for all kinds of Disc Records.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

Will you tell me through The Musician, which I read regularly, whether you deem it wise to play when we are invited at evening parties? Is it right for people to expect us to entertain them gratis?—A. M. S.

Nearly every member of the profession feels that people have no right to ask musicians to play or sing at such gatherings. Just as a physician is not supposed to be asked to prescribe for a patient at such a dinner, so are we not supposed to entertain guests unless we are engaged to do so, with a proper price attached. Artists take the ground that if people can hear them for nothing, why advertise a pay concert?

While I do not question for a moment that this is the practical viewpoint for the artist who depends for his living on concert appearances, I do not consider it the proper attitude for a teacher.

What is the teacher's mission? Does she owe nothing to the community at large in which she lives and works? Does her responsibility cease when the lessons of the day are over? It is in answering such questions that we teachers may best determine what our attitude should be.

Personally, I feel that the piano teacher has a mission—a wonderful work to do, and a medium through which to do it, that is fascinatingly fresh every morning.

If one is working with children there is always a new personal equation and an unspoiled ear and hand to work with, an opportunity to cultivate a real music life with nothing to undo. If one is working with adults there is the whole art of music at our door which becomes more and more appealing as the scientific side is better under control.

How insignificant the ordinary trials of everyday living become after a few hours spent with an inspiring teacher! What a wonderful incentive such a teacher is to better citizenship!

But though we earn our living in giving lessons to a few, what must we do for this great public who have not the privilege of music study? Shouldn't we be willing to play occasionally for them if they are good enough to be interested? I think we certainly should.

It is not necessary for us to play the most ambitious things of the repertoire, but we can have something under our fingers which we can play acceptably at any time. Whether we are rested or tired, whether the piano is good or bad, we can at least be ready to make a few converts for our art if occasion offers.

But, you will say, "I cannot do myself justice when the conditions are unfavorable and it hurts my business if I do not play well." Possibly this is true, but I fancy it hurts your business more if you refuse to play.

Just as soon as you refuse it looks to many as if you were afraid to play, afraid of criticism. As soon as that feeling gets abroad your work and influence are seriously damaged. It speaks well for a teacher if she always has something ready and offers it as if she loved to give pleasure.

The social side of music is one of its strongest aspects. What a wonderful leavener our art is and how it smooths out unpleasantness and clears the atmosphere. If we could only get away from the business side of it and give our music out for the good it may do, I can't help but feel that in the end it would materially improve our business. The community at large would believe in us and in our unselfishness and high purpose whatever our technical limitations might be.

* * *

I have long noticed in your column in The Musician mention of a system of keeping practice records and using stars. Will you please send me more detailed information about this system and also tell me where I can get the material?—J. L. D.

You can buy the stars, both silver and gold, from any school book supply company. I use silver stars for preparation that has no wrong notes or wrong rhythm, and the gold stars when besides this preparation the pupil has done some careful work toward the interpretation, work that shows music thinking. The stars are placed on the music at the close of each lesson and you will find that the pupils are very much interested in the number of gold stars they acquire.

Some teachers use them on monthly report cards only. I prefer them on each piece studied. For poor preparation I use the red star. Any parent by looking over the music can readily keep in touch with the quality of the work done at home and we find it most helpful.

How would you treat a pupil who is unable, because of a long distance in coming, to take a lesson only once in two weeks? It is a girl of nine years. It seems to me that once in two weeks is a very long time to elapse between lessons.—G. S.

Two weeks is a very long time for so young a pupil, but it is better than nothing. The parents will not expect you to make so much progress in the piano playing as if the lessons were at a reasonable distance apart. You can do a good deal of chord writing with such a child and when I have such conditions to contend with I always have the child send in her written work one week from the date of her lesson. This I correct and return together with some little advice as to how to study the music assigned in the previous lesson. Even if I only repeat what I say in the private lesson, it keeps her from making that mistake again. If you have telephone connection, try having her play to you while you listen over the 'phone to what she has memorized. While you can't give her any help on the interpretation this way, as she will have to play loud to have you catch it, you can tell whether she has wrong notes or rhythm. Then, too, if she feels you "are on her trail" she will practise much more regularly and conscientiously.

Give her transposition work to write out and plenty of material to study and you will be surprised to see how much she can do if she is in earnest.

* * *

I have a very fine position here as organist and choirmaster, but I find that I am very anxious to obtain same a little farther west. Can you give me the names of any agencies or suggest any paper in which to advertise to secure such a position?—E. A. B.

I should decide where I would like to locate and then get in touch with someone in the city who can give me information as to the positions available. Advertising in the music journals should do good, but you would have to rely on your own initiative to find the opening desired. The West is full of musicians, but there is always room for good people.

PIANO TUNING
WITHOUT GUESSWORK
TONE TRIALS Can Be PROVED By MY PATENTED TUNE-A-PHONE

You don't **guess** by my method, you **know** when you are right by absolute laws of sound. Thirds and sixths, fourths and fifths perfectly equalized and scientifically proved. **Simpler and better than oral instruction.** No doubt. No error. Makes you a master of the tuner's art. Gambleized Music "On Sale"

Our "On Sale" plan has been inaugurated mainly to assist teachers who have no access to large music stores in procuring suitable material without delay and with no added expense.

A select stock of usable music in your home practically brings the advantages of our large store directly to you. It gives you the opportunity to look over a quantity of music, use the numbers best adapted to your needs and return the balance to us for credit at the end of the teaching term.

Write us for full particulars

Gamble Hinged Music Co.
65-67 East Van Buren St.
Chicago

Will you tell me whether it is a good plan to have pupils spell chords by letter? I notice many teachers advocate it?— C. E.

In my experiments I have found it a very bad plan. Just as in reading a language we are endeavoring to start from the word, so in music must we work toward the quick grasping of our chord as our musical word. To think it in letters is just as foolish, to my way of thinking, as to have to spell out the letters D—A—Y when you want to comprehend the word "day." Children trained on letters always think in letters and never with the chord as a unit.

* * *

Will you tell me where I can buy the little drums you advocate for teaching rhythm. I cannot find them in the toy departments of our stores.

You can secure them from C. W. Beekman, 29 East Eighteenth Avenue, Denver. She is making them for my use, as the toy firms no longer carry them.

* * *

Will you advise me as to how to handle the subject of "Missed Lessons"?—E. K. R.

I am a very poor adviser on such matters. We are adopting the plan of the pupil paying half-price for the time lost. It is impossible for us to make up the lessons, as we have no free time and it hardly seems fair that after saving the hour we should lose it all through no mistake of ours. If you permit pupils to miss lessons, they grow very careless about keeping their appointments.

BOOK NOTES

The Music and Musical Instruments of the Arab. By Francesco Salvador-Daniel. Edited with notes, etc., by Henry George Farmer. Charles Scribner's Sons.

At the present time when composers are turning to exotic music for scales and rhythms as well as tunes, as material for composition when Oriental color is sought in music, a book such as this is extremely valuable to the musician, and also to the student of the history of music. Salvador-Daniel was a French musician, son of a Spaniard who was forced to flee to France on account of political trouble. After a varied career as violinist, copyist, proofreader, arranger, etc. he became acquainted with Felicien David, composer of *Le Desert.* This acquaintance definitely turned his mind to Arabian music. He located in Algiers as a teacher of music, principally the violin. He entered into the life of the people, mixed with native musicians, and played with them in their concerts. When he returned to France later he had accumulated an immense amount of material which he edited and published, being accepted as an authority on the subject. The book itself is extremely interesting and presents a very clear idea of the music and the instruments of the Arabs, with many examples in music notation.

The Opera Book. By Edith B. Ordway. Sully and Kleintcich, 373 Fourth Ave., New York. Price $2.50 net.

No phase of musical activity has so large a literature as the opera. A new book giving the stories and dramatic action of the leading operas must have something special to recommend it. The book under consideration has the following features to recommend it, namely, it discusses practically all of the operas played in the four leading music cen-

s, New York, Boston, Chicago, and Philadelphia, ring the past four years, 110 in all, it gives a y detailed presentation of the action of each era, pronunciation of names which appear in the era or in connection with composer and artists, l excellent illustrations of famous artists in favrite rôles. It is a desirable book for the library le, the studio waiting room, and for the libraries music clubs.

e Natural Method of Voice Production in Speech and Song. By Floyd S. Muckey, M. D., C. M. Charles Scribner's Sons.

Readers of THE MUSICIAN are familiar with Dr. uckey's work as a scientific investigator of the enomena of speech and song through several ntributions to this paper. He has also addressed rious musical organizations and is known as an nest worker in the cause of vocal science. In s book he presents his observations and deducns which are intended to promote the acquiremt of vocal tone without interference. The book filled with diagrams showing pure and impure ies as thrown on a screen by specially construct- apparatus with explanation as to the kind of inference which caused the impurities. An intering chapter is that giving nalyses of the voices famous singers. We com nend this book to seus teachers and singers a one containing much mirable material.

rmony Study at the Piano. A practical course in Harmony, Modulation, and Harmonic Analysis. By Carl W. Grimm. W. H. Willis & Co. Part I, 75 cents. Part II, $1.00.

In these two books Mr. Grimm has worked a ry clear, practical system of "keyboard harmony" make use of a phrase which has some vogue at e time. Book I is devoted to common chords. ook II to dissonances, and the larger chord forations. Of special value to the teacher is the ork in harmonic analysis. We should say that any acher who has studied harmony can use these oks to advantage. And they can also be used for lf-instruction.

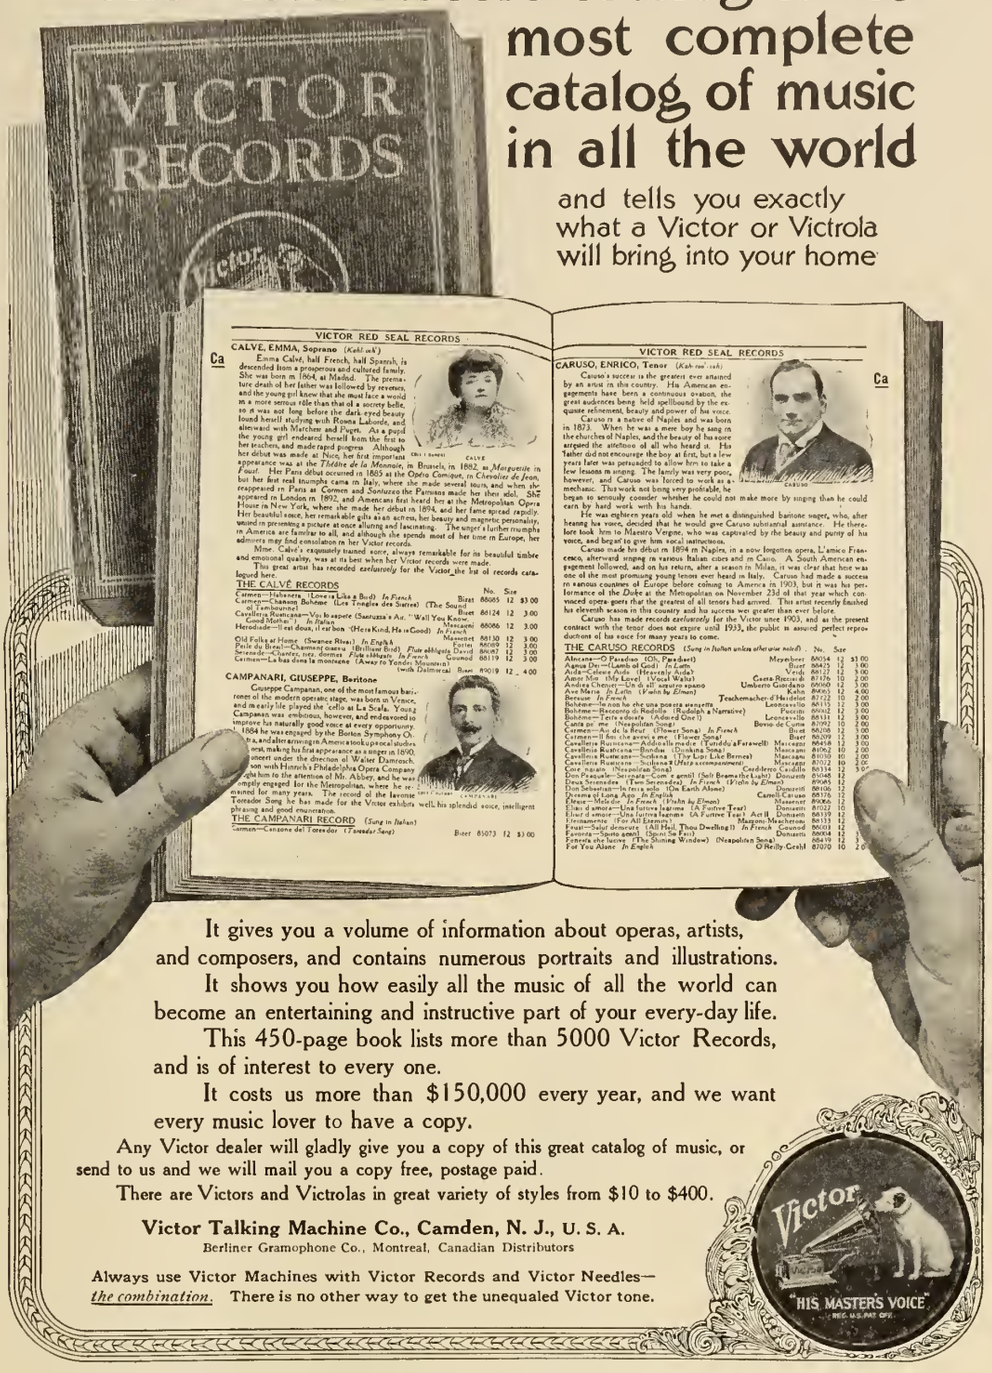
KEITH'S MUSIC PUB. HOUSE : Long Branch, N. J.

The Victor Record catalog is the most complete catalog of music in all the world

and tells you exactly what a Victor or Victrola will bring into your home



It gives you a volume of information about operas, artists, and composers, and contains numerous portraits and illustrations.

It shows you how easily all the music of all the world can become an entertaining and instructive part of your every-day life.

This 450-page book lists more than 5000 Victor Records, and is of interest to every one.

It costs us more than $150,000 every year, and we want every music lover to have a copy.

Any Victor dealer will gladly give you a copy of this great catalog of music, or send to us and we will mail you a copy free, postage paid.

There are Victors and Victrolas in great variety of styles from $10 to $400.

Victor Talking Machine Co., Camden, N. J., U. S. A.
Berliner Gramophone Co., Montreal, Canadian Distributors

Always use Victor Machines with Victor Records and Victor Needles—*the combination.* There is no other way to get the unequaled Victor tone.

New Victor Records demonstrated at all dealers on the 28th of each month

A collection of hymns and tunes largely based on the admirable *Presbyterian Hymnal.*

A Little Child's Day. Song Cycle, by Harold Garstin. Boosey & Co. Price $1.00.

Four tuneful songs which may be sung by children or to them. The texts will appeal to the little people. The accompaniments are brilliant and expressive.

Rustic Sketches, for the piano. By J. R. Morris. Op. 37. Boosey & Co. Price, 75 cents net.

Five sketches descriptive of a fox chase, the titles being: *Morning Scenes, In the Forest, The Chase, The Return, At Sunset.* The music is not difficult, grading generally III-IV, and is marked by tunefulness and rhythmical interest in the figures. The various numbers are useful for teaching.

The Most Popular Folksongs, for violin and piano. Edited by G. Federlein. Hinds, Noble, and Eldredge. Price, 75 cents.

All the old favorites are represented in this book, arranged in an easy manner for both instruments.

Foundation Studies for the Violin. A new method of violin instruction by Gottlieb Federlein. Hinds, Noble, and Eldredge. Price, 75 cents net.

The material is well chosen and well presented, and in accord with the best of the modern ideas as to the order in which the various essentials should be placed before the pupil. It contains sufficient material to cover the first year of instruction.

The Most Popular Mother Goose Songs. With illustrations in color. Hinds, Noble, and Eldredge. Price, 60 cents.

The claim of this book on the mother and father as well as the child is on the splendid quality of the illustrations. It is a book which everyone will admire. The musical settings of the various rhymes are by well-known composers. Here is a great gift book for a musical child.

———*———

GENERAL NEWS ITEMS

Mr. Franz C. Bornschein, of Baltimore, was the winner of the first prize of $500 offered by the Tri-City Music Festivals, comprising Newark, Paterson, and Jersey City, for the best choral composition for chorus of mixed voices, written by an American citizen on an American subject. Mr. Bornschein's work was entitled *Anowa,* and the text was written by Frederick H. Martens, a well-known *littérateur* who has written frequently for The Musician. Mr. Bornschein is a member of the violin faculty of the Peabody Conservatory, of Baltimore, and has won high appreciation for choral works, notable *The Djinns.* He is a frequent contributor to the Violin Department of The Musician.

The Cecilia Society, of Boston, under the leadership of its recently elected president, Mr. Henry L. Mason, is making an aggressive campaign for success. During the past few years interest in choral music has waned, but Mr. Mason's plans have brought in a large sustaining membership, and hope is being held out that once more the Cecilia Concerts will be an "institution" in Boston. Mr. Mason is a member of the firm of Mason and Hamlin, and a grandson of Lowell Mason, the famous American musical pioneer.

Baltimore is agitating a symphony orchestra with Gustav Strube, one of the faculty of the Peabody Conservatory, as conductor. Mr. Strube was formerly a member of the Boston Symphony Orchestra, and assistant conductor. The tax budget for next year will include an appropriation for $6,000 toward the establishment of an orchestra.

Philadelphia is to have a series of Sunday concerts by the Philadelphia Orchestra. It is understood that a public-spirited citizen has guaranteed the financial requirements of the concerts. The indications are that the people will support the undertaking. The popular Sunday afternoon concerts of the Minneapolis Orchestra draw audiences, Sunday after Sunday, which fill the house, sometimes to capacity.

The Music Section of the New York State Teachers' Association, which includes supervisors of music and teachers of music high schools and academies, elected Mr. Russell Carter, of Amsterdam, as president for the ensuing year.

At the competition for two scholarships offered by the National Opera Club of America, held in New York, Nov. 18, Miss Lucella Brodsky, coloratura soprano, and Miss Selma Siegel, dramatic soprano, were the successful contestants.

Mr. George A. Veazie, former supervisor of mu sic in the public schools of Chelsea, Mass., die Nov. 20, in his eightieth year. His term of ser ice was from 1869 to 1903, and during part of th period he was connected with the New Englar Conservatory. As a composer of music for schoo he had a high reputation, his best known work b ing *Morning Invitation,* which has had an excee ingly large sale.

Arkansas music teachers have organized an a sociation, the first meeting to be held in Little Roc next April. Mrs. Emil Trebing, of Little Roc was elected president.

The Oratorio Society, of New York, Lou Koemmenich, conductor, performed Bossi's ne oratorio, *Joan of Arc,* Dec. 8. Handel's *Messi* was sung Dec. 28 and 30, and Haydn's *Creatio* is to be sung April 15, 1916. *Joan of Arc* is calle "A Mystery," which defines its character. Th form is a prologue and three scenes, the chor forces required being mixed voices, male choru boys' choir, and solo voices. The Society will al sing in a Bach-Beethoven Festival with the Phi harmonic Society, Jan. 27, Jan. 30, and Feb. 1 Bach's *Magnificat* and Beethoven's *Ninth* Symphon will be given.

Theodor Leschetizky, famous as a composer an maker of pianists, died in Dresden, Nov. 17, 191 An article on his life and work is published in th number, written by one of his famous pupils, Mm Helen Hopekirk, of Boston, who in the course o an intimate acquaintance as pupil and friend, en joyed unusual opportunities to know this gre master of artistic piano playing.

Charles Wakefield Cadman, the well-know composer, was a caller at the office of The Mu sician, Nov. 29. Mr. Cadman will make his hom in Los Angeles, beginning with the new year. H reports a busy season with his *Indian Music Tal* in which he has the assistance of the Princes Tsianina Redfeather.

Mr. Gustav Strube, of the Peabody Conserv tory, Baltimore, has written a tragic opera, *R mona,* a story of the colonizing period of the We Indies.

WILCOX SCHOOL OF COMPOSITION

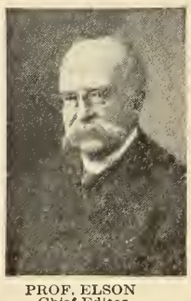
C. W. WILCOX, Director

Dept. "A." — 225 Fifth Avenue, New York City

Miss Florence A. Potts, of the piano faculty the School of Music, Converse College, S. C., ga a recital in November, playing, with other nu bers Beethoven's sonata, Op. 12, No. 2, a Brahms, Op. 78. Miss Potts was a pupil of M John Carver Alden, head of the piano departme

Mr. William W. Carruth has installed in l residence studio, "The Abbey," Oakland, Cal., modern two manual pipe organ, to be used f teaching and students' practice.

Modern Music and Musicians



PROF. ELSON
Chief Editor

The newly revised and enlarged edition of this master-work of Professor Louis C. Elson, of the New England Conservatory of Music, is now ready for distribution.

MODERN MUSIC AND MUSICIANS contains—

A superb collection of selected music.
A practical musical encyclopedia
A highly endorsed teachers' practice volume.

SEVEN LARGE VOLUMES—2000 PAGES, 50 ASSOCIATE EDITORS AND CONTRIBUTORS—50 FULL PAGE PLATES

This set of books is

FOR SINGERS—It contains over 70 choice songs with pianoforte accompaniment—the work of expert song writers.

FOR PIANISTS—About 120 piano-pieces are given, covering over 600 pages.

FOR STUDENTS OF MUSIC—It contains a full History and Encyclopedia of music and a guide to the appreciation of all that is best in musical art.

FOR TEACHERS—It presents in compact form a most remarkable survey of the whole musical field. It supplies them in the Music volumes with a wealth of suggestions; in the three Encyclopedia volumes with the most helpful collection of articles that has ever been put between covers.

PRACTICE VOLUME

Professor Charles Dennee of the New England Conservatory devoted himself entirely to the selection and editing of the contents of this volume. Every teacher should have it as a guide to help in the planning of work; students following it cannot fail of success.

SENT FREE OF CHARGE

The entire set will be sent CHARGES PREPAID. If satisfactory send $3.00 five days after delivery and pay $3.00 a month until subscription price is paid.

You must not delay as this special price is for a limited time only. Send the coupon today.

OLIVER DITSON COMPANY, Boston

CHAS. H. DITSON & CO. New York — LYON & HEALY, Chicago

WHY WASTE MONEY?

If there is a piano in your home, you probably buy quantities of sheet music—and pay high prices for it. In a short time this sheet music will become torn and scattered, and as it scatters, your good money goes to the four winds. Why not let the money you spend for music be a permanent investment—in other words, buy music in bound volumes that will last a lifetime.

The World's Best Music

contains the best selections from all music published, and is so arranged that its use doubles the value of your piano for yourself, your family, and your friends. In sheet-music size, it contains 2700 pages of the best music, selected and edited by the most eminent musicians of the country. The volumes are handsomely bound, and contain furthermore a biographical dictionary of musicians, a pronouncing dictionary of musical terms, and a large number of handsome illustrations. Buying them one at a time, you would pay over $200.00 for the selections contained in **The World's Best Music.**

Pianist—The World's Best Music is for you. It contains hundreds of instrumental selections by the best composers, including all forms of musical composition.

Singer—The World's Best Music is for you. It places in your hands hundreds of the best songs arranged with piano accompaniment.

Student—The World's Best Music is for you. It is a practical musical education.

Musiclover—Though you do not play there is no better gift from which the recipient will extract evening after evening of the most delightful pleasure.

Monthly Payments

Fill out this coupon, and we will send your set of THE WORLD'S BEST MUSIC. You may pay $5.00 upon acceptance, and $5.00 a month until the total price of $62.50 is paid. Mail the coupon today to avoid disappointment.

The University Society
Please send me THE WORLD'S BEST MUSIC (10 vols.) cloth binding. I agree to pay $5.00 upon acceptance, and $5.00 a month until $62.50 is paid. If not satisfactory, I agree to return this set at your expense.

NEW YORK NOTES

BY EVA EMMETT WYCKOFF

HE first November recital in Aeolian was given by Marian Veryl, accomed by Alberta Bimboni. Her singproved enjoyable, her voice being t and well schooled.

ARCIA VAN DRESSER, whose voice ed beauty and flexibility, was assisted Kurt Schindler at the piano. Mr. ndler also accompanied Mary Jordan, displayed charming quality of voice.

ARA CLEMENS GABRILOWITSCH was inate in having her husband at the o in her recital of Russian songs. Her e is of splendid quality and range.

THUR HIRSCHMAN, who sings with cal intelligence and deep feeling, and io di Gogorza, whose art is superior, accompanied by Richard Hageman.

VIOLIN recital, by Henrietta Bach, Samuel Chotzinoff at the piano, was ed with sincerity and with clean and tone.

ILLIAM ENDERLIN, a pianist of ability, one who has surmounted the handicap otal blindness; Hunter Welsh, who e his first New York appearance, ing talent to be later more under con- Louis Cornell, George Copeland, and or Wittgenstein, all splendid artists, ed to good sized audiences.

AN WILLIAMS came to conquer. That asy for him. The audience weeps n he puts the sob in his beautiful voice, it is a pity he is so gracious with encores, for he wearies himself to satisfy the greed of his hearers. Carl Bernthalen accompanied, as he did also for Christine Miller, who always sings delightfully.

CLEAN diction and refined musicianship characterize the singing of Caroline Hudson-Alexander, who was assisted by Chas. A. Baker.

AN interesting recital was given by Elizabeth Guttman, the program being made up of Russian, Yiddish, Canadian, and Scotch folk-songs, with a couple of miscellaneous groups. Henrietta Straus accompanied.

A CHICAGO singer traveled all the way to New York to show what can be produced in the West. Luella Chilson-Ohrman, with a voice like a string of pearls, merited the admiration bestowed upon her by the audience. Arno Dietch accompanied.

THE Edith Rubel Trio (violin, 'cello, and piano) proved themselves artists of serious intent.

ANDRÉ TOURRET and Camille Decreus, violin and piano, and the Flonzaley Quartet, fittingly wound up the month, as could only such artists.

CARNEGIE HALL

SCHUMANN-HEINK, singing better every year, producing rare beauty of tone and better diction than ever before, displayed her mastery superbly. Anton Hoff was at the piano, and in Schubert's *Ständchen* the singer was assisted by a quartet made up of Messrs. Beddoe, Thomas, Reed, and Chalmers.

The Seven Last Words of Christ

BY A. MONESTEL

Price, 75c postpaid

THIS short Lenten cantata is possessed of much melodic beauty and emotional force. The composer is a master in the art of writing effectively for voices, and the chorus parts are at once fluent, significantly independent, and withal not difficult of performance. An English adaptation has been made of the original Latin text (which is mostly biblical); it is as faithfully literal as the exigencies of the musical phrases would permit. As a work especially for Passion Week, this new cantata is recommended to choirmasters in both Protestant and Catholic churches.

What Musicians and the Press Say About the Book

¶Melodious, well-written and extremely effective. Its melodic flow will make a direct appeal.
—*Musical America.*

¶Abounds in pleasing melody and effective harmony and is admirably suited to the text.
—*Musical Courier.*

¶The work proved to be very effective, and is so constructed as to be within the range of most choirs.
—*N. Y. Evening Post.*

¶This short Lenten cantata is possessed of much melodic beauty and emotional force. The composer is a master in the art of writing effectively for voices, and the chorus parts are at once fluent, significantly independent, and withal not difficult of performance.—*The Musician.*

¶The work was given under my direction at the People's Church, St. Paul, Minn., and achieved a fine success. Not only that, but we enjoyed doing it. I do not believe there is a finer Lenten cantata, and certainly none more suitable, or more grateful to the performers. We really were as delighted with it as were those who heard it.—PROF. MALCOLM DANA MCMILLAN, *Organist and Choirmaster of the People's Church, St. Paul, Minn.*

Christine Miller IS SINGING

Good Night . . . . . by Mary Turner Salter
The Nightingale . . . . . by Ward Stephens
The Night Has a Thousand Eyes by Wm. Arms Fisher
To One I Love . . . . . by Louis Victor Saar
A Woman's Last Word . . by William Dichmont
Expectancy . . . . . by William Stickles

THE Musicians Club has undergone various changes in its interior. The Club gave two specially interesting functions during the month. Walter Damrosch, president of the Club, played selections from his opera, *Iphigenia in Aulis,* assisted by Merle Alcock, Jacques Renard, and William Kincaid. Sidney Homer gave an evening of his songs, an entire program, sung charmingly by his wife, Louise Homer, with Mrs. E. N. Lapham at the piano.

GEORGE E. SHEA, the vocal teacher, has written a book on stage deportment for the singer. Every suggestion is given to make one natural on the concert and operatic stage.

LADA, the dancer, who melts into living lines, displayed her beautiful art at the Candler Theatre.

CLARA DE RIGAUD announces her appointment as voice specialist to the Advisory Board of the National Society of Music, and is also a member of the Advisory Board of the Montclair Conservatory of Music.

THE American Progressive Piano School announces courses in general musicianship, which is much needed by the majority of vocal students.

MR. ELLMER ZOLLER accompanied, Nov. 28th, for Elizabeth Wood and Mary Gailey.

VICTOR TALKING MACHINE RECORDS FOR JANUARY, 1916

THE Victor Company evidently believes in starting the new year well. A glance over list for January establishes the truth of the previous statement. For this review we restrict ourselves to the higher class records, those in the Red Seal and Blue Label series. Here are vocal and instrumental pieces to suit a great variety in taste.

McCormack, John, tenor: *Somewhere a voice is calling,* by Tate, a ballad which has won great popularity in the United States.

DeGogorza, Emilio, aritone: *Noche serena* (Calm night) a Mexican folksong, charming in itself and delightfully sung in Spanish.

Martinelli, Giovanni, tenor: *Barearolle, The waves will bear me,* from Verdi's *Masked Ball,* vigorous and tuneful, with swing of the sea song.

Culp, Julia, contralto: *My heart at thy sweet voice,* from Saint-Saëns' *Samson and Delilah,* one of the finest operatic arias ever written, full of pathos and dramatic intensity. Sung in French.

Williams, Evan, tenor: *From the land of the sky blue water,* by Cadman, one of the most popular concert songs of the day.

Elman, Mischa, violinist: *In a gondola,* by Elman, a new composition recently published, and *Spanish Dance,* Op. 22, No. 3, by Sarasate, one of the great virtuoso pieces from the violin literature.

Gluck, Alma, soprano: *The monotone,* Op. 3, N 3, by Cornelius, with violin obbligato by Mischa E man, a remarkable song in that the voice part entirely on one tone, the violin developing a mo charming melody at the same time.

Powell, Maud, violinist: *Tambourin,* by Leclai a delightful number from the 18th century repe toire, played with exquisite delicacy and grace.

Hamlin, George, tenor: *Love's nocturne,* wit 'cello and harp, by Hope Temple, a charming En lish ballad.

Braslau, Sophie, contralto: *Oh, dry those tear* by Del Riego, a song which had much vogue sev eral years ago, and one which still holds an aud

Schumann-Heink, Ernestine contralto: *Th rosary,* by Nevin, a favorite song by one of th greatest singers of today.

McCormack, John, tenor: *Carme,* a Neapolita folksong by de Curtis, with violin obbligato by Frit Kreisler, with orchestra accompaniment.

Althouse, Paul, tenor: *Siegmund's love son* from Wagner's Opera *Die Walküre,* and *Heave and ocean* from *La Gioconda* by Ponchielli, two fin tenor arias from the opera repertoire, sung by promising young American member of the Metro politan Opera Company.

MacFarlane, George: *My own home town i Ireland,* by Solman, and *Ireland,* by Kleineke, tw Irish songs.

THE MUSICIAN

THE READING MATTER.—The reading pages of THE MUSICIAN contain articles about the great composers, classical and modern, the great players and singers of the past and the present, famous musical organizations and educational institutions, what American cities are doing for music, the work of musical clubs, and all methods for promoting musical progress. Special Departments: THE MUSIC TEACHER AND THE COMMUNITY, by Thomas Tapper; THE TEACHERS FORUM, by Mrs. Blanche Dingley Mathews; TALKS BY THE PROFESSOR; for SINGERS, VIOLINISTS, ORGANISTS, and the CHILDREN.

THE MUSIC.—Each issue contains 14-15 pieces: three Songs, the other numbers being for the Piano, with one for Violin and Piano, and one occasionally for the Organ.

A SUMMARY:—296 pages of music for $1.50, at which price it costs but *one-half cent per page*, or an average of *one cent per composition.*

SOMETHING TO PLAY

How Often You Want "Something to Play"

—Some music for pure enjoyment as well as education, when you sit down casually at the piano to entertain yourself or your friends.

The compositions in "SOMETHING TO PLAY" were chosen to meet the fullest needs of amateur, student, or professional. We predict that any player who masters the compositions in the book will not only acquire a splendid repertoire, but will note an increase in technical skill equal to one grade—certainly a gain worth while.

The technical requirements vary for the playing of the pieces. Six are quite easy, sixteen are easy, and twenty-three are moderately difficult, such as the average player can use.

Twenty-one of the compositions are in various dance rhythms—four marches—eleven are character or descriptive pieces, ten have special value in promoting certain phases of technical skill, eight are in classical style. Some of the selections belong to more than one style. This can be given to a pupil as a present for good work.

SOMETHING TO SING

In the social circle the demand is "Sing something." This demand is most admirably met in SOMETHING TO SING. Here are 50 SONGS, easy, melodious, full of appeal to the feelings of the human heart, songs of the love sentiment, love for the home, lullabys, songs about nature and her lovely moods, semi-humorous songs, serenades, songs of the romantic ballad type, the best and most practical numbers of little difficulty by Italian, German, French, English, and American composers. The book contains an introduction on "The Characteristics of First Year Teaching Songs," and notes on the singing of each song, for the use of teachers and students. It is the most valuable book of easy songs that reach the heart to be found in the market today. "Something to Sing" makes a fine Christmas gift to a singing friend.

The Series of articles by Thomas Tapper, entitled THE EFFICIENT MUSIC TEACHER which are appearing in THE MUSICIAN monthly have the most stimulating and valuable material ever published in a musical journal. They will call attention to the weaknesses in your methods of work and show you how to eliminate wastes. **They will tell you how to do better work and gain greater rewards.**

Subscribe now and get the back numbers from Sept. 1915.

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Single Copies.....$ .15
Subscription Price, Per Year..... 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured*, money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew. Renewals should be sent promptly as subscriptions are not continued after the time for which they are paid.

Note.—Customers with charge accounts in good standing may have their subscription charged to their regular account, if desired.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of *The Musician*. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of *The Musician*.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in *The Musician*, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

PUBLISHER'S NOTES

Geraldine Farrar: Favorite Songs. Introduction price 60 cents

THIS gifted singer shows her musical training by the preponderance of German songs in the collection she has brought together. The various numbers have been sought out with indefatigable zeal, largely from treasures of song buried or neglected in the works of great writers, and are therefore, in many ways, new to the average teacher or singer. Songs from other lands, such as Russia and Scandinavia are also included. The book is uniform with previous issues of MY FAVORITE SONGS series, with biographical sketch, portraits, with a striking portrait on the cameo plate paper cover, in the engraver's best art.

The price has been fixed at $1.00 postpaid, but for introduction purposes, in advance of publication, we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Cedric W. Lemont: Creole Sketches. Introduction price 60 cents

THIS collection of piano pieces is a worthy companion to the same composer's *Dream Pictures*, which has had so favorable a reception. They show the same spontaneous melody, colorful harmony and fluent invention; in addition they reproduce the picturesque special features of Southern environment justified by the title. Having lived in the Creole state the composer has caught his impressions at first hand. The cover is a splendid piece of color printing. The regular price is to be $1.25 but in advance of publication we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Deems Taylor: The City of Joy (Song Cycle) Introduction price 60 cents

IN this highly original cycle of songs both author and composer have made an effort to uncover the romance, the poetry which are so vitally present under the familiar prose of every day scenes—and have been successful. The idyls of the city's crowded ways blossom in their happy pages. Recognized as one of the most gifted among our younger composers Mr. Taylor has written songs marked by spontaneity, richly expressive in their melodic and harmonic content, and in their felicitous touches of humor. And he has further adorned the volume with a cover design and with illustrations to each song which charmingly bear witness to his skill and imagination in a kindred art. The regular price has been put at $1.25, but in advance of publication we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Arthur Hartmann: Six Pieces for Violin and Piano, Op. 28. Ditson Edition, No. 307. Price, 50 cents. Introduction price 20 cents

THESE easy pieces offer particularly attractive and practical material to the teacher, as they are primarily of musical interest, melodious, and with many felicitous touches of harmonic ingenuity in the piano part. In style they are well-contrasted, the first three being songful, the fourth a swaying waltz, the fifth in the light, bright manner of a scherzo, and the last a fiercely rhythmical characteristic piece. The price is 50 cents, but in advance of publication we will accept orders at 20 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.55.

NOW READY

THE following books are now ready for market, and those who have ordered copies in vance of publication should have received th copies by this time. Our readers will find it wo while to keep their eyes on the announcements offers which appear on this page month a month. They are genuine bargains, with pr never more than one-half the regular list value the books.

Theodore Spiering, a great violinist, conductor and teacher, has, during the past ten or more years, been a conspicuous figure in the international music world. In each one of the above branches of his profession, he has won world-wide acknowledgment and distinction. As a composer he has only lately attracted attention, his first work to win success having been his immensely difficult artist studies for violin.

This new set of Piano numbers are charming mood pictures of more than average originality and effectiveness and promise to appeal to a very large class of players owing to the fact that they are artistic in conception and technically not difficult.

Four New Volumes of the Musicians Library

Sixty Irish Songs

Edited by WILLIAM ARMS FISHER

Issued in Two Editions
High Voice Low Voice

The age-old folk-music of Ireland is regarded by many critics as the richest and most varied in the world. In this volume of THE MUSICIANS LIBRARY the editor has collected, besides familiar and favorite airs, a large proportion of wordless traditional tunes to which he has successfully wedded suitable lyrics by modern Irish poets—thus presenting the most significant volume of Irish song that has been published. For all these airs the editor has written accompaniments which express, through modern musical resources, their racial and emotional spirit; thus making of them songs that present-day singers will delight in.

Bound in Paper, each $1.50, postpaid
In Full Cloth, each $2.50, postpaid

A complete list of all the volumes (75) including Portraits of Editors and full particulars of the Easy Payment Plan will be sent free on request.

Modern Russian Piano Music

(TWO VOLUMES)

Edited by
CONSTANTIN VON STERNBERG

Vol. I. Akimenko to Korestchenko
Vol. II. Liadoff to Wrangell

Russia, the latest of the nations to develop a national school of composers, is today producing the most original, spontaneous and vital music in Europe. Based firmly upon the riches of folk-song, the ethnical note is sedulously cultivated by men whose unquestioned erudition is still their servant, not their master; the result is a flood of music which shows in its beauty and strength the joy of its creation. In these two volumes of THE MUSICIANS LIBRARY are contained piano pieces of the highest musical and pianistic merit, never needlessly complex, and demonstrating the difference between "dignified modernity and its frenzied caricature called modernism."

Concert Singers Realize That All Audiences Enjoy Kitty Cheatham's Songs

An acknowledged artist has chosen to devote her talents chiefly to the collecting and interpreting of music for and about children. In so doing, however, she has set no limit to her artistry.

Children love her songs, but it is the more mature mind which really grasps the significance of the ideals of simplicity and purity which they express.

Kitty Cheatham has been the pioneer in a new form of art.

KITTY CHEATHAM HER BOOK

Twenty-nine Songs and Recitations from the Repertory of Kitty Cheatham

Written with Four Exceptions Expressly for Her and Heretofore Only in Manuscript

Among the composers represented are John Alden Carpenter, Carl Engel, H. V. Milligan, Elizabeth Coolidge, Edward Falck, H. L. Brainard, R. Huntington Woodman, H. W. Loomis and A. W. Kramer.

There is verse by Robert Louis Stevenson, William Blake, Kenneth Grahame and other well-known poets.

Cover design by W. Graham Robertson, reproduced in original colors.

Frontispiece photograph in sepia from a portrait of Miss Cheatham by S. Seymour Thomas.

SHAKESPEARE and MUSIC

1616 A Contribution to the Tercentenary of the Dramatist 1916

BY LOUIS C. ELSON

It is fitting that Americans should honor the memory of this hero of works of the intellect. He touched on so many of the art experiences of the race, music in particular, that THE MUSICIAN has asked Mr. Louis C. Elson, of Boston, author of an authoritative work on the subject, to prepare a short sketch for its readers.

THIS year of 1916 is the 300th anniversary of Shakespeare's death. There will be countless celebrations, hundreds of speeches, and merous estimates of the poet's influence and owledge.

Lawyers will show how wonderful his legal knowlge was by the scenes in *Hamlet* and in *Merry Wives Windsor*. Physicians will prove by the diseases Falstaff and by the scenes of the insane Ophelia, t he knew something of medicine. Theologians l discourse upon his polemical knowledge. And musician, too, can enter the list, and show that akespeare had more than a passing knowledge of sic.

Milton, Browning, and Shakespeare were the ee great poets who used musical allusions ely and with surety, and of these three we y put the last named at the head.

FLUENCE OF SHAKESPEARE ON DRAMATIC MUSIC

There is one field directly connected with oper- music in which Shakespeare has distanced all npetitors. He has furnished more operatic littos than any other poet in the world. All of plays have been set in one form or another, ne of them many times over; and overtures, symonies, symphonic poems, as well as hundreds of gs have sprung from his plays.

All the world loves a lover, and it is quite natural find *Romeo and Juliet* more used musically than other of the plays. There are eleven different operas made from this text, ranging all the y from Bellini's and Gounod's famous ones to a ody, *Rhum et Eau en Juillet* ("Rum and water July"), which had a short vogue in France. Add this a famous symphony, a great overture, and merous other instrumental works, and we see t *Romeo and Juliet* has caused a good-sized mul library in itself. *Hamlet* has also been set ny times, even from the epoch of Domenico rlatti; yet, oddly enough, Shakespeare's greatwork still waits a masterly setting in music.

INACCURACIES OF POETS

But it is rather of the master's own knowledge music that we desire to speak in this article. y poets venture deeply into musical metaphor in ir works, and when they do there is great chance their coming to grief. Coleridge, in his *Ancient riner,* causes his wedding guests to hear the id bassoon," in spite of the fact that the basn is neither loud nor apt to be prominent at a lding-feast. Tennyson invites Maud to come into the garden and hear "the violin, flute, bassoon," a combination which she would not greatly care for if her musical taste were at all developed; and instances like these might be multiplied.

SHAKESPEARE'S TECHNICAL KNOWLEDGE ALWAYS ACCURATE

But when Shakespeare uses musical metaphors they are usually, almost invariably correct. Only one slip can be found that is important, which is where, in the 128th Sonnet, he speaks of the jacks of the virginal leaping "to kiss the tender inward" of the hand of his lady, which is no more possible than that the hammers of the piano should leap out to kiss the fingers of Paderewski. We may suspect that Shakespeare did not understand the virginals, since, although this instrument was the most prominent of the time of Queen Elizabeth, he alludes to it only once in his plays, in *Winter's Tale,* where the jealous Leontes watches his queen with Polixenes,—"Still virginaling upon his palm."

MUSICAL INSTRUMENTS

The careful reader of Shakespeare will find many technical points of musical knowledge revealed. In *Henry V,* that monarch compares the words of Katherine to "broken music." There is a technical touch here that many overlook. In England, at that time, when a composition ran entirely in one kind of instruments, such as a set of viols, or of wind instruments, it was regular music; but when these instruments were alternated it was designated as "broken music."

THE LUTE

How much Shakespeare understood of the lute may be gathered by the reader if he will look through the music-teaching scene in *The Taming of the Shrew,* and the keen musical allusions here go far towards taking this work out of the list of doubtful plays. The lute was of the guitar family, although it had several strings without frets. These open strings caused great trouble in tuning and retuning when the key changed. Mattheson, who wrote in the 18th century, says that if a lute-player reached the age of eighty, he had probably spent about sixty years tuning his instrument! Note, therefore, how Hortensio is sent away by Bianca and Lucentio to try to get his lute in tune. Note also when Bianca says to Hortensio—"Oh fye! the treble jars," Lucentio adds, "Spit in the hole, man, and tune again." Here again we have a glimpse of an old musical custom, for when the pins slipped it was often the habit of the player to moisten them with saliva and cause them to swell a trifle and thus hold better.

One of the finest musical metaphors in Shakespeare is found in *Hamlet,* where, after pleading with Guildenstern to play upon the recorders (the straight flute of the epoch), Hamlet taunts him with the fact that he is trying to play upon a human being (himself) and yet is not skilful enough to play upon a simple pipe.

A MUCH QUOTED PASSAGE

The most often quoted passage about music, in Shakespeare, is the one about "The man that hath no Music in himself," and he is declared as "Fit for treason, stratagem, and spoils." But just this quotation is not to be taken at its face value, since (according to the Clown), Othello is not fond of Music; and Harry Hotspur (In *Henry IV,* Part I) utterly scorns it. We must bear in mind that the above sentence is spoken by the lovesick swain, Lorenzo, in *The Merchant of Venice,* and that he is by no means the strongest character in this piece.

One of the most playful touches in Shakespeare, in connection with music, is the picturing of the musician fishing for compliments, very much as the lesser kind do today. In *As You Like It,* the Page says (Act V, Scene 3):

"Shall we clap into it roundly, without hawking, or spitting, or saying 'we are hoarse': which are the only prologues to a bad voice?"

While in *Much Ado about Nothing* (Act II, Scene 3), Balthazar, the musician, strives with might and main to win a compliment from Dom Pedro, but only gets—"thou singest well enough for a shift," as the result of his pains.

A PLAY WITH MANY MUSICAL ALLUSIONS

A careful reading of the second scene of Act I of *Two Gentlemen of Verona* will surprise the investigator with more musical allusions than are found in any other single Shakespearean scene, unless it be in *Twelfth Night.* In this scene between Julia and Lucetta we get an illusion to setting the pitch of songs ("Give me a note, your ladyship can set"), which was one of the accomplishments of the singer in the olden times. It meant pitching the song by ear, and demanded some degree of what we call absolute pitch. Even in Puritan days in New England the art of "setting" was held in high esteem, if we may judge by Judge Sewall's pride in it, as revealed in his diary.

BURDENS

A little later we have allusion to a "burden" in a song. The "burden" meant the refrain, a constant reiteration of certain words, generally to the same music, even though they had no connection with the surrounding lines. Some of the burdens known today are of great antiquity. *Tol de rol* or *Hey tol de rol,* came from the old Scotch, *Hey Troly Loly,* an exclamation like "alack and alas," in more modern time. *Derry Down* is much older and has been ascribed even to Druidic origin. *Willow, willow, willow* will be recognized as a prominent refrain used in *Othello,* by the unhappy Desdemona. This was derived from the old plant-language of England, where the willow was the emblem of a blighted affection.

THREE-MAN SONGS

Coming back to our *Two Gentlemen of Verona* dialogue, we find "mears," "bases," and "descant" spoken of. These were the parts in much of the social singing of Shakespeare's time. "Three-man songs" were very copious in England then, and almost all the catches and rounds were three-voiced. This may explain some mysteries in certain Shakespearean plays. Frequently a character (sometimes two) is introduced without apparent necessity. But if one looks a little further into the scene it will be found to result in singing. In *Twelfth Night,* which is the most musical of all Shakespeare's plays, we find not only Sir Toby Belch and Sir Andrew Aguecheek, both singers, but the Clown, who is the best singer of the three, and is added to make the "three-man songs" possible.

The close acquaintanceship which Shakespeare betrays with the different catches of his time, and the manner of singing them, leads one to the firm conclusion that he was himself a singer and often joined in the convivial songs at the tavern.

DANCES

What we today call "solfeggio," was rather more intricate at that time, and yet the poet shows the closest familiarity with the "gamut" as this style of sight-singing was then called. He was equally familiar with the dances of his day, and we may surmise that he often tripped the light fantastic toe. Here are a few of the dances to which the poet alludes: The Galliard, Coranto, Cinque-pas, Passa-mezzo, the Jig, are all alluded to in *Twelfth Night,* and most of them again in *Much Ado about Nothing* The Cinq-pas, or Cinque-pace, was a quaint five step dance, and the poet uses it as a simile for the ricketiness of old age. Naturally Shakespeare makes his two arch-vagabonds in *Twelfth Night* enjoy only the livelier dances. The Pavane and the Passa-mezzo were both slow, stately or elegant, and Sir Toby Belch avows that he hates them almost as much as "a drunken rogue." In *Romeo and Juliet* the poet causes Peter to desire the musicians to play him a "merry dump" to comfort his sorrow, which is a playful contradiction since he might as well have demanded a jovial funeral oration, since the dump was a mournful elegy, originating in Bohemia, and gave rise to the modern saying of being "in the dumps."

Shakespeare enjoyed making such musical contradictions, or paradoxes, and we find another when Mistress Ford says that Falstaff's true nature no more fits to his words than *Old Hundred* to the tune of *Greensleeves,* the latter being somewhat rollicking, and about as fit to the psalm as a jig would be.

A DUEL IN STRICT TEMPO

Naturally, time-keeping affords Shakespeare more than one metaphor. King Richard II, when in prison, mourns that although he could keep time in music, he could not keep time to the affairs of his state. But the most apt reference to this is found in the sentence of Mercutio in description of Tybalt,—

"He fights as you sing prick-song, keeps time, distance, and proportion. Rests me his minim rest. One, two, and the third in your bosom."

This mysterious sentence becomes clear if we remember that "prick-song" means printed music as different from improvisation, and recall that such music was counted with a waving of the hand like the present swing of the baton in conducting. Imagine, however, the swing in this case to be done with a rapier, "One, two," and the third beat a thrust to the heart. It is one of Shakespeare's most ingenious similes, and also the least understood.

OLD BALLADS

The ballads of the Elizabethan time were numerous. Each one told its tale, and sometimes such a ballad became almost a drama or a tragedy, recited by a single performer. Sometimes these ballads gave the poet a plot which he worked out in a less crude fashion than it possessed in its musical dress, and the humble ballad became a play. *King Lear and his three daughters, Titus Andronicus, Gernutus, the Jew of Venice,* and others, come very near to the topics of some of the famous plays. It may be doubted whether Shakespeare built an entire plot on any one of them, but he may have borrowed incidents from them on more than one occasion. The absurd and exaggerated character of some of these ballads can be studied by reading the vaunting of his wares by Autolycus in *Winter's Tale.*

There is another musical touch in some of Shakespeare's plays which generally fails of all appreciation in the present day, yet was very ingenious and must have made a decided hit in the poet's own time. It is the parodizing of some well-known song or poem by an illiterate character. Such a parody plays an important part in the grave-digger's scene in *Hamlet.* The digger sings—

"In youth when I did love, did love,
Methought it was very sweet,
To contract, O, the time, for ah, my behove,
O methought there was nothing meet.

"But age, with his stealing steps,
Hath clawed me in his clutch,
And hath shipped me into the land
As if I had never been such."

Now this is sheer nonsense, and its recurrent "ohs" and "ahs" are the hall-mark of illiteracy. But Shakespeare intends to intimate that the clown has heard a certain earnest song and has caught up its sound without in the remotest degree realizing its sense. If we read two stanzas of a poem by Lord Vaux, entitled *The Aged Lover Renounceth Love,* we at once make sense out of the grave-digger's gibberish,—

"I loathe that I did love,
In youth that I thought sweet,
As time requires, for my behove,
Methinks they are not meet.

"For age, with stealing steps,
Hath clawed me in his clutch,
And lusty Youth away he leaps,
As there had been none such."

And in this play of *Hamlet,* too, we have a most pathetic gathering of old ballads, which bubble forth in fragments from the lips of the insane Ophelia. And this too is a musical touch that should be realized: the final Ophelia scenes are made doubly pathetic by the light music which she sings. A tiny candle may serve, at times, to make darkness more dreadful, and the light touches which are given to the heartrending scenes in *Hamlet* or *King Lear,* serve to emphasize the pathos or tragedy.

Yet here one point may not be overlooked; the audience was expected to *laugh heartily* at Ophelia in her madness. There is abundant evidence to show that the Elizabethan theatrical public used to roar at the antics of any insane character upon the stage.

A brief article, such as this, treating of a very large subject, cannot do more than indicate a line of further research. If the reader cares to begin his musical study of Shakespeare by searching out hundreds of further allusions we can only suggest that *Twelfth Night* contains the most musical points, *Hamlet, The Taming of the Shrew, Much Ado about Nothing, Two Gentlemen of Verona* and *Romeo and Juliet* are also prolific in this field but every one of the plays has some touch of musical metaphor and some display of musical knowledge. Therefore, while the lawyer, doctor, and theologian lay claim to Shakespeare as almost one of themselves, the musician may put in his claim with much more emphasis.

Shakespeare was not only a lover of music but he made music, and he understood it, and therefore the musicians too may join most heartily in the celebration of the tercentenary of the death of one of the most wonderful men that ever trod the earth.

LEARNING AT HOME

BY EDNA WARREN JOHNSON

MANY of the music students in the different grades of school, from the seventh or eighth upward, commence talking of the time when they expect to make music a specialty and leave home to study in some musical college or university. Just a word to these pupils will not come amiss if it is only heeded.

Learn all you possibly can as you go along. Have a notebook and in it write every conceivable question you can think of, provided the subject is not just clear to you. I am sure your teacher will be only too eager to help you and glad to feel that you are interested.

Take lessons of the best teacher in your vicinity although it may cost you more at the time, you are lessening your future expenses greatly. Then study every detail to the limit. Find out all there is to find out and apply it to practical work. Be extremely particular about doing as your teacher tells you.

I have in mind a young lady of my acquaintance who studied with a local teacher. No begging, bribing or talking could induce her to practise scales and work on exercises to develop fingers. She was to study in a distant city preparatory to becoming a teacher. Think of it! When school days were over and she entered the conservatory, the first thing required of her was two-finger exercises and she did them and nothing else for six weeks. She wouldn't do finger exercises for her teacher at home. They were so trivial, yet she paid carfare, board and a high price for lessons to secure the same work she might have learned at home.

Think of this, pupils, all of you who intend going away to study. Do the exercises you are asked to do. Learn your scales, backward and forward, thirds, sixths, tenths, contrary and parallel, the signatures, the relative majors and minors. Don't look to the teacher to have her say: "You forgot one of the sharps," "You did finger that right," etc. Find out at your lesson what to do and then go home and do it the same as you would your school work. In public school you will not pass unless you do the work required

THE EFFICIENT MUSIC TEACHER

BY THOMAS TAPPER

VI. The Efficiency of Assignment

I

AUTOMOBILE road books and European travelers' guides are often among the best types of efficiently prepared and published ormation. They aim to convey, in the clear- possible manner, exactly what the reader shes and needs to know.

But to whatever extent a book is unclear, in- urate, hazy, mazy, and indefinite, to that ex- t it fails to serve. It follows upon this that ople will not buy an article that becomes own to be under 100 per cent trustworthy, urate, and dependable. Hence, the business ssible for such a thing begins to fall off.

But given a thoroughly reliable article as stworthy as human ingenuity can make it, l the business possible for it will steadily in- ase.

Here, then, are presented two conditions and o apparently inevitable consequences.

. We start toward our public with a 100 per t efficient article that the public needs and will come smiling to meet us. It wants what have.

. We start toward our public with an arti- that is needed, but which, as we offer it, does exactly serve its purposes. In a little while public will turn around and run away from

Perhaps then we may conclude that:

n efficient article, efficiently delivered, will ld the salesman the maximum possible effi- nt result.

Let us try this out in a few familiar appli- ions.

. The housewife who knows exactly what wants done, who knows exactly how it uld be done and how to convey directions information to her maid, will inevitably suc- d in getting it done.

onversely, the lady of the house who doesn't w exactly what she wants done, who cannot it herself, and so cannot give explicit direc- ns, changes service frequently.

So widespread is the belief in the efficien- principle which tells us,

. **Competent Counselor is best,** even though services are costly, that few people attempt act as their own dentists, haircutters, tailors, shoemakers.

ut the enormous vogue of patent medicines ws that a multitude attempt to be their own sicians and the enormous vogue of all man- of illnesses indicates the efficiency result.

herefore,

he music teacher who isn't quite sure of self, who doesn't clearly see the needs of pupil, and who is incapable of efficiently cting the pupil, must necessarily produce r results mingled with disappointment.

nd furthermore,

he music teacher, however great and mighty may be, however talented, however often his trait may appear to the public eye, who does or cannot say with exact definiteness what pupil is to DO, will reap poor results and ppointment.

he consequence is not a peculiar twist that ies from nowhere in particular. It is the sequence of breaking a natural law. From the preceding paragraph anyone can deduce the law for himself and apply it if he cares to.

II

It is an inevitable conclusion, therefore, that much poor teaching is due to the lack of care in making exact the lesson content (the thing to be done); and from failing to specify the process by which it is to be done.

However much the teacher may be inclined to think that it is the pupil's business to "hear what he is told," it will be forced upon him in time that in all teaching (even with talented pupils) he must reckon upon a certain amount of Inertia on the pupil's part. This we must consciously drive out of him. Lastly, the teacher must also remember that he gives instruction from his sub-conscious mind while the pupil struggles to receive it with the objective mind.

Now the teacher's experience has, year after year, built up his sub-conscious knowledge of music until he speaks from an unusually rich and well-stocked reservoir. But the pupil's very lack of experience makes it necessary for him to build his sub-conscious knowledge out of the experience afforded him by the teacher's guidance. If that guidance is absolutely what it should be, the pupil will in turn build a rich sub-consciousness. If it be careless, inexact, inefficient, he will build a sub-consciousness that will trip him up for the rest of his life. It will always be careless, inexact, and inefficient.

Yes. There are exceptions.

There are pupils to whom no one can sell inefficiency of assignment in great quantities. Like the needle, they always point true North.

But they are not over many and their capacity to orientate themselves is so uncommon that it need not be reckoned with here. What we have to consider is the average pupil. And of him we may say:

1. He is not inventive of ways and means.
2. Nor capable of holding to enthusiasm.
3. Nor likely to exercise 100 per cent of his attention when spoken to.
4. And so he usually fails to take in what is said to him.
5. And therefore his work process in study hours is like the house built upon the sand.

EXPERIMENT NO. 1. Let the music teacher himself take a little instruction as to the nature or use of carbo-hydrates preparatory to giving a lecture on the subject and let him observe that he will display the above five characteristics, at least to some extent, until he gets his bearings.

I think it is Benjamin Franklin who reminds us in his *Autobiography* of the terrible consequences that followed upon failing to heed the loss of a horseshoe nail.

I have forgotten the details, but something as large as a kingdom went to pieces once because of that nail.

The misconceptions of pupils are no less disastrous.

They clog the mind, or balk its action, or set it off in the wrong direction, or inhibit its progress, sometimes for a period, sometimes for life.

I once had a schoolmate who was set back in his studies a year because no one would sit down with him and make the process of long division so plain that he could see it. But he is now a bank president.

There are not a few students of counterpoint who never grasp the fact that they are to reckon all harmonic intervals from the *Cantus Firmus* only when it is in the Bass. Any continued misunderstanding makes life gloomy and unsuccessful.

One might go on citing all sorts of cases to show how a grain of sand will make a $100 watch stop ticking, and yet the moral is simple; for a perfectly clear direction will go farther towards setting the pupil on his way rejoicing than an infinite amount of carelessly handled greatness on the part of an inexact pedagog. Let us keep the refrain ever in mind: **All for want of a horseshoe nail.**

———*———

A NON-MUSICIAN'S HELP

BY EDNA JOHNSON WARREN

It appears to be an established idea that a person who does not understand music in any way is of no possible help to the young boy or girl just starting out on a musical career. This idea should be eradicated at once, for many times it is the root of much evil.

For instance: Within a few days a lady told me her two young daughters had recently started taking piano lessons and that every minute they were in the house they were at the piano; the noon before she had asked them to give the family a rest for a little while. Before our somewhat lengthy conversation ended I had shown her, from a teacher's point of view, the harm she did and how much benefit she could be to them, although she did not know one note from another.

To start with, her money was being spent for her children's musical education. The more she allowed the children to practise, the quicker the returns,—either financially or for entertainment only, whichever the case might be, and that would be a benefit to both parents and children.

In the second place, she could sit and listen to exercises or simple pieces although she did not know personally whether they were done correctly or not. This would give encouragement for work, as well as getting the girls to play to something besides an empty room.

If mothers could only understand the enthusiasm that a small amount of time freely given or a few words of praise, now and then, could arouse in the hearts of their boys and girls, I am sure they would be less—shall we say—selfish. Many a mother would wash, iron, or cook far into the night for her children, and yet if she were asked to spend three minutes listening to piano work, she would do so grudgingly.

Third, she could invite in a few friends and ask the musician to play once or twice, not enough for a bore, but just enough to show more interest. This work of the non-musician should not devolve on the mother alone. Anyone with common sense can help the little ones along in music by taking them to concerts, subscribing to a good musical magazine for Christmas or birthday, starting a musical library with a good bound book, or even reading aloud from the children's page of some of the above magazines. Do not be a knocker. Start the other way, and if you have no little folks of your own, interest yourself in someone and help the musical cause along.

THE COMMUNITY AND ITS MUSIC

BY THOMAS TAPPER

Here are stories of four workers for Music, who have found the means to arouse and maintain the interest of the public in music. These and other accounts have been published in THE MUSICIAN not to praise those who have done something, but to get others to do their part.

COMMUNITY MUSIC AND DRAMA PRACTICALLY APPLIED

THIS department has frequently mentioned concrete instances of a community not only entertaining an ideal but actually working it out.

A booklet describing a Fourth Season of Community Music and Drama as presented in the high school auditorium, at Winfield, Kan., is of permanent value as a record.

Here school children and citizens work to a common end. Just now seven programs are in process, the first of which, by the Winfield Orchestral Club and Mr. Archibald Olmstead, pianist, presented this program, a type inserted here, both for record and general encouragement.

Symphony in B minor.....Schubert
Liebestraüme, No. 3.....Liszt
Rhapsodie, C major.....Dohnanyi
Intermezzo, "Jewels of the Madonna" Wolf-Ferrari
Good Friday Spell.....Wagner
Ballet, Sylvia .....Delibes

Also for record and encouragement:

Program No. 2 is *An Evening of Song* by the High School Chorus.

No. 3 is the presentation of Jessie Braham White's *Snow White and the Seven Dwarfs* by the school children.

No. 4. Program by the Orchestral Club (works by Mendelssohn, Percy Grainger, Wagner, Massenet).

No. 5. Joint concert by a women's chorus (from the Apollo Club) and men's chorus (from Southwestern College).

No. 6. Percy Mackaye's drama *Jeanne D'Arc.*

No. 7. Chorus of four hundred children (from the middle grades) and Children's Orchestra (eighty-five pieces). Miscellaneous program.

THE PURPOSE

Edgar B. Gordon, under whose direction the community work is fostered and developed, thus clearly sets forth what he and his associates are aiming to accomplish:—

"1. To contribute something to the leisure life of the community by supplying it with a varied and attractive form of entertainment.

"2. To offer opportunity for artistic expression to a large number of persons and encourage a more active participation in this type of leisure occupation; there being a too prevalent tendency to permit the arts of music and drama to be monopolized by professionals.

"3. To provide a community enterprise calling for the co-operative effort of all classes of people.

"It has been a source of the keenest satisfaction to the hundreds who have shared in the production of past programs, for they not only experienced the thrill of pleasure which comes to those engaged in artistic self-expression, but they have found in them the opportunity to entertain their friends and render a valuable form of community service.

"The effort from the beginning has been utterly devoid of all commercialism, those taking part having played, sung, and acted for the sheer joy of it, and their reward has come in seeing a fine and growing appreciation of their work and a distinct improvement in taste among all for higher class music and drama. The entire proceeds from the eighteen programs given in the last three years have been devoted to an extension of the work and to those things which would stimulate interest in artistic endeavor. The funds realized from the present series go toward the development of the children's work in connection with the Winfield Chautauqua Assembly.

"Not satisfied with confining the activities to Winfield, the plans for the present season include an arrangement for sharing the programs with some of the rural districts and small towns adjacent to Winfield."

WHAT ONE WOMAN IS DOING FOR MUSIC

That a little village of West Virginia can truthfully boast of being the most musical community for its size in the state is due entirely to the unselfish efforts of one talented woman of wealth, who, without any desire for remuneration whatsoever, except in the satisfaction of seeing splendid results from her work, gives her time and thought to the musical development of her home town of fifteen hundred souls.

Having no organized class in either vocal or instrumental work (this is in charge of a local teacher), this quiet woman—set apart by her social position and well-known musical education from any possible envy or thought of criticism—unobtrusively directs and fosters all musical matters toward community betterment and social needs. No voice has been lifted in a hymn in the most obscure little church of the village that she has not singled out if it holds any promise whatever. A boy singing on the street corner, if he has a voice of merit, holds her attention. At the school commencement exercises she watches the children's musical development, encouraging both child and teacher.

Latent talent which otherwise would never have been thought of this woman discovers and exploits to the surprise of the village.

Every choir in the village has her personal supervision and a certain note of dignity has been attained by the manner in which the music of the service is conducted under her tutelage.

Her spacious home and grounds are thrown open very often for musical fêtes, and people from far and near gather for these real treats. Knowing the very human desire of people to "show off" and the wholesome competition and emulation aroused by competitive effort, she arranges, with infinite tact, her programs with a view to "starring" the most deserving in such a way that followers along the same line will see what they, by effort, can also accomplish.

While the village folk are saying "What a pity Jane's parents think they cannot afford to send her to a conservatory" this woman is devising ways and means by which Jane GOES.

Middle aged and old ladies who are "stiff in their joints," but who "played when they were young," are encouraged to practise duets, which they perform in public to their own and everyone's delight.

As the spring sunshine softly filtered through the delicate pale foliage of the trees and the birds caroled sweetly from near by brakes as if in sympathy and accord with the musical fête in progress this beautiful afternoon, I sat listening, thinking of Oberammergau.

This, I thought, is why the people of F—— seem to be living on a higher plane than the folk in other villages. I talked to the performers afterwards. Their enthusiasm and knowledge of music and matters musical was truly remarkable and they were voluble as to the genuine good times they had at these musical "parties."

There are many kinds of charity and good works to be done in a village but I know of nothing more truly elevating than this. Nearly every village could accomplish something along this line.

At least do not let the musical fires go out in your home town.

N. G. S.

TAKE A YEAR FOR PREPARATION AND FOR WORKING OUT THE PLAN

There follows the substance of a letter addressed to the Editor of THE MUSICIAN by D. Alfred Wooler, of Buffalo, which is worthy of the closest reading. Presented now it offers an abundance of time for the preparation necessary to inaugurate this beautiful plan in your town. Like the Winfield, Kan., programs, the description is interesting because it has to do with a practical factor; with something that can be made to work successfully anywhere. All that is needed is someone who sincerely believes in it.

"My dear Mr. Baltzell:—

"Next Sunday (December 19, 1915) we give special Christmas music at both morning and evening services, with a choir of 40 voices, which includes four soloists, augmented by 80 children's voices in carol singing. On Wednesday evening, the 22d, we shall take the 80 children in two sections of 40 each, out carol singing to 'shut-ins,' that is, to members of the church who have been unable to come to the church during the year. We shall use automobiles to expedite travel. Each section will have a list of nine or ten places to be visited. We meet at the church at 7 o'clock, and can visit the places by 9 o'clock. Each section will have an adult in charge, so that no time is wasted.

"We go right into the homes of those visited and sing two carols at each place, after which we repeat in unison, 'We wish you all a Merry Christmas and a Happy New Year.' This is our greeting to all. Then we hurry out and away to the next place. We use the piano in the home when possible, if impossible, we sing unaccompanied, the pitch being given by the leader, who accompanies each section.

"You can hardly form an idea of the pleasure given to the infirm folks. We did this last year and my heart was so stirred with joy at seeing the pleasure we gave, I can never forget it. I count it among the most happy Christmas times I have ever had.

"We return to the church about 9 o'clock, when both sections there unite and sing for the church people who will be on hand at the midweek services, after which refreshments will be served to the children. We find it best to do this on Wednesday, for the children want to be at home on Christmas Eve.

"This was such a success last year that the Epworth League of the church, a company

out 100 young people, sixteen to twenty-six rs of age, are going to do the same thing s year. However, they will go to such places hospitals, etc., and sing outside. They expect use sleds if snow is on the ground and per- ps each will have a little pocket flashlight to d with. This company will go out Christmas c and return rather late to the church for re- shments and a good time among themselves.

"I hope this may be the means of influencing ers to do the same in the future. I can as- e you it well repays for the extra work in paring the singers."

COMMUNITY MUSIC IN ROCHESTER, N. Y.

Mrs. Elizabeth Casterton, Director of Music the Schools of Rochester, N. Y., presents the lowing report on Community Music in that y. Here is an instance of effort which involves ny dissimilar types of organization, which, wever, when directed to serve a common rpose, become unified of purpose and result. A paper on the general subject of Commu- y Music, by Mrs. Casterton, will appear in a sequent issue of THE MUSICIAN.]

The community music activities which it has en my privilege to direct were inaugurated fore one heard much or at all of the term ommunity Music" or of methods to create existence. For the organization of these ac- ities there was no guide or assistance from er sources, which fact, perhaps, has been of at advantage.

The work was started in a careful and con- vative way. It was supported by altruistic rits, who kept their fingers always on the se of local musical affairs, and was encour- ed to extend and expand only as said pulse med to indicate a desire or necessity for ex- sion or expansion.

Therefore, it seems that building as we have, ording to the needs and supplies of our com- nity, our structure has a firmer foundation itself than if built according to other archi- ts' plans.

The development and growth of the work has n so gradual and so interwoven and cement- togcther are its different features that it is icult to select any one point in its history, separate its activities for description. More- r, some seven or eight years have elapsed ce the inception of the work, and during se years the writer has been much more en- ed in looking into the future of Community sic in Rochester than in reviewing its past.

WHAT THE MUSIC CLUB DID

hortly after assuming my duties in Roches- I felt the necessity of seeking the interest co-operation of the city's musicians in pub- school music and its varied features and ex- sions. The members of the local music club, Tuesday Musicale, fortunately pledged mselves to give their support individually as a body toward the furtherance of musi- culture among the people of Rochester and ointed a committee whose duty it was to as- the school music supervisor in this work.

USE OF SCHOOL BUILDINGS

rograms contributed by the Club were given he students and teachers in grammar schools sections of the city where good music was often heard. These were finally extended he high school in honor of special occasions to present to the assembled students exam- s of good music well rendered, as well as to illustrate certain topics under consideration in music classes. On account of the many neigh- borhood people who attended these programs, it was wisely decided to hold some evening con- certs.

Thirty-three of the evening Community Mu- sic programs for children, parents, and the peo- ple at large were held last year with a total at- tendance of over nine thousand five hundred. Fifteen day concerts also in various sections of the city, with the public invited, were given with an attendance of nine thousand. This makes an average attendance of four hundred and twenty- five at each of the forty-eight concerts.

Of these concerts, thirty-six were miscellane- ous in character, some were of the folk-music of different countries, and nine were of American music.

OTHER MUSICAL ORGANIZATIONS INTERESTED

The demand for concerts became so great that in order not to overtax the members of the Club, who had pledged gratuitous services, and also in order to interest other organizations in Community Music, it was decided to ask the co- operation and assistance of the Symphony Or- chestra, the University musical organizations, the High School Glee Clubs, and some of the church choirs. Their contributions to the cause have been most valuable.

The Symphony Orchestra has given its pro- grams in several different sections of the city. once in a very thickly populated Jewish section, another time in a large German district. I have been told that this season the Orchestra pro- poses to give all its programs in different parts of our city.

The High School musical organizations have also made valuable contributions to Community Music. Their appearances have served to attract large numbers of neighborhood people whose younger relatives and friends were members of the High Schools. The programs given have served to cement closer together school and community. Equally well have the University and other musical organizations of the city played their part in the Community Music ef- fort.

All the above activities will be in operation this year. In addition the following new line of Community Music effort will be undertaken. Several of the local musicians are giving their assistance in selecting a list of music books to be placed in our public libraries for free circu- lation among the people of the city. This list of books will embrace desirable family music books, easy classics, collections of folk-songs, and so forth.

The results of all these lines of Community Music endeavor in our city are manifested in ways too numerous to mention.

An epoch making revision was made in the constitution of the Club itself this year. For twenty-five years it existed "for the mutual im- provement of its members," but now it exists "for the purpose of extending musical culture throughout the city of Rochester."

In conclusion I foretell things for the school music supervisor who enters the broader field of music usefulness in his community. That the field is an almost untrodden one should not make even the youngest supervisor despair. Let him remember that those who have accomplish- ed anything in Community Music have done so of their own initiative.

They learned and grew as they progressed. No special training was theirs. For them there were none to teach.

DEBUSSY AS A STUDENT

DEBUSSY'S parents were not musical, and he him- self showed no marked musical instinct as a child. In 1871 the boy happened to be at his aunt's house at Cannes, and she took it into her head that he should study the piano. An old Italian, Cerutti, taught him the rudiments, and the teacher saw noth- ing remarkable in the boy, who on his return home took no lessons.

The mother of Charles de Sivry, the brother-in- law of Paul Verlaine, hearing Claude strumming the piano, was the first to detect the boy's talent. She had studied with Chopin, and she gave Claude lessons with such good will that he entered the Paris Conservatory in 1873. He studied with La- vignac, and took three medals for *solfège*. His piano teacher was Marmontel, and Edward Mc- Dowell was in the class. In 1877 Debussy took a second prize for his performance of Schumann's sonata in G minor. He resolved to concentrate his attention on composition.

The class of harmony was then taught by Émile Durand. "A succession of notes was given, called either 'chant' or 'bass,' as it was placed high or low. It was necessary to add chords to it according to certain rules as arbitrary as those of bridge, dis- turbed by one or two licenses, no more. For each rebus there was only one solution, which, in the jargon of conservatories, is known as 'the author's harmony.' Debussy was never able to find this 'au- thor's harmony.' One day, when a preparatory com- petition was testing the strength of future rivals, the master, a stranger to the class, who had given out the theme, read at the piano the answers. He came to Debussy's. 'But, sir, you do not understand it, then?' Debussy excused himself: 'No, I do not hear your harmony. I hear only that which I have written.' Then the master, turning toward Émile Durand, all put out, said: 'It's a pity!'"

Debussy studied for three years, and did not gain even an *accessit*, but he was more fortunate in the matter of improvised harmony. The teacher of ac- companiment was Bazille, an amiable old gentleman, who had arranged many orchestral scores for the piano. While waiting for his tardy pupils, he would play from Auber's operas. His one idea was this: "You see, boys, harmony is to be found only by study at the piano. Look at Delibes; he always composes at the piano. And see how easy it is to reduce it! The piano is an orchestra that comes all alone under the fingers." Nevertheless, Debussy had the opportunity to please his ear, and in 1880 he took a first *prix d'accompagnement*.

He then went into Guiraud's class in competi- tion. Guiraud, born at New Orleans, had a finer taste than is shown in his compositions. He liked Debussy, and gave him good advice. The pupil set music to de Banville's comedy, *Diane au bois*, and brought it proudly to the class. Guiraud looked it over, and said: "Come to me tomorrow and bring your score." After Guiraud had read the score a second time, he said: "Do you wish to take the *Prix de Rome?*" "Of course," answered Debussy. "Well, this is all very interesting, but you must re- serve it for a later day, or you will never take the *Prix de Rome*."

For a short time Debussy was in César Franck's organ class. He soon tired of hearing Papa Franck during the exercises in improvisation crying out in- cessantly: "Modulate! Modulate!" when he him- self did not see the necessity. Debussy took an *accessit* for counterpoint and fugue in 1882, and the next year the second *Prix de Rome*.

THE MUSICIAN is a great help in keeping pupils interested in their work. Pick out articles from each issue for them to read.

MISS KATE CHITTENDEN

AMERICAN PIANIST AND TEACHER

BY HARRIETTE BROWER

(All rights reserved)

ABOUT the first musician with whom I came in contact, on my professional advent in New York, over twenty years ago, was Miss Kate S. Chittenden. We lived under the same roof and saw each other daily. I was attracted by her sincerity, her fearlessness and candor, her wide experience, and the justice of her opinions on most subjects. As I learned to know her better and got beyond a certain quaint, characteristic brusqueness of manner, I realized how sympathetic she was, how tender-hearted, how ready to help struggling talent, or those who were not even talented but who craved an assisting hand. I saw the *Synthetic Method,* which she organized and worked out, grow from its very inception.

Looking back along all these years, it seems to me that Miss Chittenden's whole life has been one of devotion to her ideals. Those ideals I believe to be:

To develop the most practical method of piano study she could devise; to aid students to find themselves and develop the best that is in them; to help young teachers to establish themselves,—in short to "lend a hand."

We conferred lately on the wide subject of piano teaching. I had remarked that in my experience neither singers nor violinists, as a rule, could give an adequate idea in words, of the essentials of music study or teaching; whereas the progressive teacher of the piano generally has so much that is useful and helpful to impart.

"That is because the piano is a universal instrument," said Miss Chittenden. "The singer can only sing one note at a time, a violinist at the most can play two; but the pianist can depress about a dozen keys; the piano is the instrument of harmony."

"I was greatly interested," remarked the present writer, "in your exposition,—given at the New York Music Teachers' Convention, held in New York in June, 1915,—of the use of half tones in teaching a comprehension of the material used in music. I believe teachers and students who read THE MUSICIAN will appreciate a brief resumé of your ideas."

"I was almost forced into these discoveries," answered Miss Chittenden, with a smile, "by the utter lack of *finger instinct* I found in most of the pupils who came to me. I found they needed to *feel* the black keys as well as the white,—half-steps as well as whole steps.

"We therefore start with the half-step, the smallest interval in music. At the back of the keyboard all the keys are a half-step apart. This very fact seems greatly to simplify matters for the beginner. Who would imagine that out of half-steps there can be made, starting from all the twelve keys, 479,001,600 changes!

"We first use half-steps in pairs, in the form which I call Shaded half-steps. (See Fig. 1.) Then half combined with whole steps, as in Fig. 2. Filled-in seconds, containing three half-steps, are used in these rhythms. (See Fig. 3.)

"Now we take sequences of whole steps played chromatically, with legato touch (Fig. 4). Half-step with filled-in whole can be used in different rhythms. (See Fig. 5.)

"We now take up minor thirds. I first use either B♭ and D♭, or D♯ and F♯,—'two mountain peaks with a valley between.' The pupil can never mistake either of these for a major third, whereas the minor third on white keys is sometimes misleading. I have the pupil *feel* this minor third chromatically up the keyboard, to learn its form. It is then written and played with different touches. (See Fig. 6.) Then come broken minor thirds. (See Fig. 7.) After these the filled minor thirds in eight rhythms. (See Fig. 8.) We also use minor thirds

MISS KATE CHITTENDEN

preceded by an octave below its prime;—excellent for skips. (See Fig. 9, left hand.)

"Major thirds—'two mountain peaks with two valleys and a small hill between,' equal to four half-steps, are next taken up. These are either played together or in broken pairs. (See Fig. 11.) They can also be preceded by an octave. (See Fig. 12.)

"In teaching chords I use the three triads in this order: diminished, minor, major. (See Fig. 13.) Inversions are demonstrated by alternate hands overlapping each other. I call them "shingles." (See Fig 14 and reverse.) The diminished seventh and dominant seventh are taken up in the same way and are quite simple after the drill with the triads.

"I am glad to give you this brief summary of the work. I think the musician should not keep his discoveries to himself, but be willing to share them and benefit his fellow workers, if he has found out something which will shorten the labor of the student. He should be as generous as the physician, who is not allowed to patent his knowledge."

"How long will it take the student to go through the various half-step forms which you use?" I questioned.

"About three months. Of course it all depends on the ability of the learner and the amount of time she has to give. All beginners go through the work with my assistants. Even my girls at Vassar College are quite ready to do it.

"In a college like Vassar, where there is so much laboratory work, as well as so many other subjects which crowd out music, it is very difficult for the students to get in a satisfactory amount of practice. Music students cannot give more than half an hour a day for five days in the week. I have pruned the course in piano just as close as possible. There is only time for the most essential things. I insist on good tone and rhythm, decent phrasing and dynamics, and an intelligent use of the pedals. I am very particular about this point. I make great use of short pieces, the Schumann *Kinderscenen* Op. 15, some of the Chopin preludes; each piece for some special object. My assistants—I have three in the College—give a lesson to each music student once a week. I give them a half hour lesson every other week; the alternate week I have them in classes, six in number.

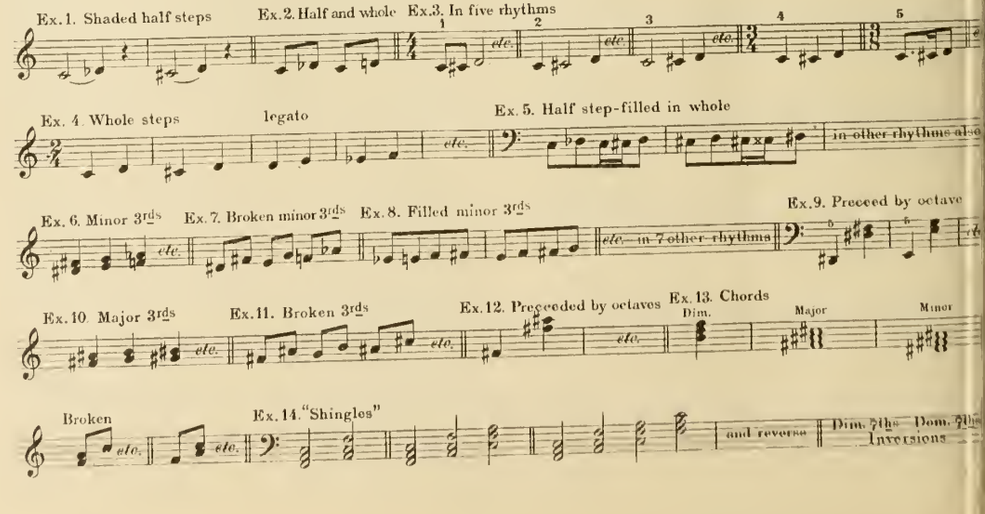
"Dr. Gow has most interesting analysis classes, in which the music students learn to criticise each other. This particular item is of the greatest benefit. A teacher may correct a fault over and over again, and his correction may have no appreciable effect; but let a fellow student criticise another and it makes an indelible impression,—it is the end of that fault."

Miss Chittenden came to New York as a very young girl, from London, Canada, her native city, determined to make her way in the metropolis, for she felt she needed a larger field for her activities than she found at home. She began at once to teach, do accompanying, and play a church organ. This was thirty-eight years ago. She held a position as organist in one of the influential city churches for twenty-five years. For a good many years she was identified with the Metropolitan College of Music, until the way opened for her to acquire it as her own venture and build up a school of music after her own ideals. She has been eminently successful in this undertaking.

Miss Chittenden numbers over three thousand pupils who have studied with her in the course of her long career. For over sixteen years she has been head of the piano department in Vassar College, making the trip to Poughkeepsie every week during the entire season. Besides all this she has been for twenty-five years one of the lecturers for the New York Board of Education free lecture courses, being the first woman ever chosen to lecture on music.

It has been recently said of Miss Chittenden:

"To an exceptional degree she is open-minded to all the new developments in the music world, and is to her capacity for comprehending quickly the points of view and discriminating shrewdly between what is worth while and what is of little or no value in the evolution of pedagogical work, that her success is in a great measure due. She has devised a comprehensive system for teaching children (the Half-tone System) which has produced eloquent results."



CONTACT PLAYING

BY KARL E. RACKLE

Mr. Rackle contributed to THE MUSICIAN for tember, 1915, an article on the subject of ght-playing which may be read to advantage connection with the following.—Editor of THE SICIAN.]

HE application of the weight principle de- ds upon the principle of contact. In the sent article the latter principle is dealt with a rudiment of piano playing.

y contact playing is meant the habit of ping the fingers in contact with the keys— ed to the keys," as it has been significantly ressed. The fingers feel the keys they are to before they play them.

ontact is the preparation for the weight prin- e. It prepares the position of the hand upon proper keys, after which the weight principle orms the actual work of pressing the keys n.

ontact insures precision and accuracy, and imizes the amount of energy required in play-

urthermore, it reduces the requisite hand finger movements to comprehensible order affords a basis for the mental record of the hanism of a piece. Let us examine the con- principle in reference to mechanism.

perfect mechanism is the basis of all thy playing. By this it is not meant to imply mechanical playing is an end to be sought. the mechanism of a piece must be master- before any real expression can be put into execution. If the mechanism is not mastered, piece cannot be worthily played at all, may performer have ever so exquisite an inter- ation in mind. A careful and deliberate king out of the mechanism is the indispen- e first step in the preparation of a piece. ry note and every finger must be conscious- uperintended by the mind, and each passage t be repeated mechanically until reflex ac- has been reliably established in the finger ements. Not until then should the mind dis- ge itself from the mere notes and fingers. he preparation of the mechanism, think o succession of hand positions required to the proper keys.

ie point can be made clearer by referring to mechanical piano-players of the old style h were set before the instrument and made perate directly upon the keyboard. Such a hanical player had a finger for each key o piano so that a finger was required to op- e only when the depression of its particular was required. There was no need for a r to find the key before striking. The fin- were always in position, each one in con- with its key. This would exemplify the ideal ontact.

it when human hands are required to ac- plish the work of the mechanical player, process becomes twelvefold more compli- d and involved. For the human hands are ed to ten fingers as agents to manipulate ty-four keys. Thus each finger must neces- y operate more than one key—theoretically keys—in actual practice any finger may be ired to play any key. While with the me- cal player there was no need of fixings of ion, the fingers being always in place, with human hands a constant readjustment is sary in order to bring the proper fingers the proper keys at the proper time. The encies of a piece require numberless differ- ent positions of the hands and these hand positions must be taken on the instant and must proceed in the proper sequence.

The mechanical process, then, can be stated broadly to be a succession of hand positions at any required grade of speed and dynamics. In the preparation of a piece, the student should think of the succession of hand positions called for, and in each position he should carefully remark which notes are simultaneous and which are successive. The interpretation of the piece will demand a certain note or notes of each position to dominate dynamically, and this is to be accomplished by the differentiation in touch of the finger or fingers playing the dominating notes. Such differentiation of touch must be worked out as part of the mechanical process.

The change from one hand position to another must receive equal attention in preparation with that given to the positions themselves. There are two general ways by which you pass from one position to the next, namely, by pivoting on the thumb, and by picking up the hand entirely and assuming the new position. In either case, the fingers (except the thumb when it serves as a pivot) are forced to leave the keys and contact is momentarily abandoned. However, the interval of transition should be reduced to the minimum time and movement by making the change as quickly and dextrously as possible. The fingers should be in actual contact with the keys of the new position immediately and should not delay finding their keys until it is time to strike. The solution of the contact principle is to take each position ahead of time, so that the hand has the opportunity of repose, even though momentary, in each position, and the fingers have a chance to prove their playing, so to speak, before they actually play.

In applying the contact principle, let the hand lie accurately in each position with each finger touching the key it is to play, until all the notes included in the position are played. That is to say, prepare all the fingers used in a hand position at the same time that the first finger of the position is prepared, instead of preparing the fingers one at a time successively. To illustrate:

Suppose this passage occurs in a piece:

The hand should be placed at once so that the thumb touches E, the second finger G, the third A, the fourth B♭, and the fifth D. Then, after each finger feels the proper key beneath it, the passage is played in the succession indicated by the notes.

Such a habit of practice should be instilled into pupils as soon as possible; for the average pupil of small experience wastes much time and energy in placing one finger in position at a time and discharging its action before the next finger is thought of. To be sure, there are instances in which the stretches are too great for all the fingers to compass their respective keys at the same time. Such instances are, of course, *hors de propos* of the point I make here. Ordinarily, the simultaneous preparation of all the fingers in each position is feasible, and it is the principle which makes for accuracy and the saving of energy.

The innumerable phases of positions and transitions are by no means exhausted. A full treatment would far exceed the limits of this article. Many instances of frequent occurrence in practical playing will be found in which the application of the principle will have to be modified. For example, when the hand pivots on the thumb, the key that the thumb plays will be separated both from the position which precedes and from the one which follows. So in this case the isolation of one key will be found necessary. The present writer hopes, however, that he will not be understood as advocating a hard and fast rule which is universally applicable. To the contrary, the purpose is to suggest a general principle which will produce desirable results, but the application of which will necessarily have to be modified to meet required conditions.

———*———

THE PRACTICAL SIDE OF MUSIC TEACHING

BY CHARLES BANCROFT

HE wondered why he was not making a reasonable financial success as a teacher. He felt he did not have a grip on the business end of his profession. If he could only raise himself out of the rut he had unconsciously fallen into, and place himself in a position where he did not have to worry about making ends meet, he felt the world would hold much brighter prospects for him.

He had overhead a salesman tell how he studied his customers' dispositions, and little mannerisms, how it helped him in doing business with them. Why not study his pupils—why not apply his business sense to his profession? He had often heard that variety fertilized success.

His next thought was, how to increase his pupil list. He had some neat announcements printed, and from those he instructed, he obtained the names of friends or relatives, who were interested in music; his pupils did not object in the least to doing him this favor. He explained that he was about to send out his business circulars, and wished to include their friends on his mailing list. He wrote a short personal note with each one stating that he was taking the liberty of enclosing one of his announcements, through the courtesy of ———— (here he placed the pupil's name). He found that this form of advertising had a distinct advantage in the fact that he had a sample of his teaching ability in the pupil these people knew.

He had a card printed large enough to fit in a business envelope with the following announcement:

MISSED LESSONS

The future success of my efforts as a teacher of music depends on the quality of pupil developed under my instruction. Only by taking lessons consecutively can a pupil hope for success. I have made it a rule that all lessons missed must be paid for, except these missed through sickness. These, however, can be made up before the end of the term if the pupil so desires.

Underneath this statement came his name and address. When a pupil showed carelessness in not reporting for his lesson he mailed to him one of these cards.

He also found it was much better to decline instructing a pupil who refused to practise. He realized that the teacher of today was judged by the quality and not the quantity of pupils he turned out, as musicians. He knew it meant a loss financially to him; but people who heard this class of pupils play, he figured, would, in all probability, blame the pupil's failing on him as a teacher.

One day he awoke to the fact that his bank account was gradually growing larger, all of which he realized came from applying business ability to the practical side of his profession as a music teacher.

Literary Methods as Applied to Music Study

A Method for the Appreciative Study of Piano Music, Adapted Either to Individual or Class Work

BY CLARENCE G. HAMILTON, A. M.
Associate Professor of Music, Wellesley College

II

[In THE MUSICIAN for January a plan for applying to the study of musical compositions methods which have proven successful in the study of English literature, questions were an important feature of the proposed method.]

WE pass now to the application of these questions to two

EXAMPLES

FOREWORD.—Number the measures of each piece under view consecutively, beginning with the first *full* measure. Where a division is repeated, number it but once; if there are two endings, use the same numbers for each, calling the first set *a* and the second *b*. Thus in the Bach *Gavotte*,* the two endings of measure 8 are numbered respectively 8*a* and 8*b*. If a measure is divided, be careful to number it but once: For instance, in the Bach *Gavotte* the first measure begins with B♭, the fourth note of the upper part. Measure 8*a* is completed by the three notes at the beginning, and measure 8*b* by the first two beats of the following part.

I

Gavottes I and II, from Third English Suite.
J. S. Bach, 1685-1750.

In performing these, it is customary to play *Gavotte I*, then *Gavotte II*, and then *Gavotte I* over again.

A: FORM

1. Early-classic. *Gavotte I* has two voices, while in *Gavotte II* a third is added, singing below the other two on a single note.

2. Playing the two gavottes as indicated above gives the divisions A B A. Each of these has two smaller divisions, of which the second is much the longer. Inasmuch as the second part of the original gavottes was regularly twice the length of the first, the proportions which Bach employs are quite justified.

3. *Gavotte I* is in G minor, although it modulates to B♭ in the eighth measure. *Gavotte II* is in G major throughout.

B: MOVEMENT

1. The meter is duple, with two half notes to a measure.

2. The pace is indicated as *molto allegro* (very rapid). There is no variation, except that it is customary to slow up somewhat at the endings of the large divisions, in order to add a sense of dignity and finality.

3. When played rapidly, as indicated, the pace is much swifter than that demanded by the original dance. It would be possible, however, to play the piece effectively in the conventional tempo.

4. A regular rhythm of two measures, based upon the succession of a quarter and two eighth notes, persists throughout. Occasionally this is slightly varied, as in measures 11 and 13, where there are unbroken eighths in the upper part and quarters in the lower.

5. There is much more varied interest in the melody than in the rhythm or harmony, although the persistent rhythm dominates the spirit of the whole.

C: MELODY

1. The outlines and range of the melodies in *Gavotte I* are instrumental, not vocal. Those of *Gavotte II* might be sung, although these also have an instrumental cast.

2. In *Gavotte I* the upper melody is full of zigzag progressions, which rise and fall in uneven lines. These lines are softened, however, in *Gavotte II*, where gentler wave-curves prevail.

3. The upper voice is generally first in importance.

4. Since the accompaniment is itself wholly melodic, it is full of interesting progressions which furnish constant contrast to those of the upper voice. An imitation of the theme of the first measure occurs in the accompaniment in measures 14 and 15. This theme is again played upon by the upper voice in measures 18-23.

D: ACCOMPANIMENT

1. Melodic.

2. Chords are merely suggested in the melodic outline.

3. In *Gavotte I*, about 2 1-3 octaves (see measure 14); in *Gavotte II* only a sixth (see measure 39).

4. Though there are no chord massings, the active and buoyant nature of the accompaniment gives a sense of fulness.

5. Only occasional repeated figures, as in measure 2, where the last four notes, played by the left hand, are immediately repeated a degree lower (measure 3).

6. Each two measures constitutes a phrase; but the most of these phrases are connected by the following bass part to those which follow. The endings of the longer divisions are very definite, resembling each other in general effect.

E: STYLE

1. Leaping and joyous in *Gavotte I*; more quiet in *Gavotte II*.

2. It is pleasing.

3. *Gavotte I* is much brighter and louder than *Gavotte II*, though in each there are various degrees of *forte* and *piano*. The range of color, however, is not large.

4. At the ends of the principal divisions. The chief climax is contained in the last few measures of *Gavotte I*, where the upper voice rises gradually in pitch, and culminates in the third measure from the end.

5. *Gavotte II* is called a *Musette*—a name derived from a mediaeval instrument of the bagpipe variety. The continuous G in the lower voice represents the droning bass tone given out by the musette. Contrast between the two gavottes is heightened by the introduction of this feature.

6. This will be answered under the next example.

F: COMPOSER

1. Bach, a native of Eisenach in Middle Germany, spent a quiet life mainly in nearby towns, where he labored unceasingly as composer, organist, and director. Most of his dance music was written while he had charge of an orchestra at Cöthen (1717-1723). His prodigious genius in adapting the methods of the early classicists to the most intricate and subtle compositions, both instrumental and vocal, entitle him to a leading place in the front rank of musicians.

2. Clearness of form, nice balance of phrase and a strong harmonic framework are Germa traits found in this piece.

3. Choral, orchestral, chamber, organ, ar clavier music, all in large and complex stru ture.

II

Second Valse brillante, Op. 56.
Benjamin Godard, 1849-1895.

Number the measures, as before.

A: FORM

1. The Romantic.

2. Prelude (measures 1-5); A (6-21); A (22-37); B (38-55); A′ (55-71); C (72-87); (88-103); C (104-119); B (120-137); A′ (137-153 Coda (154-182). Division A is altered in its r appearances only in the fact that its second pa begins an octave below its original locatio The proportions are excellent.

3. Division A is in B♭ major, B in G min modulating back to B♭, while C and D are r spectively in E♭ major and G minor. The Co though modulatory, finally ends strongly in t original key of B♭.

B: MOVEMENT

1. Triple.

2. Ordinary waltz time is indicated (*tem di valse*). This implies a somewhat quick pa

3. Though the style of the piece is mu more varied than is ordinarily the case w dance music, neither pace nor rhythm preclu its use for dancing purposes.

4. Rigidly even in the accompaniment; ried but generally regular in the upper part

5. Melody and harmony are practically equal importance with the rhythm.

C: MELODY

1. Except in snatches (see the first f measures of C), the melodies in the upper p are purely instrumental.

2. Most of these are scale-wise. Sometir the chromatic scale prevails, as is especially case in the Coda. Occasionally there are l leaps, as in the C and D parts.

3. In nearly all of the piece the flowing n odic part is above the accompaniment. The n ody is heard in the bass, however, in the f four measures of the D part.

4. A striking feature is the use made of four-note figure *B♭ D C F*, made by the low bass notes in the first four measures. In the part this figure is continually repeated a ground bass; while in the other divisions its p ence as a foundation is still quite evident, thoug is adapted to the new keys. Such a unifying de as this was regularly employed in the old da form called the *Chaconne*.

D: ACCOMPANIMENT

1. Harmonic.

2. The foundational note of the chord curs almost invariably on the first beat of e measure, while notes which fill out the harm are played together on the second and t beats. This is the conventional form of acc paniment for the modern waltz.

3. As a rule this is included within two taves; though this range is occasionally tended by transference of the accompanimen another register, as in the C part, where, order to lighten the effect, a few chords ap in the treble. Rich tonal effects are also i duced in the D part and at the end by bass octaves.

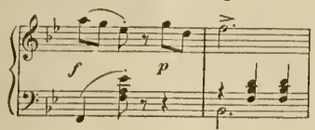
4. Full, especially in the D part.

5. Constant repetition of the four-note

* See pages 24 and 25 of the music section of the January issue.

c mentioned above (C:4) or reference to it ake this valuable as a unifying factor.

6. They are precise. The halting but grace- l forms of ending in the A part:



sumes various guises in this part, but does ot appear in the others; though there are simi- r sudden pauses in the phrase endings of the part.

E: STYLE

1. It is buoyant and active.

2. Varied devices and terse, vigorous expres- on combine to enlist the interest.

3. There are many sudden changes from id to soft and *vice versa,* as in measure 8, here the brilliant strain is cut off abruptly, d a light ending follows. After the close of e repeated A part, the B part enters boister- isly. A similar effect occurs at the entrance the D part (measure 88). A still greater con- ist occurs at the beginning of the Coda when e preceding *fortissimo* chords are followed by a licate *pianissimo.*

4. The piece is fitful and erratic in its ods, with frequent outbursts, often followed soft answers. In the Coda, however, a soft t compelling *crescendo* mounts up from a *pi- issimo* through ascending chromatic runs, until e climax of brilliant arpeggios at the close attained.

5. There are many unexpected turns, such as e sudden rush of notes with their interrup- ns in the cadences of the A part. Noteworthy so is the graceful diminuendo of the B part ich glides softly into the return of the A rt (measures 49-56); and the varied registers ployed in the C part.

6. Compared with the Bach gavottes, this altz has a much wider range of pitch and tone or, with richer harmony and brilliancy of chnical devices. These modernisms, however, e balanced by the compact, unified structure d the nice contrast in voice writing of the ch gavottes.

F: COMPOSER

1. Benjamin Godard was born in Paris, ere he studied at the Conservatoire, and ent most of his after life as composer and nductor. He is known as a composer of much ginality and refinement.

2. Grace and elegance, emphasized by novel- and brilliancy of style are essentially French alities that prevail in this piece.

3. Godard's piano music was especially suc- sful, although he wrote songs, chamber and hestral music, as well as eight operas.

MPOSITIONS OF THIS TYPE FOR FURTHER STUDY

Grades, indicated by a Roman numeral, range m I to VII.

ch, *Gavotte* and *Bourrée* from *Fifth French Suite.* III-IV.

PIANOFORTE MUSIC AS REFERRING TO SHAKESPEARE

BY H. J. STORER

It has been stated, and with truth, that great poets always lead to great musicians, whether the poets were themselves musical or otherwise. Any one who is a student of history will know full well that when a poet arises who becomes a favorite with the people, there follows some composer who voices in music the words which have created such enthusiasm in the popular mind. Schumann and Franz were the true musical reflection of Heine, and Goethe found his true musical counterpart in Schubert and to a lesser degree in Berlioz.

Shakespeare's influence was far greater than either of the two first mentioned, for it has extended for upwards of three centuries, and upon composers of nearly every civilized country. To give even a reasonably complete list of all the works inspired by either the plays of Shakespeare or the characters in them would be an impossibility as such a list would fill a volume. Operas, symphonic poems, overtures, and other large works for orchestra alone or in combination with chorus, incidental music, piano transcriptions of songs or instrumental pieces, make up a long list.

While few of these were original music for the piano much of what is known in opera or the larger orchestral works are found in pianoforte adaptations or arrangements, some of them comparatively easy but more often difficult. Some of these pianoforte arrangements are found in old editions, and probably out of print. But a large amount of this material is available, and will be briefly mentioned according to titles of the plays in question.

Take *The Tempest* for a beginning. There are at least fourteen operas inspired by this play. Perhaps the earliest is the setting by Henry Purcell of Shadwell's arrangement of the play. Dr. Arne's setting is in the old solid style of the English school of his time.

Coming down to later times, there is the admirable incidental music to *The Tempest* by Sir Arthur Sullivan, in an excellent pianoforte version.

There is an opera by Halévy in a vocal score and piano accompaniment. There is also an elaborate ballet on the play of *The Tempest* by Ambroise Thomas, with especial dances for Ferdinand and Miranda. One can mention also Tchaïkovsky's overture which is believed to be published in a piano arrangement.

For the *Merry Wives of Windsor* nothing will please better than Nicolai's overture to his opera of that title. It is bright, tuneful and deservedly popular everywhere. Of the several other operas on the subject the most noteworthy is Verdi's *Falstaff* named from the leading character. The full pianoforte version can be utilized for excerpts as may be desired.

Sir Henry Bishop, well known for his many and tuneful part songs and glees, made a fairly good setting of the *Comedy of Errors.* It is seldom heard nowadays, but some of it would bear a revival. For the *Taming of the Shrew,* the best musical setting is the opera by Herman Goetz, well known in European opera houses. Its pianoforte version will give opportunity for study of the many delightful pages of this operatic masterpiece.

Midsummer Night's Dream has its chief reflection in the incidental music by Felix Mendelssohn Bartholdy. The overture is a product of the composer's youth, and nothing in the Shakesperean musical literature will surpass it. Much of its beauty is lost when heard in any other way than in its original version, but the two and four-hand adaptations will give some idea of its delightful character. The *Nocturne,* and the well worn *Wedding March* need no especial mention, as they are familiar to all. The Liszt arrangement of the march was at one time a leading show piece for pianists and is very effective.

Dr. Arne and Sir Henry Bishop made settings, or rather incidental music to *Twelfth Night* which are good examples of the old English school and might be heard occasionally with interest. There is also a pianoforte version of a little known opera on the subject by Carl Taubert.

Beethoven's overture to *Coriolanus* may be mentioned here, although the composer founded his overture on Collin's tragedy of the same name and not from the original Shakespeare.

Coming to *Macbeth,* this tragedy has inspired much music, but little however of interest or lasting value. Purcell is believed to be the first composer to be inspired by this tragedy although some think that the music was by Matthew Locke. Spohr's overture is all but unknown in these days. If Edgar Stillman Kelley's interesting incidental music to *Macbeth* exists in a pianoforte version it should be studied as a fine modern example. Joachim Raff, and Ignaz Brüll were among those who wrote overtures on the famous tragedy, and Verdi's early opera need not be seriously considered, as the libretto was a burlesque on the work and unworthy of any composer.

As to *King Lear,* the best musical outcome is Berlioz's overture which pictures the insane monarch in a most graphic manner. As for *Much Ado about Nothing* one notices a pianoforte version of an opera by Paul Puget, but that is about all.

Othello was the tragedy which inspired Verdi to some of his best work in his latter years, and excerpts from the pianoforte version can be given with pleasure to many. Then one thinks of the old Rossini version which has many tunes and little else. The overture is heard occasionally and the piano version is easily obtained. Dvorák's *Othello* overture is a number that can be given with much pleasure.

Romeo and Juliet has inspired many composers to a greater or less degree. There is Gounod's pleasing opera, with its waltz song, and overture, Berlioz's symphonic poem is another work which will repay careful study, although it suggests a cantata rather than a symphony. Tchaïkovsky's overture is a fine example of the composer's genius.

Of *Hamlet* one finds the opera by Ambroise Thomas, with its inappropriate yet florid music to Ophelia's "mad scene." In Saint-Saëns's opera on *Henry VIII* the ballet music is most pleasing, although not strictly faithful to the spirit of the original Shakespeare.

In the *Midsummer Night's Dream,* two of the fairy characters, King Oberon and Queen Titania, are perpetuated more or less in music. Weber wrote his best operas, with Oberon as the chief character, and the overture is one of the best in the orchestral repertory. It is especially effective either in a two or four hand piano arrangement, and there have been piano "fantaisies" on themes of the opera. Some years ago, Wély's brilliant but superficial *Titania* was a popular piano piece with students, and is still in vogue among teachers in certain parts of the country. Schubert's immortal *Hark, hark, the lark,* has been most effectively transcribed for piano solo by Liszt.

And there is much in the way of Shakesperean music, by numerous composers, past and present, that is not available in pianoforte versions. Some of the old scores are out of print and others by modern composers are known only in full score. This list, however incomplete, will nevertheless give one a fairly representative field for selection in the make-up of programs for Shakesperean musical evenings, or for incidental music in conjunction with a dramatic presentation or a reading.

THE MUSIC TEACHERS' NATIONAL ASSOCIATION

37TH ANNUAL CONVENTION, BUFFALO, N. Y., Dec. 28-30

THAT educational purpose in music is not a new idea is abundantly indicated by the fact that the National Association has been in existence for almost forty years, the first meeting having been held in the midsummer of 1876.

It is true that the programs of the first four or five and the last four or five meetings differ materially; yet both will be found filled with educational purpose. The programs of the early years of the Association were intended to stimulate those in attendance to more serious and definite educational work in music, at the same time offering suggestions and methods for raising the standards of teaching and for increasing personal efficiency. Recent programs have certain features which were not found in those of thirty years ago, for example, the prominence given to work in the public school music field, to the problems which have arisen in relation to community work in music. But the purpose of those who founded the Association, is, in the main, unchanged, and has been unchanged through all the various divergences, year after year.

If one looks back progress may seem to have been slow, very slow. Perhaps the steps forward have been few and the distance covered in a step very small. But there *has* been advance. That more has not been accomplished is, perhaps, due as much to those who have remained outside of the Association as to those who have endeavored to direct and carry on the work. Perhaps the liability is the greater on those who have stayed away.

Another point is worth consideration at this time: During the past ten to fifteen years state associations have been organized in nearly all sections of the country, and these bodies have taken up with earnestness and enthusiasm problems of professional welfare which, in former years, were the province of the National Association. This is not mentioned in the spirit of criticism. On the contrary the writer of this article believes that the various state associations are much better qualified to achieve unity of thought and of action on all matters of prime importance to the music teacher. It is readily apparent that the teachers of New York State, for example, with its many large cities and towns, will have different problems from those which confront teachers in a western state in which there are few large cities and towns, where the population is much less dense, and largely rural.

Therefore we believe that the National Association should devote its energies to the study of professional questions of a national character in a broad, a national manner, leaving to the states the work of determining the best ways and means of improving conditions within the state bounds. That is, Illinois is better qualified to work out a plan of regulation of teaching within its borders than is a national association to shape one which shall be effective in all states.

But it does seem that when the various states have drawn up plans for the improvement of professional conditions a study of the various methods by a national organization might result in a larger view, which will prove helpful to workers all over the country, and tend to unify music teaching, that is, to a closer and better organization of American work in music.

Another idea may be suggested at this point, one which applies to state associations as well, namely, that the work of an association of music teachers which aims to help all who are engaged in that branch of education should be planned to continue throughout the year, culminating, if desired, in the annual convention, but not confined to such a meeting. There is enough work worth doing to occupy the attention of musicians every month of the year. And this is the point at which, in the belief of the present writer, associations have been weak.

It is true, as some one has said, that it is difficult to get the men and women of an association, state or national, to work. There is no doubt that this apathy does exist, and that it is a prime cause of the evils against which many persons rail. But it may be equally true that the desirability, nay the necessity, of working continuously and vigorously has not been presented with sufficient force to persons who ought to assist and have hitherto stood aside. Teachers repeat injunctions to their pupils, not a few but many times. An old man of a philosophic turn of mind said that if he wanted to get the people of his community to do something he said it to them "very loud and very long." He might have added with truth, "and very often."

Therefore it may be that the various state associations, and the National as well, will find it necessary to tell certain things very loud, very long, and very often before the desired impression is made upon the minds of many teachers. We need more of the idea of service, of the idea expressed by Dumas in his *Three Guardsmen,* whose motto was "One for all, and all for one." The teacher who helps the cause of music in a community helps his own interests as well. The teacher who does his studio work in the spirit of service to the whole community helps himself more than does the one who thinks only of what he is to get out of the work he is doing.

The spirit of service to the music profession, of uplift and improvement in the methods of music education, are two cardinal directing ideas in the work of the Music Teachers' National Association. And we commend to all readers of THE MUSICIAN the opportunity to assist in this splendid work. There is a need in the Association for every teacher who is dominated by the educational ideal and purpose in his musical labors.

THE PROGRAM

We can take space only for a synopsis of the program as carried out at the Buffalo meeting.

FIRST DAY

The first session occurred on Tuesday morning, Dec. 28. It is due to the Committee of Buffalo musicians who co-operated with the officers of the Association to say that they managed all details within their province most admirably. The sessions were held at Hotel Statler, and the management of the hotel made every visiting member feel at home. The auditorium was especially convenient in size and acoustically very good.

First on the program was an address of welcome from the Mayor of Buffalo, presented by his secretary. Then followed the address by the President of the Association, J. Lawrence Erb, of the University of Illinois, on *The Training of the Teacher,* in which he outlined a scheme of education and preparation for the profession which drew warm encomiums from those present. The last event of the morning session was a paper on *The Measurement of the Voice in Singing,* with demonstrations on the tonoscope, by Prof. Carl E. Seashore, of the University of Iowa, read by one of his assistants, owing to the illness of the writer of the paper. The theme of the paper was the value of the instrument in determining through the eye the extent of a singer's variation from true pitch and means for correcting the same. The lecturer claimed that the eye, having before it a demonstration of variation, will appreciate this variation more readily than an ear admittedly imperfect.

The afternoon was devoted, in part, to a Conference on questions connected with the piano, Miss Kate Chittenden, of New York, in charge. Two papers were read, the first by LeRoy B. Campbell, of Warren, Pa., on *Relaxation as Related to Piano Playing,* in which the term "relaxation" was explained according to the modern view; the second was by Hans Schneider, of Providence, R. I., on *The Psycho-physiological Background of Pupils' Mistakes,* an able presentation of the scientific principles of muscular activity. Following this conference was one on the subject of Musical Appreciation, Francis L. York, of Detroit, chairman. Three papers were read. 1. *Music in the Universities of Europe,* by Dr. Otto Kinkeldey, of the New York Public Library; 2. *An Academic Treatment of Practical Music in College,* by Dr. George C. Gow, of Vassar College, presented, in Dr. Gow's absence due to illness, by Miss Chittenden; 3. *A Freer Conception of Musical Form,* by Prof. Walter R. Spalding, of Harvard University. The three papers gave an illuminating view of methods in American educational institutions as contrasted with certain European universities.

In the evening a recital was given by the following members of the faculty of the College of Fine Arts, Syracuse University: Adolf Frey and Raymond S. Wilson, pianists, Frank Ormsby, tenor, and Francis S. Humphrey, baritone.

SECOND DAY

Wednesday morning was a busy time. The first of the session was devoted to a paper on *Class Teaching of Voice Production for Singing,* by Frederick W. Wodell, of Boston, with an animated discussion following. Mr. Wodell's suggestions were of special interest to those who are occupied with music in schools. The second part of the session was a Conference on the Orchestra, Adolf Weidig, of Chicago, chairman. Theodore Spierin, the eminent American violinist, now a resident of New York, read a paper on *The Conductor of the Modern Symphony Orchestra and His Qualifications* for which his attainments and experience splendidly qualify him to speak with authority. The paper which followed on *The Relation of the Choral Conductor to the Professional Orchestra,* by Dr. Frank Damrosch, of the Institute of Musical Art, New York, was especially vital to those who were present for many of them have choral organizations under their direction. At the Annual Business Meeting which followed some important matters were presented, especially interesting being an outline report of the treasurer which showed a satisfactory balance on hand.

The first paper of the afternoon was a discussion of *The Work and Ideals of the Association of Presidents and Past Presidents of all the Music Teachers' Associations in the United States,* by Borius Semmann, of Milwaukee, in which he presented suggestions of value to those who are interested in organized effort. Then followed a Theory Conference on the general subject: *What is the Harmonic Significance of the Era of Debussy, Ravel, Stravinsky, Schoenberg, and Scriabine?* Papers were offered by George C. Gow on *Facing the Future in Harmony;* by E. Harold Geer, of Fall River, Mass., on *The Consequences of Equal Temperament;* and by Robert W. Stevens, of the University of Chicago, on *The Closer, True Relative Minor Founded on the Mediant, with the Minor Second as the Normal Interval.* The afternoon session closed with a Conference on the subject of Community Music. Four papers were presented. *The Band as a Community Asset,* by A. A. Haring, of the University of Illinois; 2. *Some Essential Passing-tones,* by P. W. Dykema, University of Wisconsin; 3. *The Litchfield County (Conn.) Festivals,* by Waldo S. Pratt, of Hartford, Conn. *A Study of the College Glee Club,* by T. Carl Wimer, Pennsylvania College for Women, Pittsburgh.

The evening was very pleasantly occupied by a reception and concert, tendered by Buffalo musicians.

THIRD DAY

Thursday morning the members heard a paper on *In Untrodden Field in Music Teaching,* by Frederick Lillebridge, of St. Louis, in which he presented interesting ideas on the subject of piano study. The main part of the session was devoted to a Conference on the subject of liturgical music, with four papers. 1. *How Liturgical Music Was Composed and Performed from the Rhythmical Standpoint up to the 12th Century,* by Father Ludwig Bonvin, of Buffalo; 2. *Jewish Music Historically Considered,* by Rabbi Jacob Singer, of Lincoln, Neb.; 3. The Protestant Episcopal liturgical music was explained by Harvey B. Gaul, a Pittsburgh organist; 4. The special phases of the Lutheran liturgy were presented by William Benbow, Buffalo organist. A paper on the music of the Greek Church, with special reference to the Russian practice was not read owing to the absence of Mr. N. Lindsay Norden, of Brooklyn, who was called home on the previous day. At a business meeting which followed Calvin B. Cady, of New York, William Benbow, of Buffalo, and D. A. Clippenger, of Chicago, were elected to membership in the Executive Committee.

The afternoon session opened with a Conference on the subject of Public School Music and Standardization. The following papers were read: 1. *The Training of the Supervisor,* by Karl W. Gehrkens, of Oberlin Conservatory; 2. *Examinations in Practical Music (taken outside) for High School Credit,* by Prof. H. C. Macdougall, of Wellesley College, the data presented applying to the state of Massachusetts, and showing a big gain in the number of schools granting such credit; 3. *Present Usages in Accrediting Music in High Schools,* by Will Earhart, of Pittsburgh; 4. *What California Has Done for Standardization,* by Lloyd Gilpin, of San Francisco; 5. *The Ideal Basis for Standardization,* by Frederick Schlieder, of New York. This was one of the most practical and helpful sessions of the Convention.

The afternoon closed with a public meeting of the United States Section of the International Music Society. Papers were presented by Dr. Theodore Spiden, of Toledo, on *The Value of Music to the Medical Man;* by Prof. Charles H. Mills, of University of Wisconsin, on *The Relation to the Drama of Adam de la Hale and Hans Sachs;* by Dr. Otto Kinkeldey, of New York, on *The Influence of the Volksong upon Artistic Progress.*

Thus closed a very enjoyable session of the Association. It is pertinent to add here that a number of members were present for the first time and voted that it is well worth while. Every year this experience is repeated, with the result that the permanent membership of the Association is growing. It is probable that the next meeting will be in New York City.

———*———

THE CLASS MEETING

BY OTTMAR MOLL

Successful public playing demands a training of the most rigorous sort. Not only must the student's executive ability be developed very highly, but nervous and mental control as well as physical endurance must be secured. It is evident that performance in the studio does not suffice to give this training, and the attempt to solve the problem by means of an occasional recital cannot be successful, owing to the lack of adequate preparation.

The conventional Pupils' Recital is undoubtedly a great help to the music student, for it creates an incentive for serious effort during the period preceding it, and also offers an opportunity for playing publicly the compositions over which so many tedious and painstaking hours have been spent. The recital, however, falls short of its greatest benefit principally on account of its comparative infrequency in the career of the individual student.

The desired training can best be obtained by a combination of studio and recital work. The conditions imposed by public performance must be complied with, while conserving the informality of private instruction. These conditions are complied with in what has been termed the Class Meeting. To avoid confusing this term with a class lesson, it might be well to define each.

In the class lesson a number of students receive instruction, the individual being only incidentally tutored; in the class meeting the individual receives personal instruction which incidentally benefits the class. The classic exponent of the class meeting was Liszt, who probably did most of his teaching in this way.

My experience with the class meeting began while studying with Varette Stepanoff, in Berlin. I found her semi-monthly class meetings full of interest, and know that had it not been for them I would have had very little opportunity of playing publicly the compositions studied with this noted teacher. Their value was convincingly demonstrated when later, during my stay in Berlin, I was invited by the American Women's Club to play a recital. The fact that I had played the compositions comprising my program at almost all of Mme. Stepanoff's *Klasse,* enabled me to perform with more confidence and authority than would have been the case had I not had this training. Then and there I resolved that upon returning to the United States, I would endeavor to offer my own pupils the benefit of my experience, and have for the last four years devoted considerable time and effort to the development of this idea.

Class meetings, to be effective, must be held regularly and frequently. Every second and fourth Saturday afternoon in each month, from September to June, my pupils meet in the Auditorium of Henneman Hall (St. Louis). At these gatherings, which are open to the public, the students are expected to perform those compositions which have been memorized in the course of their regular study. The program is sometimes prearranged, but is more often selected as the recital proceeds. Whenever necessary the performer is interrupted and criticised, or the composition is repeated until the desired result is attained. When the student has become reasonably proficient in the performance of single compositions or groups of compositions, an entire program is attempted. Just as the successful performance of single compositions demands very many and frequent quasi-public repetitions, so naturally does the playing of an entire program require public rehearsals. It has been found quite necessary to rehearse one or two entire programs as often as possible during an entire season of class meetings, before attempting a real public recital.

The average pupil does not realize the difference between studio and concert playing until it has been forcibly impressed by frequent semi-public appearances of this sort. Interpretation assumes a new aspect and the use of the pedal in particular demands extensive revision. Tone and technic which appeared satisfactory in the studio often prove lamentably inadequate, and in striving to improve these the performer is soon convinced of the necessity of developing endurance. It is evident that in the course of several seasons of such work, the student eventually acquires endurance and the other essentials of public performance, as well as a dependable memory and repertoire.

A rational combination and co-ordination of the individual private lesson and the class meeting will result in giving the student a practical and thorough pianistic training. Too many teachers merely give lessons. A very few really develop pianists and musicians. To these, the addition of the regularly recurring class meeting to their private work, will result in increased efficiency.

The individual teacher will have to adapt the idea to conditions as they present themselves. The main points to be borne in mind, however, are these,—the class meeting must be held under conditions which closely approximate those of the actual public recital; the student must be firmly held to an observance of these conditions and must be scientifically trained to meet them.

Results will not become immediately apparent but the work must be persevered in and systematically carried on. It takes time and unlimited effort to develop a real pianist; but every bit of effort expended on the class meeting will surely repay itself a thousand fold.

———*———

PRACTISING

Every one of you knows that if you do not practise every day, you will not get very far in your piano playing. The importance of practising regularly, and carefully cannot be impressed upon you too often.

Now, since we agree that this is so important, let us see if we cannot find some way which will bring the best and quickest results. Here is a pupil, who has been working on a composition for some time. After he has played it over the teacher says, "Frank, I think we have worked out everything in that piece, and you play it quite well; so we will take a new one today." Frank is feeling very happy at the idea of getting a new piece, and he is thinking how pleased his mother will be. The teacher shows it to him, plays it over, explaining each part as he goes along, and tries over the most difficult parts with Frank. At the end of the lesson time, Frank goes home with orders to learn the first two pages for his next lesson.

What is he going to do, and how will he do it?

No doubt, if he does not know how to go about it he will start at the beginning, playing with both hands, and try to play the first two pages. That would be a very wrong thing to do. What he ought to do is this:

1. Practise the right hand part of two measures until he can play it easily.

2. Practise the left hand part until it can be played without making a mistake.

3. Play over the two measures, hands together, several times until they sound smooth and even.

In practising, be sure to get the right fingers, the right notes, and the right time. Above all, DO NOT HURRY.

After the first two measures have been learned, take the next two, and treat them in the same manner. Then start from the beginning and play over the four measures, until they go easily, and are smooth.

This is a very sensible way of practising, as you can see. You have often heard that "Music is poetry," and so it is. Now, for instance, you want to learn a poem of six verses. Would you take this poem, and read it over five times a day for a week? No, of course not. You would learn a verse at a time, until you had the whole of it learned. Then why should you try to learn a piece of music, by playing it over five times a day from beginning to end?

This may seem a very slow method to you. But try it, and you will find that you will learn your pieces and exercises better, and in less time than in any other way.

———*———

The central thought in THE MUSICIAN is that of DOING THINGS by presenting to the readers accounts of what others HAVE DONE and ARE DOING. Most of us need example.

THE PROFESSOR TALKS ON THE ART OF TEACHING

"Welcome, Professor, most welcome! Your coming is always opportune. I was just endeavoring to satisfy these ladies and gentlemen"—with a suave and graceful wave of the editorial hand, in the direction of about a dozen persons—"by giving them some ideas about teachers and teaching. Perhaps you would kindly give them *your* views?"

"With much pleasure. But, first, let me quite understand the question to be considered. Do you wish me to make a few remarks about teaching and those who teach, or to give some general advice on the art of teaching music which may be of service to those who are here?"

"Both, Professor. What we desire chiefly is to find some solution to the all-absorbing problem which is ever present in the minds of students, of musicians and of artists who are beginning their career, namely: Shall they teach or not?"

"To those you have mentioned, my dear Editor, let me add those musicians who have been trained for an artistic public life on the stage or concert platform, but who, for one reason or another, have not succeeded in satisfying all the requirements of the public—a capricious crowd!—as well as those whose powers to please are on the wane and who are, therefore, less acceptable to that crowd."

"Yes; that is the question: To teach, or not?"

THE PROFESSOR'S "HAMLET"

The Professor pondered profoundly for several seconds; then, with a humorously satirical expression of face, he soliloquized:

"To teach, or not to teach: that is the question:
Whether 'tis nobler in mankind to suffer
The tricks and ruses of untaught pretenders,
Or to take arms against the horde of fakirs,
And by opposing rout them? To learn: to teach:
Yet learn: and by such means contrive to end
Th' imposture and the thousand swindling shams
That music's heir to,—'tis a consummation
Devoutly to be wished."

A murmur of amusement and applause was quickly quelled by the steady seriousness of the Professor's gaze. "This daring paraphrase or, rather, imitation of the divine William's words (for which pray accept my apologies!) expresses briefly *how* to qualify ourselves for teaching, and what we shall achieve when so qualified.

"It is my very decided opinion, ladies and gentlemen, that the chief requisites for the teacher's profession may be summed up in the three questions:

Have you a personal message of music to deliver?

Do you feel impelled to deliver it?

Have you learned how to deliver it?

In other words: *Do you feel constrained to exercise the calling of a teacher?*

TEACHER'S CHIEF DUTY IS TO LEARN

"Thus, the first step is to make sure that we have a message, a personal message, to deliver—a message born in us by our ardent love for music. The second step is assured by the fact that we are obsessed by an overpowering desire to initiate others into the beauties and uplifting influence of the music, which we love so well. The third and last step is the most arduous and the most essential of all: To learn how to teach. Unless we acquire the knowledge, unless we learn how to apply it, all our endeavors will be in vain—no matter how sincere these may be, no matter how great our love for music, no matter how urgent our message, these will all be of no avail if we do not study diligently, always, and learn *how to deliver our message;* 'to learn; to teach; yet learn' (that is to say, study and learn, study and learn, right up to the last day of our career). The more we teach, the more must we learn.

"You have undoubtedly felt that, even for your own personal satisfaction, you must study your music in all its bearings; if you do not do so, you fail to derive any real pleasure from it. How much more, therefore, must you study and learn in order to be able to instil that music into other minds and to penetrate them with your enthusiasm and love for it!

"Another reason why we have to study and to learn always is the fact that the art of music is in a state of perpetual progress; it never stands still. If we do not keep pace with that progress, if we stand still, we speedily become 'back numbers,' 'out of the running,' completely ignorant of the newer developments and, therefore, incompetent to teach.

WE MUST KNOW MUCH TO TEACH LITTLE

"So let me impress upon you, most earnestly, the fact that you must equip yourselves thoroughly, not only with the necessary musical knowledge (that is but the essential A B C of your calling, without which you would have nothing to impart), but with the pedagogical training which will enable you to teach others. No matter how elementary the teaching that may be required of you, remember always that *we must know much in order to teach a little."*

"What do you think, Professor, of those who teach, without ever having learned *how* to teach? Should they be encouraged to continue?"

"Certainly; let them be encouraged by all means—but *not to continue* teaching. Encourage them to learn *how to teach,* before they venture upon the perilous path of the incompetent teacher; the only circumstance that prevents them being classed with 'the horde of fakirs' is the fact that they are really impelled to teach by a sincere love of music. They have only to be impressed with the indispensable need for pedagogical training, for them to acquire it forthwith and thus remove themselves from the questionable category of 'untaught pretenders.' It is only the charlatan, the 'fakir,' who presumes to make a show of teaching (!), for the sake of sordid pelf, without possessing any teaching capacity or qualification. The one, the 'untaught pretender,' who is sincere and loyal in his love of music and his desire to teach, will rectify his error by *learning how to teach;* whereas the other, the 'fakir,' will continue his pernicious practice, until the rising flood of competent teachers and capable teaching shall finally engulf him."

SOCIAL POSITION

"Forgive me, Professor; will you kindly tell us if you think that the social position of a teacher of music is one that is worth striving for?"

"Forgive me also, my dear young lady; but is your question intended as a joke? Or do you imagine that my social position, or that of my friend here, the learned editor, is so very inferior or negligible. I would like to reply that our social position depends entirely upon our own personal integrity and worthiness; if these are irreproachable the profession of music will but exalt us still higher.

"At the same time, I protest most vigorously that we are teachers because we love music and are possessed with an overpowering desire to propagate it in others, and *not* because we look upon our teaching art as a kind of 'Open Sesame!' to dances, five o'clock teas, bridge parties, and similar social struggles. Reflect for one moment and recall the names of all the past and all the present noted musicians and ask yourself the same question: Was, and is their social position worth striving for? What is your opinion of all those great ones? And remember, they were all teachers! For the highest aim in music is teaching. It is not the solitary musician who counts; it is his band of disciples (*discipulus,* a learner.)

"If we desire social position (a delusion and a snare) let us leave music and its teaching out of the question; but if we are earnest teachers, whole-souled, having high ideals, able and constant both in teaching *and in learning,* then we shall not only gain the greatest prize by our successful teaching (namely, successful pupils), but social success will knock, a supplicant at our door, for us to accept or reject as we please. The day has forever passed away when the music teacher was counted in a class with domestics.

LOVE OF ART OR LOVE OF MONEY

"One great question remains for you to decide, and upon your decision depends the success of your work: Why do you teach? Is it to gain position or wealth? Or is it because you love music so entirely, that your one great wish is to do all that lies in your power to swell the ranks of real lovers of your art and, by increasing the number of efficient teachers, to banish forever from the land the pretenders and the charlatans, who strangle the cause of music growth in this country?

"The question of position has been considered and rejected. Music as a money-getter should also be discarded. Teachers of music may and do earn comfortable competences—some become positively wealthy. But *to teach for money* deprives the teaching of all virtue; the pupil cannot succeed because the teaching is more or less perfunctory, with the teacher's eye on the hands of the clock and his mind upon his fee and upon that of the next pupil! This kind of teacher does not give *a lesson,* he gives *a period* of time (twenty or thirty minutes); when the next pupil arrives the lesson is broken off, unfinished, to the student's detriment. Pope's line fit this money-grubber admirably:

Such teacher's laws are by this rule exprest,—
Welcome the coming, speed the parting guest.

"The answer to this question of money-getting is on a par with that of social position seeking. Let the teacher be competent, up-to-date in knowledge and methods, whole-souled, sincere, loyal, imbued with an ardent love of music, not self-seeking, but seeking with all heart to make his pupils succeed, and all the rest shall be added unto him—including questionable gifts of social position and wealth.

DIGNITY OF THE TEACHING ART

Then, Professor," said the same little lady, h a timorous tremor in her voice, "may we nclude from what you have said that the pro- sion of teaching music is useful, praisewor- , and dignified, and that—"

Therefore," the good man interrupted ab- tly, with a tinge of impatience, "*therefore* my itive reply to the question: 'To teach, or to teach' is *teach,* teach, and TEACH. But in er to do so, you must remember that you e to *learn,* learn, and LEARN constantly, from ir first endeavors in the teaching art, right throughout your career up to its close; when will readily recognize that, no matter what inence you may have gained in teaching, you still a learner and that what you may have uired in music and in musical pedagogy is a small part of the vast immensity of the of Music, whose horizon is always far from because the Art perpetually progresses.

As to whether the profession of teaching sic is 'dignified' or not (!) that depends upon individual. The Art of Music is the peer of the arts, therefore its teaching is elevated 1 'praiseworthy.' The dignity of the art ould be reflected in the teacher and made nifest in his wise advice—as the poet says:

'O Music! sphere-descended maid,
Friend of Pleasure, Wisdom's aid!'

TEACH FOR ART, NOT SELF

We have to live by our art; but the more teach for the love of teaching, instead of for desire to make money, the better will our ching be and the worthier and more dignified ll we become. Wealth makes the best of us by. There is nothing like actual need to r us on and invigorate us. The Latin poet, sius, struck the right nail on the head when wrote: *'Magister artis ingenique largitor venter'* nger is the teacher of the arts and the be- wer of invention).

Thus our whole duty as teachers is to learn ays, to be sincere in our art and in our k, to make ourselves worthy of our high ing, to teach from the love of teaching, and propagate the principles and practice of our by means of our pupils."

MUSICAL MEANINGS

BY H. WALFORD DAVIES

r is very interesting to notice how inextricably nd with each other the associated and innate nings of a piece of music may become. In a v march, for example, the innate significance is ply one of restrained concerted movement. By ciation the movement becomes the tread of feet, nearly always that of a funeral or other solemn cession.

ssociated meanings have limitations, are incon- it, and some day end. Innate meanings are lim- s, constant, and unending. Associated meanings necessarily dependent upon personal surroundings personal history. They must vary with each com- y of listeners. Everyone knows how associated nories may hamper or glorify any well-known , and the thing recalled often immeasurably veighs the tune that recalled it. Associated nings are narrow, and it would be unfruitful evote study here to that which is determined by y listener variously and for him or herself. But te meanings are great, and are important to us It is helpful to everyone alike to devote atten- to them.

o that which interests us and to that alone our g responds. Interest will only be awakened n we can see some significance in the object of interest. Seeing none, our interest and therefore our response is purely a theoretic affair. Hence we must at all times and at all costs attach significance to the sounds we hear. If innate significance should fail, or not be clear, let associated significance be sought and given to every note, and the reward will be unfailing. (From a lecture.)

NOTES ON THE MUSIC IN THIS ISSUE

How many of the teachers who read THE MUSICIAN keep a repertoire record either in book form or on separate cards? Frequently a teacher will feel the need of a composition which will give a pupil just the exercise needed, but unfortunately the former cannot recall a single piece which will suit the pupil. So he "substitutes" something "almost as good," thus following a custom which is considered very reprehensible on the part of merchants.

How much more effective it is to make a note of any piece you come across which has application to a definite technical need. For example, take the *Humoresque* in G major by Tchaikovsky which is in this issue. This is in Grade IV and requires a light, staccato touch, introduces passages which are "interlocking" for the hands, chords, and is filled with the scherzo spirit. Or the *Romance* in G, by Spindler, for the left hand alone. Or *Fleurette,* by Lichner, a piece in the easier part of Grade III in which finger agility is required. Or *The clown,* by Kern, an easy humoresque, with staccato, hand crossings, and a little story to tell, as a guide in interpretation.

Humoresque in G major, Op. 10, No. 2, by Peter Ilyitch Tchaikovsky, is taken from the volume of MODERN RUSSIAN PIANO MUSIC, edited by Constantin von Sternberg, the well-known pianist, composer, and teacher, of Philadelphia, and recently issued by the publisher of THE MUSICIAN. It is an admirable example of the music of the Russian school, and a composition which has both stimulating quality to a pupil and musical interest for an audience. It is of the scherzo type and must be played with appropriate touch effects. In the left hand part, beginning in the tenth measure, be sure that the rhythmic figure D-E is played legato, as indicated by the slur, and kept well subordinated in tone, giving the effect of a murmur, one might say. Similarly the passage in sixteenth notes for the left hand is to be played quite legato, without in any way individualizing the notes.

In the gondola, Op. 20, No. 6, by Genari Karganoff, is also by a Russian composer, but not in the volume referred to in the previous paragraph. It is a barcarolle, opening with a very marked melody in the alto or tenor register, played mostly by the thumb and the adjoining finger of the right hand, while the other fingers of the right hand supply a chord to mark the beginning of a beat. The middle section supplies admirable exercise for the first two fingers in the legato passage in eighth notes. Bear in mind the composer's direction, *ppp,* and play as softly as possible, except where greater power is called for. This is a charming number for a third grade pupil.

Evening song (*Chant du soir*), by John Carver Alden, is in the nocturne style, broadly melodic in quality, and admirably promoting the development of a fine singing tone. Play the passages in octaves as legato as possible, somewhat the effect of a violin and a 'cello playing an octave apart.

Romance in G, Op. 156, No. 2, for left hand alone, by Fritz Spindler, is sure to be welcomed by ambitious pupils. Far too frequently it is the case that the left hand of a player is nearly a grade behind the right in fluency and expressive quality of touch. A piece for the left hand alone, musical in quality, is wonderfully stimulating to a pupil. This *Romance* is unusually interesting. Broaden the style of playing when the melody is given in octaves. Play the arpeggios smoothly.

Fleurette, Op. 79, No. 2, by Heinrich Lichner, is a fine example of this favorite composer's fluent, melodious style. While not cast in a definite dance rhythm, it should be played with a marked swing and freedom, so that it may convey the idea of a "floweret" gracefully waving as the light breezes move it to and fro. Begin learning it at a rather slow tempo, say 60 or 68 quarter notes to a minute, four measures at a time. It is a matter of astonishment to a pupil how much more quickly a piece is learned if it be practised in small sections separately. It is much easier to memorize it thus, and to increase the tempo. After it has been well learned carry the speed up to beyond 100 quarter notes to the minute, the ability to play the passages in sixteenths being the test as to the speed.

Alice, where art thou? a famous song melody by Joseph Ascher, has been arranged in a simple but very effective manner by Carl Wilhelm Kern. This will please the older folks, many of them doubtless knowing the air. This number is selected from 40 *Favorite Airs in Easy Arrangement for the Piano,* recently issued in the DITSON HALF DOLLAR MUSIC SERIES It is a fair sample of the interesting contents of the book.

The clown (*Humoresque*), Op. 192, No. 1, by Carl Wilhelm Kern, is intended for the younger players, for it is a Grade II piece. It is one of a set of six pieces entitled *At the Circus,* which will be found most attractive for use in a pupils' recital. It gives excellent drill in a light staccato touch, also in crossing the left hand over the right. *Melody* in F, Op. 3, No. 1, by Anton Rubinstein, arranged for four hands by Robert E. Austin, is a very satisfactory number for the ensemble class. It is so well known as a solo that we need not take space to discuss it.

Nobby Gray, Op. 17, No. 3, by Eber C. Hamilton, is an easy violin piece with piano accompaniment, with violin part in the first position. A young pupil will find in this most interesting lesson material. The teacher should supply bowing directions, having it played in a detached style and also with several notes to a bow, so as to give the pupil varied practice.

The mother heart, song for high voice, by Samuel Richards Gaines, makes a touching appeal to the mother sentiment through the text. Joined to an expressive melody it makes a song which will surely win the instant and sympathetic appreciation of the listener. Sing with sustained tone and easy diction so that every word may be intelligible. It is also published for low voice in F.

Japanese death song, for low voice, by Earl Cranston Sharp, has been used with signal success in concert by Mme. Julia Culp, the famous contralto and lieder singer. Text and music correspond most admirably, affording the singer opportunity for strong dramatic effects. It is also published for high voice in G minor.

Daisies, song for medium voice, by William Baines, is well adapted for use in teaching, as it lies in the medium register, and presents no difficulties of time or tune. It is particularly useful for the younger pupils for whom a teacher does not wish to use a passionate love song, such as we find the majority of vocal pieces to be. This song is also published for high voice in D.

Song of Jami, by William Dichmont, is from *A Cycle of Four Arabian Songs,* recently issued by the publisher of THE MUSICIAN. It is full of oriental color in melody, rhythm, and harmonic feeling. The ensemble is charming in the extreme, and the song should be a concert favorite. It may be had for medium voice.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

A PLATFORM FOR THE MUSIC TEACHER

At the bottom of Art is the essential condition—TEACHING.
The aim of Art is neither gain nor glory;
The true aim of Art is to TEACH, to elevate gradually the spirit of humanity;
In a word: TO SERVE IN THE HIGHEST SENSE.

Vincent d'Indy

EDITORIAL NOTES

DOING THINGS

SOME months ago we had a note in this department on "Talking about music," the thought being that the musicians and music lovers of a community must be sufficiently enthusiastic in regard to the art which they love to talk about it in the social circle and in other places where the people congregate, to the end that music and musical work are kept before the public.

Talking is good. It is worth while to keep the subject before friends and neighbors. But if we stop with talking we fall far short of our possibilities.

Some of the readers of THE MUSICIAN believe in following up their "talking about music" with "talking for music," with actually doing things for music. THE MUSICIAN makes a point of noticing this kind of activity, especially when it has an organized character. We make mention here of a few efforts which have come under our observation recently along with others which may receive comment later.

The President of the New Orleans Music Teachers' Association, Mr. Walter Goldstein, sends to THE MUSICIAN a letter telling of the work the Association is doing. They have drawn up a plan for standardization of teaching, a minimum requirement examination for members, and obligatory on all candidates for membership. This is working well. But to make it work still better—and here is where the spirit of doing things comes in—the certificate holders of the Association have entered on a newspaper publicity campaign to create a sentiment in favor of accredited teachers which shall make outsiders recognize the value of the Association's certificate. If patrons can be made to feel the safeguard of such a certificate all teachers will want the latter.

The New Orleans Music Teachers' Association is also working for public school credits for private instruction, and has presented to the Board of Education a scheme representing the sentiment of the organization on this important educational question.

It is the belief of THE MUSICIAN that the two problems mentioned are the most vital questions which are before the teachers of music today. They can be solved only by organized effort. And there is a share in this effort for everyone.

Baltimore musicians and music lovers are trying to promote the organization of a symphony orchestra in the city. They have enlisted the daily press in the campaign, and the columns of various newspapers are open to contributions on the subject. This is of special interest because the Mayor has approved including in the city budget an appropriation for such an orchestra.

Mr. Edwin L. Turnbull, a prominent musical amateur, and a composer of ability, has made an extensive investigation of what has been done in other cities of the same size as Baltimore or less, and has been placing before the public the results of his correspondence, with the hope that the people will feel that what other cities have done can be done in Baltimore.

For example, Rochester, N. Y., has had a symphony orchestra for the past fifteen years with a membership of 60, with a guarantee fund of $16,000 which is never called upon except fractionally.

The Kansas League of Municipalities, Mr. Homer Talbot of Lawrence, secretary, has made public some interesting facts in regard to a number of communities. Twenty-seven towns and cities spend more than $13,000 for free band concerts during the summer months. Topeka and a few other cities support organ concerts. The appropriations range from about $200 to $6,000. It must be kept in mind that Kansas has only about fifteen cities with a population of 10,000 or more.

THE MUSICIAN urges its readers to aid in this work of securing municipal funds for free public concerts. It helps the cause of music in a community.

Marquette, Mich., is a lumber town of about 12,000 inhabitants. It contains a successful business man who believes that it is a good thing for the town to have an opportunity to hear the great musical artists. He has therefore backed a series of concerts by three artists of such celebrity as Geraldine Farrar, Maud Powell, and Leopold Godowsky. Realizing the inspiration of numbers he has arranged for publicity for many miles in all directions. On the nights of the concerts all roads in that section will lead to Marquette.

Some may be ready to say that a few concerts by great stars is not the best way to develop music in a community. But it may be urged in reply that the initial effort must always be a strong one.

THE MUSICIAN believes that there is something to do in every community. Look around for what you can do to help things along.

—*—

LEARNING BY REPETITION

QUANTITY of practice is not the sure road to acquirement as some students seem to think. They will tell you, "Yesterday I practised five hours my sonata." And perhaps the one addressed will respond, "O, I did better than that, I put six hours on my concerto."

In all cases the experienced educator would feel like being present, for a time, at the practice to learn just what kind of practice went on during the five and six hour periods.

Quality is a consideration, the earnest pupil will find. A book recently issued by the publisher of THE MUSICIAN with the title *Ears, Brain, and Fingers,* contains the thought we wish to impress upon the reader. When Quantity of practice is the ideal of the student the fingers will simply be established in a certain mechanical routine. But when the ear consciously carries to the mind the impressions which are the result of the activity of the fingers, judgment is passed on the work and Quality is the result.

In a recent issue of the New York Sun Mr. W. J. Henderson, music critic, reports an incident in which the violinist Maud Powell figures.

She was in the country for the summer and, according to her custom, used some time every morning to play through certain exercises to keep her technic in condition. During a week a chore boy passed the window through which Mme. Powell was playing, and in due time became familiar with the music sufficiently to know that it was being repeated day after day. Finally he could contain himself no longer and called to the player, saying:

"Aw, say! Can't yuh play it yit?"

Repetition without thought, without development, without the effort to reach an ideal is in vain. Repetition with concentration of thought and purpose is a wide avenue to success. Which method will you employ?

The SINGER and His ART

HOW TO SING

BY ARTHUR DE GUICHARD

(All rights reserved)

I. BREATHING

What is voice?

Voice is the result of an appropriately shaped eam of air passing, at a certain rate of speed, rough a hollow organ (the larynx).

The action of emitting a sonorous note, that is say, to form a note with the voice, is a muscu- action, which depends upon: Will-power; Air; d Muscular Tension.

It is with considerable hesitation that the factor muscular tension is mentioned here. It is, how- er, necessary to state it in order to give the ie qualities of voice action. Muscular tension es not mean rigidity, stiffness, construction, tight- ss, or any of those obstacles which go to ruin od tone and to kill the natural voice.

REFLEX ACTIONS

All muscular tension in voice emission is reflex, reflex actions form the foundation of singing. reflex action is an obligatory, nervous manifesta- n which proceeds from another principle or ise. The muscular reflex at the base of singing the orbicular-costal-diaphragmatic reflex (mus- s of lips, ribs, and diaphragm).

Will-power has to be concentrated upon all that do, whether it be singing or playing, beating ie or beating carpets. This is a first necessity. t there is one that is of still greater importance: , which is usually referred to as breath, breath- , respiration.

RESPIRATION OR BREATHING

Respiration is the pendulum of life.

Deep breathing is the secret of long life.

Breath control is the chief factor in *bel canto.*

Here we have described, in a few words, the most ential element in successful singing,—indispen- le both for the making and the preservation of voice.

t is scarcely necessary to insist upon the impor- ce that exists for everyone who speaks and gs to know something, at least, about the science of breathing. Many persons think they know all about it and can breathe correctly, from the simple fact that they breathe and live. They are as greatly mistaken as the man who believes he speaks his own language correctly, just because it is his language; although he has never taken any trouble to acquire it scientifically!

CAPACITY OF LUNGS

The lungs can store about seven pints of air. They accomplish it by means of two movements: inhalation and exhalation. Inhalation consists in drawing the air into the lungs. This is done, normally, from sixteen to eighteen times a minute. In the first months of our lives we breathe about forty times a minute; at the age of two, twenty-five times, and at the age of ten, twenty times.

The mind and will-power must be fixed on the act of breathing, and every singer must know and be able to perform all its motions, from the slowest to the quickest, without raising the shoulders or making any extraneous muscular movement.

It happens very seldom that a full breath has to be taken, that is to say, that in one inhalation *all* the exhaled breath must be renewed, namely, about three and a half pints. For we must know that half the air we breathe, or three and a half pints, remains constantly in the lungs and is termed residual air—which seems to show that the lungs are never, and can never be, empty of the air which constitutes life.

When we speak, we consume about seven-sixteenths of a pint; when we sing the consumption is not quite a pint and three-quarters, no matter how high or low the note, or what its intensity, or how long the phrase may be.

THE THREE VOICE FACTORS

It must not be forgotten that the action of emitting a sound called voice depends upon three determining causes or reasons: Will-power; Air; and Muscular Tension. It is readily seen, therefore, how indispensable is will-power. Muscular tension, of which teachers seem to be afraid to speak, is of capital importance and may even aspire to second place (almost before air, it might be said) so great and preponderant is its importance. But, as I do not wish to cause discussion before the case is proved, I will merely say that they are dependent on each other.

Conscientious practice proves incontestably the collaboration that exists between our three factors. As an exercise I would strongly advise the student to seek some place where the air is pure—some park, or other open spot.

HEALTH-GIVING EXERCISE

Open your mouth as if to say OO; that is, put the lips forward in oval formation (this shows us the visible, orbicular-muscular formation of the lips), and inhale strongly. In doing this, you will feel a little coolness penetrate all the regions of the nose, at the back. The air has entered that part, where the temperature is always rather high, by a small meatus or canal which is lined with a thin skin and which is situated above the upper teeth and at the end of the palatine arch. When you have inhaled strongly, close the mouth and exhale through the *nose,* or sing a medium note. When you are accustomed to this motion, add the vowel O to *the same inhalation,* thus: OO-O. The mouth is somewhat more open for O than for OO alone; inhale strongly, and proceed as before. After a while, add the vowel A (ah) to OO-O, in *the same inhalation.* With the mouth well open, exhale after OO the same as after OO-O, and after OO-O as after OO-O-A. By so doing, you have stored up all the air that your lungs can contain and have filled them with extremely pure air. This exercise is excellent both for the health and the complexion; it facilitates breathing and keeps the respiratory functions in good working order; it is very beneficial to the general health.

In short, a singer consumes about a pint and three-quarters at each exhalation, in singing all through an act, or all through an opera, and so during several hours. This amount of air, whatever it may be, the singer must employ in a masterly manner, neither too sparingly nor too wastefully, but with just measure.

It is quite understood that, both in speaking and in singing, we must inhale through the nose and not through the mouth—a very important and essential detail.

GENERAL IGNORANCE ABOUT BREATHING

This matter of correct breathing is indeed the soul of life, even as it is also the soul of song. But mankind does not know how to breathe! Animals know how to breathe on land; fishes know how to breathe in the water; but we do not know how to breathe—or we breathe badly or incompletely.

It is curiously interesting to learn that thirteen hundred years before Christ the people of the East Indies were commanded to use daily breathing exercises; they were ordered in guise of religious exercises and as an excuse for the purification of certain organs, chiefly the chest.

Greek and Roman doctors recommended deep breathing against a number of diseases. In 115 A. D., Plutarch wrote that "the practice of singing contributes greatly towards health." But, it should be added, only when exercised naturally and according to natural laws.

Without doubt, the practice of singing and the vocal mechanism are assisted very much by good breathing but, unfortunately, this same good breathing seems today to be a very negligible quantity. A Greek doctor of the sixth century and one Mercuriales, in 1530, prescribed singing to cure asthma. pneumonia, and other diseases of the respiratory organs, as well as to prevent pulmonary phthisis. Times are indeed changed! Today the practice of singing is only too frequently the cause of diseases, pharyngitis, tonsilitis, laryngitis, and their attendant diseases, as well as of loss of voice.

The essential organ that physical education should have in view is not muscle but the lungs; for the dynamic energy of an individual is not in proportion to his height or his muscular development, but is according to the amplitude of his thorax.

PRACTICAL EXERCISES

The following are two excellent exercises that should be practised for ten or eleven minutes in the morning, on rising, and for the same period on going to bed. First exercise: Stand erect, without stiffness, one foot slightly advanced with the weight of the body bearing on the sole of that foot in order to impart a springy feeling of freedom to the body; hold hands loosely in the small of the back; inhale slowly through the nostrils, until the lungs are full of air; drop hands to sides, counting mentally four seconds; open mouth deeply, lips advanced in oval form, then expel forcibly all the breath at once, making use of the *breathed* syllable *hah!* Repeat this four times more. Notice well that the act of inhalation must be performed *without any muscular movement of any part of the body.* The breath

must be drawn in through the nostrils calmly, silently, without effort or interruption. *A good singer is never heard to breathe.*

The second exercise: Inhale as before; hold the full breath for four seconds, letting the hands drop to sides; then exhale as slowly and as silently as possible, until all the air seems exhausted. This slow exhalation will seem somewhat difficult at first, because it must go on uninterruptedly and no sound must be heard. The best way to achieve it is to advance the lips exactly as if you were going to blow out a candle *very lightly,* and place your index finger in front of your lips at a distance of an inch or an inch and a half, so that the warmth of the breath may be felt very slightly, yet continuously, on the finger. One important point to be observed during these exercises: *the tongue must remain inert* at the bottom of the mouth, lightly touching the lower teeth all around; there must positively be no movement of the tongue whatever.

The faithful daily practice of these exercises will, in a relatively short period, increase breathing capacity fifty per cent.

SIMULTANEOUS STUDY OF VOICE AND BREATHING

The exercises recommended herein are all that will be found necessary for a very long time, except in an infinitesimal number of special cases. Some teachers pretend that a student must learn the science of breathing thoroughly, from A to Z, for a long time before he learns to phonate, to sing. Such pretension is altogether illusive, not to be admitted for an instant. The emission of vocal sounds may be attacked forthwith, under proper guidance.

Without undue insistence, it may be easily understood how indispensable it is for a singer to have complete control of breathing and how necessary it is for that breathing to be absolutely quiet. Many mishaps may occur, independent of breathing. I may have just sung excellently; after a few minutes' rest I begin again and find that my voice has "gone off"—that I cannot continue. Why is it?

There are many reasons for it, and others which cannot be explained; a nervous condition, indigestion, some worry, the sudden remembrance of a past annoyance, any of these may act upon the voice, which is *the barometer of health,* both physical and mental. These things make us breathe more rapidly, quiet respiration becomes impossible, whence come poor, unsteady and colorless tones. But above and beyond all these reasons there exist others for the great majority of singers: *ignorance, indecision, and over-anxiety.*

ALWAYS INHALE REGULARLY

Always inhale in the same manner. Do not imagine that in order to sing a somewhat longer phrase, or one calling for more power, or for a long holding-note, you must try to store more air in your lungs. No; it is a mistake and is impossible.

Breathe equally, simply and naturally. From a careful examination of the method proposed, it is demonstrated and understood that this action is a muscular action; the success of the breathing and of its length becomes a negligible quantity, relegated to the second or third rank. This will be demonstrated in another article. Therefore, it is useless for a teacher to tell you to take a "good breath" because you have a long note to sustain.

The position of the tongue must be watched constantly, for, with the exception of the moment when it assists articulation, it must *rest, inert,* on the bottom of the mouth, avoiding all muscular movements, even those which are unconscious. As soon as the breath is inhaled, and the mouth put in proper shape, the movement or opening of the mouth will commence according to rules which will be given. Then the emission of voice will begin.

(To be continued)

MUSIC TO SHAKESPEARE'S SONGS

50 *Shakspere Songs. Edited by Charles Vincent. For high or low voice.* THE MUSICIANS LIBRARY. *Cloth, gilt top,* $2.50; *paper,* $1.50.

WE bring to the attention of the readers of THE MUSICIAN a collection of songs set to texts by Shakespeare as being of especial interest and value to all who may be charged with the duty of providing material in connection with celebrations of the tercentenary of the death of the great English dramatist. In this connection we quote from the PREFACE to the book referred to above.

"It is desirable, in as few words as possible, to show the condition of England, historically as well as musically, at the time when the poet was producing and performing his plays. Then Queen Elizabeth was on the throne, and her long and memorable reign was nearing its close. Owing to the introduction of the printing press, that great leveler to education, a desire for knowledge of every kind had sprung up among the more cultured classes of the people. . . . This active epoch brought to the front great leaders in science, theology, politics, and art, among the latter the great immortal dramatist and poet Shakespeare, whose genius has set down for all time the thoughts and emotions of this wonderful and stirring period.

"The condition of English music also reflected the brilliance of the times, as has been well stated by Hullah in the following passage: 'In the sixteenth century we not only sang and played as much as our neighbors, but we sang and played our own music. It is no exaggeration to say that the English hold, and are recognized as holding, a very high place among the composers of the period. Tallis, Farrant, Byrd, and Bevin, in "the service high and anthem clear"; Morley, Ward, Wilbye, and Weelkes in the madrigal; Bull, in performance as well as in composition; Dowland, the friend of Shakespeare, in the part-song; and, last and greatest in all styles, Orlando Gibbons—these are all names to which the English musician may refer with confidence and pride, as fit to be associated with the names of Palestrina, De Lattre, and Marenzio.'

"It is probable that Shakespeare wrote some of the songs in his plays to music which was already in existence and popular at the time, as many poets have done since, notably Burns and Thomas Moore. However, unless some important evidence is forthcoming, from one place or another, it is unlikely that we can ever arrive at a definite conclusion. For with the destruction of the Globe Theatre by fire, in 1613, most of the performing MSS., including the music, were burned.

"Only in a very few cases can we feel certain that we possess the exact music that was performed in the plays during Shakespeare's time. These songs are given in Part II though exception may be taken to No. 14, *Take, O take those lips away.*

"An examination of the music performed in the plays in Shakespeare's time shows us that it must have been simple and melodious, rather than difficult and contrapuntal. An additional reason in support of this view is that in all probability the actors themselves would sing the songs, and boys with treble voices always performed the female parts.

"Even if we have any doubt as to the character of the music performed in the plays, we can have none as to what the music of the period was like; for he has referred to a considerable number of songs, etc., in the several plays, many of which the Editor has been able to examine; and no doubt more can be found if diligent search be made. These are all of the simple and melodious character, and as so few are accessible to the public, or even published in modern collections, seven have been selected, from a large number, and printed as Part I of this collection. It is thought that they will not only prove interesting, but historically valuable to all lovers of music.

"The accompaniments were played by the musicians, who were placed in the upper gallery, situated above what we now call the stage box. The band consisted of about eight or ten performers on hautboys, lutes, recorders (flageolets), cornets (not the modern cornets), viols, and organs (a kind of small portable organ). The band announced the beginning of the play by three 'soundings' or flourishes. They also played between the acts. Incidental music was required of them, likewise soft music through which speaking should be heard, called 'still music.' "

Here is ample material for the use of singers and teachers.

———*———

A GREAT SERIES OF REPERTOIRE BOOKS

SINGERS and teachers are always interested to know which songs are used by the great singers and especially those which they prefer. The Editor of THE MUSICIAN has frequently been asked by readers to mention, in letters to the inquirers, the titles of songs used by certain well-known artists. This information can be secured by a careful study of an artist's program, but is dependent upon having at hand a large number of such programs before attempting to pick out those which have the most frequent use.

In a series of FAVORITE SONGS, planned by the publisher of THE MUSICIAN and recently issued, the problem presented in the preceding paragraph is solved in a very practical and satisfactory manner. Certain artists of high reputation were asked to furnish lists of their FAVORITE SONGS, the same to be published with their authorizations and with their interpretations indicated in the music text, offering to singers and teachers of singing a repertoire of songs classical, standard, and modern, by composers of the various leading musical nations, which should be a mine of suggestive material for study and public use.

Up to the present the following have been issued: *My Favorite German Songs,* by Elena Gerhardt, for high or low voice; *My Favorite French Songs,* Vol. I and Vol. II, by Emma Calvé, high or low voice; and *My Favorite Songs,* Vol. I and Vol. II, by Julia Culp, for high or low voice. As said before, these books contain the choicest numbers in the repertoires of the artists whose names appear in connection with the books, and form a series of songs which every singer should know and study.

In preparation at the time of writing is a selection from the repertoire of America's favorite prima donna, Geraldine Farrar, with others to follow.

In workmanship and finish these books are triumphs of the engraver's and the printer's art. The cover design is decorative to a high artistic degree, and the design includes a splendid portrait of the singer whose repertoire is included in the volume. The reviewer frankly acknowledges that he has never seen a series

VOICE PLACING FOR SINGERS AND SPEAKERS

A Simple, Practical and Unfailing Method
BY W. P. SCHILLING
Price, 70 Cents

After correct breathing, the most important step in voice culture is to learn how to produce the most beautiful tone of which the voice instrument of the individual is capable. This is called voice placing.

The present work consists of unique devices, which, as the title suggests, are simple, practical and cannot fail to bring the desired result. It differs materially from all other methods:

The tone can never be throaty.

The voice is naturally led into the head register, because the transition is spontaneous.

The lower quality cannot be forced upward beyond its natural limits, which is a common fault with sopranos and tenors. It will ruin the development of upper tones. The high tones produced by the new method of voice placing are not only lasting (for life), but will improve in power and quality.

This work is the fruit of practical experience of over thirty years and not a haphazard makeshift. Ample proof of its value is given in a booklet of testimonials which will be mailed on request. Incredulous readers may readily convince themselves of the truth of the assertions by trial.

W. P. SCHILLING, 131 W. 23d St., New York

When you write to advertisers, mention The Musician

ers of singing, and every person who has the wish to keep the body in good condition. The article is too technical to reprint here entire. We have therefore selected certain paragraphs which seem especially pertinent at this time.

"A cold is an infectious disease and should never be neglected.

"To be sure, most persons recover from a simple rhinitis, or laryngitis, or bronchitis, but who can say that these do not furnish the soil and lay the stratum for many other diseases, both acute and chronic?

"As a result of the physician's lack of interest or inability to produce results, self-medication at home has become widely prevalent. Such medication is often due to the tender consideration of an obliging druggist, who feels in duty bound to placate a customer by handing over the counter various drugs, such as quinine, aspirin, salol, phenacetin, rhinitis tablets, troches, lozenges, etc. If a cough becomes so severe as to disturb markedly the course of a patient's daily life or some compound cough mixture is taken. This upsets the stomach, and the last state of such a man is worse than the first.

"Now it would seem that the logical method of treatment is not to administer drugs by stomach, if drugs are to be used at all, but to apply such remedies directly to the site where action is desired, that is, into the nose in acute rhinitis, or into the pharynx, larynx, and bronchi when these parts are the location of active inflammation.

"In dealing locally with acute infections in singers, the two remedies most commonly used by specialists are silver in some form or iodoform. The silver salts are all irritating when used strong enough to be efficacious. Many patients object strenuously to having these preparations introduced into the larynx, and not without reason. Iodoform is a rather powerful antiseptic, but is likewise irritating, and its persistent, unpleasant odor on the breath and in the clothing is a great disadvantage.

"During the past three years I have been using with remarkable results the well-known aromatic principles,—oil of cloves, oil of cinnamon, thymol, eucalyptol, and menthol, not in spray form, but applied directly to mucous surfaces."

[Dr. Voorhees then gives a record of several cases which are typical of affections which frequently attack singers, and details the treatment. He continues:]

"In acute bronchitis it is astonishing how effective this treatment may be. Its analgesic action relieves the cough, its stimulant action increases expectoration, its carminative action produces hyperemia, and, finally, its bactericidal action makes it a satisfactory germ destroyer. . . . Treated in this way a case of simple bronchitis, not due to the *pneumococcus* or *streptococcus,* should not last more than seventy-two hours."

[Note these conclusions:]

"1. The course of acute respiratory diseases can be greatly shortened by direct instillations of aromatic drugs.

"2. Of these a solution of menthol in oil is most effectual.

"3. In many cases the quick result is striking.

"4. The procedure is absolutely harmless.

"5. It is of the highest value in treating the throats of professional singers."

TALENT AND GENIUS

Talent, the sunshine on a cultured wall,
Ripens the fruit by slow degrees of toil;
Genius, the sudden Iris of the skies,
On cloud itself reflects the wondrous dyes,
And to the earth in tears and glory given,
Clasps in its airy arch the pomp of heaven!

A YOUNG PUPIL'S CONFESSION

Ques.—Why am I taking lessons?

Ans.—To become a good musician.

Ques.—What kind of music do I really like?

Ans.—I like fast, airy music the best.

Ques.—What do I think about when I am practising?

Ans.—I think of what I am practising most of the time.

Ques.—What kind of thoughts do I have then, happy or otherwise?

Ans.—Sometimes happy, and sometimes otherwise.

Ques.—In all the things that I like to do does making music come first, second, third, or fourth? Honest now!

Ans.—Sometimes first and sometimes second.

MIRIAM MOORE,
Fayetteville, Arkansas.

SHARPS AND FLATS

BY MARY SHERBURNE WARREN

"FOURTEEN years old and learning to play *The Happy Farmer!*" Ethel whirled fiercely about on the piano stool. "Little Dorothy Kent ran in this morning to show me her new doll and went through it without a mistake. I made four just now. I have decided not to waste another hour practising for there's not a particle of music in me!"

Mrs. Howe looked into the determined face of her pretty niece and smiled. "I suppose you know whether a half rest is written above or below the line?" she observed questioningly as she placed the last stitch in a tiny pink rosebud.

"Of course I know that, but—"

"And you are quite sure of the meaning of the word 'allegro'?"

"Yes, Auntie, but—"

"And you can readily distinguish a sharp from a flat?"

"Why, Aunt Alice, we can learn things like that just as we learn the multiplication table."

"You are right," agreed Mrs. Howe, "yet it helps, sometimes, to know the least little bit about sharps and flats, especially when you are the only person within a radius of a mile who possesses that knowledge."

"'Oh, Auntie Howe, look! There's a piece with *four* flats. Could you please 'splain about the new flat?' I can hear Netta's voice as clearly as on that day when she tugged at my sleeve and asked me that question. I think your uncle hired Big Ben Foster for a farmhand chiefly because he thought his motherless daughter would be so much company for me during our first winter in Vermont. One morning when I was dusting the piano I noticed that Netta was watching me with her big wistful eyes. I had taken a few music lessons when I was about your age, but 'picking out pieces' was a laborious task I seldom found it necessary to add to my duties as housekeeper. Finally, with her fair head pressed against the shining case, the child whispered, 'Please, may I just *touch* the keys?'

"For an hour Netta sat at the piano, an open hymn book before her eyes, an expression of purest joy upon her face. Not a note could she read, but the unused keys responded musically to her loving touch. Later when she urged me to play 'just something' I tried a hymn or two and was so overwhelmed by the childish words of praise I lingered at the piano and showed her the position of middle C on the staff and the corresponding note on the keyboard. Question after question the child poured forth, and received with shining eyes such technical replies as, 'Yes, those notes go up and those go down. When you come to a note on that line you strike a black key.' I even forgot the hour until the men came in to dinner. 'Just like her mother,' Ben murmured again and again as I told him the story.

"When the first violets brightened the roadside I drove down to the village and found an excellent teacher for Netta, and it was then her first real lessons began. But before that happy day my pupil was able to play any hymn or ballad we might choo

"Yes, it was Netta's concert I attend when I was in the city last week. I can understand all she plays, but I love to wa the faces of those about me, and after concert it pleases me to be introduced to N ta's friends as 'my first music teacher.'"

Ethel whirled lightly about. "I won how much happier the *Farmer* will be i don't make a single mistake this time," said as she opened her book. "Listen, A Alice, and hear him whistle at his work."

PREPARING A PROGRAM

IT often happens, in these days of m music clubs, that you children prepare a sical program quite by yourselves, or, at le with very little help from your elders. A in doing this you meet with the very same plexities that trouble your elders. This b the case, perhaps a few tried rules will be amiss.

In the first place, let the program be in nature of a crescendo; that is, let it proc from quiet work to brilliant work.

To do this have the beginners play f They are the most nervous, and if kept w ing will perhaps worry those who would otherwise feel nervous. So let the least perienced play first. Their "effort" over, will be quite happy and tranquil for the mainder of the program.

Have the numbers short rather than l A dozen short selections make a better gram for children than six longer ones wo

Let the numbers be varied. I have kn clubs to give whole programs of slum songs or marches, but I am very glad I not have to listen. Have as many diffe *kinds* of selections as possible.

Always try to plan to have somethin the way of a surprise. This creates a p ant feeling and makes a happy ending.

H. M. I

"PADEREWSKI'S TEACHER IS DEAD"

THIS is the line which met my eyes on o ing the newspaper one morning—"Pade ski's teacher is dead." Now why was i "Theodor Leschetizky is dead"?

Well, the men who make newspapers men who have made a fine art of kno what interests the people. And it is a significant fact that these "masters of n should have thought the most intere thing about the great Leschetizky's death that when he died Paderewski's teacher

Leschetizky was a great man, great i work, greatest of all in what he did fo pupils. Now you children can readily se if Leschetizky had had only lazy or una ciative pupils all his work would have in vain, and we would never have hea him. It was because he had *workers* a his pupils that he became famous. Ca

said of your teacher? Has your teacher kind of workers among you pupils that l one day make *your* teacher famous?

Suppose that that newspaper, instead of ancing that Paderewski's teacher was dead, announced that your teacher was dead. uld you feel, on reading this announcement he morning paper, that you had met with eal loss, that a true friend was gone from ? And would you feel that perhaps you not worked for and with your music her as well as you might have, that you not brought to your music study all the eriness and whole-heartedness that you capable of?

am sure there is not one little reader of Department who would not be sorry in- d to read of his or her music teacher's th; but do not wait for anything so unasant as this to make you wish you had done er work. Begin to wish right now to do very best work you can for your music her; begin right now to try to understand at it is that your teacher is anxious to do you, and enter into your music work with with so much earnestness that some day r music teacher will be famous just bese she was *your* teacher, just as Leschey was famous because he was Paderews teacher.

H. M. M.

THE LITTLE TUNING FORK

DON'T know why, but most persons seem hink that the tuning fork is something to h at, that it is a sort of a joke. Its sharp, r "ping" rings back from earliest schools, bringing memories of our first agonized mpts to sing "do" as the music master t have it. Then, in later years, we met tuning fork only in the hands of the nervpiano tuner.

ut now it has risen to sudden and real ortance—for it has been found capable ocating ships in the awful fogs at sea. ld anything be more dreadful than for ship to receive wireless messages from her ship in distress, and, with all the will he world to help, not be able to find her o to her assistance? This almost makes great discovery of the wireless a mockery. now the poor little maligned tuning-fork come to the rescue, and will find and loships in need of aid in the very worst .

oes this not prove how very unwise it is make fun" of the very smallest things or le? We never can tell to what great and ndid work even the very smallest and t insignificant may some day be assigned. the easiest thing in the world to ridicule, it is much wiser as well as kinder to re- from ridiculing anything or anybody.

H. M. M.

S.—How many of you know about the ng "coil" and about "tuning to the wave"?

A FEBRUARY MUSICAL

IN ST. VALENTINE'S GARDEN

BY LAURA ROUNTREE SMITH

Part I In Father Time's Home

(Many clocks about)

Father Time is looking at an hour-glass. Enter February.

FEBRUARY: Oh, dear, I am almost late, and I must hurry, hurry. I almost tripped up January in my haste to get here on time.

FATHER TIME: Why did you hurry so?

FEBRUARY: I have so many days to celebrate, so many birthdays. Washington's, Lincoln's, to say nothing of all the great musicians born in February. And I have only twenty-nine days even in leap-year.

FATHER TIME: Let me see, I know of some of the musicians born in February. There was Chopin and Mendelssohn, and Ole Bull and Czerny, and Dussek, and Patti, and Henschel, Gade, and many more.

FEBRUARY: Oh, dear, I have so much on my mind, and we can never quite decide whether Chopin was born in February or on March first! (Baltzell's *Dictionary of Musicians.*) I was on good terms with the New Year. I can still hear his lovely chimes.

Piano. *The Chimes.* Müller. *(Rhythm and Action.* Norton.)

(Enter SAINT VALENTINE): Good evening, I hope you have not forgotten me, I belong in February too! I have come to offer you my garden for a musicale. What more beautiful place could be found than a garden with flowers blooming all the year and sweet birds making the echoes vocal with their songs. In my garden where love rules it is always summer.

FEBRUARY: Oh, dear, oh, dear, so many days to celebrate!

FATHER TIME: Cheer up, February. The school children will help you and the musical children all over the world will help you too.

Part II. In St. Valentine's Garden

Moscheles is sitting by a fireplace. Enter Chopin, Mendelssohn, Ole Bull, Joachim, Patti, Dussek, Gade, Czerny, and others.

They wear their names printed in large letters.

CZERNY: Let us hear Mendelssohn play. We hear he has written some *Songs Without Words,* and an old lady the other day asked a clerk, "How do you sell them *with the words?"*

MENDELSSOHN: Let us hear the children play first. Here they come, patriotic children indeed.

1. Piano. *Young Volunteer's March.* Austin. *(Rhythm and Action.)*

2. Song. *Star Spangled Banner* (waving flags).

3. Recitation. *Patriotic Children.*

Patriotic children we,
And we all are very merry,
Patriotic children we,
In the month of February.

So we'll sing a song to you,
Bonnie red and white and blue!
To our country we are true,
Bonnie red and white and blue.

4. Piano. *The Minuet.* Beethoven. *(Rhythm and Action.* Norton.)

5. Recitation and Dance. *The Minuet.*

MARTHA.

They danced the stately minuet,
Many years ago,
Martha in old-fashioned gown,
Used to curtsey low,
And George Washington you know,
With stately step paused and bowed—so!

GEORGE.

They danced the stately minuet,
Holding the right hand high,
They balanced to their partners—so,
To imitate we'll try,
Then trip it lightly to and fro,
As in the days of long ago.

BOTH.

The minuet, that stately dance,
Famous in song and rhyme,
We will dance again for you,
As in the ancient time.

6. Recitation. *February.*

February's come to town,
In a snowy winter gown,
Softly snowflakes flutter down,
February's come to town.

February's heart is true,
To the red and white and blue,
And we give three cheers for you,
February's heart is true.

February's valentine,
Comes each year—a happy sign,
Friends all drop us just a line,
February's valentine.

7. Piano. *Hearts and Secrets.* Kern.

8. Recitation. *The Musical Hearts.*

ALL (children hold hearts with signs on them):

We're Musical Hearts on St. Valentine's Day,
And in a recital we'll sing and we'll play.

CLEF:
I'm the treble clef, upon the spaces,
Notes peep out like little faces.

SHARP:
I'm a sharp, with voice of my own,
I raise a note up half a tone.

FLAT:
I am a foreigner as you see,
I come from the letter *"B"*
Half a pitch the tone I lower,
When I stand a note before.

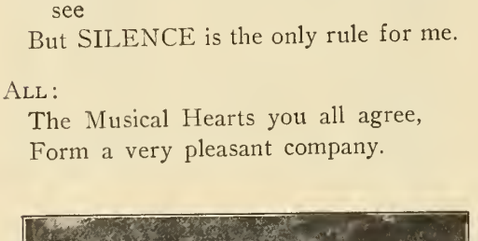
NATURAL:
I really hate to contradict you,
The only natural in the picture.

HALF NOTE:
I'm a half note as you see,
You can easily count me.

EIGHTH NOTE:
I'm an eighth note in a flurry,
I must always hurry, scurry.

REST:
I am a rest as still as a mouse,
I call for silence in the Music House.
Whole, half, quarter, eighth rests you see
But SILENCE is the only rule for me.

ALL:
The Musical Hearts you all agree,
Form a very pleasant company.



Part III. February Musicians

1. Piano. *Mazurka,* Op. 7, No. 1. Chopin.

2 Piano Duet. *Wedding March,* Mendelssohn.
(Played by Fannie and Felix Mendelssohn.)

3. GADE: Schumann once wrote a piece to honor me. He was very clever and based the music on the notes, represented by the letters of my name, G-A-D-E. I will play it for you. It is called *Northern Song.*

4. Piano. *Northern Song.* From *Scenes of Childhood and Album for the Young.* Schumann.

5. DUSSEK: I studied under Bach, became an organist at Amsterdam and The Hague, and driven from Paris by the Revolution, later returned. I tried always to express the feelings of the Bohemian people and to play with a *singing touch.*

6. Piano. *Morning Rondo.* Dussek.

CZERNY: The children talk about my *tiresome exercises,* but it is the exercises that make the fingers nimble, and sharpen up the wits. Oh, I wish I had my nine cats here!

ALL: *Nine cats?*

CZERNY: Yes, I always keep a house full of cats for company. Beethoven wished many times he had good parents to live with as I had, but he did not care particularly for my cats!

I have written over one thousand compositions and will play you my *Carnival of Venice.*

7. Piano. *Carnival of Venice.* Czerny.

8. Recitation. *The Violin.*

A song to the violin I sing,
And sweetest cadences I bring.

The wood was once a living tree,
And whispers many a symphony.

The wind long through its branches swayed,
And homing birds their nests have made.

A living tree whose sap could flow,
And all the joy of seasons know.

A tree who heard the singing stream,
And in the starlight dared to dream.

Oh violin dreaming of your tree,
Come bear to us your rhapsody.

9. Duet. Violin and Piano. *The Raindrop Prelude.* Chopin.

10. PATTI: I have been decorated by the Emperor of Russia and I have sung in all countries For encore I like best *The Last Rose of Summer.*

11. Song. *The Last Rose of Summer.*

12. MOSCHELES: What would we do without the glorious month of February? What would we do without the musicians made dear by February? Come Mendelssohn, no program at this time of year can be complete without you.

13. MENDELSSOHN: I have written some little *Songs Without Words.*

When I walk through the forest everything sings to me. The little silver brook that laughs over the stones and pebbles, the wind in the trees, the birds and bees and all the happy little insects hum as I pass.

Everything in nature is happy and everything sings!

I was thinking of these things when I wrote my *Spring Song* and now I will play my *Departure,* after which we will say goodbye and remember February as one of the finest months of the year.

14. Piano. *The Departure.* Mendelssohn

THE EYE AND THE EAR

THROUGH which sense do you receiv the stronger impressions, the Eye the Ear? To put the question in a other form. Is the Eye more retentive tha the Ear? Are we more strongly impresse by things we hear than by what we see?

The majority of persons acquire know edge or receive sense impressions upon whi they base action most readily, either throu the eye *or* the ear, rarely through both wi equal strength and exactness. Out of a nu ber of students in a conservatory, for exa ple, we will find that some are *eye-minded,* we may say, others are *ear-minded;* and st others probably use both senses.

We all know of persons who hear an a and can reproduce it with exactness after o hearing. This recalls the instance of M zart's writing on paper the score of Allegr *Miserere* which he heard but once in the S tine Chapel, at Rome.

In fact so highly is this power of the e to record in the mind impressions receiv through musical sounds, that every conser tory offers a course in ear training. My teaching is based on the power of the ear receive an impression and to reproduce with accuracy.

Thus a teacher will say to a pupil: "T effect was not what is wanted. Do this." A the pupil tries to imitate the effects he hea Imitation, as a teaching principle in music largely based on ear-mindedness.

As a practical application of the two pr esses we suggest that teachers study their pils with a view of determining whether t receive the stronger impressions through eye or the ear.

For example, a teacher of singing recoun to the present writer the case of a pupil w whom he had labored for about two ye with comparatively meager results. He plained that telling her how to do things, e doing them for her, seemed to carry l force, and the net results of his labor w really discouraging. The suggestion was m that he adopt the plan of putting his teach instructions in writing or make diagra when possible, so as to try to reach the m through the eye. In this way the pupil able to form a picture of the teacher's st ments and fix them in her mind through quent reference to it.

The progress made by the pupil in the suing three or four months was marked compensating for previous slowness.

In other cases teachers will find it de ble to repeat, numerous times, the princ they wish to impress upon the pupils' mi It is advisable that the wording be the s in all statements, in order to promote e memorizing through the ear.

We offer this idea to teachers as one w investigation. There is genuine interes this kind of laboratory work.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

HAKESPEARE AS REFLECTED IN CHAMBER MUSIC

BY H. J. STORER

N all the many and varied ways in which to ire an intimate and thorough knowledge of the ks and art of Shakespeare, not the least of e is the one all too seldom employed, and that hrough the music which has been inspired by works, as well as the characters in the works nselves.

hakespeare has inspired composers of all coun-s, from his own time until the present, and, as esult, there are operas, symphonic poems, inci-tal music, songs and piano pieces, in great num-the study and hearing of which will create an rest in the works from those who are unfa-ar, and with those whose knowledge of Shake-re is well-developed a thorough music study will te a new and many-sided interest.

he music of Shakespeare will furnish many and ly interesting programs for illustration in cham-concerts at gatherings or in the home circle. much of the early music as employed by kespeare himself in the production of his plays, come down to the present time, being not diffi-of performance and easy to obtain.

ould anyone contemplate an easy yet effective chamber concert of Shakesperean music, sev-could be made up from the music of Shake-re's time. These little pieces, used in the plays ncidental music, can be performed by piano and gs, by two or three violins and 'cello, with aps the addition of a flute or clarinet, taking upper or melodic parts for way of contrast. e of the pieces also can be played by the old ioned lutes, or the modern mandolins or gui-

ost of these old melodies are found either for voice and very simple accompaniment, or ar-ed in three or four parts, as glees for unac-panied singing. These harmonizations can be ed by strings without change, but if a viola be the tenor part should be transferred from G clef to the C clef. This is not such a difficult er as may at first be supposed. The follow-are some of the numerous part-songs and glees from the old melodies used in Shakespeare's time and in the years immediately succeeding.

As You Like It: *Under the greenwood tree.* Solo, with piano or strings.
E'en as the sun with purple colored face. Glee. (A. T. T. B.)
Crabbed age and youth. Glee. (T. A. B.)
Blow, Blow, thou winter wind. Glee. (A. T. T. B.)
What shall he have who killed the deer? Hunting glee. (T. T. B. B.)

Two Gentlemen of Verona: *Who is Sylvia?* Glee. (S. S. A. T. B.)

Henry VIII: *Orpheus with his lute.* Glee. (S. A.)
Morris dance, Shepherds' dance and *Torch dance.* Arr. by Edward German.

King Lear: *Come o'er the brook, Bessie, to me.* Glee. (S. A. T. B.)

Merry Wives of Windsor: *O by the rivers.* Serenade. (S. A. T. T. B.)

Twelfth Night: *When I was a little tiny boy.* Chorus. (S. A. T. B.)

Henry IV: (Part 2) *A cup of wine that o' busk and fine.* Glee. (S. A. T. B.)

Love's Labor Lost: *On a day, alack a day.* Glee. (S. A.)
Trip and go. (Morris dance, 17th century.)

Tempest: *Where the bee sucks.* Solo, or glee. (S. A. T. B.)

Othello: *Willow Song.* Solo with piano

Midsummer Night's Dream: *Nocturne* and *Wedding march,* arranged for small orchestra, with or without piano.

Timon of Athens: *Masques, or dances.*

The solo, or glee, *It was a lover and his lass,* has been used in *As You Like It.* There is also incidental music to *The Tempest,* composed by Sir Arthur Sullivan, that is believed to be available for small parlor orchestra, and the music is not beyond average difficulty.

In making up any program from this suggested list, should any vocal number be desired, a selection can be made from the volume in THE MUSICIANS LIBRARY, entitled *Fifty Songs of Shakspere,* edited by Charles Vincent, and published by the Oliver Ditson Company. Some of the Shakesperean melodies are by modern composers, but all are in the true spirit of the text and any of them would add interest to a program.

THE BELGIAN SCHOOL OF VIOLIN

READERS of THE MUSICIAN will be interested to know of an important new publication which has just been placed on the market by the eminent violinist and teacher, Mr. Ovide Musin, of New York.

The general title is *The Belgian School of Violin,* and it consists of four volumes as follows: Vol. 1, *First Principles of the Violin,* with Second Violin accompaniment for the teacher; 40 *Studies* (First position), by H. Léonard, Op. 47, revised, fingered, bowed, etc., by Mr. Musin, who has added some studies of his own. Vol. 2, 60 *Studies* (Op. 47 *bis*) in all positions with melodies and accompaniment for Second Violin, by H. Léonard, edited by Ovide Musin, who has added special studies in staccato, double stops, chromatics, arpeggios, shifting, vibrato, pizzicato, and how to practise them. Vol. 3, 50 *Progressive Studies,* Op. 40, by H. Léonard, preparatory to pieces by old and modern masters. Vol. 4, 22 *Special Daily Exercises,* by Ovide Musin, covering the essential technic of both hands, with difficult exercises for advanced violinists.

Mr. Musin was a pupil of Léonard, whom he calls "Chief of the Belgian School," and of whom he says that "he so perfected the science and art of bowing as to produce a more voluminous and singing tone, and the use of the whole bow from frog to tip and *vice versa.* In this connection we wish to refer to the splendid sketch of Léonard by Mr. Paul Stoeving, which was printed in THE MUSICIAN for January. The following in regard to the Belgian School of violin playing is included in a pamphlet written by Mr. Musin, from which we quote with his permission.

SOME HISTORICAL FACTS

When we say a School is French, German, Italian, or Russian, what is meant by the term?

A School means the disciples of a man of genius, superior knowledge, and of new ideas, the value of which he demonstrated and taught to his pupils who handed down their knowledge to succeeding generations.

If the above mentioned schools exist it is true that a Belgian School exists and has existed from ancient times, and furthermore that the other schools were derived from the ancient masters who went from the Low Countries to Italy, Spain, France, Germany, Austria, and even to the Court of Peter the Great, of Russia, where they demonstrated their advancement in the science and art of composition, singing, and playing of musical instruments, and where they founded schools which were the source of our modern development irrespective of nationality.

That the artistic generative force of the ancient Belgian masters was not depleted even to the 19th and 20th centuries is evidenced by the great number of Belgian artists, musicians, and teachers throughout the world whose names have added lustre to the ancient school which attained immense renown in the 14th, 15th and 16th centuries. Of our modern School the names of Grétry, Daussoigne, Méhul, François Prume, Jacques Dupuis, Gevaërt, Chas. De Bériot, Léonard, César Franck, Vieuxtemps, Meerts, Radoux, Wery, and others of the past generation propagated the science and art which produced those who today shine particularly in the realm of the violin.

The greatest teachers of the modern French School at Paris were Belgians from Liége. For instance, Lambert Massart, of Liége (was professor at Paris for forty-seven years, his most celebrated pupils being Henri Wieniawski, Camilla Urso, and Fritz Kreisler), Léonard, Vieuxtemps, Marsick, and Remy (present professor at the Conservatoire National de Paris).

Ysaye was a pupil of the Liége Conservatoire and of Henri Vieuxtemps. He also studied for a while with Henri Wieniawski at Brussels. Fritz Kreisler was a pupil of Massart at Paris. Martin Marsick, César Thomson, Guillaume Remy, and myself (Ovide Musin) were pupils of the Conservatoire de Liége and of Léonard. Jacques Thibaud and Carl Flesch were pupils of Marsick. Henri Marteau, pupil of Léonard, succeeded to the post of Joachim at Berlin. Adolph Betti and Alfred Pochon were pupils of César Thomson.

The catalogue would read as follows:

TEACHERS	PUPILS
Charles De Bériot (of Louvain, Belgium)	Henri Vieuxtemps
Auguste Rouma (of Liége)	Henri Léonard
Lambert Massart (of Liége)	Henri Wieniawski, Camilla Urso, Fritz Kreisler
Henri Vieuxtemps (of Verviers, near Liége)	Ysaye, Hubay

TEACHERS	PUPILS
Henri Léonard (of Liége)	Martin Marsick, César Thomson, Ovide Musin, Guillaume Remy, Henri Marteau (successor of Joachim, at Berlin)
Martin Marsick (of Liége)	Jacques Thibaud, Carl Flesch
César Thomson (of Liége and Brussels)	Adolf Betti, Alfred Pochon, of the celebrated Flonzaley Quartet
Guillaume Remy (of Liége)	Present professor at the Conservatorie National, at Paris

Charles De Bériot, born at Louvain, Belgium, 1802, died in Louvain 1870, was called the Father of the modern Belgian School of violin playing, because of a special manner of using the bow, first demonstrated by himself, which gives greater elegance, freedom, and continuity of tone. It was said of De Bériot that it was a pleasure simply to hear him tune his violin. His compositions are played the world over, and only an artist can understand his works and play them as they should be played.

HOW TO ORGANIZE ENSEMBLE MUSIC CLASSES OR CLUBS

BY CHRISTIAAN KRIENS

THE development of music in general is noticeable of late. The number of students of music (instrumental as well as vocal) is greatly and continuously increasing, and, in consequence, the number of teachers is equally increasing.

It seems curious, therefore, that the increase in the cultivation of ensemble music has not progressed at the same rate, but has been treated more or less step-motherly. The formation of ensemble classes is more or less spasmodic, more the result of circumstances than of the sound realization of serious intent.

If a violin teacher has a large number of students, he generally takes advantage of the fact, in performing with them (but only for a final pupil recital, or some special occasion) a certain violin solo number in unison. Or, sometimes, he will offer an arrangement of some kind, but hardly ever an ensemble number, especially composed for such a number of violins, or a violin choir.

We cannot call this legitimate cultivation of ensemble music. Ensemble music is the music composed for two violins; for violin or two violins and piano; piano for four hands, trios for piano, violin, and 'cello; piano, viola, and violin; then the traditional string quartet of 1st, 2nd violin, viola, and 'cello; for string orchestra; finally symphony orchestra.

In Europe, every conservatory includes among its various classes, without exception, classes in trio, quartet, string orchestra, wind ensemble, and orchestra classes. Also in America, with some of the large conservatories, this is the case. But outside of this there should be a much greater intent to organize such classes, or even clubs.

Some advantages derived from ensemble cultivation are:

1. The opportunity to read "at sight."

2. The acquisition of "routine" unavoidable for students intending to seek positions in orchestra.

ZOELLNER STRING QUARTET
SEASON, 1915-16
Direction
HARRY CULBERTSON, Fine Arts Building, CHICAGO

When you write to advertisers, mention The Musician

3. The great assurance obtained in various changing and strict tempos; to be grasped at once, without preparation.

4. The opportunity to play other voices of a composition than (in contrast with solo-playing) the melodic voice; thus the cultivation of the inner voice of a composition.

5. The intimate acquaintance with the literature of the great masters, written for these various combinations, never to be derived from several hearings at concerts, etc., innumerable good reasons. Ensemble practice can be obtained more easily than it is supposed.

Wherever there are two violinists, there is for them a rich and varied literature in duets, from the easiest kind, such as Pleyel, Viotti, etc., up to the concerted duets of De Bériot and Spohr.

Wherever there is a violinist and a pianist there is for them the treasure of sonatas by the old and modern masters; further, a rich and abundant library of other ensemble material.

Wherever there are two pianists, there is a richness of original and arranged music for four hands; including sonatas, overtures, symphonies, etc.

A PLEA FOR THE VIOLA

But now, before reaching the trio and quartet, I must emphasize the deplorable lack in the study of the viola. Among violin students there seems not to be a good will, or an interest, to take up the study of the viola.

The difference between the violin and viola is so slight, having the same fingering, position, and ability to master the viola is so easy for a violinist, that it is truly amazing there are so few who, by learning the instrument, want to become a valuable asset to the ensemble players. To me it seems just as valuable to be a good viola player as to be a good violin player.

When contemplating the founding of a student string quartet, violinists can easily be found, and 'cellists are always to be found; but the trouble is always with the violas.

The unwillingness of violinists to take up the viola (even as a side issue) is the cause of discouraging many a plan for the foundation of string quartets. And not only has it thus prevented the other members of the quartet-to-be from having an opportunity of studying the treasures for this combination, but prevented all the others who might have wished to hear their rendering of these great quartets, and thus have learned and profited by it. Indeed, the quartet literature is among the richest in the ensemble music. Beethoven has expressed some of his richest and most wonderful thoughts in his quartets.

Now a round of advice to students in general, in regard to ensemble practice:

No matter how small your town, no matter how few musicians there are, *get together, organize.* If the musical authorities of your community have not an organized ensemble class, you can organize yourself a duet, trio, quartet, etc. Then, when a certain number of compositions have been studied, engage the services of an authority to criticise your work.

The main point in planning the study of ensemble music is the regularity of your meetings. There may be listeners and players who alternate.

STUDIO, KIMBALL HALL - - CHICAGO, U. S. A.

When you write to advertisers, mention The Musician

An afternoon, once a week, or an evening, should be set aside and nothing should interfere with same.

A certain plan of work to cover should be laid out. Every good musician will help you, or otherwise the prominent music stores of the large cities will send you a list.

The time set aside for ensemble practice should be divided in two parts, one part to perfect one or more compositions, constantly studied—the other part for the practice of reading.

Interchanging (in quartet playing) between 1st and 2nd violin, and viola is also an excellent plan.

Ensemble practice will make you a better musician, and will give you a broader look upon the world of music in general.

RHYTHM

BY C. W. FULLWOOD

WHAT is rhythm? The musical dictionary says, "Rhythm is the first essential of melody; the recurrence of accents at equal intervals of sound; the repetition of a group of sounds at equal intervals of time; the essential rhythm is a fixed quantity which will bear very little tampering with."

Because rhythm is the first essential of melody, it is the first that appeals to the mind through the ear. Popular music catches the uneducated ear because its accents are strongly marked. It is this innate musical sense that causes all minds, from savage to civilized man, to recognize the fundamental principle of music. It is the foundation upon which the structure is reared, for what is structural form in music save the outgrowth or the development of rhythm?

The rhythmic quality of melody at once appeals to the mind of the child; the ear recognizes the marked accents of the sounds. The idea of rhythm lies dormant in the infantile mind, so does the power to speak the mother tongue, but both instincts must be aroused, taught, guided, and developed.

A poet, it is said, is born, not made; but, the poetic idea needs to be trained and cultivated. The day has passed when a genius is expected to spring into the full development of creative work without the preliminary study and training. No man can make a success of his talent without hard work. You cannot gather figs from thistles; nor can you do anything that counts for success in any line, today, until you know fully how to do it. And to gain that knowledge you must dig for it as for precious gems. You may have the idea but you must know how to develop it to practical use. The rhythmic idea must be built upon that that may be the ideal creative or interpretative form. You may call the idea the germ, but the soil must be cultivated, and the plant carefully shielded and nurtured to bear fruit.

How often you hear the expression, "I wish I could play like that." But when such persons are told that hard work and incessant diligence are required their enthusiasm wanes. Oh, yes, the natural idea of rhythm creates the desire to do something with that idea, but many persons, young and old, abhor the work of developing that idea.

The phrase, "he or she is musical" is trite in conversation. The writer of this article, claiming

WHAT CONSTITUTES ARTISTIC PLAYING?

BY MYRON A. BICKFORD

HERE is hardly a word associated with the mu- profession which is more abused than is word "artistic." For example, it is very n confused with or mistaken for something h is merely more or less mechanically per- For it is possible for a block of marble e mechanically perfect without having a blance of an artistic design.

o bring the illustration into the realm of ic. The player-piano is able to wade ugh the most difficult things with never a flaw technically; but when it comes to giving a real interpretation of the music, the human touch is necessary. In the same way a performer may have the most wonderful digital dexterity and be letter and note perfect in every minute detail without being an artistic player.

Of what, then, does artistic playing consist? Must one be a sentimentalist and over-emotional. By no means, for this is going to the other extreme, and extremists, like whistling girls and crowing hens, always come to some bad end—at least, so I have been told. Music is called the language of the emotions, but in this language, as in others, the tongue must be bridled and the emotions must be under control.

To be a player in the true sense is to be an interpreter; and to be able to interpret, one must thoroughly understand the language, not only in which a thing is written, but also into which it is to be translated. To apply this directly to the interpretation of music, one must be a musical linguist, that is to say, there must be no words or phrases too big for the fingers to understand and pronounce readily. In short, one must be technically proficient, but (and this is the keystone of the whole situation), the translation, reproduction, or interpretation, whatever it may be called, must be couched in elegant terms—done poetically, instead of in a pedantic, prosaic, or "slangy" manner. This naturally presupposes and requires a certain amount of artistic, esthetic, and intellectual culture, and a general education and development along very broad lines. Until this side has been attended to there is no chance for artistic or intellectual expression, since it is impossible to express anything, whether in tonal terms, with the brush, or with the pen, when the idcal does not exist.

Artistic playing includes fully as great a variety of phases as does the work of an orator who combines brilliancy, wit, forcefulness, thorough knowledge of his subject, and eloquence in one. The matter of interpretation really covers a large range of subjects, such as phrasing, dynamics, nuances of all kinds, attention to contrasting thoughts or motives, all of which might be put under the head of conception, and all of which have an all-important bearing on artistic playing.

Technic is important, for without it the composer's intentions cannot be expressed; but art goes far beyond mere technic, and gives one the ability to use the mechanics of music in a manner which gives pleasure to the intellect and the emotions at the same time.

LÉONARD'S VIOLINS

REFERRING to the article on Hubert Léonard, printed in THE MUSICIAN for January, Mr. Paul Stoeving sends us the following note in regard to Léonard's violins:

"Besides the pleasant personal recollections of the master and all I owe to him artistically, I prize, as the most precious keepsake that could fall to the good fortune of a devoted and grateful pupil, the violin which the Maître always used at the lessons, a Petrus Guarnerius, one of his two favorite instruments; the other, a fine Paolo Maggini, once the property of Charles de Bériot, passed, at Léonard's death, into the hands of his pupil, Henri Marteau."

ORGAN RECITAL PROGRAMS

BY WILLIAM REED

The conviction, often expressed, as to the unpopularity of organ recitals would not seem to be borne out by results, either in regard to their vogue or the activity of recitalists in general. On the contrary, the latter, far from appearing discouraged, continue to *recite* while it is to be assumed, a public is found to lend countenance to their efforts.

It remains a fact, however, that, of the large number of recitals played, an appreciable proportion seem to lack general interest and educational value in themselves; and it may not be unreasonable to suggest that the reason for this proceeds from both the manner and, in some degree, the matter which characterize these performances.

In the first place, it must be conceded that not every good church organist makes a capable and interesting recitalist any more than that a brilliant recitalist is a success as a church organist.

Further, the examination of a variety of recital programs reveals the fact that the contents, often substantially good and selected on much the same lines, seem to have been thrown together without sufficient thought as to a tactful juxtaposition of the different numbers. Such points as contrast in style, color, and movement, some suggestion as to key relationship, emotional variety, etc., are, also, too often overlooked, perhaps, misunderstood; since program-making is an art in itself, on the comprehension of the principles of which the acceptableness of a performance depends more than is generally supposed.

Again, we find that long works are too much in evidence, a consideration which, however it may interest the player himself, does not commend itself to the average recital goer.

Then, there is the custom of commencing with a Bach number. This, I consider, is a mistake. Apart from the unrest consequent on the gradual settling down of an audience, the opening number of a recital is seldom accorded close attention and, so, needs to be something of a bright, arresting nature, inviting interest in what is to follow. In any case, Bach is too good and hardly suitable for exploitation as a "curtain raiser."

Another point is, that not more than two long numbers should be included in a recital program of ordinary length, and these should find a place toward the middle, being carefully separated and enclosed between others of moderate length.

Considerations such as these would seem, therefore, to suggest an eclectic choice and an arrangement of numbers such as might be counted on to interest, in some degree at least, everyone.

Speaking from a long experience as a recitalist, I feel fairly assured that organ recitals can be made as attractive as most other instrumental performances and that, with respect to their appreciation, audiences do not greatly differ.

At the same time, the player must consider his hearers first of all. He must, for the time being, sink his individual preferences as to selection; he must avoid such heavy, scholastic works as are of little or no general interest and, in their place, present good music of an attractive nature. And the better musician and player he may be, the more will he need to bear in mind such advice. Certainly, he should play Bach; but, even here, judgment is necessary, seeing that Bach's organ works do not all maintain the same interesting level. Nor does all this mean that a recitalist should bid for popularity by playing other than good organ music and well laid out arrangements of standard compositions; but, rather, that he should select judiciously and be careful in arranging his program.

In regard to performances, the player should not only be adequately prepared but also reasonably assured as to other matters, such as the condition of his organ, etc. Such a suggestion may seem superfluous. It is, nevertheless, a regrettable fact that some recitals heard furnish examples of a general unreadiness. This, of course, is not as it should be, and that it retards appreciation may be reasonably inferred.

The idea of including vocal or other instrumental numbers at organ recitals, although, strictly speaking, incongruous, is to be regarded as being mainly a concession to popular preference. Assisting numbers relieve continuity and help the purely organ material to "go down."

It will be understood that, in expressing myself as above, I do not pretend to have covered the whole question concerning the popularity, or the contrary of organ recitals. The ideas proposed are the outcome of experience and observation in the field of solo playing. Also, as being an outline of certain points necessary to an increasing and sustained interest in a type of performance which, given as a rule under easily available conditions, carries within itself far-reaching educational possibilities.

The following comparative arrangement of programs containing some standard and popular recital numbers is appended as illustrating both a reasonably eclectic choice as well as a faulty and a more desirable lay-out of the same schemes. The keysequences are especially to be noted in each case.

THE PURCHASE OF AN ORGAN

BY HARRISON M. WILD

In preparing for the purchase of an or and the judging of it after it has been instal there are two parties most vitally interest 1, the listener; 2, the organist. For the fi the appearance should harmonize with the s roundings and be always a delight to the The tone should hold the attention and sati the ear through variety, proportion, evenness, icacy, power, richness, fulness, and charac For the organist, all of these, plus ease of nipulation and trustworthiness.

A congregation, through its trustees, sho see to it, early if possible, that the architect planned a space ample enough for an inst ment adequate to the auditorium and powe enough to support the largest congregation good, hearty singing. The organ chamber sh be in position to allow of free tone and formed as to permit the freest egress. Man fine organ is a failure through no fault of sp ification or organ builder. Tucked in by d joists, square projecting walls, and perhaps in a corner as though only tolerated, it is d

to have any builder, through any sort of
sterpiece, satisfy anyone, least of all himself.
t has always seemed to me that there are
ways to go about the purchase of an organ:
For a given specification, how much?
For so much, how much of an organ?
here are also two ways to treat builders:
As though the builder were making his
his life work as well as his living and would
dare produce a poor instrument.
As though the builder were a dishonest
, going out of business, and bound to get
possible out of his last contract.
pecifications are much the same the world
r. Long years ago I prepared, at the request
a noted organ builder, a scheme, or table,
ting with a one-manual one-stop organ and
ancing to a three-manual forty-five-stop in-
ment. In following specifications since, and
n everywhere, I find that almost no depart-
has been made from that table. A register,
stop, may be called by another name, or have
ie little new wrinkle of voicing, a newly pat-
d device may find a place, but to the audi-
the effect would be just the same.
first-class organ architect or organ builder
ld be relied upon, given the dimensions of
itorium and organ chamber, to draw up a
cification best suited to the conditions and
irements.
s to price, that is always "up to" the pur-
er. A two thousand dollar organ is not
g to sound like a twenty thousand dollar
any more than a two thousand dollar house
oing to equal one costing twenty thousand.
he appetite is for the twenty thousand dollar
rument, and the pocket has but two thou-
, wait awhile, or enter into a contract for
rable exchange.
played a *Storm Fantasia* on a large and ef-
ive instrument, and a gentleman, one of a
mittee, requested the same to be played at
"opening" of their seven-stop organ. I de-
red, but he insisted. After the performance
ked, "How about the *Storm?* 'Tempest in a
ot,' eh!" "Yes," he said; "I'm sorry. I should
considered the difference in the organs."
small instruments one can have delicacy,
very apt not to have power. A little variety,
much; no fulness because it will be all head
feet; no stomach, lungs, and heart. Much
er leave it to an expert to determine what
oing to prove satisfactory and have him
antee it, unless one must have the organ,
is quite willing to be satisfied because it
s by the name.
ommittees have been disgusted with me be-
e I could not tell them whether all the
d used was well-seasoned; whether the felt
leather were A1, best in the market; the
position of the metal pipes as indicated in
contract. All this seems stupid. A first-class
der is first-class because all that enters into
manufacture is first-class. He is more inter-
d in doing the square thing than almost any
haser is willing to admit. With the tricky
der one should have nothing to do.
iefly, I'd consult a fine organist and a fine
der, and pay them to prepare the organ on
r. Then I'd go into the market with this in
l, that quality per dollar is better than
ntity per dollar.
there is any question after the organ is in,
contract in hand let a committee of three,
chosen by purchaser, one chosen by build-
nd one chosen by and satisfactory to both,
le whether or no the contract has been
up to.—*The Advance* (Chicago).

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS FOR MIXED VOICES

BORTNIANSKY, DMITRI STEPANOVITCH
No. 12,857. **Divine praise** (*Kol slaven*)..... $0.12
In the broad harmonic style characteristic of Russian church music, from which service this anthem is taken. The closing verse has an optional setting for double (8-part) chorus.

MARZO, EDUARDO
No. 12,861. **Magnificat in D**..... .16
Intended for use in the Roman Catholic service, having Latin words only. It is spirited and melodious, and includes a solo for soprano.

WHITNEY, HOBART B.
No. 12,870. **Abide with us, for it is toward evening** .16
A fine number for the evening service. It includes a broad melodious passage for the tenors and basses in unison.

PART-SONGS FOR MIXED VOICES

BIZET, GEORGE
No. 12,873. **Habanera** (From *Carmen*)..... .06
A well-known and favorite excerpt from the opera, with soprano solo.

GARTEVELD, V. N.
No. 12,856. **Ballad of the Kremlin.** Arr. by Kurt Schindler..... .20
From the Russian ballad repertoire, a very dramatic number, demanding a chorus of men and one of women.

MORAVIAN LOVE SONG. No. 12,858. Arr. by Kurt Schindler..... .12
A number from the folk-song literature of Moravia, marked by some novel choral effects. All the parts have share in presenting the melodies.

MOUSSORGSKY, MODEST PETROVITCH
No. 12,846. **At father's door.** Arr. by Deems Taylor .12
In the style of the Russian folk-song. The bass and tenor parts are unusually effective, and the rhythm is animated.

NEVIN, GEORGE B.
No. 12,852. **Smile again, my bonnie lassie**..... .10
A simple, melodious, easy part-song for use of the school and college glee club or chorus.

PANTCHENKO, S. W.
No. 12,855. **Oh, if Mother Volga.** Arr. by Kurt Schindler..... .12
A light number, semi-humorous in character, from the Russian choral repertoire.

RIMSKY-KORSAKOFF, N. A.
No. 12,843. **Merry Yule-tide** (From the opera *Christmas Night*). Arr. by Kurt Schindler..... .12
From the pen of one of the foremost Russian composers, and a choral number of unusual character and attractiveness. The four parts are frequently subdivided making eight-part harmony. It is to be sung with accompaniment.
No. 12,848. **Russian Carol** (From the opera *Christmas Night*). Arr. by Kurt Schindler..... 12
Unusual in the vocal effects worked out, and just the thing for a conductor and chorus who want something new in style; can be sung with or without accompaniment. From the Russian repertoire.
No. 12,847. **Spinning top** (Russian folk-dance). Arr. by Kurt Schindler..... $0.12
Strongly rhythmical in character, with a touch of imitation between the parts. It is a gem from the Russian choral music.

RUSSIAN FOLK-SONGS
No. 12,844. **Bylinka.** Arr. by A. D. Kastalsky..... .12
A number of extraordinary interest and novel vocal effects. The air frequently passes from one voice to another, being used with specially good effect in the bass, often in octaves, in the Russian style.
No. 12,859. **Down St. Peter's road.** Arr. by Kurt Schindler..... .12
A lively tune used by Russian post drivers, set for soprano and tenor solos, with an accompaniment by the other parts to mark the rhythm. A fine number for a school chorus.
No. 12,854. **Interrupted slumber.** Arr. by Kurt Schindler..... .16
For soprano and tenor solos, with accompaniment by the chorus, partly hummed.
No. 12,853. **Kalinka.** Transcr. by Kurt Schindler.. .12
A Russian folk-song, with tenor solo and accompaniment by the chorus, striking in its rhythmical and melodic effects.
No. 12,845. **Ballad of the Volga.** Transcr. by Kurt Schindler..... .12
A traditional Russian theme is used in one voice after another, the remaining points being elaborated with much skill and fine effect.

TCHAIKOVSKY, PETER ILYITCH
No. 12,849. **The Nightingale.** Arr. by Kurt Schindler..... .12
In the Russian folk-song style, simple and melodious.

ZOLOTARIEV, W.
No. 12,850. **The gipsy.** Op. 20, No. 6..... .12
A dance tune harmonized with excellent effect.

PART-SONG FOR WOMEN'S VOICES

ARENSKY, ANTON
No. 12,864. **On wings of dreams.** Arr. by Victor Harris..... .12
A waltz-song harmonized in four parts, with humming accompaniment for the voices as well as the usual piano part. A good number for a ladies' glee club.

PART SONGS FOR MEN'S VOICES

CROATIAN FOLK-SONG
No. 12,865. **Onward** (War-song). Arr. by Kurt Schindler..... .16
A fine march song with patriotic text.

RUSSIAN FOLK-SONG
No. 12,851. **The song of the cudgel.** Arr. by Kurt Schindler..... .12
A Russian craftsmen's chantey, with baritone solo, accompanied by a men's chorus in four parts. The last verse may be used with accompaniment of mixed voices if desired.

NOTE:—These works will be sent with return privilege to those with no accounts *upon receipt of list price*, which will be returned, less postage, if not satisfactory.

OLIVER DITSON COMPANY, BOSTON

REHEARSING WITH THE PIANO

It is the custom of a large number of organists to hold choir rehearsals in the Sunday-school room if a piano is available there rather than in the church auditorium with the organ.

The reason is not difficult to divine. The piano has one great advantage over the organ in the matter of ensemble drill, namely, the ability to indicate a snappy rhythm, and sharp, crisp attack.

Beyond this is the fact that too many organists are careless in their release of tones. Instead of stopping sharply at the ends of phrases so as to prepare for a new attack, they frequently run phrases so close together that all clearness of construction is obscured and good diction rendered impossible because of the sustained character of the organ tone

The piano tone lacks sustaining power, and an attack on the first note of a phrase can be made sharp and with force if desired. The singers will naturally follow the style set by the instrumental support and deliver the voice parts with greater vigor and animation, and will phrase much better than when they think they must sing against the organ. We must also bear in mind that the power of the organ tone which fills the ears of the singers tends to make them careless in regard to clear cut enunciation and good tone quality. The organ covers up faults which the piano permits to stand out, which, in consequence, the director more easily discovers.

An effective method is to have a preliminary rehearsal with the piano, using the organ only for the music to be sung on the following Sunday, to accustom the singer to the attack.

THE ECHO ORGAN

BY H. C. M.

ARE not the Christmas cards about the nicest part of the holiday season? That question shows that I am no longer young, for if I were in my 'teens I should be thinking of the substantial additions to my belongings from Santa Claus and not of the dainty, beautiful, and ephemeral Christmas card.

* * *

AND speaking of Christmas cards, one of the most acceptable came from J. Fischer & Bro., the New York publishers. It is an oblong booklet of 20 pages, having a pretty first page in colors, with the firm's greetings. There are 11 pages of organ music, with autographs of the respective composers. Pietro A. Yon, Giuseppe Ferrata, and A. J. Silver. Mr. Yon's first piece is a very clever canon, 3 in 1 at the octave, strict for 21 bars, with a three-bar coda. This is followed by a short *Cornamusa del natale* of two pages, for solo stops. The piece by Mr. Ferrata is,—well, it is Ferrata-ish; that is to say, made of delicious harmonies, delicate, very refined melody, and over all a sweetness and originality all the composer's own. Mr. Silver's piece is a two-page prelude on B-A-C-H, treated with a good deal of ingenuity. On the last page of the booklet is a quaint picture of three Waits.

* * *

IT has always been a mystery to me why music publishers in sending complimentary copies to teachers always disfigure the music—or at least make it impossible for the teacher to sell it to a pupil—by stamping it "Complimentary" or "With the publisher's compliments." It always seemed to me as if the publisher practically said to the recipient of such music, "Well, it is true I'm not getting anything out of this, but I've fixed it so you can't get anything, either." If the music were not stamped it is practically certain that, if at all usable, the teacher would give it to a pupil since it would be all profit. If the piece "made good" the teacher would use more copies of it, whereas, if the music were stamped he would have little interest in it, probably not interest enough to try it. Very likely I am wrong about this, for publishers ought to know their own business.

* * *

THOSE of us who read the dear, old *Musical Opinion and Music Trade Review* (I have taken it without intermission for thirty years) will have noticed that it is getting humorous. At least Autolycus, one of its paragraphers, is. Here is a tactful letter he recommends to be sent to a singer guilty of wrong notes.

"Dear Mr. ———, I had intended asking you last choir night how your aunt was getting on. I was sorry to hear that she had caught a heavy cold and was *hors de combat*. I trust she will soon be better. Will you kindly give her my best regards? And express my sincere wish for her speedy recovery?

"Yours, &c., Blank.

"P. S.—Do you know, it seems absurd, but at the last practice I almost thought that you sang A flat instead of A natural at the top of page 3 in Hubblethwaite in F! Just notice on Sunday, and see which note you do sing. It doesn't really matter much, but one likes to have these points settled, just for curiosity's sake.

* * * "B."

Now the "merry, mad Christmas-time" is over, I may be allowed to grumble over the false accentuation into which singers easily fall, in the chorus from *The Messiah*, "And the glory of the Lord." I allude to the phrase

"And *all* flesh *shall* see it *to*-geth-er"

Did you ever hear it sung with the accent on the first beat of the measure, where it belongs, and not on the third, as marked above, which shows the effect as usually sung?

* * *

A RECENT number of the *Birmingham Post* has a most amusing as well as informing article on the difficulty some persons have in recognizing musical quotations. The writer, Ernest Newman, has the following about Mendelssohn's *Wedding March*.

"That there are people in these isles who do not know even the *Wedding March* when they hear it, I myself can testify. I was once sitting in the Thames Embankment Gardens listening to the band playing this march when a young lady in the next chair asked me if I could tell her the name of the piece. Now, many a man in my position would have seized the opportunity to play a malicious joke on the girl. He might have told her, for instance, that it was the Brazilian national anthem, or the *Kyrie* from *The Merry Widow*, or the tango from the B minor *Mass*. But I am not a man of that sort. Low as I have sunk, owing to my long association with musicians, there was something in the eyes of this innocent girl that appealed to my better nature. I could not find it in my heart to deceive her. So I told her the simple truth: I said it was *The Maiden's Prayer*.

* * *

[*Scene*: A well-known music-shop. Two organists talking.]

A: "Well, what did you think of it?"

B: "What did I think of what, the organ or—"

A: "Why the organ, of course."

B: "Same old story, lovely fancy stops, devilishly clever voicing, and a full organ that was all top and bottom, with a middle that sounded like cats fighting."

A: "But, my dear fellow, what nonsense!"

B: "Don't you know what I mean? Take the *Euryanthe* overture for example,—you could hear the treble with some clearness and the pedals boomed out, but the harmony between was nothing but a noise. Come, now, don't you think I am half right?"

A: "Yes, half-right and no more than that. One has got to discount you, B, about half, any time."

B: "Well, you can slam me all you like, but I say that I'd rather have a little organ of forty stops in a building with not too much resonance and be able to hear the things I am playing, than to have an organ of eighty stops and then not be able to distinguish clearly the sounds. Now, you wait a moment and hear me out. You know that on the big organ in St. Aloysius', if you pull out the full organ, everything going full tilt, and you were to play a piece in four strict parts, you could never set down the notes on account of the excessive confusion. You hear this muddiness—and it is an acoustic muddiness, not coming from the action—in all the large organs of the present day, and it makes me sick."

A: "O, cheer up old fellow, things are not so bad. But let's turn to C's playing; how was that?"

B: "Suppose *you* say; if I told you what I really thought you'd think me a regular musical tory."

A: "Good heavens! Isn't this a free country?"

B: "Yes, free enough, so long as you voice opinion of your neighbors."

A "Cynic!"

B: "There you go! I told you you ought to me what *you* think of C's performance."

A: "Too staccato."

B: "Too staccato for what?"

A: "Why, for style; everything was stacc even the Bach fugue was staccato."

B: "New, tell me one thing: could you hear notes? Was the thing clear?"

A: "Yes, perfectly."

B: "Well, what do you want, then?"

A: "Do you mean to say that clearness is first thing to get in an organ performance?"

B: "I'll say that I don't care how correct or well phrased or how well registrated playing is you can't hear the notes for the everlasting or ist's smudge that is over the whole thing, I've use for it."

A: "Well, you are a queer one!"

B: "Honestly now, A, don't you think the le touch is something of a fetish with the average ganist? Does he care how he smudges his m to the ear of his audience if he can suit his ears with a keyboard legato."

A: "Keyboard legato! What do you m Legato is legato, is it not?"

B: "No, legato is *not* legato; that is, legat the console may not be legato in the auditorium rapid music. That is where C shows his co experience. He plays, as Lemaré does, to the in the top gallery, and when the man in the gallery hears all the notes and hears them cle C knows he has "put it over," so to speak. pussy-cat players have no right to give rec anyway."

TINDALE MUSIC CABINETS

As an endorsement of the merits of these Cabinets we mention with pride the following who have recently bought and are using Tindale Cabinets:—

Mr. William Wade Hinshaw, New York, eminent baritone, formerly with Metropolitan Opera Company.

Mr. John Barnes Wells, New York, Concert Tenor.

Alma Gluck Zimbalist, America's Prima Donna Soprano, the music room in her New York home equipped with our Cabinets holding several thousand pieces of music.

New York Public L brary. Music Division, using Tindale equipment in place of binding the music in volumes as formerly.

But we point with no less pride to the large number composing the rank and file of music lovers who are using our Cabinets throughout the country. These embrace schools and convents, professional and amateur musicians, and many hundreds of earnest and progressive teachers and serious students of music.

We make only music cabinets. These are our specialty. We have styles to hold any collection of music, large or small, mahogany or oak. Time accommodations where desired. Write for Catalog 2.

Tindale Cabinets for Talking Machine Records have a superior way of keeping Records, convenient, simple, a separate container for each Record. Ask for Catalog 2B.

A place for every piece
Every piece in its place

TINDALE CABINET CO. Ditson Building 8-10-12 East 34th Street NEW YORK

"Phew! You are a warm one, B. But for part, I'd rather have a little of what you ele- y call 'smudge' than have this everlasting ato. You can talk to me about the man in the gallery until I'm deafened,—I don't want ev- ing served up in C's style. A little staccato a great way. You'll soon be as bad as a e organist."

"You come over to the church, and I'll show what I mean."

Exeunt, arm in arm.]

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

AM giving herewith an extract from a let- received this month from an earnest teach- a letter which is full of suggestion. This her is solving the problem of making pu- musical in a small town of something over e thousand people in a very simple way.

WHAT TO LEAVE OUT

have been quite comforted in the last num- of THE MUSICIAN to note how many writers placing real musical content before technic. own problem is briefly this: What to leave Most of my pupils are high school children n the grades just before the high school. Owing to the system of high pressure pur- l here there is no time left for music. Par- go on the theory that 'a little is better none,' so the children have half-hour les- , once a week, and practise from thirty utes to an hour a day. Very few accomplish hour.

try to combine technical work with music giving pieces which contain both and find it s my brains occasionally to do it. I give ial technical work usually to correct some t or weakness, carefully explaining what the cise is expected to accomplish, and I try, ve all things else, to interest them and cul- te a taste for better music all the time by ng studio programs with essays and inform- alks on the composers and the music which eing rendered."

was interested in this letter mainly because ner problem "What to leave out"! I had immediately a fellow feeling for this earnest teacher, for I am constantly confronted with the same problem.

There is so much that every pupil should study and study until the hidden treasures contained in all art works are uncovered, that the question of elimination is one of the most serious elements in normal work of today.

Formerly every student was supposed to go through all the scales, first in octaves, then in thirds, sixths, and in contrary motion. This was followed by daily exercises in arpeggio work and then, and not until then, the pupil was supposed to be ready to begin to practise on the work assigned for the lesson.

Now we are confronted with the fact that the average high school student who is taking the full course cannot give over five hours a week to piano practice. What can we do under such circumstances and under such conditions? The old routine is entirely out of the question.

Therefore we must branch out as this teacher has done and work for essentials.

In these days of labor-saving devices and condensed foods in tablets and capsules, it shouldn't be so difficult for us to reform the standards of elementary work in music. To do this we have to run against all the prejudices of years and all the "old German methods" which are so deadly to any real music thinking when they are doled out by the teacher who has spent possibly six months in Europe.

I am more and more convinced that if we have been successful in implanting in the child in the early years good habits of study and have given the necessary ear training and theory work along with the first three years of study, by the time the pupil enters the high school he can do more in an hour than the old-fashioned pupil could do in four. He should be able to grasp an idea in music as quickly as in language and he can do it if he has always had music presented from that standpoint. If he has had it brought to his attention only as "notes" and "finger troubles" naturally he thinks of it as a species of misery designed for the unfortunate.

While modern teachers are working for the *thing* rather than the *sign,* still all realize that we can't have the *thing* without *technic.* We may talk about understanding the music itself, but we cannot express ourselves through it unless we have the instant response of muscle, nerve, and brain for the adequate expression of the story we wish to tell.

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment — a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

Sohmer

315 Fifth Ave. New York, N. Y.

So one of our essentials must be TECHNIC. What are the different elements in a good technic? Upon our answer to this question turns the solving of our technical problem.

First, Tone-production.
Second, Good Crossings.
Third, Scientific Fingering.
Fourth, Octaves.
Fifth, Evenness and Endurance in Running Work.

Under tone-production I would include the control of relaxation, acquiring independence of fingers, voicing of chords, and the different arm elements in chord work, the pedal, which is one of the greatest adjuncts for improving tone-quality, and, above all, exercises which tend to vitalize the finger point.

By Good Crossings, I mean the lightening of the thumbs and the easy carriage of the hand so important in good running work. Not meaningless repetitions of scales or arpeggios, but carefully worked out exercises to do the work of the same without wasting so much time.

Scientific Fingerings means covering all keyboard tracks as much as possible by dividing scales and arpeggios into classes, practising only one of each class.

Octave Work demands special exercises for the endurance and also for the tonal balance and clamp.

Rhythmic treatment of scales and arpeggios for developing Evenness and Endurance as well as five-finger exercises and chain trills with liberal use of transference of accent are thoroughly essential.

This technic can be handled in fifteen minutes a day if started in the first year work and will give the necessary exercise and control, leaving forty-five minutes for other work, stimulating work in music itself.

Shouldn't we all consider some scheme of boiling down our exercises, having an axe to grind with each assignment?

HIGH SCHOOL CREDIT FOR MUSIC WORK

There is another aspect of the high school situation—one which interests me deeply—that of establishing a system of credit for successful study under teachers outside of the school.

A New Instrument TEACHES ANYONE TO TUNE PIANOS

An amazing invention—a marvel of science. Teaches piano tuning by new scientific principle. The New (Tune-a-Phone) method is absolutely accurate. Eliminates guesswork. Positively unfailing. GUARANTEED. Endorsed by authorities. Turn your spare time to profit. Learn this well paying, independent profession at home. Action Model and all Tools furnished Free with course of easy lessons.

Piano Teachers Write for "Teacher's Proposition"

There is no reason why we should not receive credit for work done, and I am delighted to see that many of the cities, as well as in some smaller places, are giving such credit.

There is hardly a pupil in high school work who will not be delighted to give more time to music if she can secure the credits for graduation thereby. There can be no question but that music is as developing as many of the studies in the school curriculum, and much more useful to the individual when he passes his majority. We musicians feel that the value of music as a social leavener can hardly be over-estimated, and if we lose these valuable years we can never make them up.

There seem to be certain difficulties in the way of establishing such a system of credits, but in many cities they are working out a plan that is practicable and stimulating. I have been deeply interested in the outline that Mr. Will Earhart has made for the Pittsburgh schools, where the work has been especially successful.

One of the great stumbling blocks for most superintendents and supervisors seems to be the question of fair markings. Many of the superintendents seem to think it would be impossible for any three musicians to agree on an Examining Board.

A letter from Mr. Earhart on this question interested me deeply and for the benefit of others who are trying to secure such adoptions in their schools I am giving his experience with the Pittsburgh board.

Mr. Earhart writes: "With regard to examining the students. We give the examinations ourselves under the supervision of teachers of music in the high school, but not by them. You will recall that the monthly report cards from the music teacher, the parent and the student are filled in duplicate, and that one-half of the card is left without any signature whatever and is identified merely by a record number corresponding to the one on the signed half of the card. If at the end of the first month the course which is undertaken is below standard or blundering in any respect, the student is given a note to hand to the teacher, stating that a committee has found the course faulty and that the pupil cannot hope to gain credit for completion of such a course. The committee is in ignorance of the name of the teacher or of the student.

Gambleized Music "On Sale"

Our "On Sale" plan has been inaugurated mainly to assist teachers who have no access to large music stores in procuring suitable material without delay and with no added expense.

A select stock of usable music in your home practically brings the advantages of our large store directly to you. It gives you the opportunity to look over a quantity of music, use the numbers best adapted to your needs and return the balance to us for credit at the end of the teaching term.

Write us for full particulars

Gamble Hinged Music Co.

65-67 East Van Buren St. Chicago

"By so protecting the situation from the s picion of prejudice we are able to secure help of experts in every line of instrume study. The knowledge of the high school te er of music and my own knowledge natur is insufficient to be authoritative regard courses in piano and various orchestral ins ments. We have found the best teachers every line in the city to be glad to co-ope with us. I can at any time get three or f leading piano teachers, organists, or violin together for an examination of report cards to serve as a board of examiners. When amination time comes, the unsigned halves the monthly report cards, which have been proved during the semester, are studied by group of examiners so formed, and the exar ers then base the examination of the indivi student upon the work represented as ha been done with some stated degree of meri the teacher of the student.

"The student thus plays or sings only w he has been successfully taught according to records. In doing this he is placed near examiners, but not where they can see him. reason of this arrangement there has been objection on the part of any teacher to the amination of their students by other teache

"Examiners I have found to be very br minded with regard to the educational valu the work done. I feared they might want w which represents some specific method or s specific degree and kind of technical attainm I found, on the contrary, that any work w is honestly done and must have meant m to the student as part of his cultural educa is almost certain to be credited by them. T are quite delighted with the good sound w

The Victor Talking Machine Company

announces an important discovery

The Victor Tungs-tone Stylus

An improved, semi-permanent, changeable, reproducing stylus of tungsten combining all the desirable features of the Victor system of changeable needles with the added advantage of playing 50 to 200 records without changing.

After searching the earth for better stylus material, a Victor expert discovered the miraculous reproducing and wearing qualities of tungsten. The Tungs-tone Stylus will play from fifty to two hundred records or even more. The life of the Tungs-tone Stylus depends on the character and volume of the records played.

YOU DON'T HAVE TO CHANGE THE TUNGS-TONE STYLUS until it wears out. When this takes place the stylus simply stops reproducing as a signal for a new one. There is no danger of spoiling the record, because, strange to say, tungsten is softer than the record, although its wearing quality is one to two hundred per cent. better than the hardest steel. We cannot explain why—it is one of nature's secrets—a phenomenon. We only know it is true and recommend the Tungs-tone Stylus to all Victor users.

NO NEEDLES TO CHANGE is the chief nostrum of manufacturers of machines operated with a permanent jewel point, but the Victor Company knows what others will learn in time, namely: that no permanent point can be made to last forever on hard disc records. The jewel stylus was a success on the old wax cylinder records, but jewels do wear rough in time, and, if not instantly detected and changed, will quickly spoil a valuable collection of records—a most insidious danger; hence the Victor Steel Needle, to be used but once, was the only practical needle for the new gramophone type of hard record until the discovery of the miraculous properties of tungsten for reproducing styli.

Full Tone

Soft Tone

TUNGS-TONE is a trade-name and was coined for the occasion. The new Tungs-tone Stylus is made in SOFT TONE AS WELL AS IN FULL TONE and can be changed instantly, just the same as a steel needle. The virtue of the Tungs-tone Stylus lies in a small cylinder of tungsten projecting from the end of a steel holder in which it is rigidly set.

The tiny cylinders of tungsten reproduce Victor Records better than any other known material. Smooth, strong and full as to tone. The Victor Tungs-tone Stylus fits all Victor sound boxes.

Made in Full Tone and Soft Tone
Boxes of ten, 25c
Packages of four, 10c

Manufactured exclusively by Victor Talking Machine Company, Camden, N. J.

Important warning. Victor Records can be safely and satisfactorily played only with *Victor Needles or Tungs-tone Stylus* on Victors or Victrolas. Victor Records cannot be safely played on machines with jeweled or other reproducing points.

New Victor Records demonstrated at all dealers on the 28th of each month

tivity was as a singer, but later he preferred work as an organist. His two best known secular songs are: *Because I love you dear,* and *The sweetest flower that blows,* with *Lead, kindly light* as one of his successful sacred songs.

THE tenth Jubilee-Festival mandolin concert under the direction of H. F. Odell and George L. Lansing will be held in Jordan Hall, March 28. The combined orchestra will number about 300 performers, the largest organization of the kind in the world.

WM. HOWARD DOANE, composer of many favorite songs for Sunday-school and church, died at South Orange, N. J., Dec. 24, at the age of eighty-two.

melodies to the latest composer in folk-song style, Brahms.

The New York Chamber Music Society is the newest organization in this fine field of musical endeavor. In addition to the piano and the usual strings, the Society will furnish wood-wind ensemble with French horn, from two to twenty-five artists. The directors are Carolyn Beebe and Gustave Langenus. The next concert occurs at Aeolian Hall, Feb. 3.

Eugenio de Pirani, the well-known composer-pianist, has sent out an announcement that he has become an American citizen.

At the third Sunday Popular Concert, Jan. 23, the Kansas City Symphony Orchestra, Carl Busch, conductor, was assisted by the Kansas City Grand Opera Co., under the direction of Ottley Cranston.

Yale University is to have a new building for the use of its music department. It is the gift of Mrs. Albert Arnold Sprague, of Chicago, and will be a memorial of her deceased husband, a graduate of the class of 1859.

Home, Sweet Home, in the original manuscript of John Howard Payne, was sold in New York several months ago for $160.

Favorite Songs of Famous Singers

My Favorite French Songs

By EMMA CALVÉ

Books I and II — High Voice — Low Voice

Price, each, $1.00 postpaid

The great singer here gathers together her favorites among French songs—mostly modern, some operatic, and a few of the ultra-modern school. To these she adds a few "Songs my Grandmother sang," making a truly unique and distinguished collection. Complete with biographical sketch with portraits and an introduction from Mme. Calvé's pen. *Please indicate voice desired when ordering.*

My Favorite Songs

By JULIA CULP

Books I and II — High Voice — Low Voice

Price, each, $1.00 postpaid

The favorite songs of this highly praised *Lieder*-singer are drawn from the music of many different lands, from her native Holland to our own America, and including France, Germany, Ireland, etc. This collection is made up of such numbers as have won Mme. Culp's affection as well as proved their acceptability to her enthusiastic audiences, and the volume is of extraordinary interest. A charming Introduction from the singer's own pen and portraits enrich the book.

My Favorite German Song

By ELENA GERHARDT

High Voice — Low Voice

Price, each, $1.00 postpaid

As an interpreter of German lyric art, Miss Gerhardt has few rivals. From her recital programs she has selected the most effective and successful numbers to make up this desirable volume, which contains an autobiographical sketch in German and English, and portraits. *Please indicate voice desired when ordering.*

TH THE SCHOOLS AND TEACHERS

KROEGER Recital was given Dec. 22 and 23, at Union Grade and High School, Union, Mo., by Christian H. Stocke, pianist, with the assistance Mr. Herman Hansen, tenor, and Miss Loraine ller, pianist.

RECITAL was given at the Pennsylvania College Women. Pittsburgh, Jan. 7, by T. Carl Whitmer Miss Mae Mackenzie, pianists, Frank Brosky, nist, and Charles Edward Mayhew, baritone.

YULE-TIDE Recital was given at the William A. f Institute of Pianoforte and Organ Playing, easter, Pa., Dec. 18. The program consisted of es descriptive of Christmas morning, the arrival of guests, a visit to the playroom, the mechanical toys, the gifts, and close of day, indicated by titles.

THE Christmas Music by the Vassar College Choir was sung Dec. 12 under the direction of Prof. George C. Gow. In addition to a number of carols, *The Christmas Oratorio* of Saint-Saëns was sung.

A SONG recital was given, Dec. 17, at Cedar Valley Seminary, Iowa, by pupils of Mr. Frank Parker, director of the Department of Music.

CHILDREN from the Civic Music Association Classes, Chicago, under the direction of Mr. Edward Collins, sang Christmas carols in the Venetian Court of the Fine Arts Building, Dec. 22.

MR. ANTON WITEK, concertmaster of the Boston Symphony Orchestra, played the *Hungarian* concerto by Joachim in its entirety, at the Von Ende School of Music, New York, Jan. 8.

THE Music School Settlement, New York, has secured Sascha Jacobson as head teacher in the violin department.

MR. CARL W. GRIMM gave a talk on *The Realm of Scales* before The Musicians Club, of Cincinnati, Dec. 11. Mr. Grimm brought out the fact that 382 seven tone scales are possible, starting from and ending with C; he indicated all the workable major and minor scales, and then showed that these scales are really in use in different parts of the globe. Mr. Grimm's lately published work, *The Book of Scales,* was reviewed in THE MUSICIAN for November, 1915.

MR. W. FRANKE HARLING'S *Four Persian Love Lyrics from the "Divan of Hafiz,"* have been used lately in concerts by John Barnes Wells, tenor.

APPROPRIATE portions of *The Messiah* were sung by the choir of the Fourth Church, Hartford, Conn., Dec. 26, under the direction of Ralph L. Baldwin, for the thirteenth consecutive year.

THE Christmas Concert of the Hampton, Va., Normal and Agricultural Institute was held Dec. 21, under the direction of Mr. R. Nathaniel Dett. The choral forces included the Institute Choir, the Hampton Choral Union, and the Institute Boys' Chorus.

MR. STOJOWSKI'S Critical Classes at the Von Ende School of Music, New York, attract a number of advanced piano students as well as teachers. The work is inspiring and informative.

MR. SUMNER SALTER, director of music at Williams College, gave an organ recital of Christmas music, Dec. 15.

MR. WINSTON WILKINSON, violinist, of Lynchburg, Va., played the Paganini concerto with accompaniment by a string orchestra, at Sweet Briar College, Dec. 11, winning great appreciation for his artistic presentation.

SECULAR SONGS

HIGH VOICE

BUNNING, HERBERT
An April shower. [D♭] [d♭-g♭ (a♭)]. .$0.60
A song of a semi-humorous character with a light, tripping movement in the voice part; especially good for encore use or for a recital of music otherwise than serious in style.

CLASS, F. MORRIS
The unremembered. [F minor] [c-a♭] ..... .60
The text of this song is appilcable to present war conditions in Europe. The music is in the modern style, free in harmonic and melodic progression, and calling for a well-trained singer. It has been used with success by several well-known concert artists.

CRIST, BAINBRIDGE
A bag of whistles. [C] [G-F]..... .50
An Irish song, semi-humorous in style, an especially good number for medium tenor voice for encore use.

FERRY, CHARLES T.
Love's confession. [E♭] [E♭-g]..... .60
An impassioned love song with a broad sweep in melody as well as in accompaniment; it is not beyond the ability of a young singer.
Night holds a secret. [A♭] [E♭-g].. .40
A short lyric, in mood approximating the nocturne of instrumental music, quiet and dreamy in character, and not difficult in the voice part. It will make a good number to use with others as a group.

GAINES, SAMUEL RICHARDS
The mother heart. [A♭] [c-g]..... .60
A tender ballad in the Scottish style, the mother wishing that her son were once more a child at her knee. The air is melodious and singable, and the song will have a strong appeal for the average hearer.

MEDIUM VOICE

BUNNING, HERBERT
An April shower. [B♭] [b♭-E♭ (F)] .$0.60
For description, see Secular Songs, High Voice.

CLASS, F. MORRIS
The unremembered. [D minor] [a-F]..... .60
For description, see Secular Songs, High Voice.

FERRY, CHARLES T.
Love's confession. [C] [c-E]..... .60
For description see Secular Songs, High Voice.
Night holds a secret. [F] [c-E].... .40
For description see Secular Songs, High Voice.

STICKLES, WILLIAM
I chose a rose. [C] [d-g]..... .60
A song of the high class ballad type which the singer will like to render and the audience like to hear. The climax is an inspiring one.

LOW VOICE

DICHMONT, WILLIAM
A cycle of four Arablan songs.... 1.25
The texts are oriental in style and the music follows in the same vein. The four numbers will make a fine concert group.

GAINES, SAMUEL RICHARDS
The mother heart. [F] [a-E]..... .60
For description see Secular Songs, High Voice.

PIANO SOLO

BERGH, ARTHUR
Four tone pastels for the piano. Op. 17, IV..... 1.00
The titles are *Embers, Her Voice, April, The Sprite.* Each has a poetic motto or verse to indicate the prevailing mood of the composition. They are melodious, graceful, and finished in style, and call for a poetic interpretation.

SCHUBERT, FRANZ
Menuetto in B minor, from Op. 78. III-IV..... .30
A new teaching edition of a favorite classic.

VIOLIN AND PIANO

BIZET, GEORGES
Adagletto from *L'Arlesienne Suite.* No. 1. Transcr. by Karl Rissland.. .40
A number that has always drawn applause in the original orchestral version.

La poupée. From *Children's Suite*, Op. 22. Transcr. by Karl Rissland..$0.50
The doll's lullaby, a favorite number in one of the composer's lighter compositions for the orchestra.

GREY, FRANK H.
Dream of summer (*Reve d'été*)..... .50
A piece of broad lyric quality, in which the player must meet the demand for warm rich tone; it contains a passage in easy double stops. We recommend it as a good concert number for the average audience.

KOMZAK, KARL
Fairy tale (*Märchen*), Op. 135, No. 2. Transcr. by Karl Rissland..... .40
A charming little number, simple and melodious.
Little folksong (*Volksliedchen*), Op. 135, No. 1. Transcr. by Karl Rissland..... .50
A delightful and easy composition in the style of the folksong, simple and melodious.

LABITZKY, AUGUST
Dream of the shepherdess (*Traum der Sennerin.*) Op. 45. Arr. by Karl Rissland..... .60
A composition which has had wide vogue for piano, band, orchestra, talking machine, etc.

MASCAGNI, PIETRO
Intermezzo from *Cavalleria Rusticana.* Arr. by Karl Rissland..... .40
An effective arrangement of an old favorite.

MOSZKOWSKI, MORITZ
Serenata. Op. 15, No. 1. Transcr. by Karl Rissland..... .50
Always a favorite with an audience.

PADEREWSKI, IGNACE J.
Menuet in G (*a l'antique*). Op. 14, No. 1. Transcr. by Karl Rissland..... .60
A well-known number from the classic repertoire.

SCHUBERT, FRANZ
Moment musical. Op. 94, No. 3. Transcr. by Karl Rissland..... .50
A classic favorite.

VERDI, GIUSEPPE
Quartet from *Rigoletto.* Transcr. by Karl Rissland.....$0.
A great number from the opera repertoire.

ORGAN SOLO

BOSLET, L.
Festal prelude in A. Op. 24.....
Vigorous and brilliant in style; the middle section introduces the tune *America* (*God save the King*), with a florid part for the pedals.

CALLAERTS, JOSEPH
Prelude in D♭ (*Priere,*) Op. 22, No. 1. ..
A fine number for church use.

GOUNOD, CHARLES
Prelude in A♭. (Based on First Prelude of J. S. Bach).....
An air that is always appreciated by an audience.

GUILMANT, ALEXANDRE
Invocation in B♭.....
A new edition of a favorite composition by the French master.

HOLLINS, ALFRED
Prelude in A.....
In the good organ style characteristic of this celebrated English organist and composer.

MALLING, OTTO
Bethlehem. Op. 48, No. 3.....
An effective piece in the pastoral style.

RACHMANINOFF, SERGE
Prelude in C♯ minor. Transcr. by H. Clough-Leighter.....
A fine arrangement for the organ of a popular piano number.

RUBINSTEIN, ANTON
Melody in F. Op. 3, No. 1. Transcr. by Wm. Faulkes.....
A well-known piano piece effectively arranged for the organ.

SAINT-SAENS, CAMILLE
Prelude to *The Deluge.* Transcr. by Alexandre Guilmant.....
An effective number from the choral repertoire.

WOLSTENHOLME, W.
Prelude in G (*Lied*).....
A charming piece of little difficulty, and thoroughly melodious as indicated by the descriptive title *Lied.*

Little Almond Eyes

LIVER DITSON COMPANY, Boston
as. H. Ditson & Co., New York

A PIANO recital was given at the Cosmopolitan School of Music, Chicago, Dec. 18, by pupils of Mr. Henry P. Eames.

A PROGRAM of ensemble music was given at the Knox Conservatory of Music, Galesburg, Ill., by Helen Hanna Birch, pianist, and Gail Hamilton Ridgway, violinist.

MR. WILBUR FOLLETT UNGER, Montclair, N. J., organized The Musicians' Study Club last fall. In the short time since its founding the Club has increased its membership from twelve to nearly thirty. Meetings are held semi-monthly.

EMPLOYEES of the New York Life Insurance Company, New York City, have organized a chorus of more than 100 voices and engaged Mr. Bruno Huhn, the well-known composer and conductor. The first concert is set for Jan. 27, the second for April 27. Mr. Huhn is also conductor of the Arbuckle Institute Choral Club, Brooklyn, which gave its first concert Jan. 26.

EUGENIO DE PIRANI was represented on a program of music for wood wind ensemble by players from the Minneapolis Orchestra, under the auspices of the Chamber Music Society, at Minneapolis, Dec. 6. His *Gavotte Rococo* and *Whirlwind* made a fine impression on the audience.

THE Christmas music program of the Westlake M. E. Church, Los Angeles, was sung Dec. 19, under the direction of Mr. Sibley G. Pease, organist.

SPECIAL Christmas musical services were held at the Church of the Covenant, Washington, Dec. 26, under the direction of Sydney Lloyd Wrightson. Jan. 9 and 10 the chorus choir of the church sang *The Messiah*.

MR. JAMES T. QUARLES, organist of Cornell University, gave a special recital of Christmas music, Dec. 17. He was assisted by Mrs. Gertrude D. Quarles, contralto.

THE choir of Asylum Hill Congregational Church, Hartford, Conn., gave a program of works by Mr. Ralph L. Baldwin at the choral vesper service, Jan. 2.

NEW YORK NOTES

BY EVA EMMETT WYCKOFF

MANY concerts were given during the month of December. Possibly one that created the most interest was given by Ernest Hutcheson, who ranks as one of the greatest pianists of his day. At this recital Mr. Hutcheson played three sonatas, the MacDowell D minor, the Tchaïkovsky B♭ minor. and the Liszt E♭, a feat displaying talent, pure bell-like tone, and virility. These were played with the New York Symphony Orchestra, conducted by Mr. Walter Damrosch. On top of this performance he played three encores to the insistent demands of the greater part of the audience. Few artists could have drawn such an array of fellow pianists, as did Mr. Hutcheson on this afternoon, most of them staying through the entire performance. Among those present were noticed Alexander Lambert, Josef Hofmann, Harold Bauer, Ossip Gabrilowitsch, Gustav Becker, Arthur Shattuck, Mrs. Frank Shepherd, Max Vogrich. who was an early teacher of Mr. Hutcheson, Leopold Godowsky, Louis Hubbard, Elmer Putnam, Yolanda Méro, and Katherine Eyman.

OTHER pianists of the month were Arthur Shattuck, displaying technical ability and much refinement; Katherine Goodson, the English pianist, who gave a Chopin program. Her art displays stability and delicacy. George Copeland, whose playing is distinguished for its delicacy and beauty of tone, with keen appreciation of style. Harold Bauer gave his second recital with all his customary warmth and giant ability. Ossip Gabrilowitsch gave his third and fourth subscription recitals. His playing of the romantic music is without sentimentality, but full of poetry. The fourth recital was all Chopin. John Powell, pianist and composer, is an artist displaying many original points of excellence.

OF the singers, an interesting recital was given by Shanna Cumming and Harry Rowe Shelley. Mme. Cumming was fascinating to the eye and sang brilliantly. Mr. Shelley played compositions of his own on the organ and, like all his music, they were showy and beautiful. Mrs. Cumming also sang a group of her own compositions and played her own accompaniments. Seymour Bulkley gave a recital, displaying a light and sweet voice. He was received by a pleased audience. Miss Lima O'Brien accompanied. Clara Clemens Gabrilowitsch gave her second recital, this time of German, French, and English compositions. Ossip Gabrilowitsch accompanied. Alice Sovereign gave a recital accompanied by Richard Epstein. Miss Sovereign has a fine quality of voice.

FAY FOSTER, the composer, gave a recital of her own compositions at Wanamaker's. The singers were Florence A. Otis, Litta Grimm, Paul Dufault, Charles N. Granville, and Earle Tuckerman, with Alexander Russell and Miss Foster accompanying.

SOUSA and his Band, besides playing every afternoon and evening in the Hippodrome performances, also gives Sunday night concerts in that auditorium, assisted by artists such as Nielsen, Melba, Destinn, and Teyte. These concerts are of unusual interest, because of the association of a band of Sousa's standard, together with the ability of the aforesaid artists.

VIOLIN recitals were given by Emily Gresser (with Samuel Chotzinoff at the piano), displaying good tone and showing marked improvement over last year's playing; Francis MacMillen (with Richard Hageman accompanying), displaying masterful art; Marie Caslova, talented and well schooled, and accompanied by Harry Gilbert. David and Clara Mannes, always delightful, have given three of their Sonata Recitals this year in Aeolian Hall. In the third recital they were assisted by George Barrére, who played in Bach's sonata in C minor and Gluck's sonata in G minor.

YVETTE GUILBERT, graceful and charming, is giving her second series of costume recitals, assisted by Frederic Fradkin, violinist, and Ward-Stephens at the piano. In one of these recitals she was assisted by The Little Symphony, George Barrére conducting.

EMMY DESTINN, who ended her contract at the Metropolitan last year, has been induced to sign a new one, and has already sung at the Metropolitan this season. Several performances of *Samson and Delilah*, by Saint-Saëns, have been given with Matzenauer and Caruso in the name parts. Their performances have been superb. The Metropolitan is keeping up its usual standard and is producing old and new operas.

EARLIER recitals were given by Mary Jordan, a charming singer, Frances Alda, who is dainty and artistic, Percy Hemus, an American song specialist. Herbert Witherspoon, in a delightful recital, and Fannie Bloomfield Zeisler, who plays so magnificently that America is proud of her.

VICTOR TALKING MACHINE RECORDS FOR FEBRUARY, 1916

We call attention to the announcement on page 123 of the present issue of a new needle or stylus to be used in reproducing records. It is quite probable that the average person conceives of little or no difference in needles—very much to the injury of the records he uses. We consider the tungstone a great discovery and of special significance to owners of Victor Talking Machines.

From the large number of new issues we note especially the following:

Alda, Frances, soprano: *Chanson provençale,* by Dell' Acqua, a celebrated coloratura song by a French woman composer.

Braslau, Sophie, contralto: *Bid me good-bye,* by Tosti, a favorite ballad in the English style.

Culp, Julia, contralto: *In the sunset glow (Im Abendroth),* one of Schubert's loveliest songs. (In German.)

Elman, Mischa, violinist: *Mélodie,* a lovely air from Gluck's opera *Orfeo,* as arranged by Wilhelmj.

Gluck, Alma, soprano, and **Paul Reimers,** tenor: *Hans und Liesel,* a delightful duet from the German folk-song repertoire.

Hempel, Frieda, soprano: *Ben Bolt,* a favorite from the older American song repertoire, by one of the Metropolitan Opera Company stars.

Kreisler, Fritz, violinist: *Songs without W* No. 25, called *May breeze,* by Mendelssohn great favorite with those who attend the a recitals.

Martinelli, Giovanni, tenor: *The sweetest* (*Come rugiada al cespite*), from Verdi's *Ernani,* by one of the favorite opera tenors day.

McCormack, John, tenor: *When the dew i ing,* by Schneider, and *A little bit of heave* Ball, two ballads which are great favorites.

Ober, Margarete, contralto: *Stride la* the great contralto air in Verdi's opera *Il tore.*

Ruffo, Titta, baritone: *Scarpia's air* from cini's opera *La Tosca;* a splendid number.

Schumann-Heink, Ernestine, contralto: *phie ode,* by Brahms, a gem from the mode song repertoire.

Whitehill, Clarence, baritone: *Dream fa* Hutchinson, a favorite English song.

Witherspoon, Herbert, bass: *A warrior* popular English ballad which people still l hear.

Wells, John Barnes, tenor: *Boat song a of the morning,* by Ware, two delightful splendidly delivered by a young American who has made a name for himself in concer

TAPPER'S GRADED COURSE
FOR THE PIANO

EDITED AND ARRANGED BY THOMAS TAPPER, LITT. D.

The only course that provides all the necessary lessons in Theory, Music-writing, Melody, and Form, *when* and *where* they should be given

Eight Reasons Why Every Teacher Should Use This Course

1. The greatest care has been taken to provide tuneful, pleasing and attractive music.
2. The grading is so easy that progress along the inclined plane of advancement is never wearisome.
3. The music is selected from the works of an unusually great number of composers.
4. An ample amount of technical training is provided.
5. Every composition in these books is well worth learning for its musical value and for its utility on the pupils recital program.
6. The music of each grade is so liberally provided that the pupil secures an unusually thorough training step by step.
7. Every Study is an interesting Piece and every Piece is a valuable Study.
8. Throughout the course there are compositions especially edited for it by the greatest authorities.

What a Progressive Teacher and Well-known Composer Says

TAPPER'S FIRST PIANO BOOK is the best little beginner's book I have ever used and I have experimented with a good many.

One feature I like about the GRADED COURSE by Tapper is the *phrasing*. As this is really the most vital feature in all playing, I am glad that Tapper stressed it so carefully.

I have always admired Heinrich Germer's editions on account of the superior editing and especially on account of the clear, logical phrasing. Tapper has gone him a close second! But TAPPER'S COURSE is most admirably adapted for American needs of the present day, because he builds up his material in a truly progressive way and presents interesting material by moderns which to me, seems to be a step forward again in the right direction.—LEO OEHMLER.

Among the Distinguished Editors of the Work are: M. Esposito, E. R. Kroeger, M. Moszkowski, John Orth, Albert Ross Parsons, I. Philipp, Xaver Scharwenka, W. H. Sherwood, August Spanuth, Bertha Feiring Tapper

The Course Consists of

1. Graded Studies (Grades 1 to 7) . . { The Graded Studies constitute a course in technics, and in all problems that develop therefrom.
2. Graded Pieces (Grades 1 to 7) . . { The Graded Pieces offer the most pleasing recreations and repertoire selections, grade for grade with the studies.
3. Manuals for Grades 1, 2 and 3 . . { The Manuals contain graded lessons in Music Writing, Melody, Analysis, Form, and Music Theory, *applied to real musical composition.*
4. Four-hand Collection, Nos. 1 and 2 { The Four-hand Collections are for the double purpose of sight-reading and for ensemble work. They may be used from the third grade.

Price of each grade, $1.00, postpaid. Liberal Discount to Teachers

Subscription Price, Per Year.....1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured*, money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew.

We do not send receipts for subscriptions. On the wrapper of the first issue sent after your order is received is the date to which your subscription is paid. This is a receipt.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of *The Musician*. All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of *The Musician*.

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in *The Musician*, and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

PUBLISHER'S NOTES

Geraldine Farrar: Favorite Songs.
Introduction price 60 cents

THIS gifted singer shows her musical training by the preponderance of German songs in the collection she has brought together. The various numbers have been sought out with indefatigable zeal, largely from treasures of song buried or neglected in the works of great writers, and are therefore, in many ways, new to the average teacher or singer. Songs from other lands, such as Russia and Scandinavia are also included. The book is uniform with previous issues of MY FAVORITE SONGS series, with biographical sketch, portraits, with a striking portrait on the cameo plate paper cover, in the engraver's best art.

The price has been fixed at $1.00 postpaid, but for introduction purposes, in advance of publication, we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Cedric W. Lemont: Creole Sketches.
Introduction price 60 cents

THIS collection of piano pieces is a worthy companion to the same composer's *Dream Pictures*, which has had so favorable a reception. They show the same spontaneous melody, colorful harmony and fluent invention; in addition they reproduce the picturesque special features of Southern environment justified by the title. Having lived in the Creole state the composer has caught his impressions at first hand. The cover is a splendid piece of color printing. The regular price is to be $1.25 but in advance of publication we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Deems Taylor: The City of Joy (Song Cycle) Low Voice
Introduction price 60 cents

IN this highly original cycle of songs both author and composer have made an effort to uncover the romance, the poetry which are so vitally present under the familiar prose of every day scenes—and have been successful. The idyls of the city's crowded ways blossom in their happy pages. Recognized as one of the most gifted among our younger composers Mr. Taylor has written songs marked by spontaneity, richly expressive in their melodic and harmonic content, and in their felicitous touches of humor. And he has further adorned the volume with a cover design and with illustrations to each song which charmingly bear witness to his skill and imagination in a kindred art. The regular price has been put at $1.25, but in advance of publication we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Arthur Hartmann: Six Pieces for Violin and Piano, Op. 28. Ditson Edition, No. 307. Price, 50 cents. Introduction price 20 cents

THESE easy pieces offer particularly attractive and practical material to the teacher, as they are primarily of musical interest, melodious, and with many felicitous touches of harmonic ingenuity in the piano part. In style they are well-contrasted, the first three being songful, the fourth a swaying waltz, the fifth in the light, bright manner of a scherzo, and the last a fiercely rhythmical characteristic piece. The price is 50 cents, but in advance of publication we will accept orders at 20 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.55.

NOW READY

THE following books are now ready for market, and those who have ordered copies in advance of publication should have received them copies by this time. Our readers will find it worth while to keep their eyes on the announcements and offers which appear on this page month after month. They are genuine bargains, with prices never more than one-half the regular list value of the books.

Julia Culp: *My Favorite Songs.* Book I. Book II. For high voice or for low voice. With portrait of the artist. Price, $1.00.

Percy Grainger: *Merry Wedding (Bridal Dance)*, a short cantata of moderate difficulty. Price, 60 cents.

Cecil Burleigh: *Sonnets of Autumn.* A set of poetic impressions for the piano by a rising American composer. Price, $1.25.

Fascinating to Music Lovers

THE OPERA BOOK

By EDITH B. ORDWAY

8vo. Cloth, Gilt Top, with 32 Full-page Illustrations. Boxed, net, $2.50

This book contains practically all of the operas played in the four opera centers (New York, Chicago, Philadelphia and Boston) during the past five years, and some of the leading novelties and revivals announced for this season. A brief, succinct, but clear account of the action of the operas, scene by scene. It is a real guide to the interpretation of what actually takes place on the stage rather than a retelling in story form of each opera plot.

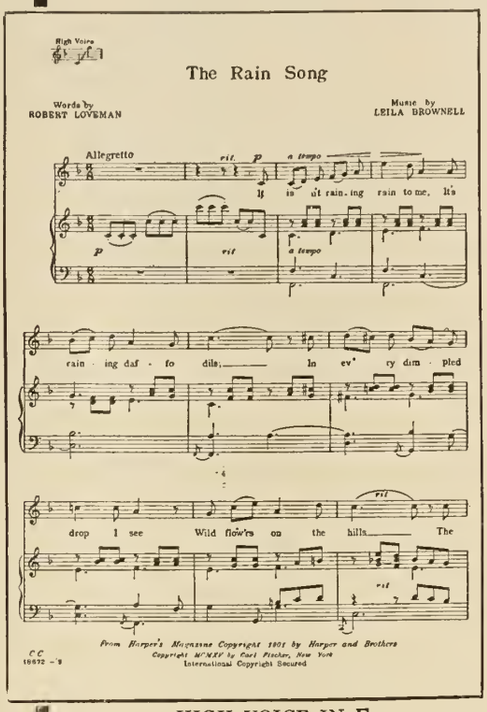
A NEW SONG BY THE WRITER OF "FOUR-LEAVED CLOVER"

LEILA BROWNELL

A delightful poem by Robert Loveman set to music by this rarely gifted writer. A poem whose bright optimistic and happy spirit is beautifully and aptly portrayed.



High Voice
The Rain Song
Words by ROBERT LOVEMAN
Music by LEILA BROWNELL
Allegretto
rit. p a tempo
If is ain't rain-ing rain to me, It's
rain - ing daf - fo dils, In ev' - ry dim - pled
drop I see Wild flow'rs on the hills The
From Harper's Magazine Copyright 1901 by Harper and Brothers
Copyright MCMIV by Carl Fischer, New York
International Copyright Secured

HIGH VOICE IN F

THE RAIN SONG

1.

It isn't raining rain to me,
It's raining daffodils;
On ev'ry dimpled drop I see
Wild flowers on the hills.
The clouds of gray engulf the day
And overwhelm the town;
It isn't raining rain to me,
It's raining roses down.

2.

It isn't raining rain to me.
But fields of clover bloom;
Where ev'ry buccaneering bee
Can find a house and room.
A health unto the happy,
A fig for him who frets,
It isn't raining rain to me
It's raining violets.

Goyescas

A Spanish Opera in a Prologue and Three Tableaux

By ENRIQUE GRANADOS

Book by FERNANDO PERIQUET

VOCAL SCORE

Paper, $4.00 net :: :: *Cloth, $5.00 net*

The story of Goyescas was inspired by the paintings of the famous eighteenth century artist, Goya. But this lyric drama is much more than a musical version of vivid pictures—it is the tonal quintessence of a temperamental people. The composer is the leading exponent of the modern Spanish school. His work, characterized by its swinging rhythm, color and striking originality, was introduced in this country by Ernest Schelling through the piano sketches from which the opera was developed. The world premiere of Goyescas on Friday evening, January 28th, at the Metropolitan Opera House was a distinct event in musical circles.

Edition Wood

825 VOLUMES

THE Best Series of Standard Musical Works, including Studies, Recreations and Classics. Carefully edited, perfectly engraved, printed and bound. Teachers, Students and Music Lovers admit the superiority of this edition.

EDITION WOOD is pre-eminently the Teachers' Edition,---planned for teachers, built up to meet the requirements of teachers. The best evidence that the efforts of its publishers have been in the right direction is the large number of teachers now using it,---a number constantly and rapidly increasing.

The high position it now occupies has been attained only by virtue of consistently giving the Teaching Profession the maximum of *practical value.*

THE EDITH RUBEL TRIO

How Three Very Individual Young Women Have Joined Forces to Create This Ensemble with New Ideas for Modernizing Chamber Music

BY GRACE HUMPHREY

F. Brunel, N. Y.
(Portrait Copyright by Arnold Genthe)

A CONVERSATION WHICH MAY OCCUR

ANY HUSBAND—Well, what have we on for tonight?

Any Wife—A concert in Angelus Hall.

A. H.—What kind of a concert?

A. W.—Chamber music, by the Browning uartet (or the Thompson Trio).

The Husband—What is chamber music? Just rings? With sometimes a piano? What—no nging? No solos even? Now, my dear, you ow I'm not musical. Be a good fellow and t me off. Telephone one of your friends to with you, and I'll not only take you down, t I'll promise not to stay at the club and rget you this time. You know I want you to , but I can't stand—or sit through—a pro-am like that last one.

The Wife (regretfully)—Well, I'll ask Mrs. all. I won't have you be a martyr for my easures, but—I do wish you really enjoyed tening to music.

Does this have a familiar sound? Or, if you e Any Husband and can't be thus frank, have u thought just this and wished you could y it?

To speak truly, chamber music has not been pular.

With musicians it has, of course, a peculiar ace, one all its own. For study clubs, it has d some value, being given one or two morn-gs in a historical survey of the entire field of usic.

But an audience of musicians, who would oroughly enjoy an entire program of cham-r music, is to be found only in the largest ies. You can count them on one hand, per-ps, certainly on two. To the ordinary concert-er, it is a *bête noir* and he will have none of If you drag him to such a concert, he is red and looks it, occasionally he admits it.

The Edith Rubel Trio, however, has a new ea about chamber music.

If it is so valuable historically, if it offers such hes to musicians, there must be some way make it available to the *hoi polloi*. Nay, more— present it so attractively that ordinary persons ll find it thoroughly enjoyable.

They have attacked their problem from two des. First, the traditional program of chamber usic, beginning with Beethoven and ending th Brahms, the numbers few and long. And, en, the historical setting, which is important, in studying the sequence of certain composers and styles. This offers an opportunity to connect the music with other already known facts—a process, often called "the tying-up method," which is today a thoroughly recognized principle in every form of education.

It is hard for the ordinary audience, especially the audience of the smaller cities, to follow a long number. Perhaps this is no more true of chamber music than of vocal. It may have to do with a basic fact of our American psychology. For, come to think of it, it's true in reading, too. People choose short stories in the magazines instead of long books.

Notice at the next concert you attend, and see if there isn't more applause for a group of four short songs than for one long aria; more real enjoyment from three little numbers than from a long concerto or sonata.

This is taking it for granted that all are done with equal technic and artistry.

Then, too, your ordinary audience wants variety. Constant change is the way to keep an unflagging interest. That very remarkable concert given in New York, when Harold Bauer played an entire Chopin program, and the people listened through all those numbers attentively and without a buzz of whispering and restlessness—it was quite a test even for the music lovers of New York. Would it succeed ordinarily?

A COMPREHENSIVE PROGRAM

"We try to give a comprehensive and varied program," says Miss Rubel, "of sonatas, songs, the many dance forms, standard music of the romanticists as well as of the classical school, modern numbers, a taste even of the ultra-modern, not forgetting American composers, or the very early writers of chamber music, such as Matheson, whose work is fresh and new for the audience of today.

"Frequently numbers which interest us are available only in fragments. Well, we are not ashamed to play fragments,—exquisite bits of medieval and modern Frenchmen, the most interesting parts of long works. snatches of Beethoven, sketches in music, like Schumann's *Kinderscenen*.

"But you must beware of playing fragments, that it shall not result in confusion, leaving your hearers all befuddled, wondering what they have listened to! We take great pains not to detach our fragments. Each composer represents the spirit of his age, each one offers certain elements characteristic of that period.

"Explain to your listeners that this air is monkish and ecclesiastical, that *allegro* romantic, the *elegie* modern, the next number mystic, like a Maëterlinck play. This group of folksongs will give you a bit of the Norwegian or the Hungarian spirit.

"Without emphasis on the logical historical development, making it seem too much a lesson in school, they do like an orderly program in chronological sequence, giving say three hundred years of chamber music, from Nardini and Tartini in the seventeenth century to Bruch or Debussy of the present day."

TUNES AND STORIES

Many numbers have been found for the Trio's repertory as a result of browsing in musical libraries and at publishers. People especially enjoy interesting little stories about the music they are to hear. Perhaps it makes it more human, perhaps it provides a change from constant listening.

Tell them, for instance, that Handel's *Water Musick* was written for the benefit of George the First who had refused to permit the composer to come to court. One August evening the royal family came down the Thames to Whitehall, amid a general illumination.

Handel followed the royal barge in a small boat, with an orchestra of strings playing under his direction a series of stately dance movements,—a saraband and gavotte, a minuet. The king was delighted, and a few days later Handel, very humble, was received at court and given a life pension of two hundred pounds.

Such an item gives you their attention, they listen with greater interest; and the more they listen, the keener their enjoyment and appreciation.

Entirely different are these little French dances by François Couperin. There is nothing of the court about them. They are country dances, full of the fresh air feeling, the very essence of provincialism.

Here is a little gigue by Corelli, a true master of the fiddle, the biggest spirit of any of the early Italians. It is a combination of stateliness and freedom. It is a fine example of what musicians call "real violinistic music," perfectly suited to stringed instruments.

And here is a very modern waltz, by Edward Schütt, reflecting, as if in the *Blue Danube*, the atmosphere of the houses so peculiar to Vienna.

APPEALS TO COLLEGES

The Trio appeals particularly to colleges and universities, to musical study clubs, to women's organizations of various kinds.

When the audience is small enough to give an intimacy and allow informality, Miss Rubel talks about the various numbers. She shares with the listeners their own pleasure in the music, giving them some background for it, tying it up to what is already theirs. Where the size and character of the audience make this impractical, it is given in program notes, written as informally and interestingly, as possible.

People today must have an emotion.

They are not interested in technic only, no matter how perfect. But appeals to their emotion, without any background, are apt to be hit or miss—with the ordinary listener, too often miss.

SECURING INTIMACY OF FEELING

To secure the desired *rapport* between audience and players, careful preliminary study in planning the program is necessary. The pulse of the audience must be felt beforehand, and this will be found to vary, for two reasons.

Each section of the country has its peculiar characteristics, and any program, to succeed, must give them due heed. In the South, the audience will accept the classics everlastingly, if some numbers are included that touch the heart. "Southerners," says Miss Rubel, "and I am one, must sentimentalize. They are touched only by what they feel deeply."

Eastern cities prefer a more conventional program, more sophisticated. But in the Middle West and the Far West traditions mean so little. The people there are always grasping, groping, looking for something different. And programs of chamber music, like the shops, must consider this.

But every audience, no matter where, enjoys a bit of humor. There are funny things, as well as serious, in good music, and people always like having the funny little kinks pointed out.

Audiences vary, too, with the size of the city. All over the world men are the same, when superficial things are removed or simmered down. Underneath they are all unconscious idealists. They are capable of appreciating the best in music, but it must be offered in a form they will take.

In smaller places people are so hungry for good music.

Their eagerness and appreciation are evident beforehand. Larger cities, on the contrary, have an oversupply of artists of all descriptions. The audience is "fed up," sated with good music, and comes to a concert saying, "You'll have to convince us! We're not receptive. We make it as hard as we can for you."

Either attitude the players feel. "It is psychological," Miss Rubel says, "and you sense it immediately. You must overcome the supercritical feeling of some audiences. You must get them with you, not let them sit there watching you. It's like a game, and takes you quite out of yourself!"

In every program is included one number which the Trio calls the "electric one."

It is the thing that gets your audience and vitalizes the atmosphere. It will not always be the same, and only experience in sizing up and judging listeners will make its choice infallibly right.

"Electric" numbers must be short, and frequently come in only as encores. Examples are Kreisler's *Liebesfreud*, Handel's *Arioso*, even though it is quiet, slow, and rather lugubrious, and, before it became so well known, the *Humoresque*.

THE LARGE OR THE SMALL AUDIENCE

Some writers insist that chamber music demands, by its very nature, a small audience, so small that intimacy follows as a matter of course. The Trio plays for a large audience in just the same way as for a small, interested group. They feel the listeners as one big person, not as separate individuals making a sum total. And with this person, the Trio feels absolutely one. They share with him their joy in playing, they make him feel it and enjoy it as though he were playing the program through himself.

The music must be an expression of something coming out from the performers; not a long, imposing, over-studied, and over-prepared vehicle for the display of technic. The highest praise from the audience is never, "How difficult! How intricate!" their comments putting all the emphasis on technic, but "How free and spontaneous! How easily you do it!" and best of all, "How much you make us enjoy it!"

If it is necessary for success that the audience have this sense of intimate listening, it is no less important that the Trio have the same kind of intimate feeling, the same expressing of the poetical idea back of the notes, the same artistic playing. But each works always for the good of the ensemble.

THE PLAYERS

Three more individual young women, of wider differences in birth and early environment, it would be hard to find. And yet, all these differences do not keep them from working together, from feeling so absolutely one, that critics have asked if they have played together four years, or only three? And the answer is, not quite one!

The Trio has that rare quality which for lack of a better word we term spirit. It may be due, its members say, to the fact that they are not just technicians, just "shoppy musicians," but are interested in other things.

Miss Brenda Putnam, the pianist, a true New Yorker, though a native of Indiana, is also a sculptor. Richly endowed by nature, well-schooled by a thorough training in Boston and Paris, she has a most idealistic tone on the piano. This same idealistic thing she has in sculpture. Her bust of Forbes-Robertson and portraits of babies have for several seasons won her a place in the exhibits of the National Academy. Tremendously talented she is, in both lines, and evenly balanced, so that she seems to be two persons in one.

The 'cellist, Miss Vera Poppe, is a painter in water colors, an English girl, born in Cape Town, the daughter of Austrian and Russian parents. With this artistic inheritance, it is not to be marveled at that she is exceedingly talented. She plays with a bigness of tone that is beautiful, not just bellowy. Graduating with honors from the University of the Cape of Good Hope, she studied at the Royal Academy in London and represented South Africa with the London Symphony. She brings to the Trio a rendering full of expression and temperament, an artistic interpretation in the fullest sense of the word.

And last, but most important, the violinist, Miss Edith Rubel. She was born in Kentucky, with a father who was musical though not a professional. She left school when very young to study the violin, clearly recognizing the fact that she had not the physical strength necessary for a general education plus music. She began playing before real studying, at fourteen giving her first public recital. "Oh, how badly I played then!" she says. At sixteen she was teaching and concertizing, winning her audiences by her beauty of tone, the finish and fine balancing of phrase which mark her technic, and the sympathy and naïve joy of her interpretations.

A funny old piano tuner who came to their litt town, was her first teacher. Then followed conve lessons, real study in Cincinnati, New York, a Berlin. The war canceled her engagements in Ge many and sent her back to this country, where s decided to form the Trio, a dream of hers for ma years.

"I have always wanted it," she said, "a Trio popularize chamber music, to combine reverence f the classics with the interesting modern worl Everyone advised me against it. It would end r own career as a violinist. Commercially, it wou mean ruin. From an artistic standpoint, did it ha anything worthy to offer?

"But I take the attitude that if people ca to listen at all, they will appreciate the best.

"And they will want to listen, once you get th attention by telling them about the best. If y don't play down to them, they come right up to yo

"They are quick to resent aloofness between t players and the audience. They like to get a fe ing of kinship. Chilliness is made by extranec things—by your nervousness, or still worse by overdone calmness that makes you move slowly a tensely to avoid breaking down.

"But if you are sufficient unto yourself, you ways have your audience. If you love your wo if you give expression to it in the best possible w in the most sincere way, so that the human elem is there as well as the artistic, there can't be a thing but a sympathetic current.

"And the audience is yours."

SIMPLE REMEDIES FOR COMMON ERRORS

BY MARTHA B. REYNOLDS

READING wrong notes is generally caused by t pupils hurrying. For deliberation and concentrati let the teacher cover the next following note measure until the previous one has been played.

BEFORE playing a new piece for the first time, ha the pupil clap the note values, with accent, count aloud. This will save weeks of attempting to c rect a wrong or weak conception of the time.

To aid in memorizing beginning pieces, mark phrases of measures and the periods, as questi and answers; show that phrase 1 and 3 are gener ly alike, and compare the similarity or differences measures, dealing with each hand separately. the child realize that the piece has form.

FOR beginners call and write 4-4 time, 4 quarte 3-4—3 quarters, 3-8—3 eighths, etc. This will m understanding of the time signatures simple.

SOME children have trouble in keeping all th music together, and sometimes come to the les without a piece or book which they "couldn't fin For these I obtain pasteboard portfolio covers wh I lace together with shoestrings. They are very expensive, 25c to 50c, and also save the music fr being torn.

IT is the duty as well as the agreeable privil of the teacher to do much for his pupil. By enthusiasm for the subject he is teaching, by gift for making it attractive, by his tact in dis ering how much at a time the pupil can assimil by happy illustration, by a judicious admixture stern exaction and encouraging lenience for lap he can make the lesson a pleasure or a penance the student. But it is also for the pupil to do m for the teacher.—*Francesco Berger.*

N EFFECTIVE PIECE FOR THE YOUNG PIANO STUDENT, THEREFORE TO THE TEACHER

BY MARIE BENEDICT

It is not always the simplest task to find, for e numerous First and Second Grade pupils, th all their individual needs and tendencies,— chnical, intellectual, emotional,—pieces which ve within them that which will forward the velopment of flexibility and strength in the uscles of hand and wrist and arm, and hich, at the same time, make emphatic appeal the child's imagination through their melodic d rhythmic charm.

In the wilderness of compositions for the ung students of the piano, much of which is ch an utterly barren waste that it is small nder that the children's love of music some- es dies from sheer starvation, there are many, ny cases where are sparkling springs of ythmic gaiety; where grow the life-giving its and flowers of harmony and melody, so solutely indispensable to the mere existence the embryo musician; so essentially con- ibuting to his growth.

Many of these there are; but they must be ught for most carefully, sometimes with uch expenditure of time and of patience, in the sert of musically worthless material, which is ntinually being thrown between the unthink- g novice and not too careful guide, and the ys untold of the realm of true music, whither ey are supposed to be taking their way.

One of these places of refreshment and of owth, for the piano student of not too tender ars, may be found in the *Peasants' Frolic*, by urlitt. Within the few lines of this little com- sition, there are several characteristics unusual pieces of the grade to which it belongs. It ves active work to all the members of each nd's quintet; not excepting the supposedly eak brother, the Fifth, a custom most essential any satisfactory growth in technical effective- ess, but one not invariably practised.

In its second section it gives to the left hand actly the work which, in its first part, is given the right hand. A most valuable point this. For the life pianistic, Left Hand is all too prone to ide lazily along with as little work as may be: ccompanying Right Hand's part, and that in more less—usually less—indifferent fashion. The re- ult being that, when, in the later years, a part emanding individuality of action, effectiveness of terpretation, falls to the share of Left Hand, it nds itself utterly incompetent; altogether unable play well its part in life.

It is most important that this training of the nds to equal technical efficiency begin in the rst stages of study. It may not be postponed ithout definite loss to the student.

The merry little theme in sixteenth notes, with hich the "peasants" begin their "frolic," must t first be practised very slowly; always with ie pressure touch, which draws its power from ie muscles of the upper arm, through flexible orearm, wrist, and hand; never with the finger troke. If you wish the most beautiful tone- uality, you must press, you must persuade the iano; you must not think that it is to be won y means of a blow.

The bright chords which follow this little theme sixteenth notes afford opportunity for growth in acility in the use of the wrist staccato.

This wrist staccato, by the way, is one of the most mportant forms of piano touch. Through it, the vell developed pianist may produce tones ranging rom fairy-like daintiness to a bravura of all the ower of which strength of muscle and response of string are capable. It is so absolutely essential to the best effect in much of the simplest, as well as in much of the most difficult music, that it forms an indispensable part of the very early training of the piano student.

In this touch, the fingers are placed, let us say, upon B and D, the tones to be sounded. Then,—a sudden impulse is sent down from the muscles of the upper arm, which, through pressure, sounds the tones and at the same instant causes the wrist to spring upward and the hand to spring with it, from the ivories. Especial care must be taken to see that the wrist comes *up*, and that the hand follows the wrist. If the hand is thrown upward of itself, without the rising curve of the wrist, the effect cannot be attained. In other words, the finger tips are the last bit of the hand to rise; and yet there is not the slightest suggestion of leisurely action in which the time of motion of one part may be differentiated from that of another; the entire movement is instantaneous, but is all due to the upward spring of the wrist. Muscles of hand and wrist must relax the instant the tones are sounded. There must be no stiffness, no inelasticity. Otherwise, the tones will be hard, metallic, unmusical.

It is, of course, understood that there must have been preparatory work in these two forms of touch, before the *Peasants' Frolic* is attempted by the young student. In the little piece she will find food for her love of melodic and rhythmic mood (though she may not express this truth in just these words) and will gain technically while having a good time musically.

In the jolly staccato chords, and in the arpeggiated first position of the dominant seventh (four tones, merely, nothing alarmingly difficult) there is the opening door to the fascination of simple chord-building and simple chord relationship; which should always form a part of the early stages of piano study.

See to it that the left hand learns to execute and to interpret its part with all the crisp clearness, all the independent security which is to be expected from the right hand.

Teach the children how to recognize the key of C major, in the tone color of which this little musical picture is painted, without reference to the key signature at the top of the printed page of notes. Make them *listen* to what the tones are saying. Show them how, by the use of *crescendo* and of *diminuendo*, light and shade, to bring out all the merry meaning of the music. Impress upon their minds, with unremitting insistence, the truth that they are not merely sounding tones; that they are (or should be) telling a story, drawing a picture in melody and harmony.

———*———

A GOVERNMENT CONSERVATORY OF MUSIC FOR MEXICO

Last summer The Musician was favored by a call from Mr. Eduardo Gariel of the City of Mexico, who had been named by the present national executive of the country, Mr. Carranza, as General Supervisor of Music Teaching and Professor of Harmony at the Conservatory.

At that time Mr. Gariel's mission was to study the methods of musical education in this country from the kindergarten to the high schools and conservatories. During his stay he visited various institutions, universities, colleges, conservatories, and public schools, not omitting the latest form of instruction, summer music schools for teachers.

Recently Mr. Gariel returned to the United States en route to Europe, where he is to study music education, including special attention to school music and methods, in Spain, Italy, Switzerland, France, and England. He is not very hopeful of an opportunity to enter Germany and Austria.

During his stay in Boston Mr. Gariel lectured at the New England Conservatory of Music on a system of harmony teaching which he has used with his own pupils with remarkably satisfactory results. In this connection it is interesting to note that G. Schirmer will shortly issue an exposition of Mr. Gariel's system in English, to be followed by an edition in Spanish, under the title *New System of Harmony Based on Four Fundamental Chords.*

Mr. Gariel has given a brief statement of his system which we place before those of our readers who are interested in harmony and methods of teaching that subject.

All chords originate in four fundamental forms. The laws of music are two, which he calls, The Law of the Lesser Effort, and The Law of Tonal Gravity, to which melody and harmony are subject.

Chords are of two classes, to which he applies the terms natural and mixed. One of the natural

EDUARDO GARIEL

chords gives a smooth, tranquil sensation; the other conveys the sensation of unrest and movement. Mixed chords, combining the elements of the two natural chords, give a mixed sensation.

The natural chords are found in the scale. The mixed chords are formed by putting together, in different proportions, elements of the two natural chords.

In passing it is interesting to note that Mr. Gariel advocates beginning with three-part instead of four-part writing. A manuscript sheet, offered for the inspection of the writer of this note, showed a melody harmonized in six different ways, the work of a pupil who had taken thirteen lessons according to Mr. Gariel's system. Especially noteworthy was the fact that the part leading was contrapuntal, and unusually clear for a tyro in the subject.

In his work with school children Mr. Gariel is an advocate of the Movable Do system which he considers the only way to secure exact pitch in singing.

The people of Mexico who are interested in the art of music are to be congratulated that the important work of forming the plans for a national conservatory and public instruction in music is in the hands of a man who is not only a musician but an educator by training and feeling.

THE MUSICIAN, one year, "Something to Play," 45 piano pieces, and "Something to Sing," 50 Songs, all for $2.00.

THE COMMUNITY AND ITS MUSIC

BY THOMAS TAPPER

It is admitted that the moral status of a nation can be judged by the way the people spend their leisure time. Municipalities have provided libraries, parks, athletic grounds, public beaches, etc., and the value of these few will deny.

But have we not in music activities, such as chorusing, playing in a band, orchestra,or listening to good music, an instrument of incalculable benefit in directing the emotional feelings which are given little or no guided expression in any other way?—Mrs. Elizabeth Casterton.

INTEREST IN COMMUNITY ACTIVITY INCREASING

IN the twelve months during which THE MUSICIAN has urged the importance of Community Music through the columns of this department, the greatest interest has been manifested in the subject and in its actual application. Evidences of community activity centralized in music and aiming at individual and civic betterment come to the Editor of THE MUSICIAN in continually increasing numbers.

We desire to present to our readers the results of community music work however humble or extensive. With a little skilful management a pupils' recital becomes a community factor of considerable importance. We have shown the value to the neighborhood of the mechanical player in the hands of those who know how to make up interestingly balanced programs, how to bring before the neighbors (as audience) a fact or two about music, the composer, the performer—and often, indeed, just the music alone with spoken "annotations" is enough to awaken dynamics that make for a pleasanter day and happier work on the morrow. Than that there can be no finer stimulus.

Mrs. Casterton presents the matter so succinctly in the paragraph at the head of this Department that we acquiesce at once, only asking, as we must of every enterprise: Who will set the matter in motion? Set the ball a-rolling? Who will take the first step? It may not even be necessary for a leader (to begin with) to lead any forces but his own. The teacher can "municipalize" her pupils' recitals (the work of Mrs. Ingalsbe, of Glens Falls, N. Y., described in THE MUSICIAN for November, 1915, is a type of this); and the concurrent activities of her teaching. The School, the Church, the Town Chorus, the Town Band, the Amateur Quartet, the School Orchestra, Glee Club, Choral Club, Concert Course, Lecture Course (this proceeds after the manner of a Whitman poem)—here are the factors *that are greater potentially than our people make them.*

But still we are coming on!

FORMS OF MUSICAL ENDEAVOR

A few men have been poking the embers of our smouldering fires of ambition (I am electing John C. Freund as Chief Engineer!) and here and there new tones are sounding. Here are a few samples.

1. THE LOCAL PRESS

1. The smaller communities are inspiring the local papers to say something about music. And the local papers are inspiring the community to say something *through its music.*

Cedar Rapids, Iowa, is a city of about 40,000 population which is doing more for music through *The Republican,* some scores of times over, than the dailies of its neighbors, New York, Boston, *et al.*

2. THE PUBLIC LIBRARY

2. The public library of all sorts and sizes of communities is adding music scores and books about music.

As a significant example the Louisville (Ky.) Free Public Library prints a special catalog of its music books and scores, of seventy-four pages, a booklet as delightful to handle and look at as it is interesting in contents. The following from the *Foreword* by the Librarian, George T. Settle, is worthy of publicity beyond the confines of its municipality (and undoubtedly has received it, ere this):

"The collection of music recently purchased, containing opera scores, librettos, vocal and instrumental music, etc., and books about music and musicians, with other material on the subject in the library, has been placed in the Open Shelf Room.

"The collection has been entered as usual in the public card catalog under composer, author of words, title, kind of music, instrument, and other subjects. In addition a separate composer and title index has been made for the Open Shelf Room of the songs and compositions in the books and scores of the entire collection. This index of more than 10,000 titles of vocal and instrumental pieces with the card catalog, makes the collection most valuable to the public. The collection is for the use of pianists and organists, teachers and classes, choir leaders and singers, professional and amateur musicians, and all music lovers.

"The printed list is issued to acquaint the public with the material to be had at the library and to assist in making selections for home use. The list is divided into two general heads, Music Scores and Books about Music, and these subdivided for quick reference. For the subdivisions, see table of contents.

"The Library Board in issuing this printed list has taken another step to show the resources of the library and to encourage its use.

"The Librarian is indebted to the musicians and music lovers of Louisville for their helpful suggestions in preparing the list for purchase."

3. MUNICIPAL CONCERTS

3. *The Independent* (New York) recently reported, though briefly, the following: High-class municipal music on a self-supporting basis has been thoroughly established by the city of Portland (Maine). It is now in the midst of its fourth successful season since Cyrus H. K. Curtis gave a great organ to the city as a memorial to the former local musical leader, Hermann Kotzschmar. Will C. Macfarlane, the municipal organist, receives a salary from the city, but the balance remaining after the winter subscription concerts and the summer pay concerts has more than offset this every year. So, while the city does the business, the cost to the city government is nothing; and some of the best musical talent in the world is heard at its concerts.

4. MUSICAL ORGANIZATIONS IN BUSINESS HOUSES

4. We have repeatedly reported the music activity of clubs and organizations within business houses: That the Wanamaker stores is organized and conducted on a business basis that wastes nothing in opportunity to serve the public in terms of art and pleasure. Many other department stores have undertaken similar work. A recent addition to such commercial art effort is the Nylic Choral Society (first season, 1915-1916), a chorus of one hundred voices formed among the employees of the New York Life Insurance Company. This chorus is under the direction of Mr. Bruno Huhn. The objects of the society are clearly stated in two terms: 1, to promote greater social intercourse among the employees, and 2, to furnish opportunity to those who have musical ability to study high class music and present it to their friends.

5. STRING QUARTETS

5. Someone said recently: There are now as many symphony orchestras in the United States as there are hairs in a fiddle bow. If this is a fact I do not fully appreciate it. But there are lots of orchestras; and some of them famous. And yet—a distinguished musician recently passed judgment on Boston as unmusical *because it has no amateur string quartets.* If I remember correctly, he credited New York with twenty-five or thirty. I am entering this not as a community music fact, but as a curiosity. Personally I have always thought Boston to be musical, and it certainly has given rise to a quartet. But then it isn't an amateur organization. However, of the many reports that come to this Department about music activities in small cities and towns, we conclude that the amateur string quartet is flourishing. When violin instruction in the public schools is as popular here as it is in English schools, we shall probably have a plague of quartets. But according to the gentleman quoted above, they are the one real test.

And still there remain: 6, Choir Concerts; 7, Church Music Festivals of broader scope; 8, the Town Band; 9, the School Orchestra; 10, Glee Club; 11, the Local Chorus, etc., *ad lib.*

We are surely marching on.

SUGGESTED COMMUNITY MUSIC ACTIVITIES

BY MRS. ELIZABETH CASTERTON, ROCHESTER, N. Y.

THERE are numberless opportunities for the school music supervisor who desires to organize community music effort. In fact, the opportunities are greater, generally, than his time and energy will allow.

THE MUSIC CLUB

Without doubt, the most effective initial attempt at community music work would be to create in the local music club a desire for community music effort and to perfect in the organization, plans for developing the same. The music club is representative of the best musical talent in the city, is comprehensive of the varieties of musical talent available, and is able, through its large number of members, to do very effective community music work, if once aroused to the desirability. If the supervisor is tactful and forceful, he may make the music club a great assistance to him and a great power in community music endeavor. If there is not a music club in his field of labor, one of the best community efforts possible will be the organizing of such a body, having for one of its main purposes the "Furtherance of musical culture throughout the city."

WHAT THE LIBRARY CAN DO

Perhaps the next most effective community music activity to undertake would be the laying of plans for having the public libraries and the school libraries equipped not only with good books pertaining to music, but with books of good music. The libraries will not to any great extent contribute to music uplift through reference books in regard to music, its composers, and so forth, which are consulted almost entirely by the musical élite of the families. It is rather through books for free circulation containing collections of good music, such as ballads, folk-songs, piano and vocal duets, and so forth. These will be used in the home to the enjoyment of all, and will perhaps serve as a substitute for much of the cheap music now being used in the homes.

CHORAL CLASSES

ie of the easiest and, at the same time, one he most effective community music activities to ertake is the organization of people's choral es, people's choral societies, etc. To a normal an being, no impulse is more difficult to resist the desire to join in singing. People like to me immersed in the rhythm of a melody just hey like to fall in step. They like the feeling ie melody and the harmony just as they like the ng of sunshine, or of warmth and comfort. hermore, the team work in chorus singing gs a sense of companionship and comradeship nany people perhaps otherwise denied this.

ORCHESTRAS

ie supervisor should aim to stimulate interest nd support for the orchestras in his community. his field does not yet support an orches- let him proceed to assist in perfecting plans the organizing of such a body. Often a small munity contains a few individuals who can aps perform fairly creditably upon orches- instruments, but for lack of a moving spirit e never united in an effort to establish such an nization, however small. The supervisor ld be of great helpfulness to the community by ting such a relationship.

is a matter of great importance that many ol authorities have at last come out of their ical hibernation, at least sufficiently to admit the study of instrumental music is as much in the province of the public schools as is the y of vocal music. Large numbers of orchestras being organized in school systems throughout country, the entire expense for instruction of e being borne by the school authorities, pre- y as for any other educational activity car- on in the schools. If the supervisor be able dd to his school orchestra adult players of the the most effective community relationships are olished.

ie results of the growth of this movement will nanifold. Not only will communities be pro- d with an ennobling means of self-expression, ch in itself is an end to be desired, but also h of the world's best music will be brought he people in the form in which it was com- d, that is, for the orchestra. The band and its er to enliven community spirit is not to be dis- rded, but it can never greatly enrich a com- ity musically owing to its limitations in tone r. The world's great masterpieces are either ossible for bands or when presented by same a very inadequate expression of the compo- n.

ARTFORD, CONN., PUBLIC HIGH SCHOOL

(Ralph L. Baldwin, Director of Music)

MINATION OF THE JUNIOR CLASS, JANUARY, 1916

Music Appreciation

I

a) Identify by composer and by complete title of the compositions or themes played.

b) Judging from the rhythm, or the form, or , indicate the title of each of the compositions ed. Judging from the style, identify the com- r of each.

II

a) Write concerning the importance of the phony as an art form.

b) Write briefly of the contributions of Haydn, zart, Beethoven, Schubert, and Mendelssohn to form and content of the symphony.

c) What is the meaning of "classical" and "ro- ntic" as applied to the music of this period?

III

(a) What was the nature of the orchestra and character of the orchestral music of the early op- eratic period?

(b) Name the instruments of the orchestra at the Bach, Haydn, and Beethoven periods. Add comment regarding the treatment of some of the instruments by these composers.

(c) What contributions to orchestral technic were made by Stamitz at Mannheim?

(d) Mention the instruments added to the or- chestra since Beethoven and demanded by the mod- ern scores.

IV

(a) Write concerning the pictorial or dramatic features of the overture to *Midsummer Night's Dream* and *The Erl-King.*

(b) Write a criticism of the *Songs Without Words* by Mendelssohn.

(c) Name the composer of each of the follow- ing works: (1) *Don Giovanni;* (2) *Who is Sylvia;* (3) *Pastoral* symphony; (4) *Funeral March* in E minor; (5) *10th* symphony; (6) *Italian* symphony; (7) *Fidelio;* (8) *Emperor* quartet; (9) *Eroica* symphony; (10) *Hymn of Praise;* (11) *The Wan- derer;* (12) *Surprise* symphony; (13) *Emperor* concerto; (14) *Jupiter* symphony; (15) *Venetian Gondolier's Song.*

V

(a) Write concerning the life and character of Mendelssohn.

(b) Mention his most important works and com- ment upon his style of composition.

In reporting upon the paper given above Mr. Baldwin says that the leaders were three boys with a standing of 96, 91, and 90.

At the annual concert in May *Elijah* will be sung by the chorus from the High School. Much in- terest is manifested in the choruses by the boys and girls. In addition to the school chorus there are two glee clubs and an orchestra of 25 pieces under training.

———*———

MUSICAL ACTIVITIES IN THE PUBLIC SCHOOLS OF DES MOINES, IOWA

From a letter to the Editor of The Musician written by Mr. William Alfred White, director of the Department of Music in the Independent School District of Des Moines, we learn that a vigorous campaign is being conducted. We epitomize the information as follows:

Pupils in the High School receive credit for out- side work in piano, violin, or other symphony or- chestra instruments, and for voice, provided cer- tain conditions are met, which are:

The teacher whose work is to be credited must be a high school graduate and a graduate from a recognized school of music. This puts such teach- ers on a par with regular high school teachers of academic branches.

The pupil who deserves credit must have two les- sons per week, practise an hour a day, take one of the music branches in regular high school, and pass an examination, given by the Director of the Department, in or on the chosen instrument.

The work is tentatively planned for four years, and the extreme amount of credit for a year's work is two credits out of eight. The regular work in- side high school, at present consists of chorus, boys' and girls' glee clubs, band, orchestra and musical appreciation.

In the graded schools we have classes after school hours in violin and other orchestral instruments, and have organized juvenile orchestras. The chil- dren pay fifteen cents per lesson or rehearsal, and the fee goes directly to the teacher, who is one of the musicians of the city, and not employed by the school board. At present we have a juvenile or- chestra made up of 44 children, third to eighth grades, from various buildings; 257 children are taking lessons and 157 more are in the various or- chestras.

Nine outside teachers are engaged in this work, after school hours, in twenty-two different build- ings. The work is developing, every week seeing new children added to the list.

We have organized community choruses in ten different centers, two of them in high schools, seven in graded school buildings, and one at the News- boys' Club. A chorus must have at least twenty- five members to be acceptable. No fee is charged. The building, janitor service, teacher or conductor, and music are furnished by the Board of Education. Anyone is welcome who is not in the regular day schools.

In the graded schools we have, in round num- bers, 22,000 children, and in the three high schools about 3,000. The work is unique in the fact that we do not use any syllable system, but teach the children to read by position and musical feeling. Each technical fact that is in a song is learned by the children, with the result that every bit of song work fits readily and quickly into the other sides of music work.

In the three high schools we have about 500 chil- dren in musical activities of one sort or the other.

A DOZEN DON'TS

BY HENRY CHARLES GERWIG

[The following "Don'ts" are printed on the back of the practice slips issued by Mr. Gerwig to his pupils.—Editor of The Musician.]

1. Don't fritter—practise.
2. Don't watch the clock—watch your music.
3. Don't let a day pass without a practice period.
4. Don't do tomorrow's practising today. A daily one-hour period is much better than a three- hour period every third day.
5. Don't forget that regular practice periods, if possible at the same time every day—preferably in the morning—count for most.
6. Don't be careless about the rhythm in any composition; the greatest weakness a musician may have is lack of rhythmic sense.
7. Don't neglect the metronome. Cultivate abil- ity to "stay with it."
8. Don't practise anything from start to finish. Divide it into four or eight measure sections and play each section repeatedly before going on to the next.
9. Don't fail to use the music dictionary. Al- ways look up the descriptive words in every com- position and try to live up to their meaning.
10. Don't cultivate a preference for compositions written in flats rather than those written in sharps.
11. Don't fail to analyze all difficult measures and phrases in your music. Rhythm, ornamenta- tion, etc., sometimes require special attention.
12. Don't practise so strenuously that the mus- cles of hands and fingers become strained or cramped.

EXPENSIVE FAME

(From Helen Ware's Scrap Book)

A young artist came to Moszkowski (who was as famous for his wit as he was for his musical talent) and bitterly complained to him about his most delicate financial condition.

Moszkowski scanned the horizon for a moment or so, as if in search of a "sure cure," then with a fatherly spirit patted the young genius on the back and advised him thus:

"Give two concerts less next season."

DYNAMIC LEVELS

BY CONSTANTIN VON STERNBERG

IN the study of music there are many things so simple, so self-evident, that the mere mention of them might be regarded as a "bromide"; but since young people do not often take the trouble to think, the teacher must usually repeat a good many times what the pupil has known for a good while—he only "didn't think of it." One of the things which every pupil knows—or, if not, he could easily think it out for himself—is the musical axiom that "accompaniments must be softer than the melody." Yet, the teacher must mention it whenever the pupil drowns a melody in a too heavy accompaniment, which he does—unfortunately—very often. He may not do it where the accompaniment consists of a mere Um-*ta-ta*, Um-*ta-ta* (in waltz time); but, barring the trashiest kind of dance music, where is there such a mere Um-*ta-ta* to be found? Surely not in any dance piece for the piano—I mean one originally written for the piano by a good composer.

Do I hear someone ask: "What about the valses by Chopin?" I expected that and I am willing to answer provided we can make a brief excursion into God's Nature, into biology. The young reader may wonder what on earth biology has to do with a Chopin valse, but with a little patience he will see that in life all things are related, even biology and a Chopin valse.

To start from a given point let us remember that Nature never separates its innumerable species by a straight line of demarcation; that all things in Nature could not be akin, as they are if a definite boundary line existed. In Nature the transitions from one kind to another are so gradual, so smooth, and so overlapping that we humans—for the purpose of classification—had to establish arbitrary landmarks, in order that we may call the rose a flower and the shad a fish. The coral for instance, while in the sea, has many attributes of *animal* life; independent action of each branch, reaching out for food, etc.; being fastened to a rock from which only extraneous force can remove it. It partakes also of *plant* life, which is indicated by its form; and when taken out of the sea it hardens and turns into a *mineral*, of which it must have possessed the organic principle. Thus the coral reaches out into other realms with which, seemingly, it has no relation. And it illustrates the matter of gradual transitions in Nature.

In art the transitions from bad to good, from simple to complex, from a folksong to a symphony are just as gradual, just as imperceptible and the higher organisms always inherit all the attributes of the lower ones, just as it is in Nature. If anyone would be foolish enough to spend his time in hunting up all the intervening links, one could, no doubt, prove a relationship between the most vulgar two-step and a Beethoven sonata; but he would at the same time prove that the one is like an invertebrate jelly-fish and the other like a highly organized human being.

Now, in the ordinary kind of dance-waltz the accompaniment has for its only purpose the physiological, rhythmic, action upon the motoric nerves of the dancers; its incessant Um-*ta-ta* serves harmonically, only to establish the key of tonality—and stays there! How different it is in a Chopin valse! To be sure, Um-*ta-ta* of the lower order of waltzes is retained in the Chopin valse—to make it a valse—just as we humans retain our animal inheritance in our physical necessities of eating, sleeping, etc. But these necessities, which with the animal constitute the entire purpose of its life, are to us only means to higher purposes; means to sustain those powers which make for intellect, imagination, spirituality and faith.

My young readers have, no doubt, by this time perceived that the laws of Nature are closely akin to the laws of art and they are now ready to look again at a Chopin valse—but this time with different eyes.

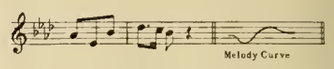
Let us take the well known *Valse* in C♯ minor, Op. 64, No. 2. See how, in the 4th measure, the tonic chord is delayed to the end of the measure. Look at measure 8 and notice how the chord of the last beat prepares the reappearance of the following dominant chord. Notice also—and particularly—how the accompaniment avoids the doubling of melody notes. When we come to the part in D♭ we find that the Um-*ta-ta* has disappeared altogether and that some parts in the L. H. form a sort of second voice to the melody, as in a duet. In this way we may look at any one of the valses by Chopin and we will always find that the accompaniment rises above its merely rhythmical function (which it must retain in order to remain a valse) wherever it has a chance for some harmonic refinement or for a bit of counterpoint. Leave those little refinements out—and you plebify the valse at once!

And yet, and yet, and still, and in spite of all I said of the difference and of the higher quality of the Chopinesque accompaniment—it must not be allowed to intrude upon the melody! It must be kept on a lower dynamic level! It may—here and there, when the melody takes a breathing spell—say its little say somewhat in the manner we do when listening to someone's talk we interpose an occasional "Oh my!" or "You don't say so" or a doubting "Really?" Such little expressions on our part give color to the narrator's story because they show which point was of special significance to us. And in a similar way the occasional emerging of a subordinate part from its demure attitude gives a heightened significance to certain parts of the melody—but these occasional "secondings" must not become *interruptions* of the melody, or—worse yet—overshout it.

The higher we rise in the scale of the compositions we play, the greater becomes the beauty and significance of those parts which are, for short, called accompaniments; provided we use this word in its proper meaning. Now, what is the proper meaning? If I am followed by my footman who carries the bundles of my purchases, he does not "accompany" me; he "follows" me at a respectful distance. But when I am "accompanied" by a friend, we listen respectfully to each other's words and speak in our proper turn; we neither interrupt, nor overshout each other, but await a proper moment to express our interest, our disagreeing, or amplification. It is in precisely such relations that the accompaniment stands to the melody in the better and best class of compositions; not a servant, but a friend.

Unfortunately the good form in conversation is not observed by every human being; there are persons who will break in upon one's talk with unnecessary remarks. This, of course, is very bad form and whenever I meet such an experience it brings instantly to my mind the manner in which a certain place in Beethoven's sonata, Op. 26, is usually played by young people. I refer to the R. H. in measures 3, 11, 29. On the second beat there is an E♭ which, not being part of the melody, sho be played so delicately as to allow the A♭ of melody to sing out and to be understood as ris calmly and serenely to B♭.

Alas, that E♭ of the second beat usually bun into the melody as if it were written thus:



and gone is all the reposefulness of the melo gone the soft, sweet curve of the melody. O compare the two curves and notice how gentle is line of the first and how violent and uncouth t of the second.

In the sonata, Op. 2, No. 2, there is a simi place in measure 11 and in all its recurrences. T phrase:

usually sounds like this: (compare the curves)

Sometimes the E—marked with a cross here- actually *held* by the player, but the lower part ters as much on the same dynamic level as to ma the holding of the E totally ineffective, except t it may satisfy the player's conscience which evide ly has no relation to his ear.

Now let us look once more upon those "curv and reflect that it is, as a rule, the *second* of e pair which is presented to the ears of "papa" "mama" or whoever else may have the benevole to listen. If they say, then: "I do not think that t melody of Beethoven is at all pretty"—could blame them? Was poor Beethoven not falsif by the player? And in how simple a manner: putting melody and accompaniment upon the sa dynamic level.

To sum up—but hold! How can this matter, si ple as it is, be summed up? Putting it into a f words would mean a "prescription" like one fr a physician; or a "recipe" like one from a co book. This is impossible, of course. I can o ask the student's kindly *consideration* for the co position he is playing and for his auditors. If melody prolongs a certain note and the by-play, neath or above it, makes any sort of melodic p gression, *the melody note must remain supreme;* should be heard—I say: *heard*, actually heard—o and above all the by-play. Should the by-play sume a momentary melodic significance (such occurs sometimes when the melody has reached point of repose) it may for that brief mom emerge from its obscurity, though never so far to reach that dynamic level upon which the audi should have to take it for the essential part.

Methinks I hear some young student ask: "H can I do it? How can I observe all these advi and suggestions?" And I answer: Nothing is easi Only—*think* while you read your music and wh you play. If you *think* of your melodies, you c not help playing them in their proper suprem over the by-play. If in doubt, play the melody by itself a few times and then, when you add t by-play, try to hear the same melodic curve as fore, free from any undesirable "butters-in." Thi and—listen! The one does no good without t other. *Make up your mind* as to what you w to do and then *listen* to find out whether thin come out of the piano as you meant them.

COMPOSERS IN LOVE AND WEDLOCK

BY J. CUTHBERT HADDEN

ONE of Schubert's biographers enlarges on the "curious fact" that Schubert, with all his romantic sentiment, never fell in love, leading marriage. Poor fellow! He had other things think about.

But why shouldn't Chopin have married? Un- Schubert, he was in love many times, and he s romantic enough, too. Indeed he was just man to be in love and to have love bestowed him. Neurotic, tender as a woman, thin frame, fragile; one whose whole appearance, as zt put it, made the beholder think of the *con- vuli,* which, on the slenderest of stems, balance vinely-colored chalices" of such vaporous tis- s that the slightest touch destroys them. Such s this poet of the piano who, according to Tur- iev's cynical jest, died in the arms of half the ntesses of Europe.

The earliest hint of an affair of the heart carries back to the time when Chopin, then a youth, t visited Vienna. In those days, and indeed ch later, he could, says one, fall in and out of e in an evening, and a crumpled rose-leaf was ficient cause to induce frowns and capricious hts. It was perhaps not quite so bad as that, ugh undoubtedly George Sand was right in re- rking on his "emotional versatility" in the mat- of losing his heart. At any rate, the first ourette did not trouble him greatly.

The lady was a certain Leopoldine Blahetka, the ghter of a Vienna journalist who had given the nantic young Chopin some heartening by de- ibing him as "an artist of the first rank, and rthy to be placed beside Moscheles, Herz, and lkbrenner." Leopoldine was a beauty, and just veet seventeen." We have no evidence to show w the attachment began or how it progressed l ended. We only know that Chopin broke vn at parting, and that the lady asked him to ry away with him as a keepsake a copy of her mpositions.

t was shortly after this that Chopin experi- ed the grand passion of his life, for the George nd affair, to be noticed presently, can hardly so described. The lady was Constantia Glad- wska, a vocalist, and a student at the Warsaw nservatory. Liszt describes her as "sweet and utiful," though it is uncertain if he ever saw . Chopin himself tells of an occasion when, a concert, she "wore a white dress and rose in hair, and was charmingly beautiful." Her w B," says the enraptured lover, "came out so gnificently that Zielinski declared it alone was rth a thousand ducats." Clearly a fascinating sonality—to Frederic Chopin, at any rate.

The course of the affair is rather difficult to fol- . The first that we hear of it is in a letter to opin's bosom friend, Titus Wozciechowski. I have already found my ideal, which I wor- p faithfully and sincerely. Six months have w passed, and I have not yet exchanged a word h her of whom I nightly dream. While think- of her I composed the *Adagio* of my concerto, l early this morning she inspired the waltz ich I send you with this letter." The works re- red to here are the *Concerto* in F minor and *Waltz* in D flat (Op. 70).

Imagine the lover sighing for his lass for six nths without once exchanging a word with ! There seems to have been nothing but Cho- 's natural timidity to prevent his making the essary advances. The lady was apparently of own station in life, and he must have often n about the Conservatoire. But he preferred put his passion on paper, or to hammer it out at the piano, rather than declare it. Thus music was to him indeed "the food of love."

Chopin went on admiring and languishing at a distance, eating his life out for a woman who, for all that he knew to the contrary, might be ready to give him her heart. He began to be restless in Warsaw; nay, the place became hateful to him, so hateful that he determined to get away from it. "The passion of love," observes Cervantes, "is to be conquered by flight alone."

But Chopin did not run away—not just yet at least. His native indecision kept him continually in what the poet calls "a damned vacillating state." Now he would, and then he wouldn't. When he decided to go, the thought that he might never see Constantia again undid his resolve.

GEORGE SAND

All this time we are in complete ignorance of Constantia's position in the matter. Did she love Chopin? We do not know. She evidently saw very little of him, and the flame of love needs constant feeding. We gather from his letters, though not very definitely, that for a whole year he never once visited her. Perhaps all this time Constantia was quite unaware of his passion. True, she gave him a ring—"my precious ring," he called it—when he finally left Warsaw, but the exact significance of the gift is nowhere indicated.

After Chopin left Warsaw he appears to have had no further direct communication with Constantia. The lady married a Warsaw merchant in 1832, and Wodzinski says she subsequently lost her sight. Chopin was "out in the wide world"—settled in Paris, in fact—by the date of the marriage, and other interests engaging him for the time being, he does not seem to have taken the thing greatly to heart.

Consolation was at hand. He had not been long in Paris when George Sand was declaring of him that he was at the same moment trying to marry one girl there and another in Poland. The French girl he discarded because when he called on her with another man, she offered the other man a chair before she asked Chopin to be seated. The Polish girl, of George Sand's reference, was doubtless Maria Wodzinska. Some of the Wodzinskis had been pupils of Chopin's father. The composer met the family while holidaying in Dresden in 1835. They had been in Geneva since 1830, and were now on their way back to Poland. Maria Wodzinska was five years Chopin's junior. She is described as tall and graceful, with features of "indefinite charm." Her "magnificent hair" was silky and black as ebony; her nose "somewhat pronounced," and her face "highly intelligent." The precise heart relationship of the pair can, however, only be guessed. They met constantly for a month, and had much "discoursing" of music together. Chopin managed to get out of the transport a *Waltz* (in A flat, Op. 69, No. 1), which he afterwards sent from Paris, inscribed "Pour Mlle. Marie." Next summer they met again at Marienbad, when, it is assumed, Chopin made formal avowal of his passion.

Karasowski says Chopin "soon discovered that Maria reciprocated his affection," and that they were formally engaged, with the approval and consent of their relatives. On the other hand, Count Wodzinski, who wrote a book about Chopin's *Three Love Affairs,* asserts that the lady replied to the effect that, while her mother favored the proposed union, her father objected on the score of Chopin's means and social position. The Wodzinskis were noble and wealthy, whereas pianists in those days did not make fortunes like our modern Paderewskis. Wodzinski's version of the story, being that of a relative, is probably the correct one.

And now, last of all, we come to the George Sand affair. Oceans of ink have been spilt over that complex episode, and I shall not add to the flood here, especially as I have devoted an entire chapter to the subject in my monograph on Chopin. I have never been quite able to reconcile myself to the alleged "fact" that Chopin was in love with George Sand. Can you imagine two such opposites losing their hearts to each other? We know what Chopin was. Contrast him with George Sand. Liszt speaks of her as an Amazon, a *femme héros,* who was not afraid to expose her masculine countenance to all suns and winds. De Musset says she was "brown, pale, dull-complexioned, with reflections as of bronze, and strikingly large eyes, like an Indian." Heine describes her as "short and stout, dark and swarthy, with a thick and unshapely nose of the Hebraic cast, a coarse mouth, and a small chin." If Carlyle had seen her he would probably have said, as he said of George Eliot, that she had a face like a horse. She delighted in outraging the social and ethical conventions. She never wore gloves and she smoked like a man. In some ways she was so masculinely coarse that Henry James once insinuated that while she may have been to all intents and purposes a man, she was certainly no gentleman.

Chopin himself said practically the same thing when he first met her. "I do not like her face; there is something in it that repels me," he wrote. "Is she really a woman? I am inclined to doubt it. She made a very disagreeable impression on me." Yet this was the woman who, according to most of the biographers, broke Chopin's heart and directly caused his early death; the woman who, as Liszt phrases it, "inspired the frail and delicate Chopin with an intensity of admiration which consumed him, as a wine too spirituous shatters the fragile vase."

What is certain is, that Chopin was a mere tool in hands of this woman, like Samson in the hands of Delilah. She was really the man; he was the woman. That the rupture brought about Chopin's early death, as some aver, is a ridiculous assumption. Chopin was a consumptive, and his early death was, in any case, physically inevitable. At the most it can only be said that the George Sand estrangement undermined his feeble health. But it is just as likely that, if it had not been for George Sand's "maternal devotion" he might have died ten years sooner than he did.

Literary Methods as Applied to Music Study

A Method for the Appreciative Study of Piano Music, Adapted Either to Individual or Class Work

BY CLARENCE G. HAMILTON, A. M.
Associate Professor of Music, Wellesley College

III

This series of articles forms the basis for a practical and successful Course in Appreciation of Music.—Editor THE MUSICIAN.

TYPE II. THE LYRIC

FOREWORD. In the early nineteenth century, when instrumental forms of music had been worked out to a high degree of perfection, composers began to employ music primarily as a medium for expressing their *own personal feelings,* rather than mere tonal beauty, and hence to make the conventional forms elastic enough to give free play to these feelings; or, when these forms did not suffice, to invent new ones for their special needs.

Now, the most personal kind of music which we have is the *lyric song,* or song which embodies some vivid emotional experience. Very beautiful songs of this nature were written by Franz Schubert and others of his school; indeed, possessed by this genius for personal expression, some of these writers even went so far as to *sing their melodies upon instruments,* instead of solely with the voice.

By this time the pianoforte had developed a sustained and mellow tone which made such lyric playing possible; and in consequence many melodic pieces were written for this instrument that gave inspiration to a host of succeeding pianists and composers. Mendelssohn called such lyrics *Songs without Words;* while other writers, notably Schumann, Chopin, and Liszt, invented for them a variety of names,—*Romance, Revery, Nocturne, Consolation*—signifying an expression of tender and dreamy sentiment.

Inasmuch as a true lyric voices but a single mood, pieces of this type are as a rule short and unified in style.

We may expect, therefore, to find their structure clear and simple, like that of a brief lyric poem.

A: FORM

1. How many divisions are there, and what proportion do they bear to one another?

Much of the interest of a composition depends upon the good taste of the composer in adjusting the length of each division according to its degree of importance relative to the other divisions. In early writings, many repeats were indicated, in which whole divisions were frequently gone over several times in all their details. Realizing the monotony of this proceeding, composers afterwards took pains to introduce variety, by adding new features in a repetition, or by shortening materially the repeated division.

2. Are the different divisions distinct or connected? If the latter, show how connections are made.

In the classic epoch, before 1800, each division regularly had its distinct ending, after which a new passage was clearly introduced. Less severe outlines, however, characterized the writings of the Romantic School; and in modern works we often find one phrase-division gliding imperceptibly into the next phrase, so that each musical idea blends naturally with the following. Such connection may be made by introducing a connecting link, by continuing the figure in the accompaniment, by letting the melody proceed on in unbroken flow, and the like.

3. If any division is repeated, are there changes made? If so, in what do these changes consist?

We have suggested the reason for such changes in number 1, above. Alterations may occur (*a*) in the *melody,* by embellishing or strengthening it, by transferring it to another register or by adding a secondary melody; (*b*) in the *accompaniment,* by changing the figures used, by altering the harmony, etc.; (*c*) in the *shape,* by varying the rhythm, or by lengthening or shortening the division repeated; and by a number of similar devices.

4. What passages are principal and what are transitional in character?

Passages which announce the chief themes with more or less definiteness of key and shape are said to be *principal;* while those of a wandering character, with frequent shiftings of key and a general vagueness of style are called *transitional.* Ordinarily a composition begins with a principal passage, somewhat formal in its outlines. After thus announcing his text the composer may indulge his whims by excursions into any desired keys; and he may or may not return to a definiteness of style at the end.

B: MOVEMENT

1. What is the meter? Does this change?

Romantic compositions of the kind under consideration are more liable to changes in meter than those cast in the dance forms. Sometimes without changing the signature a composer introduces what is really a change of meter for a few bars, as in the following example, where the indicated accents show a change into 2-4 meter. Dotted lines suggest where the measure bars actually belong.

Schumann was especially fond of this device.

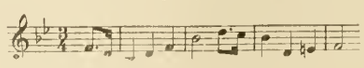
2. What is the general movement? Does this involve changes of tempo?

Words indicating movement are: *Slow, dreamy, dignified, serene, agitated, lively, passionate, flowing,* etc.

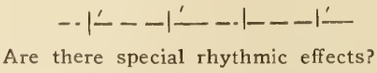
Naturally no form of composition has so elastic a tempo as the song, since every variation in the feelings of the singer has its bearing upon the pace of the music. Hence in the instrumental song, which we are now studying, we may expect many such fluctuations. The performer, however, should take care not to make the piece ridiculous by needless exaggerations.

3. Outline the chief rhythm or rhythms. What is the character of each?

A simple method of notating the rhythm as it comes to the ears of the listener is to make a series of dots and dashes corresponding roughly with the time-values of the tones. Thus the rhythm with which the *Star Spangled Banner* begins:



may be thus indicated:



4. Are there special rhythmic effects? If so, do these aid the emotional expression?

Among such effects may be mentioned those produced by opposing rhythms, as, for instance, when we have two notes in one hand against three in the other:

Rhythm, which represents the heart-beats of t music, has direct control over its emotional effe Agitation, for example, is suggested by a qui ened pace and unevenness of rhythm; while soo ing effects are induced by a slackened pace a even, lingering rhythms.

C: MELODY

1. How many subjects are there, and whe is each first introduced?

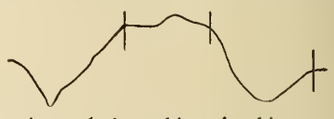
In a short lyric piece we should expect to fi either a single subject, or subjects which clos resemble each other. Occasionally, however, cided contrasts of theme are employed.

2. How do the melodies lie, relative to t accompaniment?

Very beautiful romantic effects are produced *veiling* the melody, as it were, with an accompa ment that is woven about it. In the middle reg ter of the piano a melody becomes especially m low and song-like in character.

3. Sketch the melodic outline of the ch subject. How can this be described?

Just as we indicated the rhythm by dots a dashes, so a melody may be suggested by a curv line which rises and falls with it. For instan the opening bars of the *Star Spangled Banner* (B: 3 above) may be graphically outlined thus:



Having pictured the subject in this way, we n easily describe its rise and fall in pitch.

4. Are the chief subjects repeated or imitat as a whole or in parts? If so, cite instances

The student should be constantly on the alert detect any reference to the principal subjects the accompaniment or in the melodies themsel Some of the most beautiful effects in music made by subtle suggestions of this kind.

5. Are there subordinate melodies, and if what use is made of them?

D: ACCOMPANIMENT

1. Is the accompaniment of the same nat throughout, or does it alter materially in p tern?

Some accompaniments might be called *atm pheric,* since the continued use of a characteri figure creates a sensation akin to those of cooln or warmth. Increase or decrease in complexity n excite or soothe the feelings.

2. Does the accompaniment involve chie chords or arpeggios?

Chords punctuate the rhythm into precise be while arpeggios produce a flowing, blended effec

3. Is the accompaniment thin or rich in t ture?

A composer may use a thin accompaniment wh he wishes to focus the attention of the audi strictly upon the melody. Richer accompanime may blend the melody closely into its backgroun

4. What is the nature of the harmony?

Simple and placid melodies, such as cradle so or boat songs, demand correspondingly simple h monies; while warm passionate melodies requ rich chords of varying hues. Modern compos fulfil this latter condition by frequent chroma progressions and luscious modulations.

E: STYLE

1. What is the dominant mood?

A true lyric piece centers around a single mo which appears in varying shades of intensity.

2. Is the piece unified? Show any devi that make for unity.

By *unity* in a composition we mean that effect of herency and completeness which every work of t should give. There are many devices which e employed in music to attain this result. Some these are (*a*), the repetition or imitation of the emes as a whole or in parts; (*b*), the nice bal-ce of phrases; (*c*), the use of a similar figure the accompaniment throughout; and (*d*), the adual growth of interest. In a lyric piece, the minant mood is emphasized by constant refer-ce to the leading subject.

3. Does the piece grow in interest to the d? If so, what contributes to this growth?

Interest in a piece may be developed by (*a*), a adual increase in tone-power up to a climax, af-r which a gradual decrease may or may not oc-r; (*b*), a kind of continual wave-outline in the nsecutive phrases; and (*c*), the addition of new atures, such as the embellishment of the melody the strengthening of the accompaniment.

4. What important changes in intensity oc-ır, and what is the reason for these?

Such changes often add to the interest by pro-ucing a contrast or a climax. Sudden leaps from *anissimo* to *fortissimo* or *vice versa* may indicate e onrush of a sudden emotion, or they may sim-y give a novel or humorous turn to the music.

5. What passages or points do you like the est? What is the reason for your preference?

It is of great value to the student to form a itical judgment of the musical expression in this ay, and to select the features of special interest. me unexpected turn of rhythm, melody, or har-ony, or a combination of these may produce an fect which influences the whole character of a ssage or even an entire piece.

6. Compare this with a similar composition.

F: COMPOSER

1. What are the principal events in his life?

2. What is his rank as a composer?

Only a few musicians are commonly accorded the st rank. In the second rank come composers like rieg or MacDowell; while a host of others must content with third or fourth place. It is a haz-dous attempt to assign a status to composers who e still living, and any such grading must be sub-ct to much revision in the future.

3. For what classes of music is the composer pecially noted?

4. In which of the musical elements is he at s worst and his best?

Elements referred to are Form, Rhythm, Mel-dy, Harmony, and Color.

———*———

HOULD MARY CONTINUE TO TAKE LESSONS?

An attractive and effective booklet, prepared by r. Wm. F. McMahon, of Sioux Falls, S. D., has ached the office of The Musician, in which the thor discusses the subject indicated in the cap-on which appears at the head of this note. We note from the booklet:

"Mary represents any child from six to twelve ho has taken lessons for one, two, or three years, nd has not made perceptible advancement, . . . gradually lost interest in music and failed to ractise. . . . Mary can learn to play if she wants , but there are several obstacles which may impede r progress. The principal ones are: The wrong nd of a teacher; careless or negligent parents; e wrong kind of practice; or no practice at all."

In discussing the choice of a teacher Mr. Mc-ahon says:

"Judge him solely on his ability to teach. Don't agine any teacher will do for beginners.

"But how is one to know who are competent achers? There is only one way, and that is by e success of their pupils. If they progress and play well in regard to accuracy of execution, tone, phrasing, etc., that is the best criterion possible.

"All that a teacher can do in the half-hour lesson period once or twice a week is to tell the pupil what to do and show her how to do it, and at the next lesson to offer corrections and criticism on the work done the previous week."

Then follows a statement as to what the parent, especially the mother, can do in encouraging the child to practise and keeping up interest, concluding with the paragraph,

"It is well for every parent to put this question to himself: What have I personally done to encourage and help my child in the study of music?"

A series of paragraphs on the wrong kind of practice are right to the point:

"The important thing is not how much she practises, but rather how intelligently she practises.

"Two-thirds of the students of music do not know how to practise, or at least they do not practise conscientiously. Their fingers go gliding over the keyboard like so many sticks, and no doubt if they could speak they would say, 'I don't know where I'm going or what this is all about, but I'm on my way.'

"Mary's success depends on following the teacher's instructions implicitly as to what and how to practise."

To parents who say that Mary will *not* practise and that they have offered all sorts of inducements without result, Mr. McMahon says: "You don't get the point. I did not mean inducements in the form of bribes, but rather that you had failed to create a musical atmosphere in your home which would induce her to practise because of the interest she would have in music.

"Get some books on music and musicians especially written for children. Subscribe for a musical magazine, and sit down and read these to your child. Take Mary to concerts and make her feel that you are interested in music. And Mary *will* practise."

———*———

THE WOMAN IN MUSIC

BY HARVEY B. GAUL

If we could definitely trace the story of man in music to the very beginnings, we would probably find woman by his side. Was there not Uriel with Orpheus, and were there not many Mrs. Pans to inspire that distinguished performer on the reeds?

From the time of Bach, woman has been a factor and influence in music. While she has been associated with the art from the halcyon days of Sappho, it is practically since the period of Bach that we find her ensconced in the history of music.

Now that we have crossed the threshold of the twentieth century we find woman a director if not a dictator in all the walks of life. From sciences to the Holy Scriptures, from art to aviation, from medicine to music, she is well up in the vanguard.

How much Bach owed to the unflagging devotion of his sainted wife, only the great cantor can tell. We know that at every twist and turn she aided him unflinchingly.

Handel's great attachment for his mother is equaled only by that of Whistler for his. Each strove valiantly to fulfil his loving obligation. The titan Beethoven showed in his inscriptions the debts he owed to many women loved and lost.

Berlioz, the French colossus, frankly admits in his autobiography the influence of Marie Moke, the distinguished pianist. Her influence was a gentle ray in his tempestuous life.

Clara Schumann was to Robert Schumann what Elizabeth Barrett Browning was to her husband, and Christina Rossetti to her brother. Like them, she was mistress of her art and at the same time a source of inspiration. She was a means of expression and his great exponent.

Mendelssohn's sister, Fanny, gave him assistance from his early youth. She was a capable musician indeed some of the *Lieder ohne Worte* are attributed to her.

As to Chopin and the influence of George Sand, his biography reveals many traces of this gifted woman's guiding hand.

These are women of the past. What of today! Woman is just as much of an influence as she was in the romantic period of music. She is as great an influence and she is something more—she is a creator. When Agatha Backer Gröndahl died in Norway, a creative pioneer passed. Her many piano and orchestral works placed her well in the pantheon of Norway's great ones.

From Agatha Backer Gröndahl, let us come to the contemporary composers. The most popular, if not the strongest, is Cécile Chaminade. While her works are chiefly in the salon style, she has essayed the larger forms with considerable success. France does not rank her as great as Augusta Holmés, but Paris acclaims her as more popular. Cécile Chaminade is probably the greatest woman composer of piano pieces today and Augusta Holmés was the best writer of songs a decade ago. France may well be proud of them.

In England we have Edythe Smythe, composer of the opera *The Wreckers;* Guy d'Hardelot, Alice Needham, Frances Allitsen, and Liza Lehman, all writers of songs and piano pieces. Guy d'Hardelot, Alice Needham, and Frances Allitsen all struck a popular note with their tuneful lyres. Liza Lehman, while quite as popular, has attempted bigger things. Her song cycles have won her international fame, and deservedly so. Of their genre, they are the best.

What are women in America doing? As in literature and art, they are doing their proportionate bit and doing it amazingly well. We have every reason to take off our hats to the American women.

In the very front, we have Mrs. H. H. A. Beach. Not only is she famous for her songs and piano *morceaux,* but she has won recognition with her orchestral work. She has written a symphony that was played by the Boston Symphony Orchestra. Patty Stair, of Cleveland; Carrie Jacobs Bond, of Chicago, both are popular song writers. Margaret Lang, Julie Rivé-King, Adele Aus der Ohe deserve mention as women who have achieved success.

In the world of executants, singers and performers, our women are, of course, among the leaders. It is the purpose of this article more especially to consider the women writers in music. Women have done much, but there are greater works to be accomplished ere she can take rank with the masters. While Cécile Chaminade may be compared with Rosa Bonheur, and Mrs. H. H. A. Beach with Cecilia Beaux, there are still greater things to be attained before we can mention Mrs. De Puyster Brown and Beethoven in the same breath, or Mrs. Du Barry Dobson with Debussy.

What she has done, however, is indicative of what she might do, and as the trail has been blazed let us hope and pray for a super-woman whose work will approximate Brahms.

EFFICIENT BOOK-KEEPING

BY FRANK ANDREWS FALL
Bursar of New York University

SIMPLICITY, in the field of personal and business accounting, may almost stand as a synonym of efficiency. The book-keeping of a generation or so ago was a maze of complexities,—endless entries, cross-references, laborious copyings, deadly reduplications.

Today we go straight to the mark. The modern accountant asks himself certain plain questions about the material presented to him for treatment:

What are the facts? How can they be shown in the simplest form? What use can be made of them that will show up on the credit side of the ledger?

The last question is all-important. One business man inquired of another, "How is your new accounting system working?" The reply was, "Fine! But our business is going to seed. It takes so much time and energy to work the system that we have none left to put on the business."

Teachers of music should avoid that kind of a system. They should adopt one which gives the most information with the fewest possible entries; one which helps instead of hinders the business.

Two simple books should suffice,—a Day-book and a Ledger.

THE DAY-BOOK

The former need not be a permanent affair, as all of its entries are posted to the ledger. A cheap memorandum book, a page to a day, is sufficient, or loose sheets of paper may be made to serve the purpose. On the whole, a book is better than loose sheets, especially if the teacher is not careful to post each day's business at the end of the day. Loose sheets may easily be lost before the entries thereon are posted to the ledger.

The day-book should positively be written up at the close of each day's business. If the Schedule suggested in the third article of the series THE EFFICIENT MUSIC TEACHER, be used, that will make the writing-up of the day-book an easy matter. In fact, the Schedule itself might be made to serve the purpose of a day-book, were it not for the fact that the Schedule often has to be amended. Mr. Woods may telephone that he is called out of town and will have to postpone his lesson until Friday, October first. That will, of course, change the Schedule and consequently alter the day-book entry arising from the transaction.

If all the lessons indicated in the Schedule for Wednesday, September 29th, were given, the page in the day-book would be somthing like this:

Wednesday, September 29, 1915			Posted
John G. Hayes	1-2 hour	$1.50	
Marie White	1 "	3.00	
Albert Woods	1 "	3.00	
Caroline Jacobs	1-2 "	1.50	
Herbert Ames	1 "	3.00	

The posting of the individual charges to the ledger may be indicated in the last column by either a check-mark or the date on which the entry was posted.

THE LEDGER

This book, which may constitute a complete and satisfactory financial history of the music teacher's whole career, should be a more substantial affair than the day-book. It is a permanent record, and should be treasured as such. Right here it may be suggested that a very good investment for any teacher of music would be a small safe. Twenty-five dollars, or even a little less, will buy a home safe large enough to hold the ledger, day-book, bill forms, unbanked cash or checks, bank-books, and any securities or other valuables which the average teacher of music would be likely to have. A safe is one of the best and cheapest forms of insurance.

The ledger should be either a loose-leaf book, or one bound in gray duck or the cloth known as commercial moleskin, which wears better than any leather used in book-binding. If a permanently bound book is preferred, a fairly thick one should be chosen, as each pupil has a separate account and the book should be large enough to take in the business of a number of years.

THE LOOSE-LEAF SYSTEM

The loose-leaf system has many points of advantage. New accounts may be inserted at any time, to conform with any alphabetical or chronological arrangement. A spoiled page may be taken out and replaced by a fresh one. Old accounts may be filed away, so that the records always apply to current business.

And not the least important consideration is that the use of a loose-leaf system is in line with modern methods of accounting. If your pupils see you using an "old fogy" method of keeping accounts, they cannot be blamed for wondering whether your methods in music are equally antiquated. But if they note your up-to-dateness in business details, they will have no such doubts. Modern business methods inspire confidence, whether the user of them be a merchant, a lawyer, or a teacher.

ACCOUNTS

The heart of the music teacher's ledger will be found in the individual accounts of the various pupils. That the accounts may be easily turned to, they should either be kept in alphabetical order, or, if a chronological order is preferred, an alphabetically arranged index, referring to numbered pages, should be provided. Such an index may be bought with any standard loose-leaf binder.

To open an account with any pupil, simply write his name at the top of a page. Then charge him with lessons given, and credit him with payments made to you by cash, check, or services. The account may be balanced once a month or once a year, as is your custom. If payments are made with fair regularity, a yearly balance should be sufficient.

Bills, however, should be rendered *every month*. The importance of this procedure can scarcely be over-urged. Many a teacher of music has lost in bad accounts money which might easily have been collected under a monthly billing system. Delay is generally fatal to collections, and the music teacher should see that bills go out during the first week of every month for all lessons given during the preceding month.

Dr.	JOHN G. HAYES			Cr.	
Sept. 1 1915	To lesson 1-2 hour	$1.50	Oct. 4, 1915	By cash	$7.50
" 8 "	" " " "	1.50			
" 15 "	" " " "	1.50			
" 22 "	" " " "	1.50			
" 29 "	" " " "	1.50			
		$7.50			$7.50

FORMS OF RULING

Paper for loose-leaf binders may be bought in various rulings. One kind has the left-hand page for debit entries, the right-hand for credits. A second form has the page divided vertically at the center, and still another variety has two columns for figures at the right of the page, the left-hand column for debits and the right-hand for credits.

The first form is not so convenient for music teachers as is either of the other two. Using the second form, an account might appear like this:

MARIE WHITE (68 West 57th Street, Tel. Columbus, 783)

Sept. 1 1915	To lesson, 1 hour	$3.00		
" 8 "	" " 1 "	3.00		
" 8 "	By cash			$6.00
" 15 "	To lesson, 1 "	3.00		
" 17 "	By check			3.00
" 22 "	To lesson, 1 "	3.00		
" 29 "	" " 1 "	3.00		
Oct. 6 "	" " 1 "	3.00		
" 6 "	By cash			9.00
" 13 "	To lesson, 1 "	3.00		
" 20 "	" " 1 "	3.00		
" 27 "	" " 1 "	3.00		
Nov. 1 "	By services (assisting with pupils)			9.00
		$27.00		$27.00

Of course the ledger need not be limited to the pupils' accounts. A page may be assigned to each firm from which sheet music is purchased. All sheet music received by the teacher should be immediately credited to the firm's account. Then when payments are made or music is returned, the teacher should charge the amount to the same account. If the teacher prefers to think of it as his own personal account with the firm, he may charge music received and credit payments and returns. In either case, he may always know just how he stands with any given firm. This should be done to aid in checking up the firm's monthly bills if for no other purpose.

COST

The cost of a loose-leaf outfit is moderate. Covers, in a good quality of leather, may be bought at stationery or department stores at prices ranging from $2.25 to $4.50. Paper, 8½ by 11, ledger-ruled, costs from fifty cents to a dollar a hundred sheets. A good alphabetic

dex may be bought for from sixty to ninety nts. The total cost need not exceed four dol- s.

BILLING

Financial transactions between teacher and pil should be carried on by mail whenever ssible.

The handing of cash from pupil to teacher is ways more or less embarrassing to both. aving the money on the hall table is not ich better. Mail remittances by check or oney-order are more desirable from every int of view.

Printed bill forms should be used, having at e top the name of the teacher and the street mber to which remittances should be mailed. The bill should furnish a transcript of the debit side of the ledger account for the preceding month, so that the pupil may see just what lessons he is paying for. If ledger debits are checked off in some way at the time they are entered on the bill forms, it will not be necessary for the teacher to preserve a carbon or other copy of the bill.

When the bill comes back, with its remittance, the teacher should immediately receipt it and return it by mail to the pupil. All payments should be credited to the proper account at the close of the day. They may be temporarily noted in the day-book, if desired, but unless the number of accounts is extraordinarily large, this operation may be dispensed with altogether. Unfortunately, the number of lessons given is greatly in excess of the remittances that come in.

BANKING

Finally, a single suggestion about banking. If it is possible, and the volume of receipts requires it, bank every day at the noon hour. It is not so important if you have a safe, but even if you have, you will find frequent bankings a great advantage. Take your worry to the bank with the money and leave it there. While you are at it, you might as well leave *all* of your worries, including non-financial ones, if you have any.

For Worry is one of the worst enemies of the music teacher, as it is of all the other members of the great family of the world's workers.

The Music Teacher's Money Efficiency

BY THOMAS TAPPER

FFICIENCY, the art of self-management, must necessarily involve the management of one's equipment and resources. In fact, seems more and more convincing that Effiency has no little to do with the expression of eative activity itself. If we admit this then e efficiency of money begins with creating the tive service which shall earn it and continue rough money records, plans, schedules, and to the ideals of spending it for the greatest tainable value.

There are many platitudes about money. One that it is easier to earn money than it is to ve or manage it. This truth is called a platide because it irritates those who prefer not think about it. Those of limited means disgard its wisdom because they have so little; d (sometimes) the unlimited ones disregard it cause they have so much. But the poor sin this particular more often than the rich.

Of all things hard to manage money income at least as difficult as a bad temper or any her spontaneous habit. One who seeks to find e logic of it soon comes to these classifications, respecting people and the relation beeen people and money.

1. Those who inherit money and elect not earn, but to live upon income.

2. Those who must earn in order to live and stain their responsibilities.

3. Those who, having nothing, still refuse to rk, and so become dependent upon others.

Of these three classes the first is nearly as gic as the third, for the very reasons that ke the second most to be desired. And some these reasons are:

1. **Service is infinitely above leisure in value.**

2. **Work alone reveals power. Leisure paraes it.**

3. **Work that is well done and a practical ntribution to one's time and environment is e most gladly paid for service in life.**

4. **Hence by far the best money relationship life is that one by which in exchange for owledge, skill, and practical application on r part we render a service that is cheerfully mpensated by those whom we benefit.**

This makes possible some observations on the chnic of carning money, that may be worth ile at this time. We apply them to the Music acher, but even a man who is thinking of ecializing in the grocery business will find em equally true.

1. Whatever line of music instruction you propose to offer, you must be master of it to command success. But you may depend upon it that even inefficiency secures its own reward.

2. You must not interfere with the direct practical application of your music to the needs of society by conflicting minor ideas. That is, if you sing for a living you must not overeat and drink alcohol.

3. You must find for your professional equipment the best, or at least most favorable, environment. A world renowned piano teacher cannot apply himself to 100 per cent of efficiency in a small fishing village.

4. You must strive earnestly to serve your community in the most practical manner. Lacking this effort on your part your reward in income must necessarily keep below the normal.

5. As a corollary to No. 3, sometimes earnestness, thoroughness, the desire to serve, and every other quality is part of one's plan, and yet he may fail throught non-application of common sense. Thus, a musician who specializes in the teaching of orchestration cannot earn much of a living outside of a large city; a mining camp would be of little purpose to him. So a distinguished theorist can secure professional activity in a large city, but a small town cannot make use of him to 100 per cent of his value; any more than a creeping infant can profitably use a pedometer.

6. Finally, there must be careful study as to fitness of what we know when applied to social needs.

It is said of a certain cigar company that before it opens a new store it keeps a man for weeks on the spot counting the male human beings who pass there daily. When a trustworthy average is secured the company can tell with surprising exactness how much money it can take in on that site. Here is its scheme:

1. So and so many men pass this spot daily.

2. The average of smokers per thousand of men is so and so many.

3. Hence the possible business for this site is so and so much.

The result is almost mathematically exact.

It is not necessary to have secured the proper education alone; we must know where and how to dispose of it, that is, sell it. This disposal or sale of one's ability is a part of service It means doing the level best continuously with the whole of one's equipment, for the good and benefit of other people. I think it was to Russell Conwell that a grocer once complained that he had been for a year on a certain corner in Philadelphia and had done only a few hundred dollars' worth of business. That, said Mr. Conwell, measures your service value to the neighborhood, but not your potential value.

Here is a letter from A. H. L. which tells the practical point of all this in the best possible way:

"I graduated from the ——— Conservatory with honor and little money. I spent the following summer vacation in studying how best to fit out my ship to sail the sea of my future (as you used to say to me). I decided not to begin teaching and church work in my native town, but to try my fortune at G———, about twenty miles away.

"I announced myself and my purpose in the local papers, and while pupils were NOT coming I learned the following as accurately as I could: The exact population—the school population—the number of music teachers—the number of singers in the churches (quartet and choir).

"An exceedingly valuable fact came to me through a piano salesman. He told me the exact number of pianos in town and their distribution. These and a few other facts that I discovered gave me definite information, which, as a beginning, served me, I am tempted to say, even more practically than my expensive education. But, naturally, I know that they worked together.

"I took no end of trouble with the few families who owned phonographs, in helping them get the best results in playing their records. In fact, my first public appearance was in partnership with one of these machines. At the home of a music lover I talked an opera and used illustrations from the Victor catalog. It was a brilliant and successful introduction to the society of my present environment. Briefly, with some exact information and the desire to be of use, I am so well started as to have no complaint."

We know that there is an esthetic feeling which prompts us that art and business should not mix, but it is safe to say that we shall not be wholly sane in money and business matters until they do mix, and so thoroughly that they are as one.

———*———

The central thought in THE MUSICIAN is to DO THINGS in Music. Read what others HAVE DONE and ARE DOING, and then profit by the example.

THE PROFESSOR CONTINUES HIS TALK ON THE ART OF TEACHING

AH! Here you are, Professor! I was beginning to fear that you would not come, and I desired very much to see you. Do you know that your recent outburst against a certain class of perfunctory teachers has caused quite a commotion among them!"

"I suppose, my dear Editor, that you mean those worthy (?) 'professors' who watch the hands of the clock more attentively than the hands of their pupils, and whose minds are more intent on the sounding of the hours and half-hours than on the sound of their pupils' voices? Excellent! Excellent! I am delighted to learn that they are awaking to a greater sense of their responsibility.

"The first step toward reform is to have one's sensitiveness smartly aroused.

"As for their futile 'outburst,' it is simply an avowal of their culpability. You know the old French saying: 'Il n'y a que les vérités qui blessent' (It is only the truth that hurts). There is good hope for them and for a more serious exercise of their professorat now that they are alive to a sense of its seriousness."

MUSICAL PROGRESS THE GOAL

"It has been my pleasure, Professor, to explain to some of these touchy teachers that your object was to call attention to a kind of lesson that cannot ensure either progress or a love of music."

"And I hope you made it quite clear, Mr. Editor, that my chief aim was and is, ever, to increase the value of the teacher by his whole-souled, one-idea devotion to MUSIC. If his goal is higher and beyond the pupil, if his aim is the perfection of musical progress through the medium of the pupil, then the pupil must perforce partake of the success."

While the Professor was saying these last sentences, several persons had entered the Editorial sanctum—teachers all. One of them, a lady, now addressed him with a propitiatory smile: "Will you kindly tell us again, Professor, what are the qualities that a teacher should possess; one who is perfectly fitted to undertake the instruction of, say, young children?

"With pleasure, my dear Madam; for these *absolutely necessary qualities* cannot be insisted upon too often. He, or she, should be pervaded with and moved by an all-absorbing love for his art and an earnest desire to teach it. They who do not care for music, they who do not love it entirely may, by a specious use of text-books, make an outward show of teaching, but they will never be worthy of the highest title to be gained in the realm of music: *a true teacher.*"

"But how can you tell if a musician really loves his art?"

THE TRUE TEACHER'S QUALITIES

The Professor turned to his questioner with a smile and answered in accents of deep conviction as if inspired: "The musician who really loves his art will never make use of music as a means to reach his goal; but he will be its servant, giving to it all that is best in him. He will never make use of it to satisfy his vanity, by making a show of what he can do; and he will not make it his aim to derive profit or renown from it, but will devote himself to MUSIC as *his one ideal.* If he is obliged by circumstances to make use of his talents to earn money, he will do so; but he will do it in such a way that, far from debasing his art, he will propagate the purest principles of his life's spring, his ideal Music.

"Pray do not think that, carried away by my enthusiasm, I am giving you an impossible description of a teacher, who exists only in my perfervid imagination. Those qualities existed in the highest degree in Bach, in Beethoven, in César Franck, all teachers, and in many others, including our own lamented Edward MacDowell. Read the lives of these great masters and you will discover all the virtues of the true teacher."

"But," said the lady, "you have told us nothing about his technical aptitudes?"

"You are quite right, Madam; I am afraid I took them for granted. You cannot make jugged hare without a hare: 'first catch your hare,' the cook books tell us. So the teacher must have a solid musical foundation.

"In addition to the love of his art, he must possess good technic, solid and well-developed musical education, as well as a fairly extensive general education, together with other endowments and acquirements of order, punctuality, regularity, patience, tact, and method.

"Briefly put, these are the teacher's chief qualities. I would, however, like to speak more fully about some of them."

TECHNICAL FACILITY

"Yes, Professor," said a young man of about twenty-five, "what are we to understand by 'good technic'? Do you mean that the teacher should play the pupils' pieces?"

"Ah!" replied the Professor, with a long-drawn exclamation, measuring his questioner with a glance: "Quite so! By 'good technic' I mean that the teacher *must be able to play faultlessly* any music he gives the pupil. There is nothing so good as example, especially in music. It is not enough to tell a child that the little Heller study is very pretty, or that the Haydn sonata is full of life and vivacity; these are only words which do not arouse the child's musical emotion. The teacher must sit down at the instrument *and prove* the truth of his description. The child's musical sense will be stimulated and he will have, also, a model of technic, movement, and style to aim at."

"I do not quite understand, sir," remarked the same lady, "what you mean by well-developed musical education?"

"Nevertheless there should be no doubt about it, for one moment," replied the Professor. "You know, probably quite as well as I, that a great number of teachers have a very small repertory—some twenty-five or thirty pieces which they always teach with the same effects (and, also, with the same defects) to all their pupils without distinction. Such teachers are short-sighted and evidently wanting in zeal and energy (in one plain word: lazy). Others may have a larger repertory, but one that is badly chosen, consisting of compositions without merit and without uplift; for all the world like endeavoring to teach literature by means of dime novel stories instead of by works of sterling worth."

EXTENSIVE GENERAL EDUCATION

"You have said, Professor, that the teacher should have a 'fairly extensive general education.' Surely you do not mean that the music teacher, who has already had to study very hard to acquire his art, must also have an 'extensive general education'? Consider the time and study requisite to acquire a that!"

"I have considered it, sir," said the Professor "and I would reply that the absence of that sam 'general education' is one of the chief reasons fo the failure of so much of the musical instructio of today. The folly of it all is that so many peo ple think that music stands quite alone; that it i kindred to no other art or study; that all the teach er has to acquire is a little special knowledge o some instrument, or of singing, to be able to im part it to others. Whereas music is but one o the arts; they are all co-related; to a certain ex tent also they are all related to science. The well equipped teacher has to learn all this. He has t have a liberal education, to travel, to read much both widely and deeply.

"The more he knows generally the greate will be his musical perception and the bette teacher will he be."

One lady, who had hitherto remained silent, dis turbed the courteous flow of the peaceable remark by breaking in with a tempestuous tirade agains the quality of overmuch patience. She cited, i particular, the case of a child who was naturall endowed with musical talent, but who had no pa tience to study, no regularity in practice, no am bition."

"PHYSICIAN, HEAL THYSELF"

The Professor listened patiently until the floo of words had subsided and then, quietly but in cisively he said: "I quite agree with you, Madam that it is impossible to succeed in any respect with out patience, perseverance, and regularity. Bu when you reproach others so seriously, are yo quite sure you never deserve the reproach your self?" The lady was too overcome by the unex pected accusation to do aught but look at him wit a defiant expression, that was certainly devoid o any kindness.

Turning to the Editor, the Professor continue calmly: "We must not expect from a pupil wh we cannot or do not practise ourselves. If the pu pil must practise, with indefatigable perseveranc the exercises, studies, and pieces which the teache has thought fit to give him, must not the teache be required to show the same patience and intere in the lesson and be as careful in every particul as at the child's best lesson."

"Indeed, sir!" interjected the lady, evident annoyed by the Professor's calm, "and who say that we are not full to overflowing of that patienc and interest, and care?"

"You must forgive me if I doubt it," replied th Professor calmly. "Please allow me," he conti ued, arresting her impetuous exclamation by courteous wave of the hand; "I do not think th patience consists in preserving an attitude of bor dom or silence, rather than in combating mistakes I do not think that interest consists of the repet tion of the same remarks, in the same words an form—never varying, because it is too much trou ble to seek others; and I do not think that a car ful lesson consists in allowing a child to play h music as he pleases, provided he passes the allotte time at the instrument."

THE PROFESSOR IS REBUKED

"Indeed, sir!" the only expression at the lady command, evidently (she reminded one of the pe son described by the Judge, in Gilbert and Sullivan *Trial by Jury*: "She might very well pass for fo ty-three, in the dusk with a light behind her") "Perhaps you would speak with a little more com mon-sense, if you had my experience!"

"Your own experience shall be your judge," re plied the Professor. "You will undoubtedly adm that there are days and times when you feel mor or less 'fit'? It has surely happened on one o those good days that you have given a lesson wit

which you were particularly pleased. It was so good a lesson that it drew from the child all that was best in him; he became enthusiastic and gave evident proof of the real talent that was in him. You were so pleased that when the child had gone home, you could not help saying: 'That was an excellent lesson I gave.' Is it not so? Has not that happened occasionally, Madam?" She admitted the fact, but insisted that it was not a proof that the other lessons were bad.

PROFESSOR SPRINGS A TRAP

"That is precisely the mistake you make," said the Professor; "that lesson which you thought so excellent was merely a good lesson. You imagined you were doing more than your duty, when you were giving only the kind of lesson that you should always have given. The moment that you admit having noticed on a certain day you gave a particularly good lesson, it is a self-evident proof that the others were below the 'good' standard."

With a gesture of impatience and anger the lady hurried out of the room. Without taking any notice of her departure, the Professor concluded:

"All the knowledge in the world is useless to a teacher, unless he is able to instil it into the minds of his pupils; and he can only do that by bringing to bear, each day and to every lesson, the same faith, the same earnestness, the same zeal, and the same endeavor to make the pupil interested by ever-changing examples, similes, and explanations. To succeed in this he must shun all appearance of routine. No two days may resemble each other and no two lessons be alike. Thus, not only will the pupil's interest be kept alive, but the teacher will feel only the minimum of fatigue.

"Much more remains to be said about this all-important subject of efficient teaching. It must await our next merry meeting; and may *all* its elements be harmonious."

———*———

NOTES ON THE MUSIC IN THIS ISSUE

ONLY a little more than three months left of the teaching season. Perhaps the teacher who reads these notes has not yet settled the details of the program or programs to be used at the close of the season. In such event THE MUSICIAN calls attention to the music in this issue as worthy a place on a program for a pupils' recital. The following comments will serve to indicate why we recommend the numbers in this issue, and many of those which appeared during the last six to eight months, as well.

Danse mélodique, by L. Leslie Loth, is termed an *intermezzo,* that is a piece in the style of the *intermezzo* proper which is used in large works, instrumental or vocal, to connect the main divisions. It is usually light in style, animated in movement, and thoroughly melodious in quality. These are eminently characteristic of Mr. Loth's *Danse mélodique,* which is strikingly attractive in its contrast of staccato and legato, and in the broad, rich quality of the main theme as given out in the alto or tenor register. The staccato passages are generally light and without much power, almost like the *pizzicato* of the violin or the lightly plucked harp tone. The middle section is to be quite legato.

Children's march, by A. Kopylov, is from Op. 32, No. 8, a stirring little piece of martial character, with just enough of unusualness in harmony to accentuate the Russian origin of the piece. Note the change of fingers on the repeated notes which make up the fanfare or trumpet call at the beginning, in the eighth and ninth measures, and elsewhere. Use the suggested fingering every time this figure appears. Mark the dynamic values, *piano, crescendo, forte, diminuendo,* etc., as they are essential to contrast. Use strong, clear-cut accents.

Pond lilies (*Dance moderne*), Op. 203, by Leo Oehmler, is a wonderfully attractive piece in the popular style, with a suggestion of the Mexican in its rhythmic character. It lies naturally under the fingers and is moderate in point of difficulty. It is essential in playing this piece to keep in mind the rhythmic swing which is characteristic of the modern type of dancing; especially do not play at too rapid a tempo.

Two arabesques, by G. Karganoff, Op. 6, Nos. 1 and 2, are in special contrast to each other, the first broken in character and agitated in feeling, the second broadly lyric in style. Observe the rhythms the notation calls for, the sixteenth, at the beginning of a motive or phrase, very short but not hard and heavy. In measure 17, and other measures, note the cross rhythm caused by the dotting of the quarter notes; try to avoid an accent on the second dotted quarter in a measure. In the Eb section the tempo may be a trifle faster; note the accents on the naturally weak beat of the measure. In No. 2 deliver the left hand melody as if it were being given out by a 'cello in a string quartet, and answered by the first violin. Also note the imitation in the octave between bass and treble in measures nine to sixteen. Bring out the theme very clearly and with sustained tone.

Child's dream (*Rêve d'enfant*), by Alexander Kopylov, Op. 20, No. 5, is a charming little piece for young players, selected from the volume of Russian Piano Music, edited by Constantin von Sternberg, and recently published by Oliver Ditson Company. It will give the student ample opportunity to work for an expressive singing tone and good legato. It requires a certain amount of care to bring out the melody note when it is one of a chord, not progressing in single notes. Make the melody sing.

The fan (*L'eventail*), by Henri Van Gael, Op. 73, is for Grade II players. A charming little waltz movement which they will surely enjoy. It can be played without the pedal, but can be used as a lesson in the elementary use of this important accessory, being careful to observe the changes in harmony.

Marcia España, by H. Engelman, is typical of the work of this favorite composer. It has melodic charm, harmonic variety, and a rhythmic swing which is characteristic of the Spanish march movement. Sharp accents, and rather sudden dynamic contrast are clearly indicated. The use of the pedal has been carefully marked and only the experienced player will be able to employ it otherwise than indicated without blurring.

Little boy blue, by Cedric W. Lemont, Op. 7, No. 4, is an instrumental picturing of a familiar children's rhyme, and, in conjunction with the little piece which follows on the same page, will make an excellent lesson assignment for a young player. Use both for a recital program.

Old King Cole, by Lemont, Op. 7, No. 4, like the preceding number, follows the rhythm of a well-known children's verse, and is charmingly worked out by the composer. One can almost see the merry old monarch and his servants enjoying themselves. These two are taken from a set of six pieces entitled *Story Book Folk.*

The boat ride, by Charles Huerter, has something of the barcarolle style. It is melodious in a broad way, and will make good lesson material for a pupil who can play in a broad, sustained style. The pedal is quite important in sustaining the harmony.

Waltz in G, by H. F. Enckhausen, is a delightful little number for the duet or ensemble class, quite easy, yet in every way effective. As usual both players should learn both parts and change about when playing so as to have drill in playing both hands from the treble and from the bass clefs. Be sure to sustain the dotted half notes to their full value so as to contrast with the staccato used elsewhere.

Evening song (*Abendlied*), by Josef Rheinberger, Op. 150, No. 2, for violin, is a fine composition for the study of style and expression and the use of the higher positions. It must be delivered with full, broad tone, with careful observance of the bowing and fingering indicated by the editor, as well as the use of certain strings specially marked. Work for beauty and clarity of tone in your study of this piece.

Where the roses were, song for low voice, by W. Franke-Harling, is a short lyric with broad melodic lines, especially adapted to display the charm of the contralto voice in its lower register. Avoid scooping and sliding in changing from one register, to use a convenient term, to another. For medium voice in F.

Bon jour, ma belle, by A. H. Behrend, is a semi-humorous song in which the special demand is for clear diction so that every word of the text is made plain to the hearer. Think of the song somewhat as a recitation in which the words are said to a tune. We consider this a good light recital or encore number.

God, that madest earth and heaven, Op. 1, No. 1, by F. Flaxington Harker is a useful sacred number for low voice and especially good as lesson material for a young singer, especially because the compass included in the melody is only one octave, from middle C to the C in the third space. It is also published in E for medium voice. The student should aim to deliver the phrases with sustained tone, requiring careful attention to the management of the breath.

O violet, sweet violet, song for medium voice, by Ernest R. Kroeger, is a song of a flower associated with the springtime which is soon to be with us. It is simply lyric in character and is to be given with careful attention to clear diction. In the eleventh measure occurs a change to the key of Db, following by one into D, coming back to F, through the dominant seventh chord in C, a series of changing harmonies which is very effective. Watch the intonation in these places. In Ab for high voice.

Have you written a letter to the Editor telling what you get from THE MUSICIAN? He is waiting for it, if you have not written.

The Musician for Pupils

By Ralph B. Ellen

I have always maintained that every pupil should take some musical magazine. If well read it is like an extra music lesson coming into the home each month; and, by helping the pupil, makes it easier for the teacher.

I have the year divided into two terms of nineteen weeks each, and generally pupils are somewhat lax about registering at the first of the term, and many lose three or four weeks. To try to correct this I decided to give *The Musician* for one year as a reward to all pupils who registered at the beginning of the term. The result was most satisfactory. Although the first week of the term was the hottest of the whole summer, yet I had more pupils registered than the previous season and all through the year the influence of the magazine is making itself felt.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

THE FLY AND THE CHILD

A STUDY IN COMPARATIVE VALUES

MUSIC teachers, the same as men and women in other occupations, are apt to think that they know their subject well enough. To some it never occurs to make special studies of their art and those to whom they would impart it.

Henri Fabre, the great French naturalist, who died last October at the age of 92, was called "the incomparable observer" by Darwin. In spite of his wide range of knowledge Fabre was very humble. He is reported to have said, "Why we do not yet know all that a Fly can tell us."

He believed in observation, and says that the pages of his great book on insects contains "not hollow formulas and learned smatterings, but exact narrative of facts," gained through patient observation, and recorded with care.

Oh, for an observer with the patience of Fabre to study, not the common fly, or even some rare insect, whose existence is dominated largely by that quality which we call Instinct, but to study the Child whose life is directed by Intelligence and Will, whose spiritual nature is constantly seeking expression through the art forms which the race has created.

The Child has much to tell to the teacher who will study it for the facts upon which to base methods of training the splendid powers of soul and intellect with which it is endowed. It is a study worth the best thought of the best men and women.

There is Plenty of Room at the Bottom

[The following article was sent to THE MUSICIAN unsolicited but it discusses a truth of unusual importance, namely, the absolute necessity that those in charge of educational work with the masses shall be experts in their line. It is a sort of paradox, yet a man or a woman working at the bottom of a professional line may show such skill and power as to become a leader, that is at the "top" of this section. This sketch is full of big, vital truth.]

THAT delightful and stimulating commonplace which says: "There is Plenty of Room at the Top," has been so trustingly believed in by generations of people that most interesting conditions have come about:

1. A few are actually at the Top.
2. While all the rest of mankind are struggling on the way up.
3. And so, the Bottom is deserted.

To anyone, therefore, who is scrutinizing the landscape for opportunities, the Bottom is the place to seek them.

At the Bottom there is that peace which leaves one free to go about his business, and, as the exuberant writers say: "achieve success."

Readers of current news cannot have failed to observe that here and there a man is doing thoroughly efficient work in his calling. He may be an efficient governor or district attorney or local doctor, or bread man at a bakery. And what happens? So unusual is it to witness a man achieving one hundred per cent of his task that movements are at once set going to transfer the efficient governor into the doubtfully efficient president; the efficient district attorney into a doubtfully efficient governor; and the efficient bread man into a terrible cake man.

Naturally the reply is, to any objection, that efficient service is worthy of its reward; and so every faithful one is moved up. The mistake lies in moving from success in a modest station to risk of failure in an entirely different office.

We believe with Emerson that everyone has something in him which is at once the unit of energy and of quality as well, and that in this lies his reason for being, acting, and achieving.

Therefore, we make the plea in this article for the Piano Teacher, especially, who will determine (because the heart is in it) to become the finest "beginning teacher" that ever was or can be.

Let him be one who cannot be tempted out of his special calling. And while he is faithfully at work there, let him study and observe and jot down ideas until he can tell us all about that particular little acre of teaching until its nature, interests, psychology, and pedagogy are as an open book.

They are not that now.

Have you ever stopped to think how little has been written with the authority of skill and patient observation about the first year piano study? Here is a great and beautiful world open to joyful exploration. Why isn't it traversed by one who loves it, one who is determined to bring back to the world of less skilful teachers the secrets of the do main?

Aside from one or two texts on the psychology of music, the subject *is* unwritten.

And what we need more than anything else is the psychology not of music BUT OF MUSIC TEACHING.

1. Everybody (thank heaven for a few exceptions) makes the little victim of piano study learn to read music at the keyboard whereas the one natural and sensible thing to do is to make him sing it until he learns to read it by that very natural method.

2. In ninety per cent of piano teaching music is an external thing, whereas it should be an inner feeling which the child is taught to manifest.

3. Thousands of children are still made to practice "one hour before school and one hour after school," shut up all by themselves in the parlor. And we haven't learned yet that no child can sustain and direct his own effort so long, especially in the parlor.

Therefore, again, let someone stay down at the Bottom and determine that so far as the first dozen or twenty steps in pianoforte study are concerned he will give his whole life to them and to finding out all he can about them.

Of course there is the business side. Will it pay?

A writer on astronomy starts out by requesting his readers not to ask "Does Astronomy Pay?" Then he proceeds to show that a goodly proportion of all activity in practical life would be impossible were it not for the findings of astronomers. Banish astronomy and who would know what time it is? I venture to say that if in the city of New York or in any other of the civilized world a teacher were known to be a supreme master of starting children on the truly royal road to piano playing he would be successful to a degree beyond belief.

But it would be necessary for that teacher to have earned the right and privilege *to stay at the Bottom;* to have gained the moral strength not to be tempted away from it; to refuse persistently to join the conventional climbing, clamoring crowd, hastening to express itself at the Top.

And if the teacher (a woman, of course), would write the law as she experiences it framing patiently, sentence by sentence, the body of doctrine true and tried of her specialty, she would live long after they had laid her body to rest. She would live as a vital pulsating spiritual reality. And she would be forever known as one who kept to her little garden plot and dedicated her days to telling patiently of its wonders.

The SINGER and His ART

HOW TO SING

II

BY ARTHUR DE GUICHARD

TONE: ATTACK—RESONANCE

HE art of breathing may be acquired from ited instructions, by intelligently following and ctising the rules laid down; but correct tone duction cannot be taught by books. It can be uired *only by example*. The example of pure tone st be emitted by the teacher and then imitated the pupil; this is absolutely essential.

ut, although no book that was ever printed or ever be printed, can give a model of pure tone, ited instructions can help the student to avoid ny of the obstacles and malpractices, which vent pure tone formation, and which eventually the singing voice.

t must be repeated that example only can ch the technic of singing.

his eliminates from the vast class of "teach- of singing" all those who are not and who have er been properly equipped singers—although may be excellent musicians otherwise (pian violinists, organists, orchestral conductors, netists, elocutionists—everything but singers).

have felt it necessary to preface my instructions hese few remarks, in order not to be misunder- d. It is difficult for the singing-student to himself accurately; it is still more difficult for to criticise himself correctly. Thus he may e a perfect conception of the pure tone to be g and yet not know what is the peculiar fault mission that prevents his singing it. It is hoped an examination of the following lines will help students and teachers to correct or avoid e faults, which impair purity of tone and con- ent longevity of voice-life.

ext to the competent teacher, the singer's atest friend is a mirror.

oth in the elementary and the advanced stages— e all in the elementary stages. Sight will usu- discover the reason for the defective tone d by the student.

EUPHONY—PURE TONE—QUALITY

uphony (Greek, *eu,* well, and *phone,* sound, e; also *euphonos,* sweet-voiced), in singing, is study of good voice, pure tone. It is insep- ly allied to the *timbre* or quality of the voice. It depends entirely upon breath management and control. Each singer has a special timbre of voice that is uniquely personal, having its own particular charm and appealing quality; but not one singer among ten thousand has ever had a natural voice so perfect in all its range that it could be used impeccably, and would last for years without deterioration, unless properly trained by a skilled instructor.

Recourse is therefore had to the competent singing teacher, whose first duty is to regulate, to equalize all the tones of a voice in such a manner that the individual timbre may be recognized in each note. Nothing would be more ridiculous to hear than an instrument that would emit one tone like a flute, the next like a clarinet, and a third like an oboe. Yet that is what is heard in many voices; that is what the teacher has to correct.

How may it be done?

First, by breath management; secondly, by the correction of bad and careless habits of singing which impede free emission of voice or impair the proper placement of tone.

NO PHYSIOLOGICAL STUDY

It is not my purpose to enter into any learned disquisition on the physiological properties and action of the vocal organs. Such knowledge is valuable to the teacher, though it is very questionable whether the great old masters of the art of singing knew anything at all about the structure of the larynx. Such knowledge to the student of singing is, ninety-nine times out of a hundred, a positive obstacle to progress. He has quite enough to occupy his mind and attention, without the added anxiety of inquiring *how* the voice is activated. If he knew, he could do nothing with the knowledge; because he could not control his voice by pulling this sinew or that, like a toy monkey on a stick.

Therefore no study of physiology for the voice student. His mind and will should be directed rather to what he may not do than to what he may do.

VOICE CLASSIFICATION

The first care is the classification of the voice: Soprano (kind), contralto, tenor (kind), baritone, bass (kind). The teacher will determine this, according to its *quality*: range has nothing whatever to do with it. Then it must be remembered, with regard to compass, that the extremes of high and low notes should never be practised, but only touched now and again, and *always piano.*

When the teacher has classified the voice, he has, to all intents and purposes, *posed* it; for a voice is posed as soon as its normal quality is determined. If this is recognized, that bugbear of teachers and students (posing the voice or voice-placement) is banished.

REGISTERS

It is not my intention to speak at length of those dubious things known by the equivocal name of "registers," except to state that the healthy, normal voice, which has not been spoiled by bad practice or by the malpractice of incompetent teaching, gives no manifestation of the existence of "registers." When the voice has been exercised upward say from middle C (women) or from the G below it (men), by *holding the larynx rigid* in an endeavor to emit the same kind of full, heavy tone throughout, a decided change (of "register," improperly so called) is heard at or near the note F above middle C (women), B to middle C sharp (basses), and F (tenors). There is no head "register," no chest "register"; all voice is produced in and from the larynx; there is therefore a laryngeal voice—if you must give it a name, although *voice* is all that is required. If there be no interference with the larynx, no holding, no rigidity from which the larynx is forced to release itself by a sudden jump into its right position, there will be no manifestation of "registers" or other curious abnormalities. The voice will have the same timbre throughout.

By its classification the voice is now posed or placed.

The next step is to equalize its notes; that is to say, to blend the tones throughout its compass, like the matching and grading of pearls of a beautiful necklace. Before indicating the exercises that will insure the equalization of the notes of the scale, let us consider the rôles played by mouth, lips, and tongue, for *everything depends upon their action and position.*

IMPORTANCE OF A MIRROR

It has already been recommended that all practice should be performed before a mirror; that is in order that constant watchfulness may be directed to the opening of the mouth, the play of lips and face, and the place of the tongue.

I am entirely opposed to the shape of mouth and lips usually recommended, as well as to the vowel to be employed. Singers are generally instructed to open the lips horizontally as in smiling, and to sing *a* (ah). It is altogether wrong, because it spreads the mouth from side to side and the tone with it; instead of helping to accentuate and to continue the beautiful curve of the palatine arch, the cavity is made shallow and broad; and the breath, instead of being focused on that arch, is allowed to escape from the spread-out corners of the lips; in addition to all of which, the broad Italian *a* is employed, with the result that a thin, white, blatant tone is produced, lacking in roundness, elasticity, and sympathetic quality. So many generations have been contented with a paucity of foreign vowels, as exemplified by their foreign teachers, that they have forgotten the richness of voice and expression to be obtained from their own English language and its wealth of twenty-three vowel sounds.

MOUTH AND LIPS

The proper shape of mouth and lips is ovoidal, like an egg standing on end—not spread from side to side, with the corners pointing outward, but elongated from top to bottom, with the corners and lips rather forward. The vowel to be employed at this stage is the *o* in "or."

This position must be carefully studied and the mind concentrated upon keeping it, *without the slightest change* (also without any rigidity), otherwise the quality of the tones will suffer.

TONGUE

The tongue likewise must be constantly watched, to see that there is no movement whatever; for, except during the articulation of consonants, it must lie inert in the mouth lightly touching the lower front teeth.

POSITION BEFORE THE MIRROR

The student is now ready to sing. Standing easily before the mirror, with the weight of his body resting lightly upon the sole of one foot slightly in advance of the other, he will take breath through the nostrils, as already instructed; then, with the mouth and lips shaped as above the student will sing *o* (of "or"), *mf,* to the note F, first space of G clef (women), and each succeeding note to D, fourth line, *taking breath between each note;* tenors will do likewise, beginning on D, third line in F clef, up to D above middle C;

baritones from B flat (second line) to D above middle C; basses from G (first line) to B flat, the note below middle C.

No endeavor must be made to sing several notes in one breath; breath should be taken through the nostrils between each note. The student's chief occupation is to watch himself in the mirror, to see that the mouth and lips are properly opened, in the right shape and without stiffness; to see that the tongue is in place; to see that the chin drops loosely, without effort; to see that there is no tension of the muscles at the apexes of the jaws; and, above all, to watch *that there be no muscular movement of the neck or throat, no swelling of the veins of the neck*: if any such be noticed, it is a sure proof that there is throat pressure or a rigid larynx, both fatal to longevity of voice.

DIAPHRAGM THE MOTIVE-POWER

There are many causes for the last named faults, the chief being the attack of sound by means of the pernicious shock of the glottis, and by strenuous pushing at the throat—as if the throat could supply the power! It must not be forgotten that the only motive-power is in the breath, otherwise the lungs, and that the muscle which operates the lungs is the diaphragm.

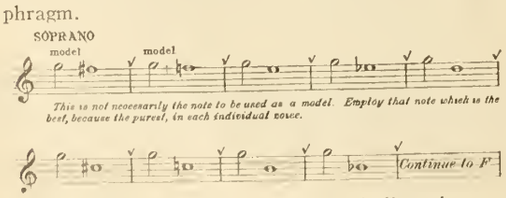
The larynx acts entirely by itself; the less we interfere with its action the better. We think pitch; the larynx responds to the thought, and the tone results.

In order that the larynx may have free play, we exert our muscular action (not too strenuously) at the very motive-power itself; namely, the diaphragm, whence the tone really projected and sustained. The most efficient remedy for a tight throat is to attack the note with a very slight aspirate (which opens the larynx) and an outward push of the diaphragm, continuing the steady, but slight push while the note is sustained. It is impossible to exercise outward pressure of the diaphragm and have a tight throat at the same time.

As for the matter of resonance, it is taken care of by the prescribed position of face, lips, mouth, and tongue; being managed as already directed.

VOICE EQUALIZATION

Practise opening the mouth in ovoidal form, closing it, reopening and closing it again and again, without any rigidity, always before a mirror; this should take the place of the teacher—it will sometimes be found more sincere, because it will show up all the faults, if you are careful to look for them. Never allow a single fault to pass by. When a certain facility of mouth-and-lips gymnastic has been acquired, proceed with the attack of single sounds to the vowel *o*. As you go on you will find some notes much inferior in quality to others. Take the note which seems to be your best and, with that for a model of quality (probably high G for soprano, high F for mezzo-soprano, D flat—fourth line of G clef—for contralto, high G for tenor, E for baritone, D flat for bass) and *sing down*, chromatically, by pairs of notes, endeavoring always to make the lower sound exactly the same quality as the model. Sing mezzo-piano, *without sliding* from one to the other; watch tongue, lips, and mouth, and there be no change of any kind; mouth well open, ovoidal shape; keep breath steady; no pressure anywhere except at diaphragm.



SOPRANO
model
model
This is not necessarily the note to be used as a model. Employ that note which is the best, because the purest, in each individual voice.
Continue to F

Transpose for other voices, as indicated.

The diligent practice of this exercise will speedily equalize the voice in all its extent.

(To be continued)

Putting Herself to Paper

The sentences reproduced below in facsimile were written by Mme. Culp for the prefatory pages of two volumes entitled "My Favorite Songs," lately published by the Ditson Company and containing more or less familiar pieces in her repertory from Schubert, Schumann, Brahms, Franz, Strauss, Wolf and various French, Russian and American composers. For those same pages Mme. Culp also wrote a little autobiographical sketch which runs:

"I was born at Groningen, a little town in Holland, Oct. 6, 1883. My mother discovered my beautiful voice when I was two years old, for I cried so terribly that she constantly told my father, 'You see she will become a singer, she has such lungs and temperament.' My father would not believe it, and so when I was seven years old, he wanted me to study the violin first. So I did, but I did not like it at all. Nevertheless I was such a good pupil that I often played violin solos in our little town, being then nine years old. Of those 'classical' concerts I can only think now with horror.

"My voice began to develop when I was ten years old. However, in school, when choruses were sung, the teacher would not allow me to sing because I sang so loud he could not hear the voices of the other children. I began my singing lessons when I was twelve years old. My voice was always very natural and easy, so I really had no trouble with technical things.

"A real song recital I sang for the first time when I was fifteen years old, in Groningen and in Amsterdam. After those first recitals I became a pupil at the Amsterdam Conservatory where I studied with Cornelie van Zanten. When nineteen years old I came to Berlin, and though I gave my first recital there with greatest success, I felt that I had so much to learn, I stopped giving concerts and studied two years with Etelka Gerster, from whom I learned everything.

"After those two years I began my career, singing everywhere in Germany, Russia, France, Austria, Spain, Italy, Holland, Norway, Sweden, and Denmark, in fact, all over Europe. I gave recitals with Grieg, Saint-Saëns and Richard Strauss, and sang with the principal European orchestras under Nikisch, Weingartner, Richard Strauss, Max Reger, Mengelberg, Fiedler, Hausegger, and others. I sang also at the different royal courts in Europe. I first came to America in Jan. 1913, and I must say that I feel at home here and I am happy to sing my songs to the American public, which has such a fine understanding of music.

"My different accompanists have been Dr. Heinrich Potpeschnigg, the intimate friend of Hugo Wolf, my sister Betsy, the late Erich Wolff, and for the last four years Coenraad v. Bos."

THE HERMAN KLEIN PHONO-VOCAL METHOD
Based upon the Famous
School of Manuel Garcia
Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

LOSING THE VOICE

Occasionally we hear of singers who through ess or, which is more frequently the case, ough abuse of the voice, "lose" it, to use a com- n term. The story of Jenny Lind's experiences the age of twenty, and the long struggle she ged before recovering the use of her voice, is miliar to many of the readers of The Musician. r teacher, the celebrated Garcia, imposed upon , as a first requisite, that for six weeks she ould speak as little as possible and not sing even e note.

Another instance is recorded by Bessie Palmer, a nous contralto, also a pupil of Garcia. Her st teacher classed her voice as a soprano. After ne months ago she found her voice becoming thin l scratchy and the throat in an unsatisfactory ndition. The director of the conservatory re- ed to allow her to change into Garcia's class. erefore she left the school and went to Garcia's use with the request for lessons. After he had de an examination he told her to rest entirely a considerable time, not singing at all, and king but little. After six months' rest she was owed to begin practice.

She tells of another pupil who had strained her ice by singing too high. She was told not to g anything in the upper register. Once only l she disobey, but Garcia detected her breach of e by the tone of her speaking voice. He agreed continue with her lessons if she promised to ey implicitly and study for a year without in- ruption before she appeared in public. After a w months she left London to spend the winter the Continent, and was never again received as pupil by Garcia. After a few years of pro- sional work her high notes left her and she had give up public work.

t is a common thing for singers to attempt to engagements when the vocal organs are in poor ndition. It is regrettable that necessity seems force this. In the majority of cases the singer fers in the end.

THE VOICE, THE TONSILS, AND ADENOIDS

Recently a number of letters have reached the office of The Musician in regard to the excision of the tonsils, and the treatment of adenoids and other throat troubles. This is a topic of much importance to singers and teachers of singing upon which the mere musician would not venture to express an opinion, especially since members of the medical profession are not at all united in their views.

Therefore The Musician is pleased to be able to refer all readers to two books on the subject which have unusual value because they discuss the subject in a non-technical way, and endeavor to impress upon one the seriousness of certain surgical operations which are altogether too common.

The first of these two books is entitled *Tonsils and Adenoids: Their Treatment and Cure,* by Richard B. Faulkner, M. D. It is published by The Blanchard Company, Pittsburgh, and is a companion volume to a larger work entitled *The Tonsils and the Voice in Science, Surgery, Speech and Song,* by the same author. This book is further described as "A comprehensive monograph on the structure, utility, derangements, and treatment of the tonsils, and of their relation to perfect tone production. The two books are not sold separately, and the price of the combination is $3.00 net.

The writer of this note cannot pass an opinion upon the accuracy and authority of the statements made by Dr. Faulkner. But he does not hesitate to say that the subject is one of enormous interest to singers and other professional voice users, whose advice is often asked. The statements in these two books will tend to assist the singer in forming a judgment as to conditions in which tonsillectomy is advisable, and, which is perhaps of still greater importance, teach the necessity of care in guarding the throat and nose from infection and uncleanliness. Not the least valuable feature of the book *Tonsils and Adenoids* is the sections containing the author's prescriptions, not for self-treatment, but as an assistance to the family physician, and a reasonably certain means of avoiding the use of the surgeon's knife.

It is interesting to know that medical journals of high standing have reviewed these two books very favorably. We are sure that every teacher of singing should carefully study this subject.

—*—

THE THEORY OF MUSIC

BY HERBERT J. WRIGHTSON

The study of a practical branch of music, piano, violin, or singing, without co-ordinate study of the grammar of the music language itself, resembles somewhat the learning by rote of the words of a song in a foreign language without the slightest idea of the meaning. Intelligent or even satisfactory recitation in either case is impossible.

Many students, when asked whether or not they will take the subject of harmony, answer in the negative, because they "do not wish to compose." An entirely mistaken idea is expressed in this reply. The composer must, of course, study several theoretical branches in order to set down on paper in the proper manner whatever musical ideas he may have, or even at all intelligently, but the study of these subjects will not necessarily make a composer. The poet, no doubt, studies grammar, but does every student of grammar become a poet? The school pupil might just as well say, "I do not wish to study grammar as I have no intention of being an author," as the music student "I do not care to take harmony because I do not intend to compose."

The great necessity for giving a musical performance life and vividness is the performer's own grasp of it in some way—his own mental processes in recital. Many performances have all the notes there, but something is lacking so that the work is dead; it is in fact a dummy, rather than a living thing, though resembling the reality closely in many ways.

I do not say that theoretical knowledge itself gives this life and soul, but it serves to attach the work to our intellects, so to speak; it gives us a tangible hold upon the composition, after which the spirit of the same is more likely to be revealed.

After all, theoretical knowledge is only intellectual grasp systematized. And without definite intellectual grasp the spiritual side of a work of art is too elusive to be held.

The "skyscraper" building does not derive its beauty from the steel skeleton, but it does derive its durability and its very existence therefrom.

70% of the letters reaching me come from women singers, indicating that more women are actively interested in singing than men. I am tempted to prepare a set of instructions for sopranos and contraltos including suitable vocalises. But first **let me know by letter** if such a plan appeals to you. If the response warrants it I will prepare such a set of instructions adding thereto changes and additions to conform to your particular vocal needs, previously reported by you. In this way I seek to help **as much as possible** singers unable to go personally to a teacher. Address,

CONDUCTED BY HELENA MAGUIRE

MUSICIANS OF THE MONTH OF MARCH

Remember in the March meetings of your musical clubs the Bachs, father and son, both born in this month; Von Wilm, beloved of all musical children for the charming music he has written for them; our own Arthur Foote, who was born on the fifth of March, 1853, in Salem, Mass, and "Papa" Haydn, who was born on the last day of the month, in 1732.

WITH THE MUSIC CLUBS

MUSICAL GUESSING GAME

BY C. NITZKY STINE

Names are given to each participant secretly. "It" stands in center, reads or tells the story, pausing where a blank should be filled in by the player, the one having the name which fits stands, the others guess what it is. The pause and the proper word to fill is indicated below by a parenthesis.

When finished "It" says, "They all flew home." They change seats, the one failing to get a seat is "It," makes a story of his own or repeats the same.

NAMES

1. Natural
2. Note
3. Very softly (*pp*)
4. Hold
5. Loud (*f*)
6. Rest
7. Repeat
8. Soft (*p*)
9. Clarinet
10. Fiddle
11. Very, very softly (*ppp*)
12. Tie.

STORY TO BE USED IN GUESSING GAME

The birds heard of our party—and the funny little fellows were actually jealous. So they had a party of their own.

Mr. Robin escorted Miss Jenny Wren that was very (natural). Professor Owl carried a (staff) and was master of ceremonies. He took (note) how Jennie (very softly) smiled when Sir Red Breast whispered "May I (hold) your hand, fair lady?"

Mrs. Macaw brought her daughter Polly. What a (loud) voice she had!

Even the woodpecker took a (rest) and left his home in the hollow of the tree.

Yellow Beeky, came with his glossy black coat. And Princess Nightingale promised to (repeat) her serenade—the night was so (soft). There were many birdies there.

A band was formed. One of the number had a long, narrow bill, so he was the (clarinet). Another with a long, flat bill turned himself into a big (fiddle.)

True the music was often quite (flat) but they were not aware of this.

At midnight they all sang (very, very soft), "Blest be the (tie) that binds," and went home, very happy birdlings.

ON CARING FOR YOUR MUSIC

You children do not realize how dear, almost sacred, twenty or thirty years from now, will be to you, the music which you are so lightly and thoughtlessly using and playing every day. The selections and studies which you are learning now are, to you "just part of the every-dayness of things." But that is the very reason why they will be valued by you in the years to come, just because they *do* belong to the "every-dayness" of the happiest time of life.

Therefore I want to urge upon you children strongly to take good care of each selection or study book that you are using now. It takes but a very few moments to cover a music book with strong paper, or to make a folder or folio in which to keep your sheet music. And I assure you that you will be very glad indeed, by and by, if you take this little bit of care now.

Then, too, do date each book or selection as you receive it. A pupil of mine once brought me a very curious and interesting collection of music which had belonged to her English grandmother. The sheets had been sewed together most carefully, and were still bright after almost a hundred years, but there was not a date on anything, and we would have given much to have been able to tell just how old the collection was.

Gray, who wrote the beautiful *Elegy in a Churchyard,* was a collector of music at a time when music was much rarer and more expensive than it is now (and so much more valued), and the exquisite care which he took to protect and preserve his music collection should be a lesson to everyone of us. This Mr. Thomas Gray made his musical collection between the years 1730 and 1770, almost two hundred years ago. Yet thanks to his care of this music it was bought at an auction sale less than thirty years ago and is now the property of Mr. Henry Krehbiel.

Mr. Krehbiel says that Gray "bound the music in stout leather bindings and lettered the back and front in his own handwriting. Each volume rests in an elegant wooden case covered with purple morocco and lined with cushions of black silk velvet. These cases are shaped like a book, tooled and lettered uniformly."

Does this not make you see how this great poet loved his music, and, although, perhaps, you never thought of it before, is it not worth *our* while to treat *our* music with loving care too, even though we may not be able to make cases of morocco and velvet for it? If you take good care of your music *now,* binding and covering and protecting it against dirt, etc., then, sometime, perhaps long after you are quietly sleeping in some churchyard, someone who "understands" will bend lovingly over this (then) old music of yours, and love the little girl or boy who loved music enough to preserve it to posterity, rich with the associations that can only be dreamed about and idealized.

Helena Maguire.

WHERE THE VIOLIN CAME FROM

"The artist who this viol wrought
To echo all harmonious thought,
Felled a tree, while on the steep
The woods were in their winter sleep,
Rocked in that repose divine
On the wind-swept Apennine;

". . . And so this tree,—
Died in sleep, and felt no pain.
To wake in happier form again."

—*Shelley*

JOSEPHINE PREPARES FOR A RECITAL

BY E. L. VANSANT

"Josephine," said Miss Ash, as we went into the class room, "are you sure you know that sonatina?"

And I said: "Yes, Miss Ash. I know it upside down and backwards and every other way."

Then Miss Ash laughed and said: "Well, now, let's see about that." Then she made me play it from memory, counting aloud all the time. After that I had to play it through again, counting to myself.

Then Miss Ash said: "Well, Josephine, you *seem* to know that sonatina. So let us try some experiments. If you *really* know

want you to play at the recital next
k."

pricked up my ears at that, because
her said just as soon as I could play at
cital, she would get me a new pink dress
I said: "Oh, Miss Ash, what do I have to
"

nd Miss Ash said: "Well, you know
etimes there is a good deal of whisper-
at a recital. There oughtn't to be, but
etimes there is. Now I want you to play
r sonatina again, and we are going to
sper and giggle all the time. If you
ly know your piece, you will be able to
it right through without paying any at-
ion to us."

was frightened. "Josephine," I said to
elf, "if you don't keep your wits about
, it's goodby to that pink dress."

o when Miss Ash said "Ready," I
ped off the stool and made a bow, just
give myself a little exercise, and then I
an to play and count to myself just as
l as I could. The other children whis-
d and giggled all the time, and if I hadn't
counting, I would have gotten all mixed
before I was half through."

That's fine, Josephine," Miss Ash said
n I finished.

was warmed up by that time, and not a
frightened, so I said: "Oh, Miss Ash!
s try something else."

nd Miss Ash said: "Well, I knew a young
, who was giving a recital and right in
middle of a piece the lights went out for
w minutes. She kept on playing just as
othing had happened."

Mary Myer said: "Oh-h-h!"

nd then Miss Ash said: "Let's see if
could do that, Josephine. Begin your
tina again, and when I say 'Lights out!'
your eyes and keep them closed until I
'Lights on.'"

nd I said to myself: "Josephine, if you
t that pink dress, don't forget to count."

wasn't any more than nicely started,
n Miss Ash said: "Lights out!"

shut my eyes and kept right
ounting, and I was almost to
end before she called out:
ghts on!"

certainly was glad to be able
ook when I played those last
rds, because they're *fortissi-*
and if I had landed on the
ng keys—well, I got them
t anyhow.

o Miss Ash said I was to
at the recital, and when I
t home and told mother, she
so delighted, she just
ped up and waltzed me all
nd the room.

s soon as I got my breath, I
: "Ma, do I get that pink
s?"

And mother said: "Yes, and pink slippers too."

Then we did another waltz around the room and I said to myself: "Josephine, honey, it certainly pays to count."

TEACHING CHILDREN

On the Editorial Page of the present issue is an article on the subject of the beginning teacher and the great opportunity offered to those who will seriously and thoughtfully give themselves to that work. We hope that all of our young readers will ponder over the ideas advanced on the Editorial Page, for the latter have much bearing upon the future of three young persons who are looking forward to musical work. The finest rewards of the career of the virtuoso are for the few only. But at present, at least, there is no limit to the demand for the most capable teachers of children. Therefore, we say, that even while you are doing all you can to perfect your technic and increase your musicianship, it is especially worth while to study the art of teaching children. Don't forget that "there is plenty of room at the bottom."

———*———

LITTLE PEPI

BY JESSIE ANDERSON CHASE

It was March 17th, of the year 1839,—when the grandfathers and grandmothers of today were babies in perambulators. In America, people thought of the Revolution, and celebrated Evacuation Day; or they put green ribbons on the horses' heads and shamrocks on the iced cakes, for the feast of St. Patrick.

But over in Hungary, on the bank of the broad but rapid Danube, in the big, gay, music-loving city of Pesth, there was a little Jewish home, in which it was also a feast day, the day of their Pepi's first appearance in public.

Father and mother, cousin Fanny Figdor, who was a pianist and lived in Vienna, but had come to Pesth for the occasion, and six older brothers and sisters, must all help in the preparations!

TEMPO DI MARCIA

The little Joseph, called by the Austrian pet-name, *Pepi,* was the least excited of the group. The good Frau Joachim carefully rolled the soft, fair hair around the curling-stick; cousin Fanny fastened the broad sailor-collar; Regina, the sixteen-year-old sister, who was studying voice-music, trilled the airs of Schubert's *Trauerwalzer,* which Pepi was to play at the concert with Pechatschek's *Variations;* Heinrich teased his little brother by pretending to run off with his precious violin; Herr Joachim sternly ordered the mischievous boy to put the violin back into its case. And—to end the confusion—dinner was announced.

Pepi, with his fresh collar and his new sky-blue jacket carefully swathed in a big napkin, attacked his soup with its meat-dumplings; he was hungry, and his music master had so often forced him to play, surrounded by people, that he had no dread of the afternoon.

"If I could play the piano as that child plays the fiddle!" sighed Fräulein Figdor; "and eat my dinner so unconcernedly before an appearance!"

"And he is so little!" murmured the mother. "Will he perhaps be afraid, when he comes on the platform?—But Herr Serwaczyaski is to appear with him in a concerto, before the little one plays quite alone."

"It is the child. He knows no fear," said the father proudly.

"But you know how he feared the dark; and the *konzertmeister* said he would never make a musician until he had conquered himself; then, and not before, would his violin obey him. And, Fanny, he made the child go through the dark corridors and fetch him something from the farthest room. When Pepi refused, he said he would not give him more lessons until he would show himself fearless. And after three days, the boy made his own resolution, and went and begged the master to come back, for he would be a coward no more."

The children, according to Austrian custom, had finished their *"strudel,"* a sort of fritter-pudding, and had left the older people to their coffee and Tokay.

"Such will and such talent together at seven years!" exclaimed Fräulein Figdor; "the boy will yet be a second Paganini!"

"Our little Pepi, the great Joseph Joachim!" said the mother quite calmly; for Cousin Fanny was not the first to see Pepi's future.

The audience thronged the Adels Kasino, and the concert room was crowded before the time set. All Pesth had heard the *meister's* opinion of his wonderful little pupil, and even in music-mad Hungary such performance at the age of seven was worth noticing.

As they waited, the crowd talked, as concert audiences will, of many things; but chiefly of the stories that had got about, of the Joachim *kindchen*.

"Of course they are Jews. Yes, the Jews have talent, have they not!—they come from Pressburg, or Kitsee—near there. The father is very dark—there he comes! They are all black, are they not! But I am told that the boy has hair of gold, like an angel's! Ah, the hair may go dark with manhood—if but the soul of the boy be still so fair!

"My little ones, they play with Heinrich and the small Pepi, and they all say, in the little class of schoolboys that meets at Herr Singer's, there is no child dares do a wrong in Pepi's presence, because the older one, Heinrich, told them that 'Mother said the child was an angel in disguise and his violin was a voice from heaven!'"

"Ah, my good friends!" interrupted a stranger sitting near; "you would have thought he needed wings, if you had made the little fellow's acquaintance in the hour that I had that pleasure! It was about this time last spring, was it not!—the day of the flood—the afternoon of the fourteenth, and I had heard the alarm bell booming for a warning; were you there? In the crowd at the Quay? Just as I reached the First Bridge, I saw a baby—not much more than a baby!—sitting on the roof of one of the millboats anchored a little beyond the bridge, playing with all his might on a small fiddle. A big roller dashed over the mill-wheel and up where the boy had been; the boat had tipped him off as it rolled, and if I hadn't been there, then he wouldn't be here now! He said he was trying to *play* the storm-music."

"But there he comes! No, it is only the quartet of singers. The boy is to play next, a concerto with Herr Serwaczyaski, and afterwards his solo."

The concerto for two violins, played by the concert-master and his pupil, was finished. The audience applauded in a mad burst of approval; then, as the boy still stood before them, there was an equally enthusiastic hush.

Little Joachim was alone on the platform, alone but for his precious violin.

From below, his mother looked to see if his curls till hung untangled, if his broad collar was still in place. His father watched the boy's courageous pose, and rejoiced to see him unafraid. Neither of his parents was a musician. But Cousin Fanny Figdor listened till her ears ached, for the first strain. And the master, outside the stage door, with apprehensive eye at a knothole—like a boy at a ball game or a circus without a ticket of admission—with difficulty restrained himself from crying out, "There's a brave fellow! Begin!"

And then—with his dark eyes fixed in a glowing look that saw, not the people, but the music written within him, the boy raised the violin, adjusted it again under his broad chin, and with a single quiver of the full young lips, drew the bow across the singing string. The first note seemed, not so much to be "struck" as to have crept into life. The air, so sweet and sombre and yet so spontaneous and swinging, moved through its measures like a stately swan on the river.

"The *kindchen* plays it as if he were creating the music for the first time!" sighed the Master happily, behind the door.

The violin paused, as the swan might pause in turning; then, like a swallow, the music swept around the *Air* in the darting curves of the variations.

It was like magic. The audience now saw the boy scarcely more than he saw them. Together they were borne along by the tide of melody.

"It is like the Danube itself, at its strongest!" cried one man aloud.

"It is ten years since Schubert died," said another under his breath; "but it is as if he were composing before us!"

"Or as if the boy, and not Pechatschek, were toying at will with the *Walzer!*"

Never had the concert room listened to *such* a child's playing! and never had its walls echoed with such applause. With the clapping went, on all sides, the happy shouts: "Again! Again! The perfect intonation! The sure interpretation! It is a second *Vieuxtemps!* Another *Paganini!*"

But the mother knew better. "A greater than either of those is my son!" she said in her heart. "This day is a day to be remembered in Europe!"

And she was right. On the fifteenth anniversary,—and again, still more wonderful, on the sixtieth, was the afternoon in Pesth, of Joseph Joachim's first public appearance, commemorated in Golden Jubilee, from Pesth to Vienna, from Berlin even to London.

———*———

THE Spirit of Music may be found out of doors at this time of the year. Get plenty of fresh air and put oxygen into your system. You cannot practise or study when the brain is sodden with impure air. Up with the window when you practise!

A RULE THAT SHOULD WORK BOTH WAYS

MUSICIANS are severely criticised by the educated classes if they are not well-posted about science or the principles of literature, and especially if they seem unlearned in regard to the standard books, paintings, and sculptures. Then we hear the members of the profession characterized as narrow specialists, uneducated, uncultured, and not on a level equal to that of the critics.

But when we examine the other side of the question we find that it seems no reproach whatever for a finished scholar or a trained scientist to be unskilled in music or ignorant of it, much less to prefer the songs of the music hall or the simple songs of the folk style to the works of greater artistic value. In fact, some of these scholars and scientists take in a self-congratulatory way about how little they know about music or how little they care for it.

Why is it not right to include music in the category of culture if the musician is to know about science, literature, and the plastic arts?

This is a thought for the young readers of THE MUSICIAN to keep in mind, namely, that the musician and cultured music lover must have a well-rounded education and scholarship.

———*———

THE JOY OF LIFE

It wakes in the throat of the woodland bird
In the rose-flushed hush of the morn;
It gleams in the gold of the billowing wheat
And the tasseled pride of the corn;
It follows the feet of beauty and love,
It stirs in the strength of the strong,
And its light leaps up on the trampling feet
Where bravery battles with wrong;
It sings through each deed that is nobly done
But sweetest, most undefiled,
It shines to the world in the world-old way
From the face of each little child.

—*Selected*

BIRD CORNER

A LETTER FROM A LITTLE AUSTRALIAN BIRD LOVER

Dear Editor of the Bird Corner,

Although living right away in the bush blocks of Western Australia I read THE MUSICIAN regularly and enjoy the Bird Corner.

I desire to become a member of THE MUSICIANS' BIRD CLUB, and promise to protect song and insectivorous birds in every way I can. Yours faithfully,

Dorothy Hutchinson

Letters from the little friends of the Bird are always welcome.—The Editor.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

THE VIOLIN IN THE PUBLIC SCHOOLS

A MORNING AT THE QUINCY SCHOOL, BOSTON

BY EDITH LYNWOOD WINN

HE Quincy School, on Tyler Street, is not in the st aristocratic section of the city; in fact, its ils are mostly of foreign parentage. We hear ood deal about hyphenated Americans in these s. One finds them in the superlative degree at Quincy School. There is something which bor- s on the military in that atmosphere. Everything s by clock work; gongs are on time, pupils are time, and teachers waste no time in personalities. was educated as a teacher in the public schools served my year after graduation from normal ool as a grammar school teacher. I began by ng too lax in discipline. When the Principal of State Board visited my school, he said,

Your business is not to make friends with your ils. Your purpose is to teach."

never forgot that rebuke.

he discipline at the Quincy School is probably fine as in any school in Boston; in fact, the ool has a high reputation in that respect.

he next thing to be considered is the impor- ce of this fact in connection with Public School sic. One cannot teach the class system of violin ying in public schools, unless the pupils are dient and alert in their studies.

r. Mitchell is quick, thorough, pedagogic, and ndly educated. Before the gong sounds, he is he hall with his "kit of tools," as he calls them, rge dress suit case full of awls, bridges, strings, ews, pegs, chin rests, rosin, etc. As quickly as a il comes in, he looks over the instrument and airs it. The pupil brings his violin, book, and sic stand.

he boys (for there were thirteen in the class) an to work at once. They tuned their instru- nts easily, as all violins had patent pegs. Dr. chell sounded *A*, and the boys tuned each string quick succession. Sometimes a boy failed. He n had to be assisted. The strings were in order ed to *A, G, D, E.*

ne salient point in the work was:—Dr. Mitch- did not take much time from the hour by tuning and repairing instruments. He was business-like and quick. He never spoke without need, and the pupils never asked questions or made comments on the work. Everyone tried to keep up.

To all appearances, these thirteen boys of foreign parentage, who could not speak English fluently, followed directions closely and responded eagerly. Names of pupils are unknown to the teachers. If they break a string a boy, who acts as bookkeeper, makes a note that a certain boy owes five cents for a string; if it is a screw to a music stand, the boy owes ten cents.

THE VIOLIN OUTFIT

The violin outfit is not inspiring for solo work. It costs $6.65 to $8.65. The boy pays for it. He also brings his stand and book. The city pays the teacher, and he works hard and faithfully. If the boy has talent, he goes to a private teacher, by and by. If he has no talent, he gives up and his violin outfit is sold to another boy. The class system may not produce geniuses, but talent may find itself easily. Then there is the problem of keeping the dull ones abreast of the others. That is also a problem of settlement work, though in the latter case the class system is not in use to so great an extent.

PROBLEMS THAT CONFRONT DR. MITCHELL

"We aim to begin in the seventh and eighth grades," he says, "and carry the work through the High School. By and by, if the system pleases the city (we have to call my work vocational) I shall be able to have orchestras established in Greater Boston, and the work will be on a high plane. That is my dream.

"In our present High School orchestra pupils are chosen who play fairly well. They are pupils of many teachers. Some have a good method; others a bad one. Some have a real love for art, and others have been driven to practise. All have had money to study. We are now aiming to find talent and eagerness to learn, with less expense to parents. Musical education is necessary.

We are confronted with the possible antagonism of private teachers. But the private teachers will get the talented ones in time, and perhaps no one would have discovered that talent, if we had not made the boy find himself.

The great trouble I have is this: Outfits have to be cheap. They sound well in unison, but are not inspiring privately. Another drawback to the system is that my time is filled, and the city does not pay assistant teachers. Heretofore, I have selected Conservatory students, who supervise the class, when I am busy. I come once in two weeks, or nine days. The pupil-teacher hears the class once between the lessons. I assign the lesson. All remember.

Few are absent at lessons. Parents sign a card promising to aid the teacher in compelling the pupils to practise one hour daily on the lesson assigned. If it is not learned by all, I go right on. The best must lead. I do not review more than necessary. I need the assistance of trained teachers. How am I to secure it? I do not know."

A CLASS LESSON

TEACHER: Are you all in tune?

Ans.: Yes, sir.

TEACHER: First added line below the staff. Name of note?

Ans.: C.

TEACHER: What finger?

Ans.: Third.

TEACHER: Make it third position. Second line staff, name?

Ans.: G. Third position.

TEACHER: Second space, what finger?

Ans.: Second.

TEACHER: First added line below?

Ans.: C.

TEACHER: Third line?

Ans.: B.

TEACHER: Third space? Name note?

Ans.: C.

TEACHER: What finger?

Ans.: Fourth.

(Note—Position of violin and bow frequently criticised. Elbows were in, and violins high. Locke chin rests and attachments. Pupils stood well.)

TEACHER: Key of D. First space below, third position. What finger?

Ans.: Second.

(Same line of questions as previously.)

(Dr. Mitchell supplies harmonies at the piano. Does not count time. Pupils understand. Bowing broad. Tone even and smooth. Varying bow arms. Good intonation. Violins remain in tune. Very good idea of unison playing.)

The assistant teacher (a Conservatory pupil) passed around and corrected hands and bow arms, stopping here and there to aid the pupils.

There was no time to tune violins until Dr. Mitchell gave orders for all to tune. Sometimes he sang the tone.

The dictation lesson is based on staff notation, the only way, Dr. Mitchell asserts, to do rapid class work; in fact, he assumes that he has tried all methods and finds that the pupils must memorize the chart attached to the fingerboard. They do not look at the chart after a time, any more than they look at mandolin frets. They also mentally fix the position of the hand in the third position.

MELODY PLAYING

The Quincy School pupils had had two lessons on third position. They were playing simple exercises, remaining in third position, not moving, from 1st to 3d. Such melodies as *Twinkle, twinkle, little star* and others were used.

Dr. Mitchell explained that his new book in third position was not yet printed, so he had to use melodies formerly taught in first position. Some of the melodies chosen were not adapted for third position, that is to say, C♯ with fourth finger on the D string was not easy for pupils, but there was no other available material. After all, it is far easier to teach melody when the pupil is in third position entirely. The difficulty would come when the pupil has to pass rapidly from 1st to 3d and back again Then comes the problem of holding the violin with the hand, and gripping too hard.

It is possible that a pupil who might be indifferent or careless in his work privately will take a start and pay attention to details in a class, through fear of being singled out as a backward pupil. Class work leads to emulation, according to Dr. Mitchell, who thinks third position may be taught in the second year.

One thing was very evident — the pupils played melodies in tune. Nothing was said about time. I asked if the time were taught in voice work. Dr. Mitchell assumed that voice work was an aid to musical knowledge, and said a pupil may not sing with the voice, but may mentally sense intervals and then play them.

Violin training is far-reaching in its results. It affects general training, in that it is good mental dis-

cipline. As the boy finds himself vocationally at the bench, so he may find himself with the violin. It may take time, and it is a sure method of ear training.

Solfeggio may not be fully explained to the pupil, but the teacher must thoroughly understand it.

Dr. Mitchell excused the class promptly at the expiration of the hour. He was on his way to another school. He stopped just a moment to discuss the general musical aim of the work.

"We have good players of wind and stringed instruments in our city in the 7th and 8th grades and in the High Schools," he said. "These could be combined in a full orchestra under a competent director. They could form classes to study trios and quartets after school hours, but who is to teach them? Surely the city will provide for this need, as we prove the excellence of our system.

"I have no method as yet. I am learning all the time. I make a note of individual cases and work with that data. I shall revise my books from time to time. One must be progressive. Violin study in the public schools is only in its beginning. I found very few points of excellence in England and in Germany, where they teach the violin in normal schools to young teachers. No real plan has been evolved for young pupils. I am not discouraged. Every teacher interested in public school violin music is feeling his way."

There are two problems before Dr. Mitchell, both menacing, and both vital. One is the problem of alternate lessons by young students who do not receive pay for services, and who do not fully understand Dr. Mitchell's way of teaching, also who have had no training in normal schools to fit them for the pedagogy of teaching. One can teach many private pupils and yet not make errors like those made in class work.

To teach classes, one must have a clear and logical idea as to what one wishes to present. This requires a knowledge of the art of questioning. One must understand children. This means study of the psychology of child life. One must also have had good intellectual training and general education. Not all young teachers of music have these qualifications. One must know how to command respect and obedience. One must govern well. Personality counts.

In the settlement schools, pupils pay a small sum. In the public schools, pupils do not pay. Do parents and pupils value what they do not pay for? Do they also value it at its worth? In all walks of life, we find that people value that for which they pay the most. Witness the millionaire and his art masterpieces. He may not have a real knowledge of art, but he prides himself on the highest priced works he can buy.

Will pupil-teachers work as well, if they do not receive pay? If they are not regularly employed, will they meet classes regularly, or will they shirk responsibility?

Dr. Mitchell will meet these problems and settle them to the interest of everyone. He is wise and efficient, and, best of all, he has dreams of future musicianship in Boston schools. A man who can afford to be a mere pedagogue for a time in order to build up a great orchestra and enlarge the musical life of Boston, through its hyphenated population, is certainly a practical dreamer, if such a term can be applied to him. *He has visions, but he will never forget processes.*

VIOLIN TRUTHS BY MISCHA ELMAN

Last December Mischa Elman gave an interview to a representative of *The Musical Courier,* of New York, in which he stated some striking ideas in regard to the art of violin playing. We quote from this interview:

"The average man or woman comes tired to an evening concert. The mysterious charm which exists for all of us in even only one exquisitely turned musical phrase brings in a moment that relaxation, change, recreation, which instantly relieves depression and puts the soul once more in tune with itself. To hear a well loved, well remembered piece is like having the warm sun flash out from behind the clouds after a shower.

"The introduction of what I may call modern feeling and expression into classical works is something which must come and has come of itself, in sympathy with our general attitude toward music.

"Nothing is hackneyed. Everything depends on the artist and the reading. His personality injects novelty into what we know as 'hackneyed' works.

"The standard of technical equipment demanded today of any violin player who has the right to be known as a virtuoso is so high that it may justly be said any one of them is the equal technically of any other. The only real difference in their playing is the individual note imparted by the personality of the player.

"Teaching is so absolutely a serious profession that the teacher, for the time being, must give himself up to it to the exclusion of all other work. The true position of a teacher to a pupil is like that of a parent to his child, and the only teacher who can be really successful is the one who is prepared to devote himself with his whole soul and exclusively to communicating something of himself, his ideas, and thoughts to his pupils."

LEOPOLD AUER'S SYSTEM OF TEACHING

[Last fall the New York *Tribune* published an article on the above topic, written by Mr. Victor Kuzdo, of New York, himself a pupil of Auer. We have selected a portion of the article for reprint here.—Editor of The Musician.]

Leopold Auer's system consists chiefly in developing his pupils in full accord with their individual tendencies, and he accomplishes this through very simple means.

The existing material of the violin literature serves his purpose. Of course, he applies it in a novel way and herein lies the originality of his system. Auer has not published any books upon his method, neither does he claim to have invented a new device in manipulating the violin or the bow. It is in his manner of using the works of the ancient and modern masters that he differs from other teachers. If he did publish a volume for the purpose of explaining his system, one would not be able to fully grasp its meaning. You must see a hear the master teach in order to familiarize yo self with it.

He lays claim to having enlarged and impro upon many of the principles taught heretofore. is a rigid observer of all the fundamental laws handed down by tradition from the old maste but he has his own individual way of building up the accepted principles. In words, his system ca not be described; it can be thoroughly understo and taught only by one who has enjoyed his pe sonal instruction and constantly attended the l sons given his other pupils.

He abhors the incessant vibrato so much indulg in by modern violinists. With him tone quality, a not quantity, is of foremost importance. He d mands from his pupils excruciatingly slow pra tice.

The absolute necessity of the conscientious stu of some of the Spohr concertos he emphasizes

In the matter of perfect legato playing, he is pa fully exacting. It is achieved through leaving fingers on the strings, even when they are cross He also is tireless in watching the action of little (or fourth) finger, and urging its const strengthening.

In shifting from a low to high note, he can sh you an almost infallible way of hitting the desi spot.

The staccato is taught by him in an entirely n way. He makes you study it as fast as possi and with a stiff wrist and a stiff arm. After few experiments the result is magical.

He can tell you the reason of every slip mistake you make, and can immediately furnish preventive against its recurrence. Chronic fa he remedies with great ease and the utmost pidity.

His native genius, his vast experience as virtu teacher, quartet player, conductor of the Impe Symphony Orchestra of Petrograd, composer the violin, and, above all, his marvelous intuit accord him a place among the immortal educa of the art of violin playing.

NUMBER OF STRADIVARIUS VIOLI

A writer in the London *Musical Times* says Messrs. Hill and Sons, the noted violin experts that city, estimate that Stradivarius made 1,116 struments, including violins, violas, and 'ce They claim to have located 540 violins and found traces of about 100 more.

The Kriens Symphony Club, of New York, C tiaan Kriens, founder and conductor, playe Wanamaker's, Jan. 29. The organization also a free public concert at the Park Avenue Clu Jan. 22. This Club consists of 100 members.

There is a suggestion in this for teachers of violin. It is considered progressive for teac of singing or choir directors to gather singers choral societies. Why not make an effort to b the instrumentalists of a community into an chestra? In the schools there are usually s young people who are string players. If an chestra exists it is reasonably certain that t will be persons to take up the wind instrum both wood and brass.

As a result a community may have a choral ciety and the nucleus of a supporting orchestr

SOME NEW VIOLIN MUSIC

LOOKING through a number of new issues of music for the violin, I was particularly attracted by a number of pieces, mostly favorite melodies, transcribed by Karl Rissland, of the Boston Symphony Orchestra. Among the easier ones are:

Fairy Tale (*Märchen*), Op. 35, No. 2, by Karl Kazak, and *Little Folksong* (*Volksliedchen*), Op. 39, No. 1, by the same composer, carefully fingered, using the higher positions when better tone production is so secured. This is one of the phases of artistic violin playing to which Mr. Rissland pays great attention, and the results are delightful.

Another favorite in the folk style is Labitzky's *Dream of the Shepherdess* (*Traum der Sennerin*), Op. 145, a most delightful melody in the Tyrolean style. As in the two pieces previously mentioned, purity of tone, not technical brilliancy, is the artistic end sought; the grade of difficulty, aside from correct intonation in the higher positions, is not great.

Three favorite melodies from the classical repertoire which Mr. Rissland has effectively transcribed are: Moszkowski's *Serenata*, Op. 15, No. 1, Brewski's lovely *Minuet* in G (*à l'antique*), Op. 14, No. 1, and Schubert's *Moment musical*, Op. 94, No. 3. They will make excellent recital numbers and fine study material.

From the opera repertoire Mr. Rissland gives us the favorite *Quartet* from Verdi's *Rigoletto*, which appears, in this form, a very effective solo, for it is unsurpassed by melody of the kind that the average person admires.

A composition of excellent program value is *Dream of Summer* (*Rêve d'été*), by Frank H. Grey, the well-known theatrical musician and director. It is melodious, broad in lyric feeling, and contains a passage in double stops which will surely attract the audience. Mr. Grey has used it with success during many of his engagements this winter, and Florence Austin is putting it on her programs. It should make a good number for use in summer concerts.

SUPERVISORS AS ORCHESTRA ORGANIZERS

BY E. C. STARBUCK

[THE MUSICIAN is authorized to say that Mr. Starbuck will give suggestions to teachers who wish to organize school orchestras. His address is Berwyn, Ill. He has been very successful in this line of work.—The Editor]

I HAVE found that one thing which keeps a large percentage of music supervisors from organizing school orchestras is the fear that they may not be able to conduct it with credit to themselves. This is, however, a mistaken idea, for with an up-to-date beginner's orchestra book and instructor, one who has ability to look after vocal music work in the schools can conduct an orchestra. The added difficulty is the technic or fingering of the different instruments, and this is so plainly shown in these books that even the student can learn with very little help. It is made so simple that there is no longer any excuse for the teacher of music who has no orchestra. Of course problems of rhythm, the finer points of expression, etc., are left for the teacher, but these are all included in any vocal teacher's work every day. A teacher's ability to create the enthusiasm and co-operation of the student will of course have a valuable and direct effect upon the success of an orchestra as in any other line of work. A flourishing organization of this kind certainly creates wide community interest and is an accomplishment of which any supervisor may be proud.

In conclusion I want to urge all supervisors, who have not already done so, to start an orchestra, and make themselves more valuable members of the profession and community. The large number who are starting this work for the first time is evidence of the popularity of this phase of a supervisor's work. Keep abreast with the times and start now.

THE CHOIR & CHORAL DEPARTMENT

CONDUCTED BY H. C. MACDOUGALL

LENTEN ORGAN MUSIC

BY HARVEY B. GAUL

THERE are periods in the church year when organists are distressed to find suitable numbers. We feverishly scan catalogs for Christmas pieces, and anxiously examine announcements for Easter compositions. Finally, with a gasp of despair we cling to that first aid to the injured, the transcription.

With the hope of aiding the inquiring organist and preserving the spirit of Lent, the following tablature has been prepared. Some of the works may serve for the General Season (in some churches the General Season lasts, like the church debt, forever), but most of them are applicable only to the period of Rogation.

For the sake of the church service it was deemed best to classify the compositions into three groups, Preludes, Postludes, and Recital numbers.

In the way of Preludes Tertius Noble's *Solemn Prelude* makes a dignified opening piece. It is finely proportioned and has a stately movement. Selby's *Short Voluntary for Lent* is another good number. *Prelude sur Dies Irae,* Dethier, is a splendid piece of writing, as is the same composer's *Procession Solennelle,* Brewster's *Prelude on a Gregorian Tone* is also to be commended. *Prelude to Stabat Mater doloroso,* Best, is serviceable. So is King's *Prelude for Lent,* Walford Davies' *Solemn melody* is also available.

For Interludes there are many compositions to choose from. Bartlett's *Méditation sériuse* is a well constructed composition. Whiting's *Requiem* is effectively thought out, Guilmant's *Lamentation* plays splendidly, Nevins' *Song of Sorrow* offers felicitous moments for solo stops; Cramer' *Adagio patetico* is redolent of sack-cloth and ashes; ditto Bibl's *Trauer. Méditation sur le Stabat Mater,* Guilmant, is characteristic of the master; *Lamentation,* by Munro, makes unquestionably a good Lenten piece.

For Postludes we have a few applicable selections: Dethier's *Marche Solennelle* is convincingly Lenten, Callaerts' *Sortie solennelle* is strongly built; Lemaigre's *Marche Solennelle* is well-wrought; and Lutkin's *Forty Days and Forty Nights* is happy in treatment. Sibley's *Fantasia on an ancient Dies Irae* and Coenen's *Variations on Peace, perfect peace,* both make capital concluding pieces. Elgar's *Solemn march* makes a fine finale.

When we come to transcriptions and arrangements from oratorios and cantatas we may go on *ad infinitum.* These are all good. The *Prologue* to Dudley Buck's *Story of the Cross, The Procession to Calvary,* Stainer's *Crucifixion; The Procession* from Gounod's *Redemption,* are all stirring compositions.

Arrangements from Rossini's *Stabat Mater* are excellent; in some respects they are better than in the original. For instance: *Fac ut portm, Pro peccatis,* and *Cujus animam.* Then there are arrangements of Mendelssohn's *The Sorrows of Death,* from *Lauda Sion,* Fauré's *Crucifixion,* Gounod's *There is a green hill,* Bach's *Here yet awhile,* from the *St. Matthew Passion,* Dvorák's *Blessed Jesu,* Handel's *Behold the Lamb of God,* and *He was despised.* These arrangements are all splendid Lenten selections.

For the organist who is addicted to the Lenten recital habit, and his name is legion, the following group will offer opportunities:

The Finale to *Symphonic Pathétique,* Tchaïkovsky, with its dynamic effects and contrast of light and shade, makes a noble number. Lauggard's *Fantasia patétical* has many interesting passages.

For Lenten appropriateness, Malling's Op. 54 (third group of the cycle *Christus*), No. 10, *Gethsemane,* No. 11, *Golgotha,* and Op. 81, *The Seven Words from the Cross,* No. 1, *The March to Golgotha,* No. 2, *The First Three Words,* No. 3, *I Thirst,* No. 4, *It is finished, Father into Thy hands.* No. 5, *Epilogue: The Darkness*—this has an *ad libitum* chorus. These works are unsurpassable. They are wonderful tone poems, full of the significance of the forty days. Above all other Lenten compositions they are to be commended.

The *Prelude* to *Parsifal,* Wagner, makes a grandiose opening number. It can be followed with *The Good Friday Spell* from the same opera. They both lend themselves for telling solo stops. The *Trauermarsch* from *Götterdämmerung* for display of trumpet and Cornopean passages is unexcelled. The *March réligieuse* from *Lohengrin,* with its sustained notes and well-defined phrases, makes another number that should be included. There are three preludes in the same key that invite the examination of inquiring organists. They are *The Prelude* in C♯ minor, Rachmaninoff, a novel *Prelude* in the same key, Vodorinski, and the well-known *Prelude* by Chopin. As initial numbers they are well worth consideration.

The old chorales make interesting Lenten selections, particularly when treated and developed by Brahms and Max Reger. Karg-Elert has some new ideas on the old choral. Bach and Buxtehude wrought marvelously in this branch. For the organist to whom the choral is virgin soil nothing more delightful can be found than an excursion into the choral country.

An organist in the Middle West said that he played a *Funeral march* every Sunday in Lent, not because they were funereal, but because they were solemn and had breadth. Below is appended his list. You will notice that Chopin in B flat minor and Handel's *Dead march* from *Saul* are conspicuous absent.

March funébre, Grieg.
March funébre, Tchaïkovsky.
Funeral march, Scharwenka.
Funeral march, Mendelssohn.
Funeral march in C minor (little known), Chopi
Funeral march, Beethoven.
Funeral march, Wesley.

There was a time when Lent was only observ in the Catholic and Episcopal churches. Now t period of our Lord's Passion is kept in many of t Methodist, Presbyterian, and other churches. Co sequently Lenten organ music is more in dema and has greater scope than ever before. Why n have our organ work consistent with the rest the Lenten service?

———*———

AN EXPERIENCE IN BUILDING A COUNTRY CHOIR

FATE decreed that I should be "set down" a little settlement not fifty miles from Bost I had no choice in the matter, so I went. was August. What a heavenly country! Barri mosquitoes, it was perfect—wild flowers in pr fusion, blue skies, the best of weather, and lightfully unsophisticated, hospitable, who souled people.

For a few weeks I was charmed. Then w the arrival of the cool dark evenings and t more somber hue of all outdoor things, I b gan to long for the city—for the theatre, concerts, for the large stores, and, above for the companionship of musical people. I I love music, and the atmosphere of my had always been musical. But now, athough found lots of listeners, there were but few p formers, and such a thing as concerted perfo ance among the local talent was practically known.

I joined the choir—more for the sake of so thing to do than from any hope of pleasure be gained, but in this I was agreeably dis pointed, as this little history shall show.

Our choirmaster was the vicar, who poss ed an average bass voice and knew someth of music, but not much. Our organist (vol tary, of course) was a young lady of very cided ability and natural talent, but, unfo nately, her musical education was very mea As for the other members of the choir—twe all told—they were just the average sort singers one would expect to find in a small vil church.

I became a constant visitor at the vicar and, before long, I had consented to act choirmistress, and from that day till I left th nearly three years later, my experience wa pleasant one—not, perhaps, pleasure unalloy for my work was arduous and *very* slow; the steady improvement which made itself parent was most gratifying, and it certa stimulated me to greater efforts.

The very simplest chants and hymns were only music attempted—the psalms being alv read. I commenced by calling two prac each week—Thursday afternoon for ladies Friday evening for everybody—and for a we devoted all our energies to an improve in the singing of those hymns and chants; believe me, there was *room* for improve and we *did* improve. By the end of the there was less of that awful tobogganin every wide interval—the vowels were b spoken, the phrasing was more intellig done, and the singing generally was in t time and tune.

his last pleased me especially. It was a dis-
t gain, and I felt encouraged. For Christmas
we prepared two anthems, both for ladies'
es. These were "anthems" by courtesy only;
although I made an effort to obtain a two-
anthem, I failed to find anything simple
igh for us to attempt—indeed, I found a
decided dearth of two-part anthems, and
olutely none suitable for our very amateur
r.

othing daunted, our organist and I copied
the voice parts of two simple duets written
ladies' voices, and they made an excellent
ning.

hristmas over, we continued our afternoon
es' rehearsals for the study of two-part
gs. We had now a choir of seven sopranos
three contraltos, and as the former were
tly small voices, the chorus was fairly bal-
ed, and our work was satisfactory.

f course, as might be expected, things were
quite so smooth sailing with the other half
he choir. The business cares of a man seem
preclude his giving more than a half-hearted
ntion to any hobby he takes up, no matter
fond of it he may be. We had two tenors
three bassos, and not a reader among them,
they were willing to learn. And for Easter
actually sang a four-part anthem—very ama-
ish, it is true, but still I knew we were on
up-grade, and I grew more ambitious.

knew of a violinist in the congregation—
ed, I visited at his home—and I tried to
uade him to come and help us. This he was
loath to do, for he had "never played in
ic." I persevered. Finally he said he would
e if Joe Brunelle would come, too. Brunelle
ed the flute indifferently well and I was not
nxious to have him; however, I did want
violin, so I got the vicar worked up to se-
them both, and for Whit-Sunday our sing-
was backed up and buoyed up with a flute
violin, and they were a grand addition to
organ, which was of the genus "cabinet,"
a poor sample at that.

uch would have more! These two instru-
ts helped out wonderfully with the melody,
that was not enough; undoubtedly we were
eavy, and more *bottom* we must have. Again
ppealed to the vicar, without whose co-op-
on, of course, I could have nothing.

the other end of the village lived an old
ioner, a veteran of the war, and he pos-
d an old trombone which had literally and
ally been through the wars; furthermore, he
taught his youngest son, a callow youth of
nteen, to play the euphonium. I thought
envy of these two "musicianers," but
! and alas! they were Baptist and attended
only other place of worship in the village.
vertheless, with much talk, they were in-
d to come for the special music at harvest
and again at Christmas, and after that
threw in their lot with us, and our organi-
n was complete. A choir of untrained
s, a small cabinet-organ, a violin, a flute,
ombone, and a euphonium! And yet, I tell
we made music. Yes! real music, such as
rised the occasional visitor from the city;
this I take it, was the secret of our accom-
ment—we attempted only the very simplest
of music, and were content to spend a
t deal of time and pains and patience on its
arsal.

ring my sojourn there we arranged for sev-
little entertainments, all more or less mu-
and all provided entirely by our own choir

New Octavo Music

(PLEASE ORDER BY NUMBER)

CATHOLIC CHOIR MUSIC

BORDESE, LUIGI
No. 12,797. **Ave Maria** $0.10
In two parts for women's voices; can be used as a duet.
No. 12,798. **Haec dies** ..... .10
For two equal voices, either as a duet or chorus.

LEJEAL, ALOIS F.
No. 12,743. **O Salutaris, in Eb** ..... .10
A melodious, easy setting for quartet or chorus of mixed voices.

MELVIL, M. A.
No. 12,825. **Regina Coeli** ..... .12
A setting for quartet or chorus of mixed voices; with short alto solo.

MINE, J. C. ADOLPHE
No. 12,799. **Ave Regina.** Arr. by Eduardo Marzo.. .08
For two women's voices, or can be used by a two-part chorus.

MOZART, W. A.
No. 12,821. **Ave verum.** Arr. by Eduardo Marzo.. .10
Arranged for duet or chorus use; soprano and alto.

MAURO, ANTONINO
No. 12,807. **Tantum Ergo,** Op. 103 ..... .10
A charming little piece for duet or chorus, women's voices.

OVEREEM, M. VAN
No. 12,809. **Ecce panis.** Arr. by Eduardo Marzo... .10
For a quartet or chorus of mixed voices; easy and melodious.
No. 12,810. **Panis angelicus** ..... .10
Opens with a duet for soprano and alto, followed by a chorus for mixed voices; devotional in style.

ROUSSEAU, SAMUEL A.
No. 12,823. **Tota pulchra** ..... .12
This is arranged for two equal voice parts, with a third *ad lib.*, and with an effective organ accompaniment; exceptionally good for two or three solo voices, with chorus.

PART SONGS: MIXED VOICES

SEWARD, T. F.
No. 12,872. **Song of the Gipsies.** Arr. by C. C. Robinson $0.16
A capital number for a school or college chorus, lively and melodious, and not difficult.

WOMEN'S VOICES

TAYLOR, DEEMS
No. 12,911. **May eve,** Op. 11, No. 1 ..... .16
A fine concert number for four-part chorus of women's voices; has a very brilliant piano accompaniment. Used by the Cecilia Club, New York, Victor Harris, Conductor.

MEN'S VOICES

HUHN, BRUNO
No. 12,882. **Balaklava** ..... .16
A stirring, dramatic setting of Tennyson's poem, "The Charge of the Light Brigade"; big, concert quality.

JAMES, PHILIP
No. 12,898. **The Victors** ..... .16
The text tells how "the victors" have passed on to other shores, and the music interprets the text. It is a splendid piece for memorial occasions.

KREMSER, E.
No. 12,836. **Prayer of Thanksgiving.** (Netherlands folksong) ..... .10
A very successful concert number, almost entirely in unison, the accompaniment varied so as to work up a powerful climax.

members, and all most thoroughly enjoyed by ourselves as well as by our audiences.

But I have said enough—all I wish to emphasize is the fact that good results can come, and that speedily, out of the very crudest material, provided only that there be co-operation and a willingness to work, and one patient leader, strong-willed enough to get a ready following and to insist on having one's wish carried out, without giving offence; and to do this, it is of the first importance that he or she should inspire confidence.—*Choir and Choral Magazine.*

———*———

STUDYING ONE'S RESOURCES

THE older organists frequently indulge in reminiscences to show the difference in the conditions under which they worked as young men and those which confront the young organists of today.

For example, in their time two-manual organs were the rule, three much the exception. Nowadays the number of three-manual instruments is large and the number of stops and mechanical accessories in the newer organs is much beyond what many of the older organists perhaps ever dreamed of.

But the man who had to make much out of limited resources knew his instrument thoroughly, and was therefore able to make a great variety of combinations of a few stops each, in contrast with the modern man who has pistons and tablets to make definite combinations.

The special point we have in mind to urge is that the organist may find some of the mechanical accessories out of action and will then have to fall back on the old-time plan of making his combinations by hand. It is worth while, occasionally at least, to practise this.

———*———

A SELF-GOVERNING CHOIR

[From Mr. W. H. Carter, organist and choirmaster of Christ Church, Rochester, N. Y., we have the following interesting account of the circumstances which induced him to allow his choir boys to govern themselves.—The Editor.]

AT least a year ago I heard a talk given by Mr. George of the George Junior Republic, at the State School for the Blind, Batavia, N. Y., and became very much impressed and interested in what I heard.

Upon returning to Rochester and going to my choir room I talked things over with the boys; they also became interested, but not until I read a series of articles which our choirmother handed to me from *The Churchman* did I put into practice the radical principles which had been adopted by another choir.

At first there was a little difficulty in making the older boys obey the rules laid down by their fellows, but after several boys had dropped out there was no further trouble. I have no worry or concern as to their behavior.

The President calls his monitors together every week, and after the Saturday morning re-

Möller Pipe Organs

Twenty-one Hundred in use. The highest grade instruments at moderate prices. Specifications and estimates on request. Write for catalogs.

M. P. Möller, Hagerstown, Maryland

hearsal there is a general meeting, punishments are meted out, and other matters talked over.

I now find at rehearsal hours the boys seated ready to begin, and in one instance, when I was delayed by a late train, the stunts we always do as preliminary to a practice were all finished and a twelve-year-old boy was drilling a Mozart *Mass*, much to my astonishment.

The boys are so interested and keen in their organization that any misbehavior outside is punished as reflecting on it. A mother called me up a few days before Christmas asking why her boy had been suspended. As I did not know he had been I inquired and found out that he had been letting down on his work or loafing.—this after several warnings.

To conclude, I never had anything approaching the discipline I now have. All worry from that score is taken from me. I understand my boys better and I think they do me.

THE ECHO ORGAN

BY H. C. M.

THE following letter may prove of interest:

"Glastonbury Festival School,
President, Thomas Beecham.
Director, Rutland Boughton.

"Glastonbury, England, Dec. 1, 1915.

"Dear Prof. Macdougall:

"I thought you would like to know that work still goes on here, though it looks as if the next few years would let us down horribly. Do you think that we might get any money from America to help with the theatre, remembering that this is holy (that is, Arthurian) ground?

"Kindest regards.

"Yours truly,
"Rutland Boughton."

Boughton's theatre at Glastonbury is described by the people in sympathy with the movement as the English Bayreuth. With Reginald Buckley, Boughton hopes to establish a new art in England much as Wagner did in his native land. Their work so far has centered around the heroic figure of the legendary King Arthur. I know Boughton to be a man of great genius. Any information in regard to the Festival Theatre may be had from the Secretary, Miss S. F. Meade, Templecombe, Somerset, England.

* * *

A FRIEND who has just recatalogued and filed his choir music is so much pleased with his system that he furnishes me with the following description:

"I have about 400 anthems of all sorts in my library, and found that it was no longer practicable to file away in manila covers in piles, with a card index referring to numbers, titles, and authors' names. The piles were unwieldy, the music became torn, and the amount of music to be reduced to order became greater, month by month.

"I therefore have had a paper-box maker manufacture 250 boxes a little larger than an octavo sheet of music and about one inch and a quarter thick. These boxes or cases stand on end just like a book, are strongly made, and hold from 200 to 300 pages; or several small anthems may be put in one case. At the back of each box I have a place cut out so as to facilitate withdrawing the music by the thumb and forefinger. The boxes when filled are contained in a simple, strong case about five feet long and four feet high, with sliding doors; in fact, I have two cases, together accommodating 125 boxes. I forgot to say that for cantatas I had boxes of double size made.

"The boxes have labels on the back edge with six places for giving composer's name and title in black. The boxes are alphabetized by the composer's name wherever possible; since each box will hold more than three or, at the most, four anthems, the other places on the label are reserved for titles (in red ink) of anthems whose composer's name belongs alphabetically there, although the anthem may be somewhere else; its real place is indicated by the number of the box that holds it. By this means the use of the card catalogue is minimized. Music that is used seldom is catalogued, boxed, and stowed away in a closet until needed.

"I catalogue my anthems not only by composer's name, words, and season (as Christmas, Lent, etc.) but I have classifications on the basis of the solos in the anthem. I find it necessary to look over my card index often in order to keep in mind anthems that will otherwise be forgotten. To the same end I have a special division labeled 'Rehearsal.' Here I put titles of all new anthems bought and of all older ones that have been sung infrequently.

"I ought to add that the forty copies of each anthem, in addition to a place in the box, have a manila cover on which is stamped the box number of the anthem to facilitate finding its proper box.

"The choir library now has a very fine appearance and in every respect the new arrangement pays for the work put into it. The boxes cost about 10 cents apiece, but I think that item could be lessened."

* * *

MY friend touches on one point that is less often considered by all choirmasters and organists than it ought to be. We all have the tendency to sing and play the same things to the exclusion of others equally good. Of course. I am aware that there are certain organ pieces, certain anthems, certain songs that are always liked, and it is a great deal more easy to perform those undoubtedly successful things than it is to test out others.

If you have a library of a useful size, ten to one a good deal of it is unfamiliar to you; and if this is not the case I suggest that your library is altogether too small. Every month the publishers send around complimentary copies of music useful in your specialties; with how much of this material are you acquainted? Music publishers tell of the enormous difficulty in introducing a new set of piano studies or a set of new songs or a new service for the Episcopal Church. The same inertia is operative with all of us: We do not take account of stock because it is too much trouble. It is easier to keep on with the things that we know than it is to learn new things.

* * *

S. K. ASKS if I can tell her something as to the use of the stops and swells in a cabinet organ; she has had piano lessons only, but is organist of a small church. In the cabinet (reed) organs with which I am acquainted the right swell opens a portion of the organ in which the reeds are imprisoned and, letting out the sound, gives a *crescendo*. The left swell draws all the stops in the instrument, although the stop-heads themselves do not move. To get the full power of the instrument, then, one must use both swells and blow powerfully, that is, st ily, and with long sweeps of the pedals. not pedal in time with the music; blow ste always, faster for *forte* passages, slower for passages. To understand the stops, try each carefully as to every note, also as to ch Note what part of the keyboard the sto fects and whether it is at the normal (that is, corresponding to that of the pianc whether an octave higher or lower. Notice Sub-bass stop in particular. This usually a the lower octave or so of the keyboard and if carefully used gives the pipe-orga fect you speak of having heard. You must your style of playing (that is, from tha playing the piano) if you wish to get any like the real organ style. Practise hymn-t for example, until you can play them with fect smoothness, *legato;* tie all notes e those in the soprano; tie even these if the rh of the tune be not spoiled. After you acqu smooth, legato style, ask yourself whether playing has any rhythm. Avoid a style of ing where the hearer cannot feel the acce natural rhythm of the composition you are forming. A few lessons from a good org (even no more than one lesson) will mak points clear to you.

* * *

IN some respects the most interesting pro of organ and choir music that I have seen are those of five historical lecture re given in the chapel of the Union Theol Seminary, New York, by Clarence Dicki director of music. The first program had pieces, songs, and 'cello pieces by seventee ganists of New York. The second progr lustrated on the organ the development nata form. The third was devoted to pr music, the Choir of the Seminary (34 voices) as assistants. The fourth had S speare and music for its subject, and the sacred folk-songs. For variety of subjec wealth of illustration it will be difficult to these programs. Anyone who knows Mr. inson's playing will understand how we project must have been carried through.

TINDALE MUSIC CABINETS

In September, 1914, we had the privilege of selling a Tindale Music Cabinet to the famous Concert Soprano, Florence Hinkle. Miss Hinkle has lately written us:

"I have found your Cabinet to be of the greatest service, meeting, as it does, all requirements for the proper filing of music."

A place for every piece
Every piece in its place

There has never been anything like these Cabinets for convenience and get-at-a-bil-ity in handling sheet music and studies. They do away with all uncertainty. There is no fumbling and searching, no loss of time. They also protect the music. Incidentally they are handsome pieces of furniture, simple in design, nicely finished. Prices reasonable, terms of payment suiting your convenience. You might as well own one.

Write for Catalogue 2 and full particulars.

Tindale Phonograph Record Cabinets have a superior way of filing Records, each Record in a separate container, simple, convenient, practical. Ask for Catalogue 2 B.

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment — a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

HAVE a young lady pupil of about fifteen ose hand can just manage a ninth by stretching the edge of the keyboard, but cannot strike an ave easily *over* the keys. The result is a bad ugly forward and backward movement of the d and arm when trying to play a chromatic pas- e in octaves.

hould she omit the octaves in such passages, y playing single notes, or continue to try to tch for the octaves, with the hope that the d will increase its grasp as time goes on?

lay I ask also if you will kindly name a few te modern pieces, attractive in nature and suita- for a girl about this age, 3d to 4th grade (or grade). She has ability, but her musical inter- needs to be developed.

shall appreciate very highly your kind consid- tion of my letter.

S. C. D.

t is rather difficult to give advice as to how ch stretching to allow a pupil to do, without ing the hand. Certainly, if the pupil in question sn't learn to play octaves now, she never will y them. So it's worth working hard for. I uld avoid chromatic passages in octaves as ch as possible until the span becomes easier, and a great deal of stress on daily octave prac- in simple forms with extreme relaxation be- en each octave. The octave exercise as given the MASON TECHNIC, First way (page 51, MASON NDAMENTAL TECHNIC), followed by the exercise the responsive wrist, page 54, No. 37, would a good beginning.

The pupil can do these first in sixths and then er in octaves. Before doing much work in the omatic scale I would advise the interlocking ave, in which one hand has a single tone and other the octave. In this work the fingers ich have the melodic thread play alone with the ne motions which would be employed if the en- e octave was being played. On page 60, MASON CHNIC, you will find exercises of this sort.

t is very easy for a pupil to overdo stretching ercises, resulting in weeping sinews with other ns of strain which are frequently very difficult undo; therefore great care should be taken both teacher and pupil.

If you are giving pieces which have chromatic octave passages, divide the octave between each hand if possible or permit her to play it as best she can without much practice on that particular place. It would be far better, however, to avoid such music until the exercises can be done with some ease.

Daily practice on either stretching exercises or octaves will give her the span eventually if you begin young enough.

As to modern music for the 3d and 4th grades, it all depends on what you mean by "modern." I give below some titles which I have found useful, although all of this music, while within the fourth grade technically, demands mental ability and tonal imagination on the part of the student.

Musetta's waltz song, Puccini. Grade 3.

Op. 52, Nos. 9 and 10, Kopylow. Grade 4.

(Several numbers from this opus have appeared in THE MUSICIAN.)

A mere trifle, Von Fielitz.

Song from the East, Op. 54, No. 2, Cyril Scott.

To a vanishing race, Op. 47, No. 2, Cadman.

Pavane-Capricho, Op. 12, Albeniz.

Mélodie meditative, Godowsky.

* * *

I enjoy reading your department in THE MUSICIAN and would be thankful if you tell me, through THE TEACHERS' FORUM, what is the artistic side of the rhythmic table?

S. M. C.

The ability to lighten the hand at will. In the first motion you play double *forte* with an accent still louder; in the second, *forte,* with a double *forte* accent; in the third, *mezzo-forte* with a *forte* accent; in the fourth, *pianissimo* with a *piano* accent.

The Rhythmic Table, practised in this way, gives tonal command and is an artistic exercise.

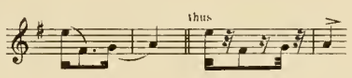
* * *

In his book: *The Principles of Expression in Pianoforte Playing,* Christiani says: "A note preceding a longer one than itself or preceding its own repetition, is shortened to about one-half of its value, etc."

This surely ought not to apply to a succession such as this: a doted eighth, a sixteenth, and another doted eighth follows sixteenth, and still less to the so-called *shortest long appoggiatura,* with the accent, as in Chopin's E minor *Study,* Op. 10; but only to the *Iambus*—including repeated notes in general—such as are to be found in the middle theme of Mozart's C minor *Fantaisie.*

By the way, is not the common writing of the *Iambus,* that is with the slur the same as the *Trochee,* misleading for students who insist in accenting the short note instead of the long one?

Excepting the rare cases when the short note bears a melodic accent, as, for instance, in Chopin's first phrase of the *Polonaise* in C sharp minor, should not the students play such a succession of notes



as well as the grace notes in the second theme of Chopin's *Waltz* in D♭?

P.

One should be very careful in laying down iron-clad rules for expression in piano playing, and Christiani gives many that are better forgotten. This is one of them. In the Beethoven example which he gives, following this rule, I think he is right, for it is a march movement in each case. In march movements the short note preceding the pulse note is more effective if shortened, for by so doing we intensify the accent. In melodic lines, such as your first example presumably is, I would lengthen rather than shorten the short note. In such places as the beginning of the Beethoven *Minuet* in E♭, Op. 31, No. 3, to shorten the first E♭ before the accent would be to cheapen the movement in my opinion.

All slurs in music are misleading to students who must depend on them for a logical reading of the passage. Many of the slurs in the music are placed there by the engravers who group measures to suit themselves. So conventionalized is music engraving that it is next to impossible to get the engraver to leave off unnecessary slurs as well as unnecessary accidentals.

In your last example, I would say that it would depend entirely on what the left hand was doing. I do not believe in transposing the bar as Christiani so often advocates in his *Revised Notation.* In your examples, if the measure accent could be established through the harmony, either by accent or by the change of harmony on the beat (which is one of the best ways of securing the measure accent), why possibly your reading would be effective. I would certainly not permit the hand to rise before the accented note however, but I presume you intended the rest to show the shortening of the note and what the hand was to do rather than the way it should sound. In the Chopin *Waltz* I teach the grace note in the middle part as an intensification of the accent played before the beat rather than on the beat, but extremely short.

A New Instrument TEACHES ANYONE TO TUNE PIANOS

An amazing invention—a marvel of science. Teaches piano tuning by new scientific principle. The New Tune-a-Phone method is absolutely accurate. Eliminates guesswork. Positively unfailing. GUARANTEED. Endorsed by authorities. Turn your spare time to profit. Learn this well paying, independent profession at home. Action Model and all Tools furnished Free with course of easy lessons.

OVER THIRTY YEARS IN MUSIC

"The World's Greatest Musical Weekly"

MUSICAL COURIER A WEEKLY JOURNAL

Published Every Wednesday

Contains all the news on classical music and musicians the world over. Read by all intelligent musicians

Publication Office: 437 Fifth Ave., S. E. Cor. 39th St., New York

Will you please give me some information about *Henry K. Medley*, an American violinist and composer, as I have no access to a comprehensive work or biographical dictionary on the American composer.

Where does he reside, and what are his achievements as a musician?

I read a curious story about an occult experience this man had while residing at Cairo, Egypt, with a friend named Roger De Chateleaux, where Medley was reported to have gone, to secure local color for an Oriental symphony.

This Roger De Chateleaux tells about the experience. But never having heard of Medley before, I thought I would inquire what THE MUSICIAN can tell me about him.

I have been unable to find any such name as Medley, and wonder if the reference may not have been to Henry K. Hadley, who is a composer and former conductor of the San Francisco Symphony. He has recently given up that position and is now in the East composing and doing some public work. He has composed four symphonies and many other works, although none of them bear the title "Orientale." I have been unable to find the book you mention or the author, Roger de Chateleaux. Baltzell's *Dictionary of Musicians*, published by Oliver Ditson Company, is an excellent work of reference.

A HOME MUSIC SCHOOL

A SHORT time ago the Editor of THE MUSICIAN, during a visit to New York, spent a very enjoyable hour at the new home of the New York School of Music and Arts, 95th Street and Central Park West, Ralfe Leech Sterner, director.

When parents are considering the question of sending a daughter away from home for music study they must think of the conditions under which the girl is to live. Shall she go into a boarding house of the usual city type, rent a furnished room and take her meals in restaurants? Shall she join several other girls and rent a flat, with a maid to serve meals and look after the rooms? Is she to be left alone and unsupported by the company and advice of those more experienced in the life of a great city? And these problems are also serious ones to the woman of maturer age and greater experience who comes to a city for music education. She wants comfort, companionship, cheerful surroundings, and freedom from the annoyances and dangers due to designing men and women.

The New York Institute of Music and Arts has met this problem by offering home life to the women students who come there for instruction. And the first thought of the visitor is that he is entering a household, and not an institution. The school occupies two buildings, one on the corner, the other adjoining on Central Park West, both overlooking the expanse of the Park, a view of great beauty summer or winter, and insuring pure, fresh air at all seasons of the year. The corner building is used for offices, reception rooms, studios, and lecture halls, the other for a students' home.

The School quarters are in a house formerly occupied by one of New York's millionaires, and is munificently decorated, especially in the main rooms, the entrance being through grilled doors, set in marble portals, the reception hall having an inlaid mosaic floor, the walls elegantly decorated. A beautiful stairway ascends to the second floor where one finds large studios, with magnificent stained glass windows set in copper, cut glass chandeliers, etc., making a most artistic setting.

We have purposely emphasized the home idea in The New York School of Music and Arts, as worked out by Mr. Sterner, but we must not omit mention of the courses of study offered which cover a thorough musical education. The vocal department is under the care of Mr. Sterner, who has a long list of professional pupils to his credit. In the piano department is an artist of international reputation, Arthur Friedheim, a pupil of Liszt, and Miss Harriette Brower, whose name is familiar to readers of THE MUSICIAN as an able contributor. The work in pedagogy is conducted by Frank Howard Warner, the violin classes by Clarence De Vaux Royer, pupils for the 'cello by Paul Gruppe, and public school music by Blanche Kelley.

The New York School of Music and Arts makes a special point of summer courses of six weeks, especially appealing to teachers.

BOOK NOTES

The History of American Music. By Louis C. [illegible]son. The Macmillan Co. Illustrated. Pr[illegible] $6.00.

The first edition of this book was issued in 1[illegible] The present volume is a new and thoroughly [illegible]vised edition, which takes account of events of [illegible] past decade which have had influence in shap[illegible] music in the United States. In this book Mr. [illegible]son, the well-known writer on musical subjects, [illegible] member of the faculty of the New England C[illegible]servatory, tells of the beginnings, the foreign in[illegible]ences, the changes, the methods, and the personal [illegible]deavors which have had their share in the mak[illegible] of American music. It goes without saying [illegible] every library in the country should have this b[illegible] on its shelf, and this will apply to public libra[illegible] as well as schools, conservatories, and colle[illegible] And the private teacher who has a collection of [illegible]sical literature cannot afford to be without this [illegible] authoritative volume on American musical hist[illegible] It is profusely and finely illustrated, and is a [illegible]ume of 400 large pages, octavo size, printed [illegible] coated paper, and handsomely bound.

The Interpretation of the Music of the XV[illegible] and XVIIIth Centuries Revealed by Contem[illegible]rary Evidence. By Arnold Dolmetsch. Nov[illegible] & Co. Price, $5.00 net.

Appendix. Containing 22 illustrative pieces. [illegible]vello & Co. Price, $1.75 net.

Readers of THE MUSICIAN will recall that [illegible] Dolmetsch was a resident of the United St[illegible] some years ago, and that during his stay in [illegible] country he gave a number of concerts, presen[illegible] the music of the XVIIth and XVIIIth centuries [illegible] instruments of that period. In addition, he su[illegible]vised the construction of harpsichords and cl[illegible]chords, patterned after the original instrument[illegible] the factory of the Chickering Piano Co.

Mr. Dolmetsch's thorough study for a long pe[illegible] of years and his deep sympathy with the musi[illegible] the older composers gave him an authority in sp[illegible]ing of that music which there was none to dis[illegible] The book noted above, therefore, comes to u[illegible] the teaching of one who speaks with real auth[illegible] on a subject concerning which the average mus[illegible] is almost wholly ignorant.

Notation, even today, is admittedly imper[illegible] and it was much more inaccurate and insuffi[illegible] two and three centuries ago, when the question [illegible] to transfer a correct representation of the com[illegible]er's thought to paper. Even texts by Beeth[illegible] vary, and there is much disagreement as to [illegible] style in which he wished his works to be perfor[illegible]

Mr. Dolmetsch says that before we can play p[illegible] erly a piece of old music "we must find out:

"1. The *tempo* which, frequently, is not [illegible] cated in any way.

"2. The real *rhythm* which, very often, di[illegible] in practice from the written text.

"3. The *ornaments* and *graces* necessary fo[illegible] adornment of the music.

"4 How to fill up the *figured basses* in ac[illegible] paniments."

It is plain to the musician that the above are [illegible] dinal points in the planning of an interpreta[illegible] and Mr. Dolmetsch considers these problems [illegible] fully and quite exhaustively, with the result [illegible] after reading this book the player will no l[illegible] believe that the old music requires nothing be[illegible] mechanical precision.

The last chapter, of about fifty pages, conta[illegible] clear description of the instruments of the pe[illegible] The *Appendix* contains a number of pieces c[illegible] according to the principles laid down by Mr. [illegible] metsch and help to make plain his views.

The Musical Quarterly. O. G. Sonneck, e[illegible] January, 1916. Price, 60 cents.

The first number of Vol. 2 contains ten ar[illegible]

mphony Association has been formed in , O., to furnish for the people of the city s of concerts of symphonic music, with . A guarantee fund is being raised.

WITH THE SCHOOLS AND TEACHERS

Mr. Wm. W. Jones, supervisor of music, Scranton, Pa., sent us several interesting programs of school music tests in the grade schools, and chorus numbers in the Central and Technical High Schools.

Miss Mabelle J. Graves, of Fair Haven, Vt., presented an attractive program of ballads, sacred songs, and operatic selections at Mechanicville, N. Y., Jan. 20, the numbers being rendered by eight of her pupils.

Mr. Cecil Burleigh, head of the violin and theory department of the University of Idaho, gave a recital of his compositions for violin and for piano at the Harvard Musical Association, Boston, Jan. 14, assisted by Mr. Clarence Mayer, director of music in the Wesleyan University, Bloomington, Ill. Mr. Burleigh's poetic work made a deep impression. Among the piano numbers were extracts from *Sonnets of Autumn*, recently issued by Oliver Ditson Company.

A pupils' recital of compositions for voice, piano, and violin was given at Cedar Valley Seminary, Osage, Ia., Jan. 31. Mr. Frank Parker is director of the music department.

Miss Elizabeth Siedhoff, of Boston, was accompanist to Bertha Lansing Rodgers and Mme. Millsbone, 'cellist, at the Chautauqua Carnival Week, in February. She will play for Paul Reimers on his concert tour. Miss Siedhoff is a pupil of Breithaupt.

Mr. Clarence Cameron White, of Boston, gave a violin recital at the Hampton Institute, Hampton, Va., Jan. 28, including in the program an original composition, *Negro Chant.*

A recital of Junior pupils was held at the Cosmopolitan School of Music, Chicago, Jan. 29, presenting compositions for piano and for violin. Recitals are held every Saturday.

Mr. Eber C. Hamilton gave an organ recital at the First M. E. Church, Franklin, Pa., Jan. 25, with the assistance of Mrs. A. C. Dunkle, soprano.

Mr. Clarence Dickinson arranged a series of five historical organ lecture-recitals at the Union Theological Seminary, New York, beginning Feb. 1, and given on successive Tuesday afternoons. He had the assistance of a number of distinguished artists.

The Kroeger School of Music, St. Louis, gave the usual Mid-winter Recital by advanced students, Jan. 27, nine pupils assisting.

Mr. William F. Bentley gave a lecture song recital, Jan. 27, at Knox Conservatory of Music, Galesburg, Ill., his subject being "Music, the Magnifier of Poetic Emotion." The twenty-one songs were selected from the classical and modern repertoires, including Americans.

Mr. Guy Maier, pianist, gave an interesting recital in Boston, Jan. 25, presenting a program

LEARN TO FIGURE FASTER
The Demands of the Day Require It
E. S. WALSH, Little Rock: "I have never seen anything equal to it." THE BOOK YOU WANT
WOULD YOU LIKE TO KNOW HOW TO ADD FROM 200 TO 500 SOLID FIGURES PER MINUTE WITH PERFECT EASE, OR
To multiply any two numbers together, placing the answer underneath the line without the use of other figures in a manner that is bewildering to the spectator, or
To divide numbers in one half the time you now consume, and
To prove such work without making a single figure, or
To compute interest in less time than it would require to look it up in the interest books, or
To handle fractions in a practical and rapid manner, or
To compute all kinds of measurements, such as Log and Lumber, Corn, Hay, etc., with less than one-tenth the figures you now use in such work.
To tell the day of the week of any date for a period of 3000 years more quickly than you could do it in the calendar.
We positively explain how these results are accomplished in C. W. PREWETT'S PRACTICAL CALCULATOR AND BUSINESS ARITHMETIC. Revised 1915 edition now out, containing the most exclusive and complete set of rules and methods ever published on this subject.
These methods are carefully explained and outlined so they may be learned by the Busy Business Man, Bookkeeper, School Teacher, or Student without the aid of a teacher.
The author of this book has taught hundreds of people methods contained in this book for prices ranging from $5.00 to $25.00. There are dozens of methods you will learn for which you would not begrudge $1.00 each were you unable to secure them more cheaply.
The size of this book is 5x7 in., and contains fifty pages of boiled down practical matter, neatly bound with Embossed Leatherette Cover.
Price, postpaid, $1.00. Sent to any address in the U. S., via Parcel Post—$1.00.
First and second Editions entirely sold out within few weeks, third Edition now ready, best ever. Endorsed by Bankers, Bookkeepers, Busy Business Men everywhere. School Children learn it without teacher.
Now don't continue to handle figures by the old laborious methods that have been in use for centuries. Time is money. Add to your store of Practical Knowledge by learning these labor-saving methods.
They are easy to learn. You will be mystified with their simplicity.
Order the book NOW; DON'T WAIT TILL TOMORROW. Send all orders to E. C. ROBERTSON, General Salesman, 1408 Prairie Ave., Houston, Tex.
P. M. MARSHALL, Expert Accountant: "It is the best thing I ever saw." THE BOOK YOU NEED
THE BOOK YOU OUGHT TO HAVE
T. M. Mangrum, Accountant: "I can cheerfully recommend the book to teachers, business men, bookkeepers, accountants and students. It is easy to learn and will please anybody."

New York School of Music and Arts

Central Park West, cor 95th Street, New York City

largely by modern composers, in a delightful manner.

Mr. Ralph L. Baldwin, director of music in the public schools of Hartford, Conn., is giving a lecture course on the Symphony at the Evening High School. Each lecture has a very full outline or syllabus.

Mr. A. D. Jewett, in his School of Music, New York, pays special attention to work with children. Mr. Jewett will conduct his usual Summer Course at Edgartown, Mass. (Martha's Vineyard), including normal classes for teachers.

Mr. Jaroslaw de Zielinski is director of the Los Angeles Conservatory of Music and Arts.

Mr. Otto W. G. Pfefferkorn, director of music at Brenau College Conservatory, Gainesville, Ga., gave a piano recital, Jan. 13, presenting a program mainly from the classical repertoire. He gave a group of original pieces, *Endymion* and *Valse lyrique*.

The Choral Music Society of Boston, Stephen Townsend, conductor, gave its first concert of the season Jan. 12.

Miss Eleanor Patterson, contralto, of New York, is in the Middle West, filling a series of engagements covering a two months' tour. She is using Cowles' *Don't you mind the sorrows*, and Bartlett's *Dream* on her programs.

Mr. Edward Scherubel, director of music at the Lombard College, Galesburg, Ill., is specializing in preparing the hand for piano playing and has placed several practical and effective devices on the market.

The Pittsburgh Musical Institute includes in its January *Bulletin* a list of new organ music prepared by Mr. Charles N. Boyd, of the faculty.

Mr. Karl Edmund Rackle, of the Arrillaga Musical College, San Francisco, gave a recital of piano compositions at the college, playing a program of classical numbers, the only exception being pieces by Chadwick and Debussy. Mr. Rackle is a valued contributor to The Musician.

Mr. Thomas Giles, director of music in the University of Utah, has sent to The Musician a number of programs showing some of the activities of the Department of Music, including the presentation of piano concertos with orchestra accompaniment by seven pupils, under the direction of Prof. Giles.

The University Choristers and the Choral and Orchestral Society of the University of Illinois, Prof. J. Lawrence Erb, director, are important factors in the musical life of the university.

Mr. J. Warren Andrews, organist, of New York, had a busy recital session in the Middle West in January, playing a program each evening from the 10th to the 14th, with two others, on the 18th and 20th. Three of them were under the patronage of state chapters of the American Guild of Organists.

A pupils' recital of piano music was given at St. Rosalia's School, Pittsburgh, twenty pupils assisting.

Mr. Chester H. Beebe has sent us a number of programs showing the character of work done in his Piano School at Brooklyn, with its three branches, including his six free lecture recitals on *Modern Piano Methods*.

NEW YORK NOTES

BY EVA EMMETT WYCKOFF

At Aeolian Hall, Louis Graveure presented a packed house, a program of much origina and beauty. His voice is wonderfully adapted anything he sings. It is near perfection. Coenr V. Bos accompanied Mr. Graveure in the supe manner in which his work is always done.

George Harris, Jr., with Camille Decreus at piano, sang a program worthy of especial n tion. Mr. Harris is a sincere artist. His Fre diction is pure, and the songs of his program v translated into English by himself.

Cecil Fanning, with H. B. Turpin accompa ing, gave a program that was interesting, proved himself to be a splendid singer.

Sophie Braslau, of the Metropolitan O Company, gave a recital, displaying intelligence much charm.

Adelaide Fischer, with Alexander Rihn at piano, gave her second recital of the season. young woman has a voice of sterling quality, playing superior intelligence in her renditions, certainly has a great future before her.

Robert Maitland, bass-baritone, with Fra Moore at the piano, and T. Tertius Noble pla an organ accompaniment for one of his num sang with intelligence a program unusual in general make-up.

Piano recitals were given by Aline van Ba zen, a young woman of talent; Katherine G son, a serious, successful pianist; Hunter W who gave two piano recitals during the mo Germaine Schnitzer, in a delightful program, playing a clear, singing tone with poetic interp tions; Herma Menth, a Viennese pianist.

The Zoellner String Quartet, made up of family, father, daughter, and two sons, gave annual concert at Aeolian Hall, playing quarte Haydn, Beethoven, and Gliére. They are me with deserved success. The Flonzaley Quartet its season's concerts to large audiences of lovers.

Kathleen Parlow, with Homer Samuels a piano, gave a violin recital, this being her f American tour. Her reputation is already lished as a reliable artist. Eddy Brown, with cis Moore at the piano, gave two recitals in ary, at Aeolian Hall, and played at one of the day evening concerts given at the Metrop Opera House. He produces a lovely tone, fine musical feeling and technical facility. H ture is established.

Mme. Lilli Petschnikoff, assisted by Mr dolph Ganz and Clara Clemens-Gabrilowitsch, an interesting concert. Mme. Petschnikoff is schooled. Mr. Maurice Eisner accompanied. Gabrilowitsch, as usual, sang artistically. I a treat to all music lover to welcome bac Ganz.

Maximilian Pilzer, with Charles Gilbert at the piano, gave a violin recital. Mr. Pilzer with good technic, but a rather rough tone. gentleman is the concertmaster of the Philha Orchestra.

Pablo Casals, 'cellist, and his wife, Susa calfe Casals, together with the New York phony Orchestra, gave a concert at Aeolia of consummate art. The 'cello tones are ri full, and the singing of Mme. Casals is unusual order, in its superior beauty and ment. Jean Verd played the piano accompan and Mr. Casals led the orchestra for his numbers, and for her second group played he accompaniments.

85 BROAD ST. BOSTON

At the Harris Theatre, Jennie Dufau gave two recitals, accompanied most delightfully by Charles Lurvey. Her German songs were especially good, her diction being so fine that the voice seemed to respond to its superiority. The voice is small but has the true coloratura tone.

The Philharmonic Orchestra is enjoying its usual success in its 74th season, with Joseph Stransky conducting. The concert of greatest importance during January was a Strauss program, wherein the last act of *Salomé* was beautifully sung and as few could do it, by Marcella Craft, who has sung this rôle in the opera many times. Also at Carnegie Hall, *The Messiah* was given by the Oratorio Society, with Corinne Rider-Kelsey, a thoroughly equipped oratorio singer, Henrietta Wakefield, Lambert Murphy, who did some genuinely good singing, and Vivian Gosnell. Louis Koemennich, the conductor, secures from his singers beautiful tone, and much of their work is so well done that were four voices singing, it could not be in more perfect harmony.

Jennie Hall Buckhout gave, at her residence, during January, recitals made up of compositions of Mary Helen Brown, Laura Sedgwick Collins, Gustav L. Becker, and A. Walter Kramer.

The Von Ende School of Music is giving its usual monthly concerts at the school, consisting of recitals by teachers and pupils.

During February the Wagner music drama, *Der Ring des Nibelungen,* was given under the direction of Arthur Bodanzky, at the Metropolitan Opera House.

VICTOR TALKING MACHINE RECORDS FOR MARCH, 1916

The special favorites of the American concert going public are well represented in the Victor lists for March, as the following will show:

Mme. Melba, soprano: *Annie Laurie,* the favorite Scotch ballad which never grows old; a charming record.

Destinn, Emmy, soprano: *Old Slav melody,* with text by Mme. Destinn, a gem from the folk-song literature of Central Europe.

Schumann-Heink, Ernestine, contralto: *Cradle song,* Op. 49, No. 4, by Brahms, sung in German, a favorite with all who love simple melody.

McCormack, John, tenor: *Forgotten,* by Eugene Cowles, a song which has become endeared to the public a number of years past.

Zimbalist, Efrem, violinist: *Andantino,* from Reger's second sonata, Op. 42, No. 2; classical in style, but filled with lively melody.

Hamlin, George, tenor: *Santa Lucia,* that favorite Neapolitan song which everyone knows; sung in Italian.

Martinelli, Giovanni, tenor: *Thy lips like crimson berries,* from *Cavalleria Rusticana* (sung in Italian), a lovely serenade sung in the best style of this popular opera tenor.

Elman, Mischa, violinist: *Rondino on a theme,* by Beethoven, as arranged by Fritz Kreisler, a delicate and charming number.

Gluck, Alma, soprano, and **Paul Reimers,** tenor: *True love,* a duet by Kücken, one of the older German composers, in the German song style; sung in German.

McCormack, John, tenor: *Calm as the* by Bohm, a magnificent song, with violin obligato by Kreisler, a record for the popular

Williams, Evan, tenor: *The Ninety and* by Sankey, a simple air which touches heart of everyone.

Miller, Christine, contralto: *The slumber* by Gaynor, and *Absent,* by Metcalf, two quisite songs, exquisitely rendered.

Werrenrath, Reinald, baritone: The *Pro* from *Pagliacci,* by Leoncavallo, and the *T dor's song* from *Carmen*; two splendid ai a fine American singer.

THE PUBLIC SCHOOL CLASS METHOD FOR THE VIOLIN
BOOKS I AND II

By ALBERT G. MITCHELL, Mus. D.
Assistant Director of Music, Boston Public Schools

DITSON EDITION, Nos. 176 and 305
Price Each, 50 cents net; by Mail, Each, 5 cents extra

THIS method, which has been employed by the author in the Public Schools of Boston, is based on original lines and has met with great success in class work. It has been adopted also in the public schools of New York City and Schenectady, N. Y., and is in use in other schools.

COMMENTS OF MUSICIANS AND THE PRESS

I find it the most practical guide for the beginner which as yet has come to my notice.— *Karl Rissland.*

The most up-to-date method for beginners yet published.—*L. D. Burford.*

Although designed primarily for class use, this work is, of course, suitable for individual instruction.—*Musical Courier.*

The work has many excellent qualities to meet the requirements of public school teaching.—*Franz C. Bornschein.*

School again commends it to the teachers of the violin classes in the public schools of this city.—*School.*

Three hundred pupils in the experimental course of violin instruction yesterday afternoon convinced Supt. Dyer that the new branch of Boston's educational program is an absolute success.—*Boston Daily Advertiser.*

One of the best primary instruction books for the violin we have had the pleasure of seeing. *The Violinist* would like to see the study of a book of this nature made a regular part of the music curriculum of our public school.—*The Violinist.*

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Single Copies ..... $ .15
Subscription Price, Per Year 1.50

The Subscription Price of $1.50 per year applies to subscribers residing in United States, Mexico, Panama, Hawaii, Philippines, Alaska, Cuba, Porto Rico, Guam, Tutuila, and the city of Shanghai. The price to Canada is $1.75; to Great Britain and the British Colonies, 9 shillings; to Germany, 9 marks; to France, 11 francs. To all other countries the yearly subscription price is the equivalent of $2.20 in American money.

The entire contents of this magazine are covered by the general copyright, and articles must not be reprinted without special permission.

REMITTANCES should be made by Bank Draft or Check, Post-Office Money Order, or Express Money Order. *Where none of these can be procured,* money may be sent in a Registered Letter.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew.

We do not send receipts for subscriptions. On the wrapper of the first issue sent after your order is received is the date to which your subscription is paid. This is a receipt.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of *The Musician.* All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of *The Musician.*

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in *The Musician,* and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

PUBLISHER'S NOTES

Geraldine Farrar: Favorite Songs. Introduction price 60 cents

THIS gifted singer shows her musical training by the preponderance of German songs in the collection she has brought together. The various numbers have been sought out with indefatigable zeal, largely from treasures of song buried or neglected in the works of great writers, and are therefore, in many ways, new to the average teacher or singer. Songs from other lands, such as Russia and Scandinavia are also included. The book is uniform with previous issues of MY FAVORITE SONGS series, with biographical sketch, portraits, with a striking portrait on the cameo plate paper cover, in the engraver's best art.

The price has been fixed at $1.00 postpaid, but for introduction purposes, in advance of publication, we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Arthur Hartmann: Six Preludes for the Piano, Op. 29. Price, $1.00 Introduction price 60 cents

SIX short pieces by one of the prominent musical figures of the day, hitherto known principally as a violinist and composer for the violin. This new field he enters with success, for these pieces are sure to interest the concert player as well as the musician. The titles are descriptive. 1, *Paysage Russe.* 2, *In an old monastery courtyard.* 3, *Danse Roumaine.* 4, *Tania.* 5, *An American prelude.* 6, *Hungaria.* The style is as varied as the pieces. Nos. 1 and 3 are filled with the Slavic spirit, to reproduce which in music the composer's life in Europe has admirably fitted him. No. 2 suggests one of the old church modes. No. 4 is a sort of elegy or souvenir of a loved one. No. 5 has the strong rhythmic flow of American tunes, and No. 6 is full of the national spirit of Hungary, the native land of the composer. The regular price has been put at $1.00, but in advance of publication we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

NOW READY

THE following books are now ready for the market, and those who have ordered copies in advance of publication should have received the copies by this time. Our readers will find it worth while to keep their eyes on the announcements and offers which appear on this page month after month. They are genuine bargains, with prices never more than one-half the regular list value of the books.

Julia Culp: *My Favorite Songs.* Book I. Book II. For high voice or for low voice. With portrait of the artist. Price, $1.00.

Percy Grainger: *Merry Wedding (Bridal Dance),* a short cantata of moderate difficulty. Price, 60 cents.

Cecil Burleigh: *Sonnets of Autumn.* A set of poetic impressions for the piano by a rising American composer. Price, $1.25.

Cedric W. Lemont: Creole Sketches. Introduction price 60 cents

THIS collection of piano pieces is a worthy companion to the same composer's *Dream Pictures,* which has had so favorable a reception. They show the same spontaneous melody, colorful harmony and fluent invention; in addition they reproduce the picturesque special features of Southern environment justified by the title. Having lived in the Creole state the composer has caught his impressions at first hand. The cover is a splendid piece of color printing. The regular price is to be $1.25 but in advance of publication we will accept orders at 60 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.75.

Arthur Hartmann: Six Pieces for Violin and Piano, Op. 28. Ditson Edition, No. 307. Price, 50 cents. Introduction price 20 cents

THESE easy pieces offer particularly attractive and practical material to the teacher, as they are primarily of musical interest, melodious, and with many felicitous touches of harmonic ingenuity in the piano part. In style they are well-contrasted, the first three being songful, the fourth a swaying waltz, the fifth in the light, bright manner of a scherzo, and the last a fiercely rhythmical characteristic piece. The price is 50 cents, but in advance of publication we will accept orders at 20 cents, postpaid, unless to be charged, in which case postage is additional.

With The Musician, one year, $1.55.

Fascinating to Music Lovers

THE OPERA BOOK

By EDITH B. ORDWAY

8vo. Cloth, Gilt Top, with 32 Full-page Illustrations. Boxed, net, $2.50

This book contains practically all of the operas played in the four opera centers (New York, Chicago, Philadelphia and Boston) during the past five years, and some of the leading novelties and revivals announced for this season. A brief, succinct, but clear account of the action of the operas, scene by scene. **It is a real guide to the interpretation of what actually takes place on the stage rather than a retelling in story form of each opera plot.**

By DR. PERCY GOETSCHIUS

The Larger Forms of Musical Composition

An Exhaustive Explanation of the Variations, Rondos, and Sonata Designs, for the General Student of Musical Analysis, and for the Special Student of Structural Composition.

Cloth $2.00 Net

THIS monumental work forms the capstone in the arch of one of the most remarkable, and certainly the most complete, series of musical textbooks ever issued in the English or any other language. Erected on the broad foundation laid, some twenty-five years ago, in the *Material Used in Musical Composition* (now in its fourteenth edition), each succeeding course solidly built up by the hand of a master-workman whose horizon expanded and whose insight deepened with the progress of the work, the admirable structure of *The Methodics of Musical Art* now stands completed in all the symmetry of perfect logical proportion.

The *Larger Forms* is the sequel or continuation of Dr. Goetschius' *Homophonic Forms* (the smaller forms of musical composition of preponderantly harmonic texture) and *Applied Counterpoint* (the contrapuntal forms). It contains a carefully systematized and exhaustive explanation of the larger structural designs, among which the Variation is included; the book begins with a detailed analysis of this form (whose origin is traced to the small Ground-motive), followed by the *basso ostinato*, the Chaconne, the Passacaglia, and the smaller and larger (higher) Variation-forms proper. Then follow the three Rondo-forms, the Sonatina and Sonata-allegro forms, and the Compound forms (including the complete Sonata and the Symphony).

The book is intended for the student who aims to acquire the necessary technique in practical composition, and also for those who desire to obtain a complete general knowledge of the structural details of existing masterworks as an aid to their adequate interpretation. While emphasis is laid on classic works, both the romantic and modern schools are largely represented in the analysis of the remarkably copious musical quotations, as well as works of most recent date from the pens of ultra-modern and even "Futurist" composers.

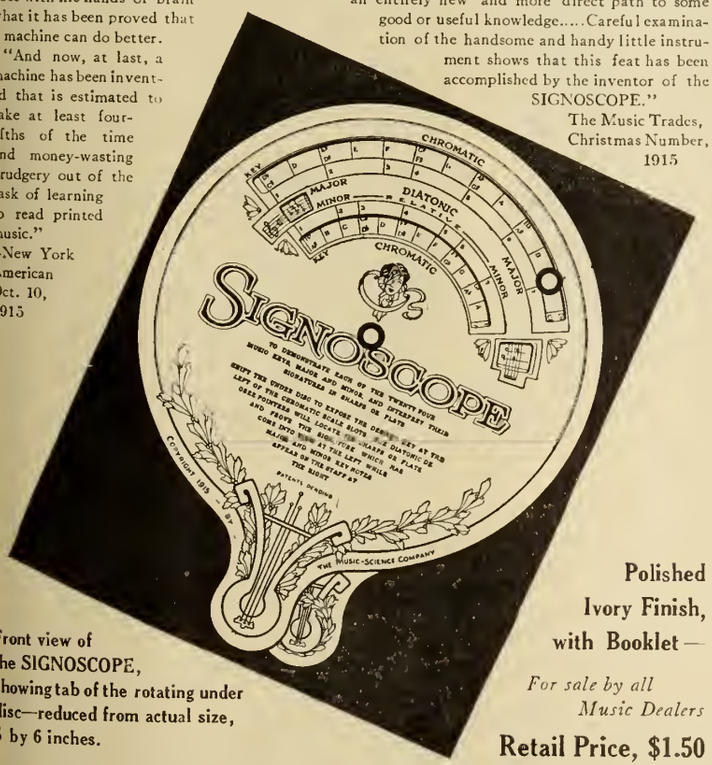
3 East 43d St. G. SCHIRMER New York

"In nearly every human vocation nobody any longer does with his hands or brain what it has been proved that a machine can do better.

"And now, at last, a machine has been invented that is estimated to take at least four-fifths of the time and money-wasting drudgery out of the task of learning to read printed music."
--New York American Oct. 10, 1915

"Once in a great while some daring person, with courage as firm as his convictions, blazes an entirely new and more direct path to some good or useful knowledge.....Careful examination of the handsome and handy little instrument shows that this feat has been accomplished by the inventor of the SIGNOSCOPE."
The Music Trades, Christmas Number, 1915



Front view of the SIGNOSCOPE, showing tab of the rotating under disc—reduced from actual size, 5 by 6 inches.

Edition Wood

825 VOLUMES

THE Best Series of Standard Musical Works, including Studies, Recreations and Classics. Carefully edited, perfectly engraved, printed and bound. Teachers, Students and Music Lovers admit the superiority of this edition.

EDITION WOOD is pre-eminently the Teachers' Edition,---planned for teachers, built up to meet the requirements of teachers. The best evidence that the efforts of its publishers have been in the right direction is the large number of teachers now using it,---a number constantly and rapidly increasing.

The high position it now occupies has been attained only by virtue of consistently giving the Teaching Profession the maximum of *practical value.*

JULIETTE CROSBY ADAMS

COMPOSER---TEACHER---EDUCATOR

A MAKER OF YOUNG MUSICIANS

MUSIC EDUCATION in the United States owes much to the women who have been identified with it for several generations. he "old-fashioned" music teacher who trained the oung ladies in a boarding school to play a few pieces f a flowery, brilliant style, filled a place in her time, ut she was not the only type. Here and there, in ie smaller towns, as well as in the cities, in an unretentious school as well as one with a big reputaon, teachers were to be found who had surveyed eir work from various angles and had been coninced that what music in the United States needed as not a showy, superficial CULTURE, but an EDUATION founded on the bedrock of broad, solid mucianship.

During all of the splendid progress which music in s many phases has made during the past fifty years omen teachers have had a big place, particularly i that most important field, foundation training nd elementary work with children.

Just as the most successful primary teaching i the public schools is done by women, so also i music education the most significant work ith children has been organized and carried out y women.

Prominent among these workers is the subject of is sketch, Mrs. Crosby Adams, who was born near iagara Falls, N. Y., and, under her maiden name, uliette Aurelia Graves, was highly esteemed as a usician and teacher. Persons of a musical temperaent are usually very sensitive to the charm of nare. Miss Graves was fortunate in having parents ho were keenly alive to the grandeur and beauty f the natural surroundings of the locality, and the aughter reflected their high ideals. This is the way ie describes old Niagara:

"Were ever such colors reflected! Was ever a rainow so lovely! For it was the complete circle, shinig through the spray. We knew every haunt of iat river; it belonged to us; we seemed to own it. his was before the government had bought the nd surrounding the Falls to be used as a National ark, and therefore before so-called improvements landscape gardening and commercial industry had aken place. I am glad we knew the old river before iese innovations. Many memories of all phases of s loveliness stand out, but to mention just one—glimpse of the last flower of the year, the blue inged gentian growing in great clusters in inaccesble places in the clefts of the rocks rising sheer in ie vicinity of the old Terrapin Tower (a landmark ng since gone). These rare wild flowers lifted their etals toward the blue sky from which they had aught their cerulean hue and should be growing ere yet. I wonder if they are!"

EARLY TRAINING

Her first instruction in music was received from a ind neighbor, Miss Emma Packard, who was the earest available teacher. Later she studied in town ith another teacher, Miss Augusta Spencer. Soon after this early work was started it was discovered that the little pupil possessed absolute pitch, a faculty she has always regarded as having untold advantage to her. Of course it needs all possible cultivation and a relation to the art of music as a serious study. And this she has given it.

MRS. CROSBY ADAMS

A decided predilection for painting claimed some of her time in her early 'teens. But music was ever uppermost and at sixteen she had begun teaching. An opportunity also came at this time to play the organ, and eventually she became the organist of her home church. Soon thereafter she decided to go to Rochester, sixty miles distant, for lessons with a well-known teacher, Mrs. C. S. P. Cary. These were found so helpful that she spent a season there. Already this earnest young student had had the true nobility of music revealed to her by the incomparable playing of Anton Rubinstein, Essipoff, and Wieniawski, establishing thus early unusually fine standards. Later, the Thomas Orchestra brought the revelation of what music meant when expressed by superior players of various instruments under masterly direction.

PROFESSIONAL LIFE

At twenty-one she accepted a position as teacher in the piano department of Ingham University, LeRoy, an old school in western New York, and there also continued her studies under Mr. Claude Crittenden, who had been a pupil of Kiel, Theodore Kullak, and Liszt.

After four happy years of teaching in this school of many pleasant memories and associations, she was married to Mr. Crosby Adams. They went to Buffalo, where they both became prominently identified with the musical interests of the city. Later they removed to Kansas City where Mrs. Adams' talents won recognition and secured for her a large student and artistic following. She was also organist at different times of three of the well-known churches. In 1892, Mr. and Mrs. Adams located in Chicago, and at once entered upon an active musical life in that city. Mrs. Adams' success in this art center has been more pronounced than at any time during her previous career, which is only natural as she is essentially a student

It was her keen observation of that element in music which proved most attractive to the child that prompted the material she afterward prepared. While providing musical instruction for the child she was constantly studying the child nature, thereby schooling herself to become better qualified to furnish instruction, both as to the manner of presenting it and the character of the material used.

After twenty-one years in Chicago, where both Mr. and Mrs. Adams were important factors in the musical life of the city, they have carried out a cherished plan of many years, and settled in the Blue Ridge Mountains, at Montreat, North Carolina, a lovely spot about eighteen miles east of Asheville. Here they are experiencing the saying of the old adage that the world will search out the worker who excels, no matter in what nook he may seek retirement, and make a beaten path to his door. They are still in constant touch with the great music forces of the country and are constantly being sought out, even in their mountain home, by those in need of that finish and inspiration, which has been recognized as characteristic of Mr. and Mrs. Adams.

MRS. ADAMS AS TEACHER

The following was written by an appreciative listener who was a guest at the studio one day.

"Mrs. Adams must have been born a teacher as well as a musician. Her method is too vital, too much a part of her profoundly musical nature to be described in the terms of a 'system.' She aims, first, to discover and arouse the latent musical capacity, which she believes to exist in the nature of each child; then to unfold and develop such capacity to its fullest possible extent. I could not fail to be impressed with the entire absence of anything suggesting affectation, artificiality, and formality.

"Mrs. Adams seems to inspire in each pupil a spark of her own love for the best, the simple, and sincere in music. We hear much about 'atmosphere,' in all art,—many vague references to its potent power, but in the presence of this teacher, one felt, for once, the force of the term 'personality' and 'atmosphere.' This is just as close as one can come to a description of her secret of success as a teacher, and reminds one of the story of a little lad

whose manner had improved so visibly under a few weeks' attendance at school, that his parents questioned him as to the cause of the wonderful change.

"'Does your teacher give you lessons in politeness?' they asked.

"'No, she never says a word about it,' he averred, 'she just walks around, and we all feel polite.'

"As Mrs. Adams is a teacher of *music* one can easily discover the analogy."

"IF I WERE THE TEACHER"

Mrs. Adams has a way of getting the child's viewpoint in order to help him the more. To this end, one time she asked the littlest members of her flock to write her a letter telling what they would do if they were music teachers, that is, what they would expect and require. The answers were most interesting, suggestive, and unexpected. Here are just a few of the observations:

"I would have my pupils hold their hands the right way and not let their fingers sink in."

"I should always expect them to be ready to play for friends and to keep their repertoire book good and full."

"I would have them finger nice and play their scales first."

"First I would get some pupils if I could. I would try to get their love and confidence so they would not feel afraid of me and would not dread their lessons if they felt they hadn't them as well as they should have them."

"I should want my pupils to have clean hands and to practise well and faithfully."

And here is a complete little letter! "If I were a music teacher I would have to know how to play pieces in all keys, both sharps and flats. I would have to know how to harmonize my chords and other notes on the piano. After I know how to do these things and begin to teach children I have to be patient with them (as you are patient with me) and not expect too much of them at first, coaxing them and pushing them up the staff of music life, and if they did not go quick enough to suit me I am sure I would feel like spanking them, but I would try and be patient with them as I am sure you have been with all your pupils."

NORMAL WORK FOR TEACHERS

In addition to very much teaching of children, Mrs. Adams has not confined her work to this department alone. She has had unusual experience in the instruction of girls and boys through their growing years and up to and including the advanced work. This gives her a musical survey that is invaluable in planning for their musical education.

Along with this private work have come the classes for teachers which have been held each summer during the past twelve years in Chicago. Two sessions are now conducted, one in the home studio, in Montreat, N. C., and one in Chicago. These have attracted many teachers from widely different sections of the country who desire to become familiar with useful and beautiful music in the way of études, pieces, and ensemble numbers, and to consider plans of study, program making, and, indeed, any other phases of the work which will tend to make them more resourceful and skilful in the handling of their teaching problems.

MRS. ADAMS AS COMPOSER

In the year 1896 a modest little set of pieces for piano, called *Five Tone Sketches*, was written by the subject of this sketch. The names of the separate numbers are: *Singing and Swinging, In the Rocking Chair, Dance of the Marionettes, Lullaby, and What the Bells Say.* A critic wrote thus: "*Singing and Swinging* is about the most beautiful easy two-part piece I have ever seen, the melody being charming and the cadences novel, easy and interesting." Another reference by the same writer to these pieces reads as follows: "These little pieces are incomparably above the usual level of children's music. They belong to something entirely higher and finer melodically and contrapuntally considered, and as a vehicle for awakening musical feeling, are of a very superior order. If the composer has more of the same class of material she owes it to the public to make it known."

Valuable as was this early recognition from this and many other reviewers, it remained for the children of the land to pronounce emphatically in favor of this collection. Their comments, their love for these pieces, were expressed in no uncertain terms, as the ever growing editions have revealed.

MUSIC FOR CHILDREN

Mrs. Adams was one of the first composers to consider the child's viewpoint as well as his needs. With the sympathetic insight of the true teacher and a comprehensive view of much of the existing literature for piano students, she undertook to minister still further to their needs with her own creative gift, as there seemed to be a demand for exactly what she had to offer. She has always believed that a child has good gray matter, and that since a cultivated musical taste is, or should be, one of the ultimate goals of all teaching, great care must be exercised in the selection of material used in that teaching. It is her firm belief that all music chosen should be "something worth saying said in a way worth remembering." Her own compositions must also pass this critical test. She does not write voluminously, but teachers throughout the land will agree that her music has been a real contribution to children's literature. Thus it happens that not only have the *Five Tone Sketches* found their way into the hearts of teachers and pupils alike, but many other writings by this lover of children, have, each in turn, claimed attention as the list grew, until the name of Mrs. Crosby Adams has become, as so may tell her, a household word.

Turning to the set of pieces which brought the name of this composer before the public, we find her every contribution which has followed, making a distinct appeal both to teacher and pupil alike. Mention should be made of each of these in turn, so affectionately are they esteemed, but space does not allow. To cite two or three instances, however, the instruction book called *The Very First Lesson at the Piano*, has been considered a revolutionary work, in that it brings nine major tonalities with a hint of the minors, thus being a concrete evidence of Mrs. Adams' belief that a child could encompas more than is usually expected of him while still little beginner. As some one has expressed i "Mrs. Adams makes grown-up looking-and-sound ing music possible for very young children—lik dressing up in mother's dresses." Her writings ar designed to help the pupil towards music at th earliest possible moment. Having small hands he self, she more readily understands the situatio confronting beginners, but, in addition to this, sh has a wonderful perception of the important pa the teacher plays in the child's life, a part which second only to that of the parent.

This same perception has given Mrs. Adams remarkable insight into the high calling of the voc tion of a teacher, and has made her name familia to progressive teachers all over the country. An while she has not confined all her musical writin entirely to compositions for the earliest grades, y because of their musical and scholarly contents, high standing is accorded the very smallest of the and her name is very naturally associated with th class of musical literature for beginners.

THE LATEST WORK

During the past few years Mrs. Adams has spe much time compiling a series of books for the st dent called *Graded Studies for the Piano*, of whi seven books are arranged for two hands, and tw books for four hands. These boo are filled with material beautiful fro a musical point of view as well helpful examples for the developme of technic. Says a critic: "The d mand for these studies proves th they are meeting a need, and satisf ing a large contingent among th growing class of progressive teache who have learned how to make mu teaching attractive and of educatio interest to the student; who ha broken away from the restricted me ods which mean drudgery to the pu and, therefore, a dreaded duty inste of an enjoyable study. The stud which go to make up this series books have been so attractively co piled that they prove exceptiona successful in fitting every requireme And the series affords a variety study not found in any other grad collection."

THE HOUSE-IN-THE-WOODS, MONTREAT, N. C.

The teacher of the normal class one of the largest conservatories in the country t her teachers, "Get everything Mrs. Adams e wrote." This enthusiastic recognition is sha by many others who are familiar with the resu obtained by their use.

The following summary of Mrs. Adams' comp tions will doubtless prove interesting to the read

First Grade.—The following instruct books are noteworthy: *Preliminary Studies, V First Lessons, Home Study Books.* In addition several sets of small studies and pieces.

Second Grade.—This material consists four sets of studies and five pieces.

Third Grade.—A set of studies for the hand and a number of pieces.

Advanced Third and Fourth Grade Several studies including *Thirty Improvisations,* all major and minor keys.

We should also mention piano duets, original, compilations, for work in Grades I, II, and III.

Mrs. Adams has written for the voice, both solo and in concerted forms, the *Christmas-t Songs and Carols* having had wide use.

And her pen activity has not been confined music writing as those who are familiar with books will testify: *Chapters from a Musical L The Doll's Musical Festivals,* and *What the Piano M ings of Edward MacDowell Mean to the Piano Stud*

WHERE SHALL I STUDY THIS SUMMER?

If you are pondering this problem read the article below

THE strong agitation in the various state organizations of music teachers as well as local associations is a certain indication that teachers recognize the desirability of working upon higher standards than hitherto, that each one needs a revision and raising of his own standards.

But a very practical query obtrudes itself, namely: how can I increase my professional equipment without giving up my bread winning work in the studio or class room?

Colleges and universities have met a similar need on the part of members of their faculties by giving a "sabbatical year." one year in seven. In the case of the private teacher the recourse is to use his summer vacation as a "sabbatical" period for study, and go to some school which has open doors in the summer, or follow some private teacher to his summer retreat, and there seek the special training which he wishes.

THE MUSICIAN is a firm believer in summer teaching and study, and notes, with much pleasure, that each successive summer more teachers and schools are at work with pupils, and that those who have been in the field for some time are growing in the number of their pupils, and broadening the courses of study offered.

It is possible now to make the short term of six to eight weeks a period of intensive study which means wonders for the student. Think what it means to an ambitious young teacher to have the privilege of meeting an instructor six times a week, of sharing in class meetings three times a week or oftener, and of living in an atmosphere in which all activities of body and mind are governed by educational purpose. That is what American summer music schools offer to their pupils.

This article will not undertake to tell the reader just where he shall go this summer for the very good reason that conditions vary with individuals. Some wish the seashore, some wish the country, others the mountains, and still others after a season in the smaller cities and towns, find a large music center stimulating in the summer.

NEW ENGLAND

It is the custom of many newspapers to call New England the great playground of the country. Within its borders is a great extent of seacoast, mountain, hill, lake, to say nothing of Boston's claims to being a pleasant summer resort. At Boothbay Harbor, on the Maine coast, is the Commonwealth Art Colony, with a School of Music under the direction of Prof. Clarence G. Hamilton, of Wellesley College. The courses of study include piano, singing, violin, with the theoretical classes required for sound musicianship and pedagogic skill. Concerts, recitals, and lectures round the work admirably. Outdoor sports, tennis, boating, canoeing, and salt water bathing are a part of the school advantages.

Coming west along the coast until near the New Hampshire line we reach Ogunquit, a summer resort of attractive features where Mr. Frederick W. Goodell, a prominent vocal teacher and choral director of Boston, and author of several books relating to the vocal art, Miss Florence Leonard and Miss Louisa M. Hopkins, of Philadelphia, representatives of the Breithaupt system of piano technic and teaching, and Mr. Karl Rissland, violinist, member of the Boston Symphony Orchestra, and a composer of high merit, have joined forces for the summer's work. This offers a fine opportunity to combine study with delightful summer recreation, under the breezes.

New Hampshire is the favorite ground for those who prefer the country, the hills, the mountains, and the lakes. One of the most beautiful bodies of water in the lower White Mountain region is Squam Lake, where Mr. Allen H. Daugherty, a well-known piano teacher of Boston, has opened a summer music school for girls, which unites fine musical instruction with the features which distinguish camp life in the woods for girls, namely, tramping, boating, canoeing, swimming, botanizing, etc. Pure water, table supplies direct from the farm, and genial temperature give healthful physical conditions.

Long Island Sound is the center of a teeming summer life. New Haven, familiar as the seat of Yale University, has claims as a summer resort. For a number of years past Mr. George Chadwick Stock, a New Haven teacher of singing, has remained at work during part of the summer, and built up a considerable following of earnest pupils who find the city a good place for intensive summer study.

NEW YORK

New York as a summer resort sounds a little peculiar when one considers the great number of New Yorkers who leave the city at the first breath of summer temperature. But one must not forget that the people of a great city who remain at home for nearly the whole summer are legion. And they have developed a summer amusement life of extraordinary interest and activity. Therefore, persons who come to New York to study music during the summer will find much to interest them and keep away dulness. The Institute of Musical Art, the New York School of Music and Arts, the American Institute of Applied Music, the American Progressive Piano School, Louis Arthur Russell's normal work at Carnegie Hall, and at the College of Music, Newark, the Musin Virtuoso Violin School, Victor Kuzdo's studio classes will offer fine courses of study under skilled instructors, at moderate prices. And those who do not hear much music at home will have plenty of opportunity to hear master works at the various resorts within easy reach of the city.

THE MIDDLE STATES AND THE MIDDLE WEST

But it is not necessary for pupils to go to New York or New England. Those who prefer the middle states with the summer features of a large city, will find what they want at the Pittsburgh Musical Institute, located within sight of the Carnegie Museum and Library, as well as the Carnegie Institute with its opportunity for summer study in other lines.

The normal work of this school is in the hands of well-equipped instructors who believe in high standards of excellence for teachers.

The Middle West offers to its people the advantages of one of the most prominent musical institutions of the country, the Cincinnati College of Music, which has supplied to American musical life artists of high standing and teachers of skill.

An interesting booklet "In the Footsteps of Our Students," issued by the College, is a magnificent record of educational achievement in music.

THE SOUTH

The South has not been backward in this feature of musical work, with Brenau College Conservatory of Music, at Gainesville, Ga., prominent among the pioneers and leaders, offering special summer courses in music with opportunity to take college studies at the same time. Keep in mind that Gainesville is in the foothills of the Blue Ridge, with pleasant summer temperatures.

A little farther to the west, still in the mountain region, we come to Montreat, N. C., the camp school for music students conducted by Mr. and Mrs. Crosby Adams during the month of June. On another page of this issue the reader will learn about the work of Mrs. Adams.

CHICAGO

Let us now make a journey northward, without stopping, to Chicago, which also claims to be a summer resort, with every variety of summer amusement which the ingenuity of man can devise. It is claimed that Chicago has a larger number of music students than any other American city. Certain it is that such institutions as the American Conservatory, the Chicago Musical College, the Columbia School of Music, the Northwestern University School of Music, at Evanston, The Walter Spry Music School, in the Fine Arts Building, to say nothing of the attractions offered in the studio work of the many private teachers, Mrs. Blanche Dingley-Mathews, Calvin B. Cady, Petrowitsch Bissing, D. A. Clippinger, Harold Henry, and others, for example, must draw a very large number of students in summer as well as during the regular season. Chicago is a good place to go for summer study no matter what may be the special needs of the prospective student. The institutions and teachers mentioned above are prepared to give you what you want. And Mrs. Katharine Burrowes will conduct summer classes for the teaching of children at Detroit.

We have not forgotten our readers in the extreme western section of the country and neither has the well known educator, Miss Alchin, who will carry on classes for teachers and students in harmony and ear-training at Los Angeles. Miss Alchin is author of several valuable text books, namely, *Ear-Training* and *Applied Harmony*.

———*———

VICTOR TALKING MACHINE RECORDS FOR APRIL, 1916

GETTING nearer to the time when people will begin to think about summer music. The time was when few cottages and summer homes had pianos. But the invention and perfection of the phonograph has made it possible for us to have all kinds of music whenever we want it, providing we will give a small space in our houses for a Victrola and cabinets for records. Here are a few issues that are worthy of note:

Caruso, Enrico, tenor: *Luna d'estate* (*Summer moon*), an exquisite Italian song by Tosti. He also presents the great tenor air from Gounod's *Queen of Sheba, Lend me your aid* (*Prete-moi ton aide*).

Culp, Julia, contralto: *Dutch serenade*, by S. de Lange, with accompaniment for the harp. Sung in Dutch.

Elman, Mischa, violinist: *Menuett* in D (No. 2), by Haydn, a dainty piece in the old classical style.

Gluck, Alma, soprano, and **Paul Reimers,** tenor: *Hoch vom Dachsteinan*, a Styrian folk-song, by Seidel, and a charming duet.

Hempel, Frieda, soprano: *Cradle song* (*Wiegenlied*), one of Mozart's loveliest songs.

Journet, Marcel, bass: *La Brabanconne*, Belgian national air, by Campenhout, and *Le pere de la victoire* (*Father of victory*), an old French patriotic song with new text, dedicated to Gen. Joffre.

Kreisler, Fritz, violinist: *Spanish dance*, by Granados, the composer of popular Spanish operas.

Martinelli, Giovanni, tenor: *Questo quella* (*'Mid the fair throng*), a favorite air from Verdi's *Rigoletto*.

McCormack, John, tenor: *Beautiful isle of somewhere*, by Fearis, a popular sacred song.

Powell, Maud, violinist: *Gondoliera*, by Saar, a Cincinnati composer.

Schumann-Heink, Ernestine, contralto: *One sweetly solemn thought*, by Ambrose, a sacred song which has won its way into the hearts of thousands.

Werrenrath, Reinald, baritone: *Good bye*, by Tosti, and *Oft in the stilly night*, by Tom Moore.

The Borough on the Hill, and What Benefit Am I to My Community?

TWO STUDIES IN COMMUNITY MUSIC

BY THOMAS TAPPER

DUNMORE, PA., has made its significant success of Community Music Night. More than fifteen hundred people attended the Community Singing Evening, inaugurated by the Borough on the Hill. A Scranton, Pa., writer (we regret that the clipping in hand does not carry the name of the paper) says:

They were not all Dunmoreans, this audience. There was a good scattering of Scrantonians, a few from Wilkesbarre and a good delegation from up the valley. They had heard about this community singing and came to see what it was like.

They found a fine program awaiting them—very unique in its character in that it provided for community singing, individual singing, quartet singing, and piano selections. Those who performed were all from the town. That these artists were willing to perform for the people of Dunmore shows to what extent this new music innovation has taken root in Dunmore.

The auditorium proved too small to accommodate the crowd—a crowd that filled the aisles and crowded the corridors to the doors. It was a good-natured crowd—they came to sing and did sing even though they had to stand throughout the evening.

"It is to be Pennsylvania night," said Superintendent Hoban as he mounted the platform and called the audience to order. "We are to sing the songs of Pennsylvania composers: we are to learn something of the life and work of these authors—Barrett, Nevin, Foster, Bispham and Thomas Dunn English—and try to give them a memorial in our hearts equal to that which their music now occupies."

Pennsylvania, John E. Barrett's state song, was taken up. The lights were turned out and by means of a stereopticon the chorus was thrown on a screen hung in front suspended from the ceiling. Mrs. Owens first drilled the altos. They came out strong and with beautiful quality. "That was fine," said Superintendent Hoban. "Now, bass, show what you can do," and every bass in the audience responded. Then Mrs. Owens drilled the tenors, and, as a climax, all the voice parts joined in the singing of the song. The effect was most thrilling. The building fairly vibrated with the volume of the 1,500 voices.

Then there follows the story of the life of David Bispham, a Pennsylvanian by birth; the story of Ethelbert Nevin's *Rosary;* of Thomas Dunn English's *Ben Bolt.* There were piano solos, songs on the phonograph, choruses, and much else of interest. It is described as "a good night."

"Dunmore did itself proud—and the great audience filed out feeling that a great night's work had been done, and impatient for the next event."

And it may be added that, in its Community Singing Evening Dunmore has an asset of immense value. It will point the way, as leader, to countless other communities. For

What it has led its citizens to do with music warms the heart, brightens the eye, cultivates brotherly love and makes forgiveness for any form of you-hurt-my-feelings easy enough.

———*———

THE artistic temperament cannot be taught; it is inborn. To train a pupil whom nature has endowed with this gift, to bring out all that there is in him, to encourage him never to forsake his ideals, is the highest mission of the teacher, the pleasantest part of a none too pleasant occupation.—*Francesco Berger.*

WHAT BENEFIT AM I TO MY COMMUNITY?

YOUR articles on Community Music—thus runs a letter to the Editor of this department—have inspired me to ask myself some questions. At first I was entirely skeptical as to the value to be found by the community in the work of the private teacher. I argued thus from my own experience:

I attend to my work just as faithfully as I can. On my own initiative I secure my pupils and by my own study, knowledge, and industry I help them. The whole matter then is private; it involves me and my pupils and is no affair of the public.

This is the way I argued at first. Then one of my pupils asked me whether she might play at a school function to be held on a Friday afternoon in the assembly room. We decided upon what she should play, worked it up carefully, and held the proper rehearsals.

I determined to go to that school function if I could. The principal was very courteous and invited me to sit with the teachers. The program was excellently arranged and splendidly carried out. Every number had individual interest, was pleasingly presented and the appreciation of the children was delightful to witness. Emily played her piano piece quite to my satisfaction and infinitely more to the satisfaction of her schoolmates.

As I came away from the building and watched the children romping, running, and shouting on their way home, their sedate parents bringing up in the rear, it suddenly crossed my mind that I had been in attendance at a community concert; that my pupil Emily had made her debut as a community performer, and that by all lines of reasoning I had become a community teacher. That is, by my work with Emily, done privately and earnestly we had this day given pleasure to an audience of several hundreds of people, young and old, hitherto unknown to me.

I determined, then and there, to study the question of community service; not academically, but in the practical application of my ability to my townspeople. Here is a school, a community unit, which could quite easily think of itself as I had thought of myself: called upon to teach and let it go at that. But it didn't let it go at that. It found twenty ways to please its pupils and their parents; it took time, trouble, and pleasure in arranging as pleasant an afternoon's entertainment as one could wish to attend.

At once I thought more of the principal of that school and of the teachers. They were making good, and not only that, they were anxious for the make-good to be known and enjoyed.

What, in like manner, was I doing?

When I asked myself that question I nearly fell over. What I had hitherto rather rebelliously regarded as my private professional activity I now saw was a straw man of my own selfish creation. The root and branch of the truth was this: **I had clung to the privacy of my work, to the exclusion of my task, to the dignity of my calling, because I was a poor team-worker, or better, no team-worker at all.**

I stopped quarreling with your community music preachment, and made up my mind that I had been interpreting it wrongly. Instead of pondering on what people are doing in distant places; instead of thinking how impossible distant successes would be here, I saw at once that it was my duty to think of what would succeed here, right here in the home town. **I determined then to examine my surroundings, starting where I found my two feet.**

I would recommend to you readers to do what I next took the pains to do (and they were real pains) I wrote as carefully and as fully as I could two sets of sentences.

1. What can the music teacher do for her community?
2. What can I do for mine?

When I thought I had done my best on the two lists, I made a third.

3. What I am NOT doing for mine?

I said to myself, here I am forty-six years old (don't reveal my identity, Mr. Editor). In all the years of my teaching I had supposed myself free and clear of debt, and now I find that I owe a tax. But I am glad to pay it. This dear home town of mine has provided welfare to me and to my parents and to my grand-parents. It gave me a splendid education; it gave me even a part of my musical training. And when I was ready for them, it gave me children to teach, boys and girls of its families.

And all these years I have been thinking that all I do in my daily teaching life is my own private affair.

I have discovered a new and enticing working creed. I am going to pay my annual tax in service such as I can render, and I am joyful in the anticipation of my plans. I see expansion in my work and not contraction. (Forty-six is a tragedy when interests are growing fewer.)

Perhaps readers of this letter, if it ever gets into print, would like to know what I wrote down for the three lists, particularly number two: What can I do for my community?

I find that every statement in this list springs from the individuality of the town and its people. I am not attempting to run my town's music, but I am trying to contribute. These things shape themselves more by the guidance of a hand than we are inclined to believe. From this guidance I have learned a few things. It is restricting, constricting, belittling to be musically exclusive.

I shall never forget the first big hint. Let me show it this way:

a. I, sitting in all my feeling of privacy, in the school.

b. Emily, in all her pride and innocence.

c. The five hundred or more listeners cheering Emily and waking me up.

Does it take time and does it pay? Yes, it takes time just as courting does; or going to Europe or stopping in the midst of a day's work to receive the good news that a legacy has come to you. But now, I regard the time it takes as the greatest privilege of my life. I am doing something for other people.

Does it pay?

Yes, it pays, just as it pays to take the trouble to sit down to a good dinner, or as it pays to accept a kindness.

It pays in outlook, inlook, pleasure given and received, knowledge more and more humanely applied.

I could go on forever.

Just try it.

———*———

No one can arrive at being an artist without mastering the technic of his art; that applies to all of the arts equally. But to have done this, and this only, will not suffice to make the artist. Something more is wanted. If we deduct from a great artist all that is purely technical, we shall still find a heavy residuum of his own personal artistry that which not only makes him the artist he is, but which differentiates him from other artists. If they were absent each would exactly resemble the others. Though Paderewski and De Pachmann, and Busoni and Carreño have all been through the same mill of technicality, there is a wide gulf of individuality which distinguishes each from each, and this, nothing else, is what we call their art.—*Francesco Berger.*

MUSIC FOR THE MOVIES

BY THEODORE STEARNS

THE selection of adequate orchestral programs to fit moving pictures while on the upward trend is still in its infancy. Except in a few ases—and these may be counted on the fingers of ne hand—managers have yet to realize, apparent-, the coming necessity for spending time and oney to meet the musical demand which large udiences expect when they pay a dollar, two dol-rs, or even fifty cents to see big feature pictures. production like the *Birth of a Nation*, now so olidly known that it is above any apparent free dvertising, has a complete program of accompany-g music, composed and arranged like an opera, nd the score is even published.

Marie Dressler, in her last two five and six-reel omedies, had special music *composed*, not merely ranged, to fit each and every incident flashed on ne screen. The length of these two pioneer original ompositions is sixty and eighty minutes respec-vely, and calls for a large orchestra.

With the large moving picture houses using or-estras of from twenty-five to forty men the selec-on of a long program that will synchronize per-ctly with the ever changing feature films and noto plays is manifestly a difficult procedure. hese big pictures are released on a certain date and ne same afternoon are flashed on the screen before ne matinee audiences. Naturally there is, in this ase, but one thing for the leader of the orchestra do and that is, having learned from the press gent in advance, the general character of the pic-re to be shown, to select from his library an as-rtment of music which, in his judgment, will fill ne bill, the orchestra parts are placed on the music ands in a pre-arranged rotation and rehearsed in e morning with the pictures, before the house ens.

In many instances, however, such a rehearsal is ot held. In this case the musical program is rgely a matter of "hit and miss" for at ast the first one or two times the picture is run off, until the leader is sufficiently familiar with the cture so that he may re-arrange his program in ots and give the *Segue* sign to his men to jump to e next musical number, thereby following more osely the action of the screen play as it grows and velops.

The selections making up a musical program cover exceedingly wide range, and where the orchestra composed of good players the music may include ything, from Palestrina to Puccini, or Beethoven Irving Berlin. Unfortunately the custom with aders is to break off in the middle of a beautiful erture, selection or concert piece and jump to a ck "hurry," ghost dance, melodrama thief usic, or what not, thereby not only ruining the usical scheme, but also shocking the esthetic nse of the intelligent listener who nowadays is owing to be a really large part of the big picture use audience.

If the music were specially "composed" for pictures naturally these violent contrasts could done away with, for the composer could measure s music with the aid of the metronome to corre-ond with the displayed length of each scene on the m.

Up to date this method has been used successfully only one composer, Frank Saddler, of New York, the past twenty years known from coast to ast by all first class theatrical orchestras through s beautiful orchestrations of the big Broadway oductions.

Again the moving picture leader is chained and und by tradition. Also his manager wants to ar a vicious crash on the drum when Chaplin falls Montana Bill shoots. A departing train or steamboat on the screen without its accompanying "choo-choo" or "toot" in the music would lay the leader open to reprimand, nine times out of ten, and if a moonlight scene with the *Barcarolle* from *Tales of Hoffmann* were suddenly interrupted by a battle or mob scene we would "kind of" like to hear the music change to something more exciting.

Insensibly, then, all of us are more or less to blame for good-naturedly tolerating such an unmusical state of affairs.

This is all the more significant, if not really serious, when reflection must tell us that the major portion of the next generation is even now gradually and subconsciously moulded by the moving picture industry of today.

Not one of us would tolerate bad pictures and very few of the habitues of the movies will stand for old pictures, cracked ones, in any way mechanically poor, without some protest. It is human nature to kick if you do not get the full worth of your money. Yet we listen, fifty per cent of the time spent in witnessing the movies, to poor music or distorted good music usually without a murmur.

This is unjust to ourselves, to our children's artistic development, and to music itself, the only plea for ages for the effectiveness of which consists in its careful and concientious rendition.

Until the splendid moving photography is harnessed in a dignified manner with specially composed and synchronized music that fits it, then, and not until then, will the full worth and mission of the modern photo play be adequately announced and fulfilled.

The seed has been sown and is just beginning to sprout. In many ways the question of regular, music for the movies is "up to the managers and producers" in theatrical parlance.

But back of it all is it not more likely to be up to the twenty million paid admission tickets that nearly each day in the year swell the mounting movie millions in the United States alone?

COMPOSITION FOR ELEMENTARY PIANO STUDENTS

BY CHARLES N. BOYD

EVERY harmony teacher realizes that an enormous gain could be made by students if they would begin some sort of music writing at an early stage. Leaving out of the question the idea of self-expression, the student would profit greatly by increased familiarity with many essentials, even down to the mere matter of notation. Still better, the student early learns to look at music from the inside, so to speak. Instead of merely trying to play so many notes, the determination and expression of the musical idea becomes the main question.

Even in the case of very young students, one of the first investments should be a blank harmony exercise book. This is brought to each lesson, and in fact the teacher may decide that it be the only book a beginner needs for some time. In it is written, from day to day as needed, all the simple, technical exercises, scale and chord experiments and as many rhythmical inventions as the stage of advancement warrants. Concise directions and rules may also be noted in this book, in direct connection with the appropriate subject. The pupil does most of the writing, even if the teacher could save time by the opposite plan. A surprising number of points for discussion and explanation come up in the course of this preliminary work.

As soon as the first grade compositions are undertaken, the pupil is ready to begin writing. Probably melody writing will be taken up first, in four-bar phrases. The composition, or one of the pieces, for the week will serve as a model. It will first be given a thorough analysis, and all the essential points of the melody will be thoroughly discussed. Then new phrases will be constructed out of the same chord and scale material, preferably in several different versions and with constant rhythmic alterations. The pupil soon learns many valuable points about melodic construction, and by comparison of model copies the performance of the former will be improved.

Next, after the phrases have been enlarged to periods, begins the simple harmonization of the tunes. The analysis of the melodic structure has already laid the foundation for the harmony. While retaining the same melody and harmony, different varieties of accompaniment and treatment may be borrowed from other pieces in the instruction book, and the pupil early accustomed to chord figuration. Of course all this material is to be transposed to various keys, mostly at the keyboard and seldom written out.

The third step is the outlining of simple compositions in the smaller forms. Here the model is dispensed with, unless it may be for cadence formulae, and the pupil practically thrown upon his own resources. It will often be found that the first results of the work are suspiciously like some of the pieces in the instruction book, but the pupil's individuality usually begins to assert itself at an early stage. Only the teachers who have tried some such plan have any idea of the possibilities, or even the facility, of the average pupil at such work

Of course ear training must be a feature of every grade in this work. It is a curious commentary on music teaching in general that so few pupils have even a remote idea of what they hear, and that piano players seem especially deficient in this regard. If begun in time and regularly, not spasmodically, kept up, the pupil makes the acquaintance of each new chord or progression by ear as well as by the eye.

Even the young pupils should be provided with a musical dictionary, such as Elson's. The very small dictionaries are too condensed, though they may contain all the terms a pupil needs for some time; it is better to spend a dollar or so on a book that is not so tabloid in form. If the teacher expects the pupil to know the meaning of every musical term encountered in his work, and also insists that the pupil's exercises be liberally and precisely marked, the use of the dictionary becomes a pleasure. In fact, the teacher has to be careful lest the pupil become the more exact of the two in the use of less common terms.

Perhaps one caution is necessary concerning the correction of the pupil's exercises. Above all things is to be avoided the dry, precise, square-cut harmony exercise, though there is much less danger of encountering such examples in this way than there is in the use of a harmony text-book. A good deal of latitude should be allowed, and discussion of doubtful points is vastly preferable to downright criticism. The spirit of investigation and experiment is to be encouraged. Finally, the teacher will always keep before the pupil the object, increased ability to deal with the music to be studied, and will see that the pupil does not wander off into paths of his own devising.

ISAAC ALBENIZ

BY H. J. STORER

Those who keep in touch with whatever is interesting or novel in the way of present day piano music, have doubtless observed on recital programs the name of Isaac Albeniz, among others of Spanish origin, who are in the public eye at the present time.

It is hardly more than ten years ago that Albeniz, as a composer, was first heard of in America, although for some years previously he was favorably known both as a pianist and composer in England, and other places outside of his native country. The fame of Albeniz as a composer is growing, although, like many another before him, such recognition is posthumous; for he passed away several years ago.

Spain and its people always suggest the romantic side of life; and the early career of Isaac Albeniz was as romantic as it was unusual. If his childhood had been today, instead of fifty years ago, what a wealth of material would have been at the disposal of the passionate press agent. As it was there is not the record that there should be as to the concert tours that Albeniz made in America and Cuba in his early days. But there is enough, however, to picture a most unusual career of one who ranked well in life, and whose comparatively premature death cut off what promised to be an even greater career, especially as a composer. His life is indeed a romantic picture, which will be of interest as a knowledge of his compostions becomes wider among pianists and music students generally.

A MUSICAL PRODIGY

Isaac Albeniz was born at Camprodon, in Catalonia, Spain, May 29, 1861, one of five children of Angel and Dolores Albeniz. His father was a government official at Barcelona and as neither of the parents were musical it is probable that the son inherited some of his musical ability from a relative, who had considerable reputation as a church musician. Young Albeniz had an older sister who showed much ability as a pianist although herself quite young, and it was from her that he first heard music which was to develop his own ability, and at the age of three he had already learned much from her.

The older Albeniz, although not musical, had already observed the first evidence of musical genius in the son, and, noting also his rapid progress, sent him to Paris, where for two years or more, he studied with A. Marmontel, at that time in charge of the piano department of the Paris Conservatory. Young Albeniz is said to have made such rapid progress, that on his return to Barcelona, at the age of seven, he made his first public appearance at the Romea Theatre in that city. On this occasion, among other pieces, the youthful prodigy played the last movement of Weber's *Concertstück,* and Dussek's sonata, known as *Les Adieux,* a great favorite in those days. Not long after, the family removed to Madrid, where the son afterwards gave a concert with the same success as at Barcelona.

The praise that was bestowed upon young Albeniz made him feel as if he could win further success in other lands and places, although he was scarce ten years old, and, further, he had a great desire to learn more than was possible under local conditions at the time. The father could do little for him and, as a result, the son ran away from home to make a living on his own account by appearing as a pianistic child wonder.

TOURING AMERICA AT ELEVEN

In 1872 he came to America, although under whose protection or management is not stated. For two years he gave concerts in some of the larger American cities, going afterwards to South America, and thence to Cuba. Meanwhile the father had been making business trips through various places in Spanish America, and, during the winter of 1873, was in Havana, where, by a remarkable coincidence, the son was giving a concert. The older Albeniz, although still unreconciled with his son for leaving the parental roof so early in life and without sanction was still sufficiently interested in his son's musical career to attend the concert. It is said that the father was so well pleased with the boy's performance on this occasion, that he made his presence known to the youthful prodigy after the concert, and a complete reconciliation followed.

TAKES UP STUDIES AGAIN

Then father and son had a long discussion as to what should be done further, and it was decided to return to Spain as soon as possible. Young Albeniz, although precocious in many ways, still lacked a certain fundamental training that would be essential if he desired to take rank with the leading pianists of the time, and the father decided to send him to Leipzig, where he went in 1874. Here Albeniz lived for nearly two years, on the proceeds of his former concerts in America, studying with Carl Reinecke and S. Jadassohn, but whether or not such purists had much influence on the exotic mind of the young Spanish student is a matter for conjecture.

Albeniz returned to Spain in 1876, as the father declined to pay further for the son's education. What was the next best thing to do? The son went, on his own initiative, to Madrid, where he put his case to the wife of Alphonso XII, who was always ready to assist worthy artists of her own nation, both by good advice as well as financially. The Albeniz case was no exception. The Queen gave him a pension for a certain time which enabled him to go to the Conservatory at Brussels, where he studied the higher aspects of piano playing with Louis Brassin, and harmony and composition with Auguste Dupont and François Gevaërt. He won first prizes in all departments as a reward for his labors.

Albeniz's royal protector, the Queen of Spain, had meanwhile kept in touch with his work at the Brussels Conservatory, and was so gratified with his success, that she gave him a letter to Liszt, who was living at Rome at the time, and, as a result of this, Albeniz was a pupil of Liszt for six months. He must have gained greatly by all this, for his old teacher, Brassin, who was in Rome at the time pursuing study as a painter, said he only used the brush well when Albeniz was playing something to him.

PROFESSIONAL CAREER

Things went along until 1881, when Albeniz again visited America, where, for a year or more, he gave many concerts and recitals under both public and private auspices. It is unfortunate that the public records of the time give little or no account of his tour here, although from certain meagre notices, one learns that Albeniz made a delightful impression, even if he were not the subject of much newspaper comment. Times have certainly changed in the last forty years in such respects.

After his trip to America, Albeniz returned to Spain. For a time he settled in Barcelona, where he taught and gave concerts, appearing also in Valencia, Cadiz, Seville, Grenada, and other places. In 1883 he married Rosina Jordana, and there were three children by this union. The year following, he was appointed Court pianist to the King of Spain, and Madrid became his home.

Now was the time that the name of Albeniz was becoming known outside of his own country, and his romantic life, together with the undeniable charm of his playing, helped to put him in the eyes of the musical public. He went to Paris in 1884 at the invitation of Erard, the piano maker, where he gave five concerts, and delighted the younger generation of the French metropolis. While, from report, Albeniz did not take the national messag so seriously as others of his countrymen, his compositions, mostly then in lighter vein, were note worthy for piquant rhythm, sensuous coloring, an charm of manner, and he was described as a virtuoso of high rank, with "delicious cosmopolita talent," his technic showing a "fluid grace, nervou precision, and withal great poetic sense and sen sibility."

Albeniz was now working on compositions o larger scope, besides his other musical duties. Hi first appearance in London was at a musicale give by Lady Morell Mackenzie, wife of the eminen physician, and shortly after he appeared publicly a a concert in Princes Hall, where he made a gre success, because of the beauty and breadth of h tone, his superb technical acquirements, and po etic interpretation.

WORK AS A COMPOSER

His success was so great, that he asked for an obtained a ten years' leave of absence from h duties as Court pianist to the Spanish King, remain ing in England for most of the time until 1900, great demand as a teacher. During these Londo years, Albeniz produced his opera, *The Magic Opa* (Jan. 18, 1893), which, though greatly admired fo its piquant themes and interesting score, had b indifferent financial success. This lack of publ success did not, however, prevent his writing v rious works for the stage, such as *Enrico Cliffor* (1894) and *Pepita Jiminez* (1895), produced at th opera house in Barcelona, and *San Antonio d Florida* (Madrid, 1894). These were all produce under the composer's direction, and it is said th he financed the productions as well, unfortunate for him, at a loss, although the works were w received.

During his later years Albeniz lived more or le in Paris, where he gave concerts, and also studi with Vincent d'Indy and others of the mode French school, his latest works showing more less of its influence. His orchestral suite, *Catalon* was given at a concert in Queen's Hall, Londo with much success, and was also heard at a C lonne concert in Paris. His piano suite, *Iberia,* w also frequently heard.

His smaller works for the piano were beginni to be appreciated at this time (1906), a few them being occasionally called for in America. U fortunately, just as his star began to rise over extended musical horizon, his health failed, a in the spring of 1909 he went to Cambo in th Spanish Pyrenees, hoping that the change would of benefit. The relief was only temporary, f Albeniz died there on May 25 of that year. the time of his death he was working on the se ond part of his *King Arthur* trilogy, entitled *La celot,* and had already finished the first part, *Merl*

Albeniz, in many ways, had a remarkable care both musical and otherwise. As time goes on mu that is now practically unknown of him will pro ably come to light as his numerous piano works l come better known. His *Iberia* suite has be heard here, and among smaller works, the *Tan* has become popular with many pianists. Now th Spanish music is being studied and enjoyed, A beniz will come into his own, and his works w prove a rich field, for whoever wishes novelty well as unusual tonal effects.

A younger representative of the Spanish scho Enrique Granados, is now in New York, where opera, *Goyescas,* had presentation. While, unfo tunately, Isaac Albeniz is not among the living present his conception of the modern in Span musical art, his works are with us, and many p neers in the way of novelties will present th to us for our instruction as well as enjoyment

THE RIGHT BELIEF IN WONDERS

BY CONSTANTIN VON STERNBERG

THERE is, I trust, no human heart which, in the depth of its recesses, has not some little nook where the materials are stored building "castles in the air"; where the be- f in or hope for wonders and marvels has not ind a hiding place so well-concealed that ither friend nor foe can find access to it.

This is especially true with people who are id of poetry, painting, sculpture, music, or in any form. As it happens that I, too, am essed with such a heart, I ought to be the t person to find fault with this snuggery of acy. And I would not have a word to say ainst it were it not for the unjust feature of eping not only the enemy out, but also the end. The dangerous enemy, Cold Reason, is merciless foe who delights in destroying the id fancies of which the air-castles are to be lt and it is not more than prudent to keep n out.

But the friend, Common Sense, should find mittance, for he can be of great help in the ilding and in making the airy structures sub- ntial enough to stand, after a while, on the ra firma of real life without losing any of ir charms.

This belief in wonders is one of the most rious gifts of Heaven. Without it, beauty uld be dead, and we should turn into cold, signing, heartless thinking-machines to whom flowers are but a waste of natural energy, woods but future lumber, and the rainbow ootless refraction of light rays. Without it, etry would lose its right of being, painting n into a purposeless optical delusion, and mu- —the most glorious of the sisterhood of arts would become what poor, pitch-deaf Balzac led it, "an expensive noise."

Where, on the other hand, this belief in won- s and marvels dwells safely in a heart, it ssoms out into a sense of beauty. It makes life itself a source of enchanting mystery; t becomes the reflector of the outer and the erpreter of the inner life, while Nature turns o the very speech of God.

Yet, this fond belief in marvels, this building terial for castles in the air, if it is left to lf and if its owner fail to call to his aid the e friend and architect, Common Sense, to ke beautiful and practical plans, the material he fancy—is absolutely certain to fall into ay and the castle will turn out to be a freak- sort of structure, bound to tumble down ore being finished, break into splinters and ve the unskilled, over-secretive builder a y to painful disappointment and bitter re- t. Alas and alack, that such a sad experience uld be so frequent! But so it is, unfortu- ely, and it always comes about by the same or of starting to build without consulting t clear-headed and well-meaning friend, mmon Sense.

Young people, whose love of music is, unfor- iately, coupled with aversion to work, mani- t their belief in wonders by pinning their h on strange, queer "methods," such as are dly proclaimed by cunning charlatans.

Of these "methods" there is no end. In utter regard of the very nature of music, physi- gy, and anatomy, they advertise: "Piano ying taught in ten lessons"—"The miracu- s Twaddlitzky method"—"Piano playing learned hout practice"—and so on and on.

It does not take these charlatans very long to attract a goodly number of victims, because the innate belief in wonders is often still further strengthened by the desire to obtain "something for nothing."

The poor, ill-advised dupes either forget or do not know that "something for nothing" is a proposition which is both morally and physically impossible. They take up the "wonder-method" and when it is finished they can—at the very best—strum one or two of such pieces as would better not be played, and which have been *drummed* into their heads. They realize very soon that they have learned nothing about music, that they are unable to study any piece of decent music by that method, and, worst of all, if they afterwards do go to an honest teacher, they must have their queer notions unrooted, which takes much time and effort. They cannot even begin to learn something before they have *unlearned* what the "wonder-method" made them believe to be knowledge. The reproach of having tried to obtain "something for nothing" they ward off by saying that they paid their good money for it. But this defense does not hold, because money is not the coin with which knowledge and ability can be purchased.

The money paid to a good teacher compensates him only for his time and for his skill in presenting his knowledge to the student so clearly that the student can grasp and understand it; but the grasping and the understanding of it is the student's business, not the teacher's. The pupil must put his mental powers to work; he must think; he must practise in order to make the rational action of his fingers, arms, and shoulders *habitual*. This work, this mental and physical effort, is the coin which can buy knowledge and ability.

The coin must be of the student's own minting; no coin from any other mint will pass.

Besides the aforesaid charlatans there are teachers, so-called, who teach by the aid of "thought" methods (they make you "think that you can play"); others through some oriental occultism, and others, for all I know, by hypnotism, *à la Trilby*. These methods may be based upon an erroneous, though honest, belief; but has anyone ever heard an artist or a good amateur play or sing who was taught by any such method? I have not, and I never met anyone who has.

This is not said to tear the belief in wonders out of young people's hearts. On the contrary, it is said to strengthen this belief and to lead it into the right path.

For the wonders lie not in the way of learning it, but in music, itself!

When our heart is saddened, music consoles it. To our joy it gives the highest utterance; the love of country is intensified by the tunes of patriotic songs; the warrior's courage is fired by music; the "homey" folksong brings back the happy days of our youth; our faith in the infinite mercy of God peals from the organ and the choir chants what we feel too deeply to put into words—music does all this; is there a greater wonder? All the music composed in a long sequel of centuries; all the music which to gather into one library would be no more possible than to put all the inhabitants of the earth into one hall; *all this music* was written with the slender and simple alphabet of musical notation, which the great thinkers of the world declare to be "the most stupendous achievement of the human mind"—where is there a greater marvel? And yet, there is a still greater one! The greatest of all these wonders is:

That a kind Providence has given to every normal mortal the power to unlock the portals of the magic palace of music.

To every *normal* mortal, I say; for, normal people *pay* for what they purchase and pay with proper coin, which in this case is: WORK and COMMON SENSE.

Strange to say:

Work alone will not unlock these gates. Common Sense must oversee and guide the work.

This overseer performs in our studies that function which the wind does in a corn field. The stalk will grow without wind. It will even grow a sort of an ear—but the ear will be empty (that is why it holds its head so high). The wind, which carries the fructifying pollen from one blossom to the other, was missing; and so the stalk put all its strength into unnecessary tallness, into useless corn-silk, into pith (which is of poor, flabby quality in empty stalks), into anything and everything except into the one quality for which the seed was confided to its kind Mother Earth.

The analogy between the growth of grain and the result of study is perfect because in nature all things are akin. Our study of music is so often unproductive because we reach for speed, as the corn-stalk reached for tallness. We reach for force; we make a fetish of fingering, of pedaling, of obeying the metronome prescriptions, and what not; while the simple and natural question asked by Common Sense remains unheeded. How does it sound?

Let me ask every piano student individually: Can you tell how your playing sounds? Have you ever LISTENED to it?

Do not be ashamed to say "No"! There is, as you know, safety in numbers. Thousands of other students are just like you. They cannot tell whether they do or do not like their own playing because they never listened to it. Yet, they all expect their auditors to like it, and if these do not find it enjoyable, what causes their dislike? Let me tell you:

For illustration, let us assume that your vital energy amounted to 30 pounds per second. You spend 15 pounds of it upon your eyes when you read music, or upon your memory when you play from memory; and the other 15 pounds go to your motor centers to direct the actions of your fingers. But your ear, your hearing, the main function in music, gets—nothing! You are like a painter who looks at his palette only, and puts the colors wherever they may hit the canvas.

It is not enough that you hear what you have struck.

You should, inwardly, hear every note BEFORE you strike it, and TELL the piano what to do instead of INQUIRING of it HOW that note will sound.

And when the key is struck, your controlling ear should examine whether the sound it produces is right in pitch, in touch, in strength, and in its relation to the other notes of the phrase.

You believe in wonders—and may Heaven preserve you this beautiful belief—but you look for them in the wrong place. The wonders of music are not to be touched with the fingers. It takes a much finer organ to perceive them. If you only knew what an almost incomprehensibly fine instrument your ear is! To it alone music reveals its marvels and the ear alone can open the gates to them.

Believe in wonders, for there ARE wonders; but they are IN the magic palace of music, not on the road to it. Let no trickster deceive you about this.

Literary Methods as Applied to Music Study

A Method for the Appreciative Study of Piano Music, Adapted Either to Individual or Class Work

BY CLARENCE G. HAMILTON, A. M.
Associate Professor of Music, Wellesley College.

IV

This series of articles forms the basis for a practical and successful Course in Appreciation of Music.—Editor THE MUSICIAN.

EXAMPLES

NUMBER each of these as described under examples of the first type. Be sure to have each piece performed *twice* before proceeding to the questions.

I

Nocturne in B major, Op. 32, No. 1.
Frederic Chopin, 1810-1849.

A: FORM

1. There are two principal divisions, the second of which is repeated; and a short Coda follows. The letter formula is this: A (measures 1-20); B (20-41); B′ (41-62); Coda.

Note: An accent above and to the right of a letter signifies that there are some changes in the repetition. Examples: B′ above.

Evidently the two divisions are practically of equal length. The repetition of division B seems amply justified on account of its variety of treatment and the addition of subtle touches.

2. Division A closes clearly and with precision on the first beat of measure 20; and division B enters on the second beat without perceptible break. A similar ending and recommencement of division B occupies measure 41; but in measure 62, the ending of division B′ merges imperceptibly into the Coda, which has the effect of an extension of the same thought.

3. Three changes are found in the repetition of B. The first two of these are very slight, involving the addition of a grace-note in measure 43, and of a chromatic interval in measure 45; while a more elaborate effect lies in the cascade of notes which leads to the ending in measure 60. Chopin's artistic restraint is shown in the delicacy with which these changes are introduced.

4. In division A the first 7 1-4 measures are *principal* in character. Then follow four *transitional* measures (8-12), after which the principal passage returns, with embellishments. Division B, though it contains a diversity of material, has yet a definiteness of aim which entitles it to be called a principal passage as a whole; and the Coda simply completes its meaning.

B: MOVEMENT

1. Compound duple, or *quadruple* meter prevails throughout; though this is interrupted for the free passage in measure 63.

2. The movement is flowing and sustained, but of an emotional character which causes a frequent variation in pace. An instance of such variation occurs in measures 6-7, where the mood hurries to a climax, but breaks off abruptly, after which there is a tender and subdued cadence. This cadence occurs again in measures 18-19; and in measures 36 and 57 it is followed by an emotional passage which, in the last case, develops into a Coda full of fitful changes in pace.

3. In the first two measures the rhythm of the melody is as follows:

That of the second subject (measure 20) begins:

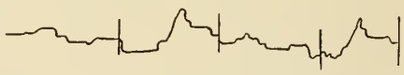
4. Measures 6 and 7 contain an interesting rhythmic contrast, since the first of these is divided into four notes of equal value, while in the second the time is irregularly broken up. Erratic rhythms pervade the Coda.

C: MELODY

1. There are two subjects, the first occupying measures 1-7, with part of measure 8; and the second beginning on the second beat of measure 20. The principal section of the latter ends with measure 24, though other and varied phrases carry it into measure 41.

2. The melody is in the upper voice throughout.

3. The melodic outline of the first four measures is as follows:



At the start it winds closely about a single tone (D♯); but after a slight fall it leaps up in a graceful curve (measure 2). The same figure is then repeated with some embellishments at the end.

4. An interesting use is made of the cadence turn which appears first in measure 7. At or near the close of each division this turn is heard; also it is imitated in measures 28, 30, 49, and 51 of division B. There are other suggestions of it in the little figures of the Coda.

5. In measures 22-26 and 43-47 the secondary part in the upper voices has almost the character of a contrasting melody. Note especially the downward four-note scale in measures 22 and 26, which imitate like progressions in the preceding measures:

D: ACCOMPANIMENT

1. The waving figure is maintained with slight interruptions and changes up to the Coda, where the altered style calls for a different treatment.

2. Mostly arpeggios, although two or three notes are occasionally played together.

3. The wide range of the accompaniment and the blending of its tones by the pedal give it a very rich effect.

4. Starting out with simple combinations, the harmony soon becomes more emotional through the use of chromatic chords. In B and in the Coda are delightful chromatic modulations.

E: STYLE

1. Dreamy and tender, but with emotional warmth.

2. The use of the cadencing figure described above (C: 4) and the waving accompaniment figure are the most prominent unifying devices.

3. Interest is added to division B by its more complex harmonies and its elaborate ending, which in the repetition leads into the dramatic and passionate measures of the Coda.

4. Emotional outbursts and contrasts occasion many fluctuations in intensity, as in the cadence of which we have noted the frequent use, where (measures 5-7) the music increases in volume and speed till a sudden revulsion of feeling takes place. In the Coda, two sudden rushes of tone followed by sharp, full chords precede the sustained and melancholy final phrase.

5. Especially noteworthy are the many delicate embellishments, such as those of the figure in measure 2, which occur in measures 4 and 16. Growing directly out of the lovely, clinging theme, they seem to invest it with added significance.

6. This will be treated under the next example.

F: COMPOSER

1. Chopin was born near the Polish city of Warsaw, and was educated among the aristocratic youths in the school where his father was a teacher. His emotional and refined playing afterward made him the idol of the cultured classes in Paris where he spent the most of his life, and where he died of a lingering illness.

2. Chopin's fame rests almost exclusively upon his piano compositions, the nobility and grace of which has won for him the status of an artist of the first rank.

3. Music for the pianoforte.

4. Chopin is distinguished in his use of all the elements of music; although his treatment of melody, rhythm, and harmony is perhaps more suitable than that of form.

II

Barcarolle, "June," Op. 37, No. 6.
P. I. Tchaikovsky, 1840-1893.

A: FORM

1. This piece follows the formula:

A (1-32); B (32-51); link (52-53); A′ (53-82); Coda (83-99). We note that division B is about two-thirds the length of division A; while the Coda is about one-half the length of A.

2. Division A ends distinctly on the first beat of measure 32, but is followed on the second beat by division B. The accompaniment helps to make the connection a close one. A link nearly two measures long connects divisions B and A′. The latter division ends clearly on the first beat of measure 83, the Coda entering as a new idea in the latter part of this measure.

3. When division A is repeated, the left hand plays a greater number of imitative melodic fragments in the middle voice (see C: 4).

4. Division A is made up of a principal passage (2-12); a passage more transitional in character (12-22); and a return of the principal passage (22-32). Division B starts out in a definite manner, but becomes more and more wandering to the end. The Coda is increasingly vague in outline.

B: MOVEMENT

1. Common, or 4-4 meter. During division B this changes to triple meter (3-4).

2. Calm and wave-like throughout A; increasingly agitated in B, especially when the meter changes to 3-4, where one beat seems to be elided from each measure in the hurried progress. This eventually broadens out (50-52); and the Coda brings back the serene mood of the beginning.

3. Even flow characterizes the opening rhythm (2-6):

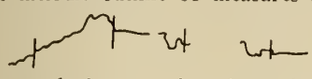
while two rhythms of a more intense nature clothe the melody of division B:

4. The syncopated accompaniment in the B part of B creates an effect of agitation, which is emphasized by the succeeding rhythm in 3-4 measure. In this the short notes come irregularly on the first beats, while the chief accent is thrown forward upon the second beats. In measures 47-50 the meter really changes to 2-4, suggesting intensified haste.

While the syncopations in division B are imitative of agitation, those which occur continually in the Coda between melody and accompaniment have rather a lingering, soothing effect.

C: MELODY

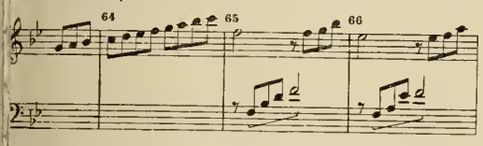
1. The subject introduced in measures 2-10 is e dominant theme.
2. Generally in the upper voice, although frag- nts occur in the middle voice.
3. The melodic outline of measures 2-6 is:



After a gradual, even rise, the melody falls in cling fragments.

4. Reference has been made (A: 3) to imitative tches of melody which are played by the left nd. In division A these occur only as answers the short ending figures in measures 4-6 and 26; but in division A′ the imitation is more fre- ent, sometimes contrasting with the upper voice, in measures 53-55, where the latter moves up l then down, the imitation the opposite:

l sometimes merely continuing the rhythm, as measures 64-66:



mitations are found also in the Coda.

. Division B starts out with a new melody, ich proves only of short duration (32-39); for ther, livelier melody enters (40-), which is it- , however, but short-lived.

D: ACCOMPANIMENT

. There is a material change in division B from quiet, even figure in division A to nervous syn- ations and a following fitful rhythm. We have ed additions in division A′ (C: 4); and in the la varied devices are found.

. Chiefly chords, though arpeggios occur in A′.

. Simplicity characterizes the beginning; but re is an increasing richness of texture.

. The chords, of a prevailing minor cast, are honious and conventional in their succession. ense emotion is suggested in the strong chro- ic chords which end division B.

E: STYLE

Calm and somewhat melancholy, interrupted a passionate outburst.

The return to the first part in division A the quiet ending emphasize the unity of the ight.

In division B interest is added by the entire rast in treatment. Again, on the return of di- on A, new features occur (C: 4); and in the a the novel descending and then ascending out- attended by occasional reminiscences of pre- us themes carry the mind of the hearer forward he ethereal close.

Division B is made up of an almost continual *cendo*, which conveys the impression of intense tion. Again, the descent to a *pianissimo* in the a, followed by a short upward wave of tone es us with a sense of perfect repose.

The return of division A (53) is particularly ıtiful on account of its fine contrast with the pre- ng passage, to which the dignified and repose- link passage gives just the right bond of con- ion. Especially attractive, too, are the imita- s in division A′.

Our two examples are written in much the e mood, with the same quiet flow of melody and mpaniment. The Barcarolle, however, is more ionate in the middle division, while the Noc- turne has a more dramatic ending. Whereas, too, the interest in the Nocturne is increased by the addition of embellishments, in the Barcarolle the same end is sought by the snatches of melodic imitation.

F: COMPOSER

1. Tchaïkovsky was the son of a mining engineer in Russia. As a youth he was in the government employ; but turning to music, he studied at the Conservatory of St. Petersburg. After graduation he taught at the Moscow Conservatory for some years. His later life was devoted mainly to travel and musical composition.
2. Probably the second rank.
3. Operas and large orchestral works.
4. While Tchaïkovsky seems equally at home in his development of all the musical factors, his efforts of intense color are particularly striking.

COMPOSITIONS OF THIS TYPE FOR FURTHER STUDY

(Grades range from I to VII)

Grieg: *Spring Song. V.*
Mendelssohn: *Songs without Words,* Nos. 6, 14, 25, 44. IV.
Nollet: *Elégie,* Op. 88. IV-V.
Rubinstein: *Third Barcarolle.* IV.
Scharwenka, Ph.: *Gondellied,* Op. 63, No. 3. III.
Schumann: *Des Abends,* from Op. 12. V.
Schütt: *Reverie,* Op. 34, No. 5. IV.
Scott, Cyril: *Notturno,* Op. 54, No. 5. IV.
Sibelius: *Romance in D flat.* V.
Sinding: *Serenade,* Op. 33, No. 4. IV.

Pianoforte Touch in Its Various Aspects

BY JAMES W. BLEECKER

ONE constantly hears so much in regard to touch that it is a wonder the subject is not exhausted. Unfortunately such is far from being the case. What one hears is generally something like the following: "A good tone can be produced only by a weight touch." "A good tone can be produced only by finger touch." We also hear about the clinging touch, thrusting touch, and various others too numerous to mention.

Undoubtedly all of these have their proper place in playing, but the danger is that most pupils and, I fear some teachers, are very apt to emphasize certain points to the detriment of others. They are likely to look upon some one touch or touches as great discoveries which, by mysterious means, impart peculiar properties to the tone.

If, first of all, we examine the piano action we will get a clear idea of what it is capable mechanically. Knowing this we can, by studying the fingers and muscles and action of the mind, gain a better knowledge of the why and wherefore of the various styles of touch.

If one presses a key down slowly, he will notice that just before the hammer reaches the string it falls back. This is necessary to prevent the hammer from blocking against the string and stopping the tone. Now however slight the distance between the string and the hammer may be, it is plain that if the hammer is to reach the string, it can only do so by its momentum. The physicist tells us that force in a moving body can only be represented by its weight, mass, and speed. As the first two are constant, that is we cannot change the weight or mass of a hammer, we see that speed is the only thing left to our discretion. Since this is the case we must investigate the best ways of producing, under all conditions, the amount of speed required by the hammer to produce the desired dynamic. To do this we first examine the mechanical side of our fingers and then the combined mechanism of fingers and keys.

It is very evident that in the hand we have a lever on the end of another lever (the arm), and that the hand is completed by five more compound levers (the fingers). As one of the first principles of mechanics is to avoid lost motion, it is evident that every movement that has not a definite aim is wrong. If a finger touch, pure and simple, will answer our purpose, it is wrong to call upon the hand for aid. If the hand touch suffices (as in octaves) it is equally wrong to call upon the arm. From this we get the reason for the three broad classes of touch, finger, hand (or as it is generally called, wrist), and arm.

When we put our theories into execution we find a number of other elements entering the problem to complicate it. First, we have the concussion at the surface of the key which is absorbed by the fleshy pad at the finger tip; then there is the give to certain joints which also absorb motion; the friction between key and finger and the friction inherent in the piano action has to be reckoned with. How all of these facts may complicate the act of touch can easily be seen.

In a certain case a finger touch might produce the required tone but owing to the inertia and friction of the action, we may find it convenient to add to the fingers a slight arm weight and allow the extra force (speed) to be absorbed by the concussion at the finger tip and by loose joints. This gives us the clinging touch.

In obtaining a certain degree of *forte* it may be perfectly possible to leave the task to the fingers alone. Still the demand for speed enough to propel the key with the required rapidity may be excessive and we may find it much more convenient to aid ourselves by adding some arm weight.

Beside this there is the psychological side to be considered. It is easier to think some things one way than another. It may be possible for one person to conceive a touch that will produce a good *pianissimo* that would not work for another at all. Still this supposition is a little extreme and as a general rule what is best for one is at least good for nearly all.

Beside the psychology there is also the physique of the individual to be considered. A very light hand will have to make up with extra speed what it lacks in weight.

To sum up: We find that in the finger we have a lever which works on another lever (the key). To the latter, we find that the only quality we can impart is varying degrees of speed.

To obtain these speeds we have at our disposal various means of affecting the former lever (the finger). The speed may be increased, first of all, by the finger itself, and then by added weight of hand and then arm: in extreme cases even the body weight can be added.

The speed may be decreased, first, by the finger itself, and then by various other means such as the following: The first joint may be held loosely so that when the finger strikes the key part of the motion is absorbed by the movement of the joint; the fleshy part of the finger may be used more than usual in absorbing the motion; in the case of wrist touch, a loose finger, in the case of arm touch, a loose wrist, may reduce the speed.

Knowing the means at our disposal, it ought to be comparatively easy to make up our mind as to just which combination of the principles mentioned, is best suited to our immediate need. Physical and psychological conditions may make the combination a little different in some cases than others. It should not be difficult to find the genesis of every conceivable touch in some combination of the movements examined in the present article.

EFFICIENT PERSONAL ACCOUNTING

BY FRANK ANDREWS FALL
Bursar of New York University

SOME one has said that to keep good books for a business is talent; but to make a dependable accounting of one's personal income and outgo is nothing less than genius.

If this be so,—and anyono who has tried to develop a satisfactory system of personal accounting is disposed to admit that it is,—an attempt to evolve a scheme which the average man or woman can understand and operate without risk of brain fever would appear to be a desirable effort.

In *Efficient Book-keeping** certain plain questions put to himself by the modern accountant were touched upon: What are the facts? How can they be shown in the simplest form? What use can be made of them that will show up on the credit side of the ledger?

Precisely the same questions should be put by the teacher of music who desires to add to a satisfactory system of book-keeping for the business, a workable scheme for keeping track of personal finances.

The machinery of efficient personal accounting may be even simpler than the book-keeping system outlined in the preceding article. **A single book, and that a small and inexpensive one, will do the trick.**

Column segregation of income and expense items, which is one of the most important time and labor saving devices of modern accounting, is the essential feature of the personal account book.

A "spread," or double page, suffices for each month's business. At the extreme left of each page the lines are numbered downward from 1 to 31, a line for each day of the month. To the right of the date numbers are a series of columns for expense, classified according to the special needs of the one concerned. The last two columns, at the extreme right of the right-hand page of the "spread," are reserved for cash received and total expenses.

Such a book may be bought, without printing, and ruled to suit the user's special circumstances, or what is generally known as a "family expense book" may be purchased, with all rulings made and the column heads printed in.

There are several varieties of the "Family Expense Book" on sale at the best stationery and department stores. One of the most popular forms is published by the Kiggins and Tooker Company, 35 Park Place, New York. The column heads are these: Rent or Board; Provisions or Groceries; Fuel and Light; Clothing; Furniture; Books and Education; Labor and Services; Physician and Medicines; Charity and Church; Traveling Expenses; Taxes and Insurance; Laundry Account; Contingent Expenses; Cash Received; Total Expenses.

The retail price of this book, bound in leather, is only seventy-five cents. A cloth-bound copy may be bought for forty cents or less. It is obvious that no one need hesitate to try this plan because of the expense involved in getting the equipment.

INCOME

As the major part of the income of the average teacher of music consists of fees from pupils, the teacher's personal and business accounts will have to be correlated to a certain extent. This is a very simple matter.

At the closo of each day the teacher should enter in the "Cash received" column, on the line opposite the proper date number, the total amount received during the day in cash, checks, and money-orders. The details of this are found, of course, in the ledger, but they need not complicate the personal account.

EXPENSE

The various items of expense should be entered in the appropriate columns at the close of each day, and the total carried to the last column at the right. At the end of the month all the columns should be footed up and the totals carried to a monthly summary, a form for which is provided in the back of the book.

The difference between the total receipts and the total expenditures will be carried forward to the next month, and should be entered at the top of the "Cash received" column. If expenditures have exceeded receipts, the resultant overdraft should be entered in red ink. If there is a balance, it will usually consist of a combination of two items,—cash on hand and cash in bank.

A business man of my acquaintance has a rather ingenious scheme for keeping track of his personal cash balance from day to day. Each night as he enters his receipts and expenditures for the day he foots up the cash received column and the total expense column, and gets his balance as of the close of the day's business. This balance, divided into cash on hand and cash in bank, he enters on a card which he carries in his wallet for reference during the following day. He therefore knows at the beginning of each day exactly how much cash he has on hand and in the bank. He carries a blank check or two in his wallet, and can always avoid an overdraft, even though he does not have his check-book with him, because the card tells him exactly how much he had in the bank at the beginning of the day.

The same card is used for noting his expenditures during the day, whether in cash or by check. At night he writes up his expense book from the information given by the card, and then prepares a new card for the following day.

Thc teacher of music will doubtless wish to relabel some of the columns in the standard form of expense book. Sheet music, for example, might need a column of its own. Piano rental and other similar items may be segregated. For this purpose, it is only necessary to appropriate some of the columns that represent the least active accounts, and take care of those occasional expenditures in the contingent expense column.

USING THE BANK

By all means do business by check as much as you can. It is the cleanest, quickest way of paying bills, and it gives you, automatically, a receipt for every expenditure.

But most important of all, the bank *will help you to save.* For this purpose the stocking has been found wanting. So have the old shoe, the bureau drawer, the cozy corner, and the chimney flue.

It is not merely that theso homely treasure-places are untrustworthy,—that your savings may easily be stolen, lost or burned up. Nor is it that these free-and-easy depositories cheat you by paying you nothing for the use of your money.

The worst feature of trying to bank at homo is this: You can get at your money too easily. It is far better to put it where you cannot get your hands on it without some trouble and unwinding of red tape.

"Spend" is a tempting message which rushes to us from every point of the compass. Hundreds of useful, boautiful, desirable things conspire to separate us from our cherished dollars, pulling at them liko some great greedy magnet. In such an emergency the stocking and the chimney flue do not help us much. They aro the most dependable get-poor-quick agencies on record.

But the bank is different. It places itself between our laboriously accumulated savings and numberless things that we want but do not need. Stand back, it says to them. This money is not of the ordinary common or garden variety of money. It is consecrated to a worthy purpose. It is set aside to earn other money. **It is capital, and you would better not try to eat into capital.**

In the face of this defense, made by our friend the bank, the attack of our enemies—the things that wish to be bought—withers and dies. Mere purchasable things lose their glamour. We find that we did not need them after all; that they are not essential to our life, or even to our happiness.

And meanwhile our good friend the bank has kept safe and active our principal, that unpretentious, but respectable foundation on which we are to rear our superstructure of independence and content, if not of wealth.

THE BALANCE SHEET

If the music teacher wishes to know just how much net gain he is making from year to year, he can set up a general balance sheet, showing assets and liabilities as of December 31st of each year. This does not need to be an elaborate statement, nor should its preparation involve much time or trouble.

On the liability side should be placed any debts on notes or mortgages; accrued interest, taxes, insurance premiums or rents; and bills payable of whatever amount.

On the asset side should be indicated property owned or equities therein; cash on hand or in bank; stocks or bonds at market value; personal property at a fair appraisal; all bills receivable that are regarded as certain of collection.

The personal balance sheet, if continued from year to year, gives a return out of all proportion to the trouble involved in setting it up. If you are steadily getting ahead, it is no little satisfaction to know just how much you are gaining each year. If you are going backward, it is doubly important that you should have the fact impressed upon you in some graphic way. Then go back to your summary of monthly expenditures and study it carefully. Decide what items should be reduced and then go resolutely to work to cut them down, so that the balance at the end of the next year will show on the right side of the ledger.

SMALL INVESTMENTS

Finally, to return for a moment to the general topic of saving: *Keep your money at work for you.* Do not make the mistake of thinking that unless you have a thousand dollars at a time you cannot make a conservative investment.

A number of high-grade railroad and industrial companies now offer bonds in five hundred and one hundred dollar units. Good traction bonds may be had in fifty and one hundred dollar denominations.

Stock brokers do not despise the small investor. On the contrary they are doing everything they can by specializing in the less expensive bonds and small lots of stock, to attract his patronage.

Teachers of music may, therefore, put their small savings to work at once, and begin to get a return from them. That accomplished, each step along the road to competence becomes easier than the preceding one, for every conservative investment, however small, provides income which may go toward the acquisition of another investment.

Do not try to learn trilling from a book. Practise slow trills in groups of two and also in groups of three notes, which latter manner will give an opportunity for alternating accents and develop alike both of the fingers engaged. You will soon find that you can trill automatically, and when this point is reached make your trill long enough to carry out the note bearing the sign. The last note of the last two notes, as the case may be, must be played the same speed as the trill itself, and form simply its last note or notes.—*Josef Hofmann.*

JOB AND EQUIPMENT

(No. 8 of "The Efficient Music Teacher")

The man who remarked heartily that the world is getting sick and tired of the word Efficiency, was described by his friends as one who forever apologizes for what he has not done. This is invariably the way with critics.

Does the job demand more than it used to?

And if it does where shall we begin to put ourselves in order for its greater demands?

BY THOMAS TAPPER

I

THEY began some months ago to build a twelve-story house down the street. People speak of the builder as putting UP a house here. ey ask how big a building is going UP? And ey comment: Another skyscraper going UP. eryone UPS that house. It is putting UP, ing Up, building UP the city; UP goes another vestment.

And yet to date all they have done with their am boiler, derricks, drills, teams, and gangs of n, is to go DOWN, down into the earth, down in t the opposite direction from that upgoing use. The more they dig DOWN the tougher the ge is, but still they keep on going DOWN.

And all this DOWNNESS is for no other purse than to secure UPNESS.

So for the efficiency which meets the growing mands of the job: It would be well for us to overul ourselves and discover afresh the range of our bits and the quality of our actions. Have we er gone far enough DOWN for the amount of ? we contemplate?

EXPERIMENT NO. 1

From arising in the morning to retiring at night go through a long series of actions, motions, bits, and customs. They constitute the backne of our day. They are our routine. Their st in time and effort is inevitable. But like the n-bound bucket that hung in the well, they are e to become moss-covered. They get little of r attention, when, as a matter of insurance ainst the bacteria of the moss-covered state, they uld get much.

This is the experiment.

Write down everything you do from the first wn (to you) of light, to your retiring. Stop long ough to give each action a fair scrutiny. (Ask a dier, if you can, how he felt the first four weeks of career.)

Take the morning's bathing and dressing: Do u do this in the best, most direct, and quickest y? Do you, the night before put everything in diness and in preparation, or do you scramble and nt to locate equipment, wondering, as you scout und under the furniture, whether you are to be e for work?

In this familiar morning exercise a considerable ount of material and equipment is involved. at material and equipment is converted by us o use for the day by motions of the body. Have u studied arranging in the best and simplest order e required motions of conversion, or are you the ppy-go-lucky kind of Haphazard that spends ten nutes today in morning preparation and forty morrow?

We venture to say that whoever has not organized at morning preparation is invariably late at pointments.

Do you arrive at the breakfast table at a pretermined time, or do you cry for a hot breakfast ien you do happen to arrive? And do you spend teen minutes at it or an hour? Remember that it esn't matter much which it is so long as you ve predetermined it and make it part of a fixed hedule. **This, we see, is reducing the working y to the persistent regularity of soldiers' drill.**

If you want to have a lovely time when work is done and you are free, live the soldier's life at your work.

Here, you inquire:

Will it interfere with my genius? Not a bit.

Will it be uncomfortable? It is certain to be for a while.

(Ask a soldier how he felt the first few weeks.)

Will it take away my liberty? You haven't any. You are here and now a slave to doing the common things of life in a hasty, messy, botchy way, and that "way" owns you, body and mind.

Or, take the matter of equipment. Does your desk top hold just what you need? Or, does it hold everything you have dumped upon it? Are the various tools of your equipment where you can easily reach them? Or, do you have to cultivate your detective instinct to locate pencils, pens, and other indispensables?

And so about all of us: Are we intelligently conducting our life, living not in the dream state of automatic existence, but fully alive and knowing that we are bit by bit learning to guide, govern, direct, at least the smaller affairs of daily living.

Rule: The more we become inextricably tangled up in the mazes of small affairs, the more sordid and commonplace life becomes.

II

Now, this is a music magazine, and undoubtedly this article should be full of music references, glowing, gleaming, bubbling with music. Well, I have taken no care to get the word music in because I think it is far better out. This is a big world, and every phase of its activity teaches the musician something. I have suggested that you make a list of daily actions and that each one be studied until the best possible way of performing it is discovered. We now come to

EXPERIMENT NO. 2

Make a list of every obligation which your work as a teacher places upon you. Count those you meet and those you dodge. Then answer these questions:

1. Can you do perfectly everything involved in every lesson you give? So perfectly that the Goddess of Beauty would smile in happiness to see you performing the tasks you set?

2. Are you practising the industry you preach? So thoroughly that the God of Labor would crown you with laurel and bay if you had time to stop and listen to him?

3. Are you developing your own powers more and yet more as you go on with your class? Or, are you a stand-stiller, shouting directions to a little party of pilgrims who are gradually moving off into the distance? (Many a stand-still teacher does not realize until too late that her pupils are gradually getting away, gradually moving, while she is static.)

4. Do you still strive by fine, efficient management, to get an hour a day or a week, for the purpose of blazing the trail a little farther? Are you thus seeking to lead on your flock to better pastures like a good shepherd, or are they forever nibbling at the short grass *of what you used to know?*

5. And are you convinced now as you were when ambition fired youth, that music is the one best world for your mind, heart and soul? Or is it just a side show into which you step when you must, to keep office hours?

In brief, do you hear the Call of your Job?

If you do, then you are willingly under discipline to the Beyond of your present work.

If you do not, then may mercy be your portion for you will need it.

III

Here is that part of this article where music obtains a little more prominently.

Say to yourself:

If I give twenty lessons a week I should be ashamed not to take them.

If I have assigned Op. 740, Czerny, No. 1, to Millie, and she fumbles it, and I, being out of practice can do no better, what particular good am I to Millie as an exemplar?

Yes, of course, too busy to keep in practice, which means too busy to keep up on one's own business. We know this, and yet we are so naturally diplomatic that we want our feelings spared in this indictment. A strange case of esthetic cowardice.

Why should a music teacher who gives twenty lessons a week and who is incapable of delivering them in good condition expect any more for them than a grocer who cannot deliver his goods at all?

And yet the music teacher expects the money, while the grocer does not.

So, about that house down the street. They propose to put it up by first starting a long way down, at the bottom of things, where the foundation will be strong and secure.

A good builder knows that to go up with safety he must first go down with patience.

And I sometimes wonder if the pursuit of music and art may not sometimes tempt us to push up and up and up before we have ever thought for a moment of going down for a good start?

CREATING AN IMPRESSION

BY JANET CUTLER

WHY are many student recitals failures? The teacher has carefully planned the program, choosing selections from some of the best composers; she has trained her pupils in solo and ensemble work, thus giving variety. The answer often lies in the fact that the pupils have failed to "create an impression."

What is meant by "creating an impression"? The pupil would reply, "rush to the piano, tear through the piece, and rush away." Some might say that it is always the best-dressed pupil or the one who makes a nice bow who reaches the audience and makes a recital a success.

But in fact it is none of these. It is the pupil who realizes that he has a musical message to give and knows how to give it who does his part toward a successful recital and "creates an impression."

Each pupil must be made to feel that his piece is real music which must be presented to an audience often not ready to receive it. If the listeners are admiring relatives and friends the task is an easy one. If they are simply "listeners" often the music must be literally imposed upon them in order to make any impression at all.

The first thing for a performer to do is to get into sympathy with his audience. He knows himself that his music is real music, but he must state each tone so clearly to his hearers that they cannot help but realize it also. Each phrase has a meaning which must be brought out and presented so that the audience will have something to grasp.

If a musical phrase is put so clearly before an audience, each individual will, after a time, feel that he must listen. Then an "impression is created," not one of outward show but of musical understanding.

THE PROFESSOR TALKS ON TEACHING CHILDREN

"HOW do you do Professor? How are you today?"

"Excellently well, Mr. Editor; 'fine and dandy,' as the other man says. I hope you are in good health and spirits, as well as the goodly company of ladies and gentlemen surrounding you. May I inquire the occasion of so many visitors to the editorial sanctum? I am not accustomed to see so many here."

"Neither am I; and I trust that you will not be startled out of your accustomed equanimity when I tell you, my dear Professor, that *you* are the occasion of the gathering. I hope that you have not forgotten your promise, of last month, to discourse further with us on the important subject of efficient teaching. It was the announcement of your intention which has brought all these earnest teachers here to meet and to hear you."

"Highly delighted, I'm sure," murmured the Professor, while his gaze wandered round the room, as if in search of an expected visitor. Then, turning to the Editor, he said, questioningly: "I do not see my friend (!) here—the impatient lady, who made so tempestuous an exit the last time?"

"Your remarks evidently hit her misplaced *amour propre* too hard," said the Editor; "she belongs to the class—a very small one, I hope—that may be termed 'The Incorrigibles.' "

A CHILD'S INBORN SAGACITY

"Ah, I suppose so " rejoined the Professor. Then after a brief pause: "The curious part of it is that those testy, touchy, tactless teachers, entirely wrapped up in a rigid routine that has but very little rhyme and no reason, make no allowance whatever for that most wonderful of all things: the child's mind. Its subconscious working is little short of miraculous. Teachers of that description are quickly 'weighed' by the pupil and 'found wanting.' Or, if not, the under-current of antagonism caused by the teacher's tactlessness is such that the pupil becomes discouraged and disgusted and—unless another, more competent teacher be employed without delay—finally abandons the study of music for all time.

"Yes; a child's mind is wonderful in its untutored powers of reasoning; and herein lies the tactful teacher's opportunity. A brief suggestion, a mere hint sometimes, is sufficient to arouse the child's interest and to set him (or her) off on a voyage of discovery in music's magic realm. Believe me that *everything is possible, in the way of success in teaching children, if the teacher will but exercise all his wit and ingenuity to excite the pupil's interest and curiosity*, and so cause a craving for more knowledge, for more music.

AVOID DRY ROUTINE: GILD THE PILL

"Avoid the deadly, dry-as-dust routine form of teaching. Excite the imagination, even about trifles. Do this, even from the very first lesson. Remember that music is a sound creation of the imagination; to express it, therefore, the imagination must be exercised. As for the routine that has to be observed, do not make it apparent. Give the child his musical medicine as you would his physical medicine: *gild the pill.*

"If you are unable to visit art museums, fine buildings, and scenes of interest with your pupils, you can at least, from time to time, as a form of amusement, show them drawings and pictures of celebrated works of art: paintings, sculpture, and architecture. Most probably, they have already some ideas about drawing and have seen some of the paintings and sculpture. Then, nothing will delight them more than to hear you describe the analogies or differences between those works of art and the music you are teaching them. At first, they will be astonished, then pleased. After a time, when their minds shall have responded to these first suggestions, the children will find a pleasure in establishing relations between their musical imaginings and other things, seen and heard, and so weave them together in their young minds. Indeed, they will frequently astonish you with their quick wit, the cleverness of their remarks, the keenness of their power of observation and the aptness of their criticisms."

"But, Professor," timidly hazarded a young man of about thirty, "is not all that rather Utopian? Of course, I admit it is very desirable, but"—hesitatingly—"can it be done?"

A LITTLE GIRL OF SIX

"Most assuredly, my dear Sir; take my word for it. Here is an example from my own personal knowledge. I am well acquainted with a little girl, just six years young. She is bright, intellectual, of quick perception and ready understanding; healthy of body and vigorous of mind—the usual combination of *mens sana in corpore sano.* But she is only just six.

"She has been learning the violin (a dear little quarter-size instrument) for about nine months and, in addition to her finger exercises, can play a number of folk songs and little pieces. She has had about six lessons on the piano, but she has experimented with it, all by herself, ever since she was tall enough to touch the keys. She reads music readily and has a remarkably true ear—two of them, in fact. Now, her musical mind is so constituted that what she plays on one instrument she can reproduce on the other. When she is playing some little piece on her violin, she is listening to the piano accompaniment so that, as soon as it is finished, she goes to the piano and tries to reproduce the accompaniment she has heard, but not seen, and does it with remarkable fidelity. Yet she is only six.

"She will play an even scale and tell you 'that is a pretty straight line, isn't it?' Or, if it be uneven, she will remark, with a humorous little grimace: 'that line had a bad bump in it, didn't it?' She constantly amuses herself with her piano or her violin, endeavoring to express in music the things she sees and hears, whether in the daily life around her or in her fairy stories. Remember, she is only six.

"I do not tell you this as something very wonderful; I merely cite the case to show our friend her that such education *is not at all 'Utopian'* and that *it can be done.*

"The mind of a child can be trained best by careful suggestion along the lines of its inclinations and desires. Routine, also; but hide it. Don't forget: gild the pill "

"Then, Professor," said an elderly lady, a teacher of some years' standing, "if I understand you aright, a child's mind has to adapt itself to the teacher's suggestions and to conform to his way of thinking? How do you contrive that?"

TEACHER'S TACT AND ADAPTABILITY

"I am afraid, my dear Madam, with all due respect, that you have understood me a-wrong. The one important, cardinal point, that I desire to impress most clearly upon you all, is that the teacher must possess the qualities of tact and adaptability in the highest degree.

"He must adapt himself to the child's mind, to the child's taste, to the child's bent o yearning. He must suggest his own ideas an teaching to the child in so subtle a manne that the child may feel them as if emanatin from himself. If the teacher can succeed i doing that, he has attained the highest pin nacle in the art of teaching and his success a a teacher is assured.

"As I said at our last meeting, the teacher' musical knowledge is a *sine qua non;* without it, h has nothing to teach. But in order to impart tha musical knowledge to another, he must do it i such a way that the other will infallibly receive it I can use a hammer and nails, a chisel or a saw but I usually spoil the wood with these latter, an I invariably hit my thumb instead of the nail: s I do not consider myself a carpenter. Neither d I consider him or her a teacher of music who know all the Art of Music from A to Z (is there any Z? and yet who does not know how to implant acceptably in the mind of a student."

"Whom then do you blame, Professor, for th wrong or mistaken choice of a teacher?"

PARENTS ARE TO BLAME

"The parents, without a doubt," replied th Professor, in a tone that admitted no contradictio "They exercise little or no real discrimination i choosing a teacher of music, either instrumental o vocal. More frequently than not, the decision made in obedience to the recommendation of son relative, a cousin, an aunt, a cousin's cousin, o some other person, who is quite as ignorant as th parents themselves with regard to the qualificatio of a good music teacher. Yet these same paren would not, for one instant, think of engaging tutor or a governess, or even a nursery governes without insisting upon the production of a Norm School, University, or High School diploma, some such specific guarantee of the proposed teac er's ability. This accounts for the fact that many young women and men are teaching mus today, whose only qualification is the ability sing a little or to tinkle on the piano.

"I repeat that the ability to impart knov edge is the chief factor in the success of t teacher and, therefore, of the pupil.

"Parents must be brought to recognize that; a they must be made by degrees to understand t necessity of demanding positive proofs of t teacher's ability before confiding their childre young or old, to their instruction.

SOME SINGING TEACHERS AND THE PUBLIC

"While these guarantees are absolutely nec sary for the competent teaching of any branch music, they are imperatively exigent for the teachi of singing. This concerns adult pupils, th who have passed the period of change of voice some two years or more; to be on the safe side, us say sixteen for a girl, eighteen for a man, acco ing to their health and constitution.

"There is no free-lance running amuck in musical profession so recklessly and irresponsi as the self-appointed, self-commended, self-satisf and self-ignorant teacher of singing! The un lightened public looks upon every good-look woman who can sing, more or less acceptably, i small way, as sufficiently qualified to give lesso Great, but spurious reputations are often built just such flimsy foundations!

"It would not matter so much when the pul is taken in, if a monetary loss only is involved. am quite cynical enough to enjoy the sorry j and to say, chucklingly, with the ancient auth *Vulgus vult decipi? decipiatur! The public wants t buncoed? Let it be buncoed* (Free translation, rights reserved.) But where voice is involved, question is fraught with the gravest dang When a student learns an instrument wrongly, i usually only a loss of time, money and, perh enthusiasm for the subject. But when a par confides a son or a daughter to the instructio

incompetent teacher of singing, the pupil may d, probably, will lose both voice and health. ie most serious throat troubles arise from the mal- actice of ignorant singing teachers.

"Whence it follows that it is imperatively cumbent on fathers and mothers to take ery precaution in the choice of a teacher, om whom they will require proper proofs and arantees of efficiency."

MUSICAL ATMOSPHERE IN THE HOME

"Excuse me, Professor, if I put one more ques- n to you that our teacher-friends here may have erlooked. Do you think that the good teacher's rk with his pupils is all-sufficient? Do they not ed some assistance outside the studio? In ort, do they not require a sympathetic, musical mosphere at home? What is your opinion?"

"That, as usual, my dear Editor, you are quite ght. I am of the opinion that **the home should e made as musical as possible**; that the music- om or the music-corner speak for itself by the esence of pictures and busts of the chief com- sers and artists; that musical acquaintances be couraged there to form a musical circle, at least ce a week; that the student's reading may com- ise musical histories, biographies, and stories of tistic endeavor; and that an endeavor be made to rm weekly meetings for ensemble study: duos, ios, etc., even in the most elementary period. parents will help, in this way, to create a musical rcle for their children, old and young, and if they e fortunate enough to enlist the services of the ght kind of *competent teacher*,

"One who loves his profession, and who is enetrated with a great, big, overflowing meas- re of helpful sympathy for all earnest seek- s after musical expression—then those par- nts may rest assured, not only of their children's ccess in music, but also of their greater, truer and rer outlook on life and a deeper, more intimate nd more sincere sympathy with everything that human in thought and in endeavor."

———*———

TAKING MUSIC LESSONS

BY HERBERT J. WRIGHTSON

GERMANY, the so-called "home of music," has pro- ced a very large proportion of the musicians of e world. The German is inclined to do things thor- ghly, and this especially applies to his music. The ung music student is placed with the most mpetent teacher the parents can engage, and pt strictly at his studies without intermission r a lengthy period. He must *work*, and not erely attend periodical lessons with more or ss indifference, as is unfortunately sometimes e case with the young person in this country. e is required by his parents to practise a cer- in number of hours per day, regardless of the tractions of other things. The natural result of ch methods is that he acquires considerable ility, perhaps in spite of himself. Whatever lent he may have is brought out—if much, a markable genius may be developed; if little, a ell-educated musician at the least.

Without this careful selection of an instructor and it is a difficult matter for the average par- nts to discriminate among the multitude of achers soliciting pupils at the present day— nd above all without that steady and continued plication to the subject, even a talented pupil ill never attain prominence, while the ordinary udent with average intelligence, but no special ft, makes little or no progress, and is too often scouraged and relapses into original ignorance.

If a thing is worth doing at all it is worth do- g well and thoroughly. The advantages to be erived from any study cannot even be discov- ed unless, like the gold mine, it is earnestly orked; and in the case of the study a great deal epends upon the guide—the teacher.

NOTES ON THE MUSIC IN THIS ISSUE

JUST three months more—in many instances less—remains for the present season of musical work. We are now on the home stretch and what we accomplish in the next ten weeks will determine the percentage of acquirement and efficiency with which we can credit ourselves. Therefore another girding of ourselves, a long, deep breath, and a sturdy, vigorous effort before we lay aside our work.

We offer in the music section of this issue some useful material for the customary closing recital, to which pupils and parents look forward with interest. It is true that some persons will mildly sneer at a pupils' recital and tell us that it is a bore to everyone—not excepting some of the participants and fond parents. But we must not forget that the aim of the recital is not to entertain an audience by the artistic presentation of master works, but to demonstrate the present skill of the young performers and to encourage them to continued study and further acquirement.

In the music under present consideration we have kept in mind the needs of junior players, those in Grades II and III, only one piece being in Grade IV.

On quiet woodland path (*Auf stillem Waldespfad*), Op. 9, No. 1, by Richard Strauss, is one of the few moderately difficult piano pieces by this great German composer of today. Many of our readers know about him, some have heard compositions by him played by orchestras, some have heard songs by him, but only a few have had opportunity to try his music for the piano. This number is melodious, broad in style, and filled with the atmosphere of a woodland scene, quiet, meditative, yet richly colored in harmony. Note that the melody is frequently in the left hand, answered by the right, much as if a duet were being maintained. Here is a piece well suited to a recital of springtime music.

Path of gold (*Rondo facile*), by E. S. Phelps, is a charming piece for our younger readers, with an unusually attractive theme. In the D major section, note that the left hand may play in octaves if desired, although the simpler way is recommended for the average player. The teacher should explain to pupils the meaning of the term "Rondo" as applied to a musical composition. The principal themes of this rondo are found in the opening measures, the first theme; the second is in the D major section; the third in the C major part. The application of the title is not clear. It is probably poetic, and may apply to the rays of light spread out at sunset on any path lighted by the golden glow of the sun.

The bird clock, Op. 9, No. 2, by Cedric W. Lemont, is one of a set of little pieces entitled *Pleasant Memories* intended for the use of young players. The tempo is marked *allegro*, but it is suggested that pupils begin practice at moderato, and increase the speed gradually. For example, in the first two measures, right hand, one motive is repeated four times. It will be easy to work up speed here. The fifth and sixth measures should be practised repeatedly and then joined. For example, the sixth measure appears four times. Analyzed thus the pupil will find that the actual amount of material to be learned is not large, and the whole piece can be mastered in a short time, right hand alone first; then the left; and finally the two hands together.

Elegie for a sparrow, by P. Lanciani (*Lan-che-ah-nee*), an Italian composer, is an attractive little piece of a descriptive character, in which an appealing melody is to be played with a clear singing touch. Notice the tempo is not rapid. The left hand part will call for quite a little practice to make the wide skip of more than an octave with accuracy. But this accompaniment figure is used so much and so often in a great variety of pieces that it is worth while to practise it carefully.

An April shower, Op. 8, No. 1, by Cedric W. Lemont, is from a set of little pieces entitled *Springtime Sketches* which have marked educational value as well as musical interest. The sixteenth notes obviously represent the plashing of the raindrops, the upper notes delineating a melody; for example, beginning with the fifth measure, the right hand theme would be D, a dotted quarter, E, an eighth, the same notes repeated in the sixth measure, the seventh, D, G, F♯, E, as eighth notes. And similarly in other measures. In the fifth measure a slight accent on the first D, the second and third lighter. The left hand supplies a sort of alto or second part. Aim for delicacy and lightness particularly in the passages marked *pianissimo*.

An old song (*Chant ancien*), by C. Ciolfi (*Chee-ol-fee*), is marked moderato, the metronome indication calling for 132 quarter notes to the minute. Moderato therefore refers to the unit of beat which is a half note as shown by the perpendicular line through the C at the beginning of the piece. Commence much more slowly. The chromatic passage in the middle of the piece will require considerable practice to give it smoothly. Try it with combinations of two and three chords at a time, for example, in the thirtieth full measure, take from the third chord to the third in the next as a phrase to be practised independently; then eight more chords; then three; work these up separately before trying the complete passage.

The Cuckoo (*Le Coucou*), by Claude Daquin (1694-1772) is by a French composer of the classical period. This is a splendid piece for teaching easy finger action with quiet hand, and is taken from the standard repertoire. The theme is generally given out by the left hand and is developed from the two-note figure of the cuckoo call. The composer's name is pronounced *Da-kan*, the final *n* with the French nasal sound, as in Chopin.

Rain patter, *The merry-go-round*, *The bogey man* are three pieces for quite young players, from a set of pieces entitled *Childhood Memories*, by James H. Rogers, which will make a delightful series for a recital. The descriptive character is clearly indicated in the titles. From the thirteenth to the twenty-fourth measure of *The bogey man* the left hand may be taken to suggest the "man" and the story which is being told about him.

Roses in bloom (*Roses fleuries*), Op. 497, by Marius Carman, is an attractive waltz for the ensemble class, easy and thoroughly melodious.

Forgotten, a transcription for the violin of Eugene Cowles' fine song, popular for a number of years, is a delightful number for young players. It has been prepared for use in instruction by Mr. Karl Rissland, of the Boston Symphony Orchestra, and offers fine opportunities for broad, effective tone color in the higher positions. This piece will please the hearer.

It was a lover and his lass, by Thomas Morley, is from the volume of *50 Shakspere Songs*, edited by Charles Vincent, one of the famous MUSICIANS LIBRARY series, issued by the Oliver Ditson Company. It is by a composer of the time of Shakespeare and is representative of the style of song used by the people of the period.

O mistress mine is a traditional song, the air being found in *Queen Elizabeth's Virginal Book*. It is also representative of the period when the dramas were written, and, like the preceding number, may be used in a program of Shakespeare music with special fitness. We call attention to the volume mentioned in a previous paragraph as containing music for a Shakespeare program.

Yesteryear, song by Earl Cranston Sharp, with 'cello obbligato, is from the pen of a composer whose recently published *Japanese death song* is being used with sensational success by Mme. Julia Culp. *Yesteryear* is a song of broad, melodic character, and good climax. Published for medium voice in F, for low voice in E♭.

April smiles and tears, song by William Baines, is suitable for a concert of springtime music, and is a good teaching piece to help impress upon pupils a light, easy style of production, with clear diction.

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

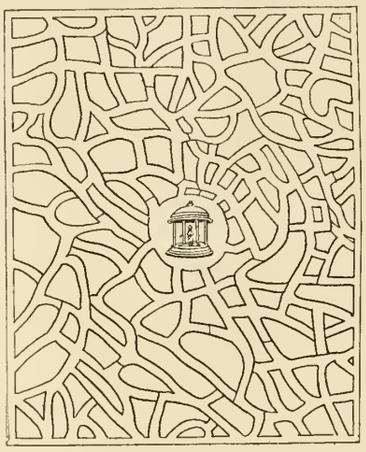
THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

SOLVING PUZZLES

INTEREST, according to writers on pedagogy, is the certain means of securing results. A study of the favorite methods of successful teachers usually discloses their power to arouse interest on the part of the pupils and, as much, to keep that interest alive.

A teacher called her pupils to a general meeting in her studio. She gave to each a diagram similar to this.



Starting at the entrance and without crossing a line, one is to reach the center; a puzzle popularly known as a maze. A prize was offered for the first correct solution.

At once every eye, every face was alert with interest, and every child was ready and eager for the task. Some commenced laboriously to try every apparent route, content to win by the slow but sure process of elimination. Others, more active-brained, would look ahead at every point which offered more than one route, and then discard those which led into a *cul-de-sac*. Finally a shout announced that one had solved the puzzle; and then another; and still another, and so on.

"Another one!" was the cry from all sides.

This was the opportunity for which the teacher had planned.

"The little puzzle has aroused your interest," she said. "But now that you have solved it what has been your gain? Have you added anything to your brain power? Just think a little about this puzzle.

"You were willing to spend the time to solve it because your interest was aroused. Practically everyone is fond of working at puzzles. And you are willing to work puzzles because you like it. You will do with pleasure in play what you grumble about doing as an assigned task.

"Now then, for a new puzzle. Can you not change your attitude toward a music lesson, let us say, try calling it a puzzle to be solved, or, if you prefer, a problem to be worked out. Thus you give yourself a splendid boost at the very beginning for you have decided that your lesson is a 'puzzle' which you will be interested and glad to work out.

"And do not forget that a lesson *is* a puzzle, one which, when you have worked it out, leaves behind it, in your mind, the feeling of having achieved something, and will make the next puzzle (lesson) easier of solution.

"In the maze we have just been working on there is but one thing to puzzle out. In your music lessons there are various puzzles, all of them real, and all of them worth while. Is there any reason why you should not feel real interest in working up a music puzzle?

"It's up to you to make your lessons much easier because you approach them with t spirit you show when you attempt to find t solution to any one of the numerous puzzles which you delight.

"Here then is a 'puzzle' which will help y to train yourselves for the future."

And the moral is just as good for "grov ups" as for children. Put interest in what y have to do. It is magical in its power, a makes you enjoy what formerly you dislil to do.

The Musician Prize Competition for Piano Music

TO STIMULATE the composition of music for the piano THE MUSICIAN offers the following prizes on conditions set forth below:

One Prize of $100, and royalty of 10% of the retail price on every copy sold in sheet form
One Prize of $75 Two Prizes of $50 each Four Prizes of $35 each

CONDITIONS

1. *As to Grade:*
Compositions must not exceed Grade III (or advanced III) in difficulty in a scale of *seven* grades.

2. *As to Character and Style:*
They must be melodious and attractive, and have educational value, that is, useful for teaching purposes. They may be in dance rhythm, but mere dance music is not wanted. They may be descriptive or poetic in style, in such forms as the Intermezzo, Nocturne, Romance, Song without Words, Serenade, Idyl, etc.

3. *As to Manuscripts:*
Only manuscripts clearly written will be considered.

4. *Who may Compete:*
The contest is open to residents of the United States or Canada, with no restrictions as to nationality or sex.

5. *How to Compete:*
Address your manuscripts to MUSICIAN PRIZE COMPETITION, care of Oliver Ditson Company, Boston, Mass. Compositions submitted must not bear the composer's name, but, instead, a *nom de plume* or other distinguishing mark or motto, and be accompanied with a *sealed* envelope on the outside of which shall appear the *nom de plume*, etc., inside the composer's name and address. Competitors may submit more than one manuscript.

6. *When to send Manuscripts:*
No manuscripts will be considered which are received after October 2nd, 1916. The decision of the judges will be announced in THE MUSICIAN as soon thereafter as possible.

7. *The Judges:*
The names of the judges will be announced later. They will be musicians of high standing.

8. *Publishing of Prize Competitions:*
The compositions to which prizes are awarded, with the exception of the one awarded first prize, shall become the property of OLIVER DITSON COMPANY, upon payment of the awarded prize. The OLIVER DITSON COMPANY shall have the option to purchase compositions to which prizes are not awarded at the usual current prices for piano numbers of similar grade and character. The prize compositions shall be published in THE MUSICIAN.

The SINGER and His ART

HOW TO SING

III

"TIGHT THROAT"—DIAPHRAGM —LIPS, FACE, TONGUE

BY ARTHUR DE GUICHARD

The principal fault to be overcome is that which known as "singing with a tight throat." What e its causes? They are many and various.

It is an established fact that the larynx must be lowed perfectly free play; its action is self-governed id automatic; we have nothing whatever to do ith it. It ascends with ascending scales and assages, and it descends with descending scales id passages; but *we* do not do it—it does *itself*. e think of the note we wish to sing—that is to say, e think *pitch*—we open our mouth, set the breath motion, and the desired note issues forth. Reduced to its simplest expression, that is all we ave to do: open mouth, think pitch, give the eath-impulse.

Any muscular interference with this simple act ill result in "tight throat"—which causes bad uality of sound, and leads to extinction of voice id to diseases of the throat.

The only voluntary muscular efforts to be made singing are at the diaphragm, in order to control ie breath, and at the mouth (that is) lips and face, regulate the resonance. But, whereas the uscular action of the diaphragm may have frequently to be very strenuous, the orbicular-facial uscular movement is very elastic and flexible.

CAUSES OF "TIGHT THROAT"

Let it be recognized, once and for all, that the roat (the larynx and part above the larynx) is n unfailing barometer of vocal health. It is a well-nown fact that any great emotion causes the per-on experiencing it to lose his voice, to become speechless from emotion," from excitement and forth. Tension, whether of mind or body, acts irectly upon the larynx: therefore, rigid lip or ps, craning neck, stiff jaw, fixed chin, rigidity of gs, arms, body or chest, shock of the glottis, stiffness of the muscles at back of the neck—in short,

Stiffness or tension anywhere acts upon the arynx and causes "tight throat."

Once acquired, whether from bad imitation or om erroneous teaching, a tight throat is, usually, a ery difficult thing to get rid of; because, in the rst place, a bad habit—in singing, as in everything else—is corrected with extreme difficulty and only by constant watchfulness, and, secondly, for the reason that every means except the right one is attempted for the correction of the fault. Let us see.

LUNGS AND GASOMETER

What is voice? Breath, vocalized. What is the breath's motive-power? The diaphragm. Is there any other motive-power that we employ directly and knowingly, in making voice? No. Then, can we help our breathing by throat pressure of any kind? Most certainly not. Let us take a homely but very apt parallel.

Consider a gas-burner, the tap, the gas-pipe, the gasometer, the steady pressure for the outflow of gas; they have their exact counterparts in the mouth and upper larynx, the vocal cords, the bronchial tube, the lungs, and the diaphragm for the outflow of gas. What would happen to the flame if the tap were turned off? It would go out. That is what happens to the voice, when the tongue slips back and cuts off the larynx. Again, what would happen to that flame if the gas-pipe were pinched? It would be reduced and made uncertain in size, brightness, and intensity. The same thing occurs to the voice, when the wind-pipe and the larynx (the latter being the upper end of the former) are pinched by holding, craning, and by direct muscular pressure. The motive-power (diaphragm) controls the outflow of gas (breath) from the gasometer (lungs), through the gas-pipe (bronchial tube) and its open tap (larynx and vocal cords), whence the flame (voice). Stop the motive-power (diaphragm) and there can be no voice. No throat pressure can supply breath; on the contrary, it will cut it off.

Thus, there is but one motive-power: the diaphragm. It is by means of the diaphragm that we breathe and live and do our singing. It is the diaphragm only that regulates our voice, and it is at the *diaphragm alone* that we may exercise any voluntary muscular effort. Let there be no misunderstanding about it: the diaphragm is the one and only muscle that we use knowingly for any and every vocal effort; any other muscular effort of any part, willed by us, is wrong and pernicious.

ACTION OF DIAPHRAGM

How then, is "tight throat" to be avoided or, if present, to be eradicated? By more or less strenuous, outward pressure of the diaphragm. Not by any contraction (drawing in) but by pushing out.

It is an absolute impossibility to push out at the diaphragm and to have throat pressure at the same time (except only the shock of the glottis); the former kills the latter. According to the intelligence and diligence of the student, it takes anywhere from six weeks to a year to eradicate the pernicious habit of a "tight throat" and to acquire a free, healthy, unrestricted use of the larynx.

During the past year many pupils suffering with tight throats have been corrected and their throats rendered supple by me. One case, in particular, is worth recording: A young man of twenty, who had been studying for three years with two different teachers. When he came to me he was afflicted with a throaty voice that very few teachers would care to tackle: but, through its horribly metallic sound could be heard occasionally a few notes of surprisingly beautiful quality, which showed that the natural voice must have been very good indeed. Careful examination and some well-plied questions proved that he had an excellent baritone voice, all the upper part of which (from D, above middle C, upward) had been emasculated, almost ruined, in an endeavor to make him a tenor—and a lyric tenor into the bargain!

In order to acquire the peculiar quality which was supposed to belong to that voice, he was made or allowed to produce his upper notes by means of that equally peculiar, stiff craning of the neck, forward and upward (thus becoming what some of my better informed pupils term "a goose-necked tenor "). In this manner he gave vent to certain thin, hard, metallic sounds that resembled a tenor voice as closely as a hard-boiled egg resembles a chicken.

"NEVER TOO LATE TO MEND"

I told the young man that I was afraid there was not much hope for him. He appeared to be so genuinely anxious that, influenced by the memory of the few excellent natural notes he had sung, I took him on trial for three months.

By the diligent practice of exercises exemplifying the action of the diaphragm, to the exclusion of any throat effort, he was able, *in the space of ten weeks' time*, to liberate his larynx, to get rid entirely of the excrescence of tightness, and to sing every note, of his two octaves of excellent baritone notes, perfectly free and with the *true baritone quality*. The poor fellow (and, in knowledge, his still poorer teachers) had mistaken compass for quality—that is, for kind of voice—and was endeavoring steadily to kill his voice in an impossible quest for the tenor B♭!!! As a baritone, this man has the voice of one in fifty thousand; he will make his mark one day.

The foregoing is related to show the efficacy of the use of the diaphragm and *pour encourage les autres*.

LIPS AND FACE

Second in importance to the diaphragm only are the mouth and tongue. "Mouth" is, perhaps, a misnomer; the interior alone is not meant, but all that is implicated in the *opening* of the mouth: the lips and face. *How* to open the mouth, must be studied carefully and practised assiduously. After having practised a certain length of time on the vowel ô of "or" (see former articles), it will be found that *the voice has fallen into its proper place* and that, no matter what vowel or consonant may be sung, the voice will always take that place automatically without the exercise of any special care or preoccupation. Exceptions must, however, be made of the vowel sounds of e (as in "me") and a (as in "name"), and of the gutturals k and g (as in "come" and "go").

It should not be forgotten that the form of the lips is ovoidal, not horizontally but perpendicularly. To sing e ("me"), the lips should be advanced, their opening small, almost as if about to whistle (but without stiffness), tongue lightly touching the front lower teeth. There must be the sensation of a cavity or hollow place, right in front of the mouth, immediately behind the teeth. At first, this may be found difficult to accomplish, but when once acquired it will facilitate many other combinations, and it will do away with one of the chief blemishes in word singing: that is to say, the sudden change of quality from round and resonant ah, o, u, i and their variants, to the thin, shrill or nasal e. Start on E♭ and sing the words "Who has my key?" to the ascending arpeggio E♭, G, B♭ and upper E♭. Sustain the word "key" and examine it for quality and position of mouth and tongue: you will be edified.

HIGH NOTES AND MOUTH OPENING

Care must be taken also to open the mouth deeper for all upper notes. There must be no side movement of the lips; the corners must not be drawn out horizontally but should be moved forward, nearer each other instead of spread away. This may be advantageously practised to the ascending arpeggio of the common chord, also to the two notes of an ascending octave and, finally, to an ascending scale. To attack the highest note: Drop the chin and, simultaneously, give a slight outward push

to the diaphragm; you will thus get the right quality and avoid any throatiness. The higher you go the more will you drop the chin—it may be only the difference of a line, but you must drop it (notice that I say *drop*, not force it down). The higher you go also, the more strenuous will be the sensation at the diaphragm. And that strenuous sensation at the diaphragm must be maintained for the entire length of the high note; observe that, and you will never run any risk of throatiness and its disastrous consequences.

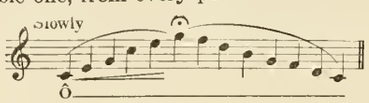
(My voice is bass. I sing low C and can sound A♭, a major third lower; yet I can sing a good, resonant, high A (the tenor high A) and sustain it, without strain, fatigue or discomfort, thanks entirely to this action of the diaphragm. This by the way.)

Thus, the mouth opening is generally vertical, with the corners drawn in. Corners spread out wastes breath, spoils quality, and frequently impairs intonation. Corners drawn in will correct false intonation and avoid the other faults.

EXERCISES FOR PRACTICE

Without singing, practise several times daily the lips and mouth movement, as follows: Lips closed; drop chin and, simultaneously, shoot forward lips in oval-vertical shape, to the whispered breath sound of ô (or). Take care to keep the tongue against the lower front teeth.

In addition to the singing exercises of the common chord and the octave, the well-known exercise by Rossini may now be practised. It is a most admirable one, from every point of view.



Note: One breath only for the exercise.

Attack as already instructed; drop the chin slightly on the upper C, a little more on the E, and still more on the high G; sustain the G. The outward pressure of diaphragm must be felt increasingly on the upper C, E, and G, and continuously while sustaining the G; *but you will exercise no pressure whatever when descending.* Remember this rule for all exercises: Ascending scales, arpeggios, and passages require outward pressure of the diaphragm, gradual and constant; descending scales, arpeggios, and passages sing themselves without diaphragm pressure.

Observe well your exercises, vocalises, and others. You will notice under each ascending passage this sign of *crescendo* It does not really mean, in this case, that the passage is to be sung louder, but that the diaphragmatic pressure must be sustained. Look also at its shape: Proceeding from a point to an opening, like the opening of the mouth. It will, therefore, be well to remember that this sign means: *As you ascend keep up the diaphragmatic pressure and open the mouth wider.*

NATURAL AND MADE VOICES

I have restricted these remarks on "How to sing" to those fundamentals which are necessary to every singer: When they are properly cultivated the voice is rendered more beautiful and its longevity assured; when they are disregarded the voice loses the quality it originally possessed and speedily dies away. A correct, working knowledge of these fundamentals is indispensable alike to the natural and to the made singer. For there are natural voices and made voices.

The natural voice, that is, that beautiful, pure, clear, resonant and pearly voice, a birth-gift from Nature does not need voice lessons: music lessons, theory and style, yes; but no voice lessons. A few examples may be found of interest: Jenny Lind, "the Swedish nightingale," was barely eighteen when she made a sensational debut as Agatha, in *Der Freischütz*, at Stockholm; Adelina Patti was only sixteen when she made her successful appearance as Lucia, in *Lucia di Lammermoor*, at New York; but probably, the most remarkable of all was Henrietta Sontag who, after having delighted all the people of the countryside from the age of *seven* by her singing, made her debut, at the age of *fourteen*, in Italian and German opera at Vienna. These celebrated singers needed no voice lessons; all they required was instruction in music, in style and good taste, and in operatic tradition. Indeed, I wonder what any teacher could have taught about voice to such prodigies!

RECAPITULATION

Let us now recapitulate the chief desiderata for making a competent singer:

I. Breath control;

II. Mouth and lip position;

III. Tongue, when not employed in articulation of consonants, to *rest, inert*, at bottom of mouth lightly touching front teeth;

IV. Observe that there is no stiffness anywhere;

V. The only voluntary muscular effort is exerted by the diaphragm, which controls all;

VI. Constant observation of face, mouth, tongue, chin and lip movements;

VII. Train the ear to listen, the eye to see and the mind to criticise all you do and sing.

THE AUDITORY JUDGMENT OF VOCAL PRODUCTION

BY DAVID C. TAYLOR

That the ear is the only reliable guide for the voice is a truism with which vocal students are generally well acquainted.

It is, however, by no means so well known that the listener's ear is a competent judge of the tone production of every singer to whose voice he pays close attention. This is a fact of great importance to the student. By listening closely to the tones of a singer one can tell with the utmost precision just how he handles his vocal organs.

Vocal tone impresses the keenly observant ear in a peculiar, almost a mysterious way. There is a marked distinction between the impression made by the tones of the human voice and the tones of any musical instrument. Consider first what you hear when you listen to a single tone of the flute or violin:

You hear a musical sound which has the following characteristics: Steady, uniform tone on a definite pitch; Beautiful quality; and the Individual *klangtint* of the instrument.

All these elements are present in a single tone of the voice. In addition there is also a peculiarity of the sound which informs you of the muscular action of the singer's throat in producing it.

One who has never turned his attention to this aspect of vocal tone will be surprised to learn how penetrating is the ear's power of analysis. Yet no effort whatever is needed for acquiring the ability to judge a singer's tone production by the sounds of his voice.

It calls for nothing more than attentive listening, with the conscious purpose of auditory vocal analysis.

But the gift can be perfected by practice. Every vocal student will be greatly helped in acquiring the needed command of his own voice, by perfecting his ear's ability to judge the correctness of another singer's tone production.

In the ear's estimation of vocal production we make use of a remarkably delicate mechanism with which nature endows us. We call into play not only our sense of hearing, but also the muscles and nerves of our throats. A moment's consideration will enable us to see what takes place.

Have you ever listened closely to the voice of a thoroughly bad singer? You know the type of voice possessed by the average cheap vaudeville performer. When you listen to a voice of this kind you feel intuitively that the unfortunate singer is straining his voice painfully. You even feel a sympathetic pain in your own throat.

This is because we always unconsciously imitate, silently of course, the voices that we hear.

Our silent imitation of other people's voices is, in one sense, purely mental. We do not actually produce sounds in imitation of the voices. What we do is simply to imagine how it would feel to use our own voices in the same way. Yet, to some extent at least, we do actually contract our throats in the way which would produce tones of similar character to those we hear. This is plainly seen when we consider once more the voice of the hopelessly bad vaudeville singer. The pain we feel, in sympathy with the singer, results from an actual strain of our own vocal muscles.

Listening to other people's voices is thus seen to be a rather complicated process. In addition to hearing the tones as purely musical sounds, we also imitate them mentally and judge by the sensations in our own throats how they are produced.

This is a purely instinctive action which we cannot help performing. Until our attention is called to it we are usually altogether unconscious of the mental imitation. Only when listening to extremely faulty tone production do we contract our own throats violently enough to be aware of any actual sensation of pain.

But it is well worth the student's while to cultivate the habit of judging voices by the mental imitation of the tones.

A little attention paid to this aspect of vocal tone will result in a keenness of ear and a certainty of judgment which will be of inestimable value to the singer. Most important of all, a conception of the meaning of perfect tone will thus be acquired, more precise and reliable than can be obtained in any other way. As the voice is guided by the ear, the singer's first requirement is an ear capable of appreciating the finest shades of difference between perfect and incorrect tone. Attentive listening to other singers, with a view to judging their manner of tone production, is the best and quickest means for acquiring the necessary insight into the nature of perfect tone.

The old Italian masters were well acquainted with this aspect of vocal tone. They first pointed out the fact that faults of production are usually of two types.

To one type of incorrectly used voice they gave the name "throaty" because the tones seem to be, as Tosi expressed it, "choked in the singer's throat." The same authority speaks of another type of faulty voice as "passing through the nose." We may be sure that no unfortunate singer whose tones were under criticism ever explained to Tosi the nature of his faults. On the contrary, it was left for the master to diagnose the case, and this he did solely by means of the impression made on his ear.

While the terms "nasal" and "throaty" have passed into common use, their origin is still perfectly plain. We call a voice throaty, just as Tosi did, because in listening to it we feel that it is held in the singer's throat. A moment's consideration will show that we get this impression through mentally imitating the voice

THE HERMAN KLEIN PHONO-VOCAL METHOD

Based upon the Famous

School of Manuel Garcia

Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

n precisely the same way we say that a faulty inger "sings through his nose."

It is our own ear that tells us this, aided by nconscious yet instinctive mental imitation.

No vocal student need be warned against the arshly nasal or throaty quality of tone. But here is a somewhat slighter degree of faulty ocal management, which is not always so well nderstood.

Tone production may be faulty, and yet be not quite bad enough to result in tones of narkedly throaty or nasal quality. It is precisely this manner of using the voice which the tudent needs to avoid most carefully. Daily xercise of the voice in this faulty manner is xtremely dangerous. It leads in time to a hard, nechanical type of tone, devoid of beauty, even hough it be free from any flagrant fault. What ontributes most of all to make singing a delight to the hearer is the fresh sweetness of an nspoiled voice. The bloom will soon be rubbed off if the student persists in singing in the faulty nanner just described.

How can the student learn to avoid this type of tone? The best way is to be able to recognize in any other voice the quality we are considering. This is a fairly simple matter when once the attention is turned to the auditory udgment of tone production. Singing of this ype always gives the impression of tension or strain in the performer's throat. The ear soon becomes keen to recognize this defect, and to detect even the slightest indication of throat stiffness.

There is then no difficulty for the student always to avoid producing tones of this type. All that is needed for him to listen constantly to his own voice in all his practising. With the ideal of pure correct tone always in mind, and an ear keen enough to detect the slightest fault of production, the voice will instinctively and of its own accord adopt the correct manner of tone production.

CARE OF THE VOICE

In the issue of The Musician for March several short notes were printed bearing upon throat troubles. This is a subject of especial interest to singers and students of singing.

It is commonly acknowledged that most of us are careless in small matters such as are reasonably sure to bring on a "cold." And singers who should be unusually careful are, frequently, just as unconcerned as the person who has not a voice which should be protected.

In his book, *The Voice, Its Production, Care, and Preservation*, Dr. Frank Miller, the eminent New York physician and throat specialist, has a chapter on *Hygiene of the Voice*, which should be read by every singer. We quote a few sentences from this which have special bearing upon the risks which singers will take in certain seasons of the year. "A hot bath, followed by exposure in the open air or to a draught, is apt to develop a cold by night. I recommend for singers a lukewarm bath.

"When singers have their hair cut they should watch themselves carefully for the next twenty-four hours. Some singers catch cold every time they have their hair cut.

"For travel the singer should be prepared for atmospheric changes as no one else in the world. He should be especially cautious at night."

For travel on a train he recommends a dressing gown with a hood, regulating the bed clothing accordingly. He calls attention to the sudden changes which are characteristic of New York. And, in passing, one may say that the greater part of the East shows similar sudden variations in temperature and condition of the atmosphere, to say nothing of Boston's famous "East wind."

"There are certain periods of the year when singers should especially look out for their voices," says Dr. Miller, and then calls attention to the period of January thaw and of colds from melting snow. In the latter part of March the earth is beginning "to ferment and this is a period for spring fever and intestinal troubles which indirectly affect the voice.

"The first sneeze should send the singer to his physician, and he should also realize—as only too few persons do—that, after a cold, nature requires from a week to nine days to repair the damaged processes, and that he should not work too soon."

We have referred to this book in previous writings, but wish to call the attention of our readers to it again, for it discusses matters of hygiene with great clearness and thoroughness, and the chapters on the training of the voice are also full of valuable suggestion to singers and teachers.

———*———

DISCOVERING A VOICE

We read in the daily papers, now and then, that some teacher or singer has discovered a great voice and that the person in question is certain to have a brilliant future. All this predicted because of a "great voice."

The cynic is likely to ask what becomes of all these "great" voices. He fails to hear them in public work and wonders. Perhaps he will believe, as some do, that the average teacher spoils a "great" voice and that the trouble is with the teacher. Not a few persons are incredulous as to the ability of the average teacher to make an artist out of a pupil with a "great" voice.

Here is the process: A young man or a young woman comes to a studio to have an examination of the voice and a report on the material. It is really way above the average, so much so that the teacher is enthusiastic as to what may be accomplished by the possessor of the voice under favorable conditions. Arrangements are made for lessons and the voice is on the way to success.

But the glow of discovery and of being discovered is now over. Work begins; work for teacher, work for pupil. Here is the test, that of personal fibre, of character, and of ability. Voice, and again voice, is necessary to a great singer; but it is not all. The splendid instrument must be used aright, must be played upon artistically. And to play well means two things, at least, namely, good training and mental ability which some one has called, "The singer's brains."

The teacher is responsible for the training and we will assume that he is competent to do the right kind of work. But the pupil must be able to receive, absorb, and assimilate the instruction, and be willing to do his share of the work. Here is the rock upon which the career is wrecked. The mentality of the pupil is not of the kind to develop the voice to its fullest possibility.

But granted that the pupil has the intelligence to apply the training he receives the final demand which he must meet is that he must have soul, feeling, understanding of the text and music, or he will never put into his tone and his presentation of the song that life, that vital energy which suffuses everything with artistic appeal.

A teacher may discover a "great voice," but making a great singer out of the possessor of a great voice is not a natural sequence. But the teacher should always be on the lookout for the fine voices. We hope you will find at least one every year.

The Twenty Vocal Lessons

given in fundamental voice training in my Summer Course, beginning June 10th, will give you a thorough insight into correct principles and practice, besides placing your voice on a sure foundation for further development. Send for an outline of the work.

CONDUCTED BY HELENA MAGUIRE

MUSICAL TONGUE TWISTERS

1. Much money made Master Mozart's melodious music merry.

2. Bach's big, bad, bitter brother behaved badly, berating Bach.

3. Schubert's soft, silvery songs sing sweetly.

4. Big Beethoven's breath breathes brimful blessings. ADELE SUTOR.

THE YOUNG MUSICIANS' CLUB

The Young Musicians' Club of Newtonville, Mass., sends us the following story of "club doings."—"We have recently formed a Club Chorus and it made its first appearance in January. . . . We took *Favorite Airs* for our study subject, and each member answered the roll call with the name of an old song, its composer, and a few words about it. Parents and friends are always invited to our meetings, and the program is always followed by musical games. The club members take turns in providing the games and looking after the social hour. The *Favorite Airs* were both played and sung.

ALPHABETICAL CLIPPINGS FROM A MUSIC TEACHER'S YEAR OF TRAVEL

BY RENA I. BISBEE

Fill each blank with the name of a composer whose initial letter is the same as that of the place mentioned in connection with it.

1. Just before leaving my home in Arlington, I heard a famous vocalist give a recital of ——— songs.

2. I decided to take the night train from Boston because in the afternoon I wanted to hear ——— in a program of her own compositions.

3. I had before this sent to a firm in Chicago for a complete set of ——— studies to give one of my pupils.

4. I went first to Detroit to visit some friends who were particularly fond of ———'s *Humoreske*.

5. They took me on an excursion to Lake Erie and the orchestra on the boat frequently played ———'s *Salut d'amour*.

6. The illness of a friend in Framingham brought me there in a hurry, but by the time I arrived she was sufficiently recovered to go to the Gorman one evening to hear a stock company give ———'s *Martha*.

7. I decided to spend the summer in Gardiner where I could assist some amateurs in giving two of ———'s operas.

8. Later feeling the need of a sea voyage, I took a trip to Halifax and was delighted to hear a large chorus there give ———'s *Creation*.

9. In the fall I went to Ithaca on purpose to hear one of the Cornell professors lecture on ———.

10. When the first frost came I hurried south to Jacksonville to avoid the cold, but I was driven out because the young lady next door persisted in singing ——— songs until very late every night.

11. So I took the first train for Knoxville and on the way fell in with a party of music teachers who were discussing the merits of ———'s method for beginners.

12. Hearing that a famous pupil of ——— was to give a concert in Louisville I went there for a few days before starting for

13. Minneapolis where I had some relatives who urged me to come for a music festival when ———'s oratorios were to be given.

14. Business called me to Nashville, but I was rewarded for the hard journey by meeting someone who had known ——— and who played his *Narcissus* charmingly.

15. Being so far south again, I thought I would go on to Orlando to sample the famous oranges and grapefruit there. I arrived on the evening that a traveling opera company gave ———'s *Tales of Hoffmann*.

16. Seeing by the paper that ——— was to play in Philadelphia I deserted the orange groves and took the fast express north telegraphing ahead for a ticket to the concert.

17. A former pupil of mine wrote that he was to sing the tenor solo in ———'s *Stabat Mater* which was to be given in Raleigh soon, so I decided to take this in en route to

18. San Francisco where I went partly for the Exposition, but mostly to get a glimpse of the great German composer ———, who was reported as likely to give concerts there sometime during the summer.

19. Finally tiring of the excitement I started east stopping off in Topeka to hear one of ———'s operas given in Russian.

20. A wireless from friends in Vancouver urged me to come for opera season when all of ———'s operas were to be given, but I could not spend the time as my year of travel was most over, so I went on to

21. Washington to hear the ——— operas instead.

22. By planning carefully, I had just enough money left to go to Yonkers to hear the great violinist ——— play in a joint concert with

23. Mme. Bloomfield ——— who was so favorably received in Zurich before the war.

ELSA AND THE METRONOME

BY ELIZABETH A. GEST

Elsa had just come home from her music lesson.

"Oh, dear me!" she said to herself, as she put away her music, "what a scolding I got today! I wonder why I cannot play in time? I never could, but today was worse than ever." And she put her books carefully where they belonged (for she was a very neat little girl).

"I believe I will practise right now, while I am in the mood for it, and perhaps that old metronome will help me."

So she went to the piano again, and opened the little door of the metronome.

"Hello," said the little tick-tack; "I thought you had quite forgotten me."

"Oh, no, I have not forgotten you at all," said Elsa, "but you are so hard to get along with."

"Nonsense," said the metronome, "*you* are the one who is hard to get along with. I never know whether you are going to play fast or slow, and then you blame the trouble on me."

"Perhaps it *is* my fault," said Elsa, meekly.

"Certainly it is; but it is good fun anyway. So let's get together for a little while. Really you have not opened my case for so long, I feel quite stiff in the joints."

"I am sorry," said Elsa, "but you will soon limber up."

"Well, let us begin on scales," said metronome. "Scale of C, very slow. Now set me off."

And Elsa gave the weighted pointer a little push, but—bing—it went tick-tack, tick-tack, like a little French clock.

"Oh, my!" she cried, "what is the matter?"

"You forgot to set me," explained the metronome.

"Oh, so I did. Now we will try again, very slow." And Elsa began her scale, and the metronome ticked a steady accompaniment.

"That is very good indeed, for you," said metronome. "It was only uneven in six places. Let us try again, very carefully." And Elsa went up and down the scale several times.

"Very good indeed," said metronome. "Now double your speed, and play two notes to each tick—absolutely even. It is hard work, I know, but pay close attention." And Elsa played on.

"That was very good, too," said metronome. "It is a very difficult thing to put a thumb under, and keep time with me, isn't it? But you are doing much better."

Soon Elsa was playing four notes to each tick, and her scales were getting smoother with each repetition, until she looked at the clock and found that she and metronome had been playing duets for half an hour.

"Dear me, it is almost tea time," and she osed the piano.

"Must you go?" asked metronome. "Well hope you have had as much fun as I have."

"Indeed I have," answered Elsa, "and you re not nearly so troublesome as I thought," ie confessed.

"Thank you. Let us do it again tomorrow, nd soon we will try to work together on pieces s well as scales."

"That will be fine," said Elsa: "and I really hink I have improved some already," she id as she put the tick-tack away.

And the next time Elsa went to her music esson she was pleased when her teacher told er that her time had improved.

"I knew it would," said Elsa, shyly, "because I practised every day with the metonome, and it was lots of fun, too."

———*———

ORCHESTRA

BY GRACE BUSENBARK

Ten-year-old John had had his first experince listening to an orchestral concert, and ame to the music club meeting eager to relate is impressions.

"O, Miss B.," he exclaimed, "there were *so many* men all making the same music together; nd there was a man that father called the conductor' who beat time for them."

"But the men could not watch him all the ime they were playing," observed Miss B. milingly. "So how do you suppose they all ept together?"

"Why,"—John thought a moment, "they nust all have counted for themselves, too."

John had previously found out the value of ounting in his violin lessons.

"Do let *us* have an orchestra, Miss B.?"

So we had the following game* which caused nuch merriment and from which grew many nstructive as well as entertaining hours.

The players sit grouped in semi-circles, one ehind the other.

Each one chooses a musical instrument which ie is to represent. One child who is the "conductor" faces the "orchestra" with his baton. The orchestra decides upon a tune which they hen sing, each one at the same time imitating is chosen instrument. There may be violins, orns, harps, cymbals, trumpets, drums, 'cellos, n organ, and a piano.

The conductor unexpectedly stops beating ime and asks one of the players: "What is he matter with your instrument?"

Before the conductor can then count 5, the layer must answer, mentioning some part of is instrument that is defective. If he does not nswer correctly he must change places with he conductor.

It obviously became more convenient and nteresting to have a speaking acquaintance vith the several parts of one's instrument.

One of the things to prepare for the next nusic club meeting was to find out all the parts f one instrument,—a small prize being offered for the child bringing the longest list. Some of our youthful musicians were surprised to learn that a harp has seven pedals, that an organ has more than one keyboard or how a 'cello is held.

Our "conductor" soon saw the advisability of accenting the firt beat of a measure with his baton or in some way differentiating it from the other beats. 2-4, 3-4, 4-4 and 6-8 rhythms became quite new conceptions under such a stimulus of responsibility.

There was no hesitancy about beating time now. The rôle of conductor came to be a most enjoyable one and this eccentric personage sometimes,—at Miss B.'s suggestion—varied his questions to his players by demanding what kind of time he was beating, or even on which beat he stopped.

At the next meeting John brought a fine large picture of a symphony orchestra and interest seemed unabated.

The children could always choose one game at our meetings, so at game time we rearranged our orchestra players using the picture as a guide.

Miss B. showed other pictures from her musical collection and it was voted that the club make a scrap-book of musical instruments in which one page should belong to each member.

Great was the competition as to who should fill his page first and great was the demand for old Musicians and other musical magazines.

Some queer foreign pictures were brought and one of an ancient Egyptian harp. This picture, side by side with that of a modern one, brought out the idea of how universal is music, —loved in all lands and times.

Another interesting picture of ancient musicians showed the players keeping time to the clapping of hands of one of their number.

"Why that is what Miss B. and I do when I am learning a new piece," cried Rose.

"Let us have one from every country," said adventurous Roland.

So the pictures were grouped according to their respective nationalities and great was the enthusiasm.

There was a Greek *lyre*, a Roman *tuba* (trumpet), a Hindoo *vina*, a Scotch *bag-pipe*, a Japanese *ko-ko* (a kind of zither), an Irish *tabor* (harp), an English *barytone* (for which Haydn wrote many pieces), and an Arabian *rebec* (a primitive violin); besides many more modern instruments, such as the *harpsichord* Handel used and the *organ* that Beethoven played on.

"I found a story about my picture," said Edith. And this is what she read:

"At old English festivals the favorite instrument was the harp. It was passed from hand to hand and whoever could not play well upon it was counted unworthy of being received in good society."

One day we gave over our entire club meeting to an Orchestra Day.

First we went to the Art Institute, where we visited the room of musical instruments which contained many of the ancient and foreign ones whose pictures we had in our scrap-book. Of course we took our scrap-book with us—a treasured possession by this time. It was fun to identify the pictures with their prototypes on the walls before us.

As an appropriate climax to Orchestra Day, we then went to hear a popular concert given by an orchestra (not a band).

Miss B. gave each one a diagram on which was marked the proper location of every musical instrument, and as we were early we could check off the men as they came upon the stage a few at a time, with their instruments.

After the concert was over we felt as John did when he said: "Miss B., I liked this concert lots better than I did the first one I went to. *Now* I know *what* instruments the men are playing and *how many* there are, and *how they do it*."

"It must be something like duet-playing," said Eva. "If you make a mistake you might 'put the other player out,' and then, too, the men would have to listen to the other players as well as to their own playing and not play too loud or too soft or the effect of the whole would not be good."

"But I wonder," said thoughtful John, "how *so many* can play at once and get on different notes of the scale? It's like different voices in a choir."

"When you know harmony," said Miss B., "you will enjoy a concert twice,—no four times as much. But that is another story."

*Adapted from the *Boston Normal School of Gymnastic Games.*

A BIRD AND ARBOR DAY MUSICAL

BY LAURA ROUNTREE SMITH

(Book rights reserved)

BIRD HOUSES MADE BY FOURTH GRADE CHILDREN, STATE NORMAL SCHOOL, PLATTEVILLE, WIS.

Costumes and Stage Setting: The stage should be given the appearance of the woods. Potted plants, green hangings, green paper chains at the windows, and a gate in the middle of the stage, the wires wrapped with green, and covered with roses, gives a pretty effect. The players may enter through the gate.

Birds wear capes, and old hats cut, leaving a

point in front, to suggest the bill, or the hats may be made in this way from crepe paper.

The Wind wears a loose cape and hat with streamers flying. He blows a megaphone.

The Sun wears a bright yellow dress and yellow crown, carries a yellow wand with streamers which she whirls to give the effect of sun rays.

The Rain wears a rain coat, cap, and carries umbrella.

The Green Leaves wear green dresses, skirts cut in points, wreaths of green leaves, and carry green branches. They sway the branches in time to the music.

Children with rose garlands go through a short drill at the close. Girls should wear white dresses, and boys white suits for the drill.

Tulips—Little girls, red dresses, red caps.

Enter Heralds of Spring, Wind, Sun, and Rain.

1. Recitation. Heralds of Spring.

Heralds of spring are we,
Wind and Sun and Rain,
Heralds of spring are we,
The birds have come again,
Trip to music's merry measure,
Springtime brings delight and pleasure,
Birds and flowers and many a treasure,
Trip to music's merry measure.

(The Wind blows, and Birds and Flowers, etc., all enter.)

2. Song. *Blow, wind, blow.* (*Sixty Songs from Mother Goose.*)

3. Recitation. To the First Cuckoo. Langford.

The flowers were blooming fresh and fair,
The air was sweet and still,
A sense of joy in all things beamed
From woodland, dale and hill.
On every spray had fairies hung
Their sparkling lamps of dew,
When first across the meadow rung
Thy welcome voice, cuckoo;
'Cuckoo! cuckoo!" No blither sound
In all the songs of birds is found.

4. Song. *Rain Song.* Reinecke. (*Thirty Songs for Children.*)

5. Recitation. Spring and Birds.

Spring again! Spring again!
All the flowers are in her train,
And the song-birds come to meet her,
Every year we gladly greet her,
Joys we bring, in the spring,
Everything delights to sing.

Birds again! Birds again!
Robin, blue-bird, thrush and wren,
All the woods are thrilled with laughter,
Sweet spring breezes we will waft her,
Soon is heard, song of bird,
Everything with music stirred.

6. Song. *Spring's Arrival.* (*Thirty Songs for Children.*)

7. Piano. *Birds in the Orchard.* Cadman. *Hark! Hark! the Lark.* Schubert. *Hedge Roses.* Schubert.

8. Recitation. Little Miss Tulip.

Little Miss Tulip, sing heigh, and sing ho,
Little Miss Tulip, 'tis time to grow,
Little Miss Tulip is nodding her head,
Skies are so blue and bright overhead.

(While the next selection is played the stage is darkened. Little girls in red dresses, with red caps, holding arms straight by their sides, enter, form a circle, all bow low toward center of circle, join hands, whirl round in the circle and the Wind goes in and out among them. The little girls represent the Tulip bed.)

9. Piano. *Tulips.* Lichner. *Flying Birds.* Lichner. *On the Wing.* Engelmann. *Springside.* Esipoff (*Rhythm and Action.* Norton.)

10. Recitation. In Springtime.

Laughing little Pussy Willow,
Wakened from her silky pillow,
Said, "It's much too cold to purr,
I will wear my cap of fur."
And the crocus from the ground,
Came up with a growing sound.
"Ha, ha," said the laughing rill,
I find it rather chilly still."
But Sir Robin in the trees,
Said, " 'Tis springtime, if you please,
So, we'll laugh and sing together,
In the pleasant springtime weather."

11. Song. *Once I saw a little bird.* (*Sixty Songs from Mother Goose.*)

12. Piano. *In Springtime.* Manney.

13. Council of the Birds.

1st. I am the wise old owl, I will call the meeting to order, I will ask some one to tell about habits of wild birds, but first let us sing together.

Song. *The Owl Song.* (*Sixty Songs from Mother Goose.*)

2d. Habits of Wild Birds.

Wild birds often fly long distances and have to stop to rest. They rest on wires, on fences and trees, and often on the masts of vessels at sea. Have you ever watched a wild bird falling asleep? He will find a good branch on a tree, shake his feathers, listen intently to see if he is safe, shake his feathers, tuck his head under his wing and fall asleep. Many other habits may be observed by bird lovers.

3d. The Humming Bird. The humming bird is the smallest bird in the world. It is a very swift traveler. It can travel faster than our fastest train. There are several hundred varieties of humming birds and they have brilliant plumage.

4th. The Merry Nightingale. Chaucer speaks of the Merry Nightingale and the bird seems to be a favorite with him. He mentioned it so often. Theocritus also mentioned the nightingale and the bird seemed to fascinate him as he often alluded to it in his writings.

5th. Birds as Travelers. Birds are wonderful travelers. They can reach up to mountain heights far higher than man can climb. They go long distances over land and sea. They journey north in summer and south in winter. They have been said to be the most wonderful travelers in the world.

6th. A Bird Dance. The Igorotes in the Philippine Islands have a dance which they call the *Bird Dance.* They beat drums and strike a piece of steel with a stone. They form a circle and a man goes inside dressed in a flowing blanket whose ends touch the ground. He hops about and skips and takes steps like a bird. He is followed by a woman dressed and dancing in a similar manner.

7th. Making Bird Houses. Children all over the world are making bird houses, and putting them up for the birds. They place them on trees and stumps and have found that many birds like to live in them.

A good many birds will stay with us all winter if provided with houses and fed plenty of crumbs.

8th. Birds in Music. Musicians of all times have loved Nature and birds. Beethoven used many bird-calls in his music. Verdi introduced bird-calls in his operas.

For their morning concert birds have a recognized leader who starts to sing at dawn, the rest soon waken and join in the chorus, until all the woods are full of melody. A lady living near the woods where she had noticed thirty-nine varieties of birds, found the robin was recognized leader and started the song every morning.*

14. Dance of the Green Leaves. (They give a dance and follow out motions suggested by the music.) *Whispering Leaves.* Geibel. *Swaying Branches.* Lanciani. (*Rhythm and Action.* Norton.)

(The Wind winds in and out among the dancers when they form a circle.)

15. Song. *The Wind.* Fisher. (*Posies from a Child's Garden of Verse.*)

16. Recitation. (From the German.) Every Tree with Music Tinkles.

Every tree with music tinkles,
Every blissful nest is singing—
Who, I wonder, is choirmaster
In the forest choir so ringing?

Is it the gay plover yonder,
Who keeps nodding on so gravely?
Or that pedant, ever calling
"Cuckoo," keeping time quite bravely?

Is it yonder stork so serious,
Place of leader as though taking,
Leg outstretched, like baton tapping
To the music all are making?

No, in my own heart I find him,
Who the woodland choir is leading. . . .

17. Piano. *In the Rose Garden.* Geibel. *The Swallows.* Bachmann.

18. Piano. *The Rose.* Bohm.

(Children with rose garlands go through a short drill and dance, to close the musical.)

* Note—*This is true in the woods surrounding my home*

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

SUGGESTIONS ON LEFT HAND WORK AND MENTAL CONCENTRATION

BY WILLIAM WALKER TODD

MANY excellent teachers who realize the importance of any element in violin work which tends toward the saving of time and development of concentration in the student's daily practice routine, lay considerable stress on the value of frequent practice of difficult left hand passages without the assistance of the bow.

The more complicated the finger work demanded by the particular passage under consideration, the more important it is that it first be given a careful going-over by the left hand alone, before the student brings the bow into service.

The advantages of this plan are manifold. The student does try to grapple, at the same time, with two sets of widely different technical problems,—the bowing and fingering—but by first familiarizing himself with the left hand technic until it becomes, to some extent, automatic, is better able to concentrate his attention on the right hand difficulties when the bow is finally brought into use; 2, increased sureness of position in the various shifts will be gained, as well as accuracy in scale and arpeggio passages and double stops and chords of all descriptions; 3, the necessity for letting the fingers fall hard enough to make a slight tone on each note stopped will result in greater strength and flexibility, as well as a marked sharpening of the perception of intonation; 4, and last, but not least, the ability to hear mentally, without aid of bow or fingers, various widely separated intervals or skips in the printed music—a most necessary acquirement for a violinist—will be greatly developed and improved.

As a means of quickly getting a new piece "under the fingers" this process is most excellent, while violinists of nervous temperament and sensitive ear often find considerable relief from the wear and tear of practice by alternating left hand work alone with the regular bow work. There is no species of left hand technic to which this method of practice may not be applied with benefit, and the more involved and difficult the passage, the greater the benefit to be derived from this means of study.

The student must not, however, understand the present writer to be exalting the importance of left hand work at the expense of bow technic. Accuracy, purity of intonation, and great endurance are indeed supreme and indispensable requisites of a well-trained left hand, but of even greater importance is the possession of a thoroughly trained bow arm.

The most highly trained left hand in the world would be of little advantage were the bow technic meager and awkward.

A favorite axiom of one of the most famous and distinguished teachers in America, whereby he seeks to emphasize the relative importance of right and left hand technic, is, "the left hand is one-third, the right hand two-thirds of violin playing." Another favorite remark during the lesson hour is, "the left hand is the artisan, the right hand the artist." The student should therefore train himself to regard the bow arm as the real leader, both in a mental as well as a physical sense, for accurate unification of right and left hand elements of technic depends upon the bow *leading* the fingers, *not* the scrambling fingers pulling along an awkward and stumbling bow.

In other words, the right hand is the conductor, the fingers of the left hand the men of the orchestra who obey with instant accuracy every intricate motion of the baton. However, the more independent and accurate the work of the artisan—the left hand—can be made to become, the more freedom of technic and artistic interpretation is possible for the artist—the right hand; hence one of the advantages of considerable left hand work alone.

Another valuable application of left hand work alone lies in the great benefits to be gained therefrom in mental concentration and accurate memorizing.

Every violin teacher will doubtless agree that the bowings of a piece, even when somewhat intricate, are, in the case of most pupils, much more quickly learned than the corresponding finger passages, for the reason that the bowings are more largely a matter of physical habit, while the left hand passages demand that the player shall have a more or less clear mental conception of the various relative positions of the fingers in the different scale passages, double stops, chords, etc.

Doubtless, the vast majority of players have, at some time or other, when playing in public, undergone the sickening experience of suddenly encountering what may be termed a "blank spot" in one's memory, when, without apparent reason, the fingerboard becomes a strange and uncharted wilderness, and the bow arm feels as though it were stricken with paralysis. While there are many circumstances and conditions which may cause "stage fright" and consequent loss of memory, the thoughtful student who will take the trouble to analyze his work will find that such unpleasant incidents are caused, nine times out of ten, by an insufficient or hazy mental picture of the left hand requirements in certain portions of the composition.

If a student who has never done any work with the left hand alone will lay down his bow, and, *without the notes*, attempt to finger through some familiar composition, he will have a most illuminating experience. He will be in the same condition as the piano student who attempts to play the left hand portion of a piece and discovers that he cannot make it "go" without the co-operation of the right. Both have depended upon finger memory, pure and simple, and have failed to realize the supreme importance of the mental insight, or, so to speak, mind picture, which is the only real basis of technical surety.

Therefore, let the student who would develop concentration, improve his musical memory, and gain in technical accuracy, form the habit of frequently reviewing his pieces, from memory, with the left hand alone.

Let him begin with some simple piece with which he is thoroughly familiar. The fingers should fall on the strings with elasticity and with strength enough to make a slight sound sufficient to guide the ear and insure correctness of intonation. Care must be taken, however, that the fingers are not stiffened by undue exertion. Purity of intonation in double stops or chords may be ascertained by brushing the strings lightly, pizzicato, with a finger of the right hand. After the fingers get to going well, try mentally to supply the various strokes of the bow. This will require additional and intense mental concentration, and will, for many, be at first a most disheartening process; but the beneficial results to be obtained will fully justify the effort expended.

When employing this method of practice the student will be astonished to discover, in pieces with which he considers himself thoroughly familiar, the number of passages in which his memory, in regard to the left hand work especially, is hazy or altogether a blank; and he will cease to wonder why, in playing for friends or in public, he so often stumbles over apparently well known portions of a composition.

After he has learned to go through a piece with the left hand alone, at the same time mentally supplying or imagining the various bowings employed therein, he should lay his violin aside and endeavor to go through the piece mentally, supplying in his mind both fingerings and bowings, and at the same time, of course, hearing the violin part in its proper pitch and tone quality. In addition to this, the mental conception of the work should be so developed that the student can, while sitting perfectly quiet, actually *feel* the varied fingerings and strokes of the bow involved in the performance of the different passages.

If, also, the student can, at the same time, clearly visualize, or, so to speak, see in the "mind's eye" the printed music he will enjoy a still greater advantage.

There are, however, many excellent pianists and violinists who confess themselves unable to visualize printed music clearly, while there are others who seem to be able to do so with ease. The student, therefore, must not be discouraged if he does not succeed at first in this feat; the presence or absence of this particular talent does not seem to have any special bearing upon a player's real musical ability. However, the possession of this faculty, even in a slight degree, is a great aid in memory work and should be cultivated as much as possible.

This mental practice involving the above described principles is employed in a considerable degree by all the great artists, and is the *ne plus ultra* of musical insight or perception in a technical sense, for the attainment of which every player who would call himself a musician should earnestly strive. The student should not be discouraged if he finds the initial steps of this method of work quite difficult. The harder it is the more surely he needs just such mental exercise and concentration, and the time and effort he puts forth along these lines of study will be repaid a thousandfold in results.

———*———

If your local school authorities have not added to the curriculum the teaching of violin-playing in classes, you are missing a good opportunity to promote the cause of music by not trying to bring about the organizing of such classes.

TONE PRODUCTION

It must not be imagined that any hints can be given by which a violinist may acquire a tone better than his own, and at the same time out of harmony with his temperament and character. However much a violinist may practise or study to improve his tone, the most he will gain will be ease and certainty of method. Actual character of tone is so much a part of the player that the same peculiarity may be distinguished in him from the very beginning to the end of his career, however much—or little—the early rasping or later polish may tend to disguise it. . . .

Brilliance, power, delicacy, nuances, shading, etc., depend on the character of the player and the shape and touch peculiar to each player's hand and wrist. Usually if a player believes in brilliancy he will play thus. If cold and powerful or rigid he will play in this manner, and generally have a large tone and so forth; while a broad character will possess all or most of the qualities combined. It is the latter broad character of violinist which we should strive to imitate if we desire to play almost every style of music. The man with nothing but brilliance to grace his playing would not be very acceptable in the more gentle or contemplative styles, and the massive-toned player would probably fall short in delicate nuances. The most talented, however, usually only excel naturally in one or two styles, and therefore in order to become all-round players must particularly cultivate the rest.

The qualities of tone most difficult to effect are loud tone with slow bow, soft tone, crescendo, diminuendo, sforzando, and general accents. The many different methods of producing all these make it a difficult matter to lay down any law amounting to a set rule even for any particular occasion. The following may be regarded as safe hints:

For ordinary medium tone, not much pressure will be necessary, and only a correspondingly moderate amount of pressure from the resisting grip of the thumb. The bow will travel about an inch from the bridge on the second string, nearer the bridge on the first and fourth strings, and a shade over an inch on the D. That is, the thinner the string the nearer may the bridge be approached without producing a grating tone. The bow should always be well tilted over at the heel and gradually assume a non-tilted position by the time the down stroke reaches the point of the bow. This latter may be regarded as a strict rule in producing medium tone and may be frequently disregarded in the production of loud tone. The louder the tone the nearer the bridge is the usual plan. In allowing that position of the wrist (unbent) at the heel which brings the hair flat on the strings, more power is gained, but great care will be required to avoid the slightest scraping. It should be resorted to only for very coarse effects.

Great command of the bow is necessary for making crescendos, even when taken with the up bow, but much more difficult is the down bow crescendo. In any case the bow will be placed a good inch or so from the bridge as in *pianissimo*, and well-tilted over, gradually becoming less tilted as the stroke swells to *forte*, and at the same time moving nearer to the bridge. It is well to be economical with the bow in crescendos, reserving the greater part for the loudest portion of the stroke.

Thus the bow will move very slowly at the beginning of a crescendo for about a third part of the bow, and then the speed will accelerate in proportion to the pressure and loud tone required. Exactly the reverse of the crescendo process is practised for producing a decrescendo. The position of the arm has a great deal to do with facilitating the crescendo and the decrescendo. This then would be a slight raising for the soft portion, and lowering toward the loud for the crescendo, and *vice versa* for a decrescendo. But mind—very slightly as a rule.

Ordinary sforzandos can be attained in several ways. The bow may be set firmly on the strings or simply be let fall on them, or pushed or drawn. The heel or the point are most commonly chosen for any of these methods, but other parts of the bow are equally suitable.

In the first method care must be taken to set the bow on the strings without too much bite or scratch, unless a very harsh sforzando is required, and the same care must also be taken in "dropping" the bow on the strings. The pushed sforzando is used when no crispness of attack is intended. Many degrees of force may be used just as occasion may suggest—from the most furious down to the merest emphasis. The soft sforzandos or common accentuations of notes require little more than the slightest extra force or crispness, or perhaps a trifle more of the bow. Some surprising results are obtainable through means of the many varieties of sforzandos, but the highest skill is essential for their production.
—From *Violin Playing*, by John Dunn.

Greater pressure of the first finger on the stick, and greater rigidity of thumb pressure, etc., are also necessary for very loud, sustained tone production. For soft playing the reverse process must be observed; the stick held gently and with absolutely no pressure, and with the wrist curved in the extremest degree—even at the point—and the bow removed far from the bridge. Very soft flute-like tone is produced when the bow is moved slightly over the fingerboard.

Making a gradual swell from one end of the bow to the other is usually most easily effected with an up stroke. This should be so contrived whenever possible by altering the bowing marks in pieces requiring such revision. Many of the principal classics for the instrument have, however, at least one good edition with all suitable fingering and bowing for the student's requirements.

a work in favor with violinists. The Oliver Ditson Company publish two charming part-songs for women's voices, **May Day Song** and **Sister Awake** by Mr. Hartmann.

MUSIC AS TAUGHT IN THE J. STERLING MORTON HIGH SCHOOL, BERWYN, ILL.

BY E. C. STARBUCK

The question has been asked by several persons lately, as to what kind of music work we have in the J. Sterling Morton High School, and in schools of this type in the State of Illinois. The following report may interest music teachers in high schools in the United States. Our classes in music are:

Chorus work; Band and orchestra work ensemble; Boys' and girls' glee clubs; Harmony; History of Music; Musical interpretation and appreciation.

There are 500 students in the school and music, like most of the subjects, is elective. There are 32 members in the orchestra, 14 members in the band, 70 members in the Girls' Glee, and 30 in the Boys' Glee Club.

In addition to this we are instructing classes containing from 5 to 10 members, on the different instruments, that is, we have a beginning class of violin of 10 students, who are taught as a class, much as you would teach algebra or any other subject in the regular curriculum. We give individual help when it is needed, but, as a rule, any proposition explained is understood by a large majority of the class. Sometimes a member of the class may not understand, in which case it becomes necessary to instruct individually. The other members of the class, hearing the explanation, will learn the proposition more accurately.

All students are taught the correct position for holding the violin in the first lesson. Whenever a student fails to hold the violin as instructed the fact is at once called to his attention. Most of the class hearing this will correct any fault they may have of a similar nature. These students are taught to bow with proper position of arm in unison on open strings.

They are then taught the scale in one of the easiest keys, the key of C, commencing with the open G string, followed by the first note, A, on the G string about one inch from the nut, made with the first finger; then B, made with the second finger one inch higher on the finger-board than A; then C, made with the third finger which is only about half of an inch higher on account of the half tone between B and C. The class will learn to do this in unison and at the same time the teacher should use the piano with the class so that they may know when they are in tune. The other strings on the instrument, D, A, and E, are

aught in the same manner, until all the fingering s learned in the first position.

I am using a text which I prepared especially or this work and published for all instruments in he Orchestra, *Starbuck's Beginner's Orchestra Book and Instructor.*

The reason for doing this work in classes is hat it can be done as well as the old individual way, and much more cheaply. A teacher, worth one dollar per hour, can give ten lessons at a cost of one dollar, the old way the cost would be ten dollars. My observation has been that the progress s more rapid. The student profits by the association and has a better incentive in class than alone, nd will accomplish more in the same number of essons.

At the beginning of the intermediate class I put he students who have gained some degree of proficiency on the various instruments in the intermediate orchestra where they may have more advanced work in class, where I use all kinds of nstruments at a time. For this work I am using s text, *Ditson's Orchestra Book.*

The advanced work is handled in much the same manner but with a more advanced text, such as the *Lyric Collection* of easy overtures.

The work in the Girls' Glee Club is a much easier proposition, as the grade school has prepared the way by teaching the children to read music before they come to high school. At the beginning of the year I organized the girls who chose his work into classes of about thirty each, dividing he voices, soprano and alto, in equal parts. If here are more high voices than alto voices I make a glee of three parts and use half of the sopranos on second or mezzo-soprano, using music suitable for the combination which I have.

Some of the material which I use for this work and have found to be good as a text, are *Part-songs,* by S. S. Myers, Wilson's *Quartette Book, Part-songs,* by J. S. Fearis, and other selections and leaflets, by Oliver Ditson Company, C. C. Birchard, Ginn & Company, and Silver, Burdett & Company, all for women's voices.

For chorus work we are at present using the list of songs recommended by National Music Teachers' Association as the songs every school should sing.

For the harmony class we are using as a text White's *Harmony and Ear-training.*

For the history of music we are using W. J. Baltzell's *History of Music,* and THE MUSICIAN and *Etude* for supplementary material.

Frequently some one says: "I would have an orchestra if I could get enough to start with; but I do not know how to go about getting students interested enough to purchase instruments and start taking lessons, so that in time they would be able to play in an orchestra."

No doubt this is the case with most music supervisors who have no orchestra. My method of procedure may be helpful.

First. I talk to my school at the general assembly period telling them the value of a musical education and find out how many, if any, play instruments which can be used in a school orchestra. There are few schools who have no players; also there are few communities where you will find no outside help; in fact most communities have outside music teachers who will be very glad to cooperate in so valuable a piece of work. I ask all outside music teachers for their help and for the names of students who play instruments, and get them to encourage their students to play in the school orchestra, for which we give credit on the same basis as other work done in the school. I ask all students interested in taking up beginning work in orchestra to come to me privately and talk over the proposition.

At that time I guide them as to the instrument for which they are best adapted and help them to select their instruments and get proper material to begin with. In return for co-operation asked of the music teachers in the community, we offer credit for outside music study

—*—

Do not allow your work and your influence to be limited to the studio. Read what others have to say in regard to the music teacher's duty to his community and the opportunity for splendid service to the art as well as practical benefit to the profession collectively. Whatever increases public interest in music increases the number of pupils to study.

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS: MIXED VOICES

DRESSLER, LOUIS A.
No. 12,902. **Eight responses for use after prayer**..$0.16
Melodious settings, to be sung unaccompanied.

HUHN, BRUNO
Sing unto the Lord..... .12
For general and festival use; a fine choral number by a leading American composer.

WOOLER, ALFRED
No. 12,916. **Hear, O Lord, my supplication**..... .10
A short, easy anthem, with solos for soprano and tenor.

CATHOLIC CHOIR MUSIC

BORDESE, LUIGI
No. 12,796. **Regina coeli**..... .12
Two-part song or chorus for women's voices.
No. 12,793. **Salve regina**..... .10
Two-part chorus; easy and melodious.

DUBOIS, THÉODORE
No. 12,820. **Panis angelicus**..... .10
For two or four-part chorus, with soprano solo obbligato.

FAURE, J. B.
No. 12,826. **O salutaris**..... .10
For two-part chorus.
No. 12,819. **Tantum ergo**, in E♭..... .12
For four-part chorus of mixed voices, with alto or baritone solo.

HUMMEL, JOHANN NEPOMUK
No. 12,792. **O salutaris hostia**..... .08
For two-part chorus of women's voices.

LEJEAL, ALOIS F.
No. 12,744. **Tantum ergo**, in D..... .10
A melodious setting for four-part chorus of mixed voices.

MAURO, ANTONINO
No. 12,808 **O salutaris**..... .08
A short setting for two-part chorus, women's voices.

MELVIL, M. A.
No. 12,815. **Ave regina**..... .10
For four-part chorus, mixed voices.
No. 12,812. **Salve regina**..... .12
For four-part chorus, mixed voices, with optional solo for soprano.

MINÉ, A.
No. 12,748. **Lauda Sion**..... .10
A three-part number for soprano, tenor, and bass.

OVEREEM, M. VAN
No. 12,813 **Adoro te, devote**..... .10
Two-part chorus, easy and melodious.

PETERS, W. C.
No. 1,804. **Asperges me**, in G. $0.08
A pleasing setting for four-part chorus.

SAINT-SAËNS, CAMILLE
No. 12,746. **Tantum ergo**, in E♭..... .12
For four-part chorus, mixed voices, with optional quartet or semi-chorus.

VERDUSSEN, FR.
No. 12,817. **Tantum ergo**, in A♭.....10
An easy four-part setting.

PART SONGS: MIXED VOICES

BOSCOVITZ, F.
No. 12,900. **Bella Napoli.** Arr. by C. C. Robinson.. .12
A barcarolle, or boat song, easy and melodious.

JAKOBOWSKI, EDWARD
No. 12,893. **Carnival chorus** (From *La Tarantella*).. .10
A four-part chorus, especially adapted for use of school choruses; it is in waltz rhythm; choirs of boys and girls alternate in the arrangement.

MACY, J. C.
No. 12,890. **The light of youth**..... .08
A march song for school use, soprano and alto parts.

SANDERS, HERBERT
No. 12,877. **Come, May, with all thy flowers**..... .12
An inspiring chorus of moderate difficulty; a fine song for spring music festivals.

PART SONGS: WOMEN'S VOICES

CLOUGH-LEIGHTER, H.
No. 12,879. **Fragrance of the rose**..... .12
A concert number for three-part chorus.

SAAR, LOUIS VICTOR
No. 12,881. **Golden slumbers**..... .12
Three-part chorus, with brilliant piano accompaniment; a fine concert number.
No. 12,880. **Weep you, no more, sad fountains**... .12
Three-part chorus, with piano accompaniment; a lullaby.

SINDING, CHRISTIAN
No. 12,930. **Dreamland.** Op. 47, No. 2..... .10
A three-part song for women's voices, with piano, by the foremost Scandinavian composer of the day.
No. 12,931. **Let the fiddles, flutes, and brasses.** Op. 47, No. 4..... .10
For three part chorus, with piano accompaniment; in dance rhythm. It includes a soprano solo, and makes a fine concert number.

PART SONG: MEN'S VOICES

STEBBINS, G. WARING
No. 12,358. **A song of the sea**..... .12
A strong, inspiring song for male chorus.

OLIVER DITSON COMPANY, BOSTON

THE ECHO ORGAN

BY H. C. M.

Our musical brethren in England are having a more and more difficult time as the months move on. Only yesterday I heard of a man, known on both sides of the water, who has lost quite all his teaching connection not because students are too poor to pay, but because his clientele consisted almost entirely of young men going up for the various musical examinations and who have now enlisted. We of the United States can hardly understand how much teaching of that sort there was before the war. Any young man anxious to rise in the musical profession had to get his A.R.C.O. and then the F.R.C.O., or, if a pianist, his L.R.A.M.; but these degrees are only beginning, the Mus. Bac. and the Mus. Doc. must follow, completing the long chain and standing for an immense amount of hard and, in some cases no doubt, stupefying study, spread over from five to ten years or even longer.

* * *

And so the demand for this instruction was supplied by a new kind of teacher, an examination coach, the business of the coach being to prepare his pupils as expeditiously as possible for the tests. Look at any English musical paper of May or June, 1914, and see how many of these examiners there were.

* * *

[*Place, the Church of Saint Aloysius; time, the other day; persons, two organist friends, talking "shop" while waiting for an organ recital to begin.*]

A.—"What did you play at your last recital?"

X.—"Same old thing—first sonata of Mendelssohn, prelude and fugue of Bach, an *Impression* by Karg-Elert—"

A.—(Interrupting). "You don't call Karg-Elert 'same old thing'?"

X.—"Well, no, but Mendelssohn and Bach are certainly old enough."

A.—"Oh! You mean that those two worthies are staple and must furnish the bulk of the program."

X.—"Yes, that's the idea. Of course you can't ignore all the modern things, but—"

A.—"But—"

X.—(Laughing). "You're a queer one, A. Don't you like the modern stuff?"

Möller Pipe Organs

Twenty-one Hundred in use. The highest grade instruments at moderate prices. Specifications and estimates on request. Write for catalogs.

M. P. Möller, Hagerstown, Maryland

A.—"Certainly; some of it has lasting power and a good deal of it is cursed with the fatal facility that is characteristic of much of our modern music. We are too clever: we think a great deal and *feel* little. And then our organ is getting to be a sort of trick instrument, a mountebank, hopping around like a kangaroo, screeching like an owl and disporting itself in a most unseemly fashion."

X.—"Do you mean that you think the only thing the organist ought to do is to play chords, at a slow tempo?"

A.—"No, of course not!"

X.—"I'll tell you what is the trouble with you, A: you can't play some of the modern 'stuff,' and so you're down on it."

A.—"*Et tu Brute!* X, if we hadn't grown up together musically, I should take your charge in earnest; as it is I see that you want to draw me out. . . . Well, here goes. With all the changes brought about in music through the Berlioz-Liszt-Wagner propaganda as regards the opera and symphony the organ could not remain unaffected. Compare the orchestra of the *Scotch* symphony with that of *Tristan* noting also the treatment of the orchestra in each of these typical cases, and ask yourself if it was possible for organ composers or organ makers in their turn to escape the modern influence. Of course they could not escape it."

X.—"Well, who wanted them to escape it? You talk as if it was cerebro-spinal meningitis or typhoid fever!"

A.—"X, you are silly. Organ music was bound to be affected by modern movements in music and thus we have two distinct developments in our organ-music-of-the-minute: We try to make out of our somewhat unwieldy, but majestic instrument a rhythmical one, and we utilize to the full all the appliances for tone-color given us by our friends the ingenius organ builders."

X.—"O, I see what you are driving at; you want to make out that the organ is an unrhythmical instrument, fit only for plain-song harmonies."

A.—"And so it is, speaking from the rhythmic standpoint alone. Of course you can make marches of a somewhat obvious type sound really exhilarating, on the organ, but if you try such a thing as the —"

X.—"Look here, A, did you ever hear Z—— play the *Ride of the Valkyries* on a big organ with good wind pressures, and when he was feeling all right? And do you mean to tell me that you did not feel the splendid march of the rhythm?"

A.—"You've picked out the one piece in all the concert repertoire that whether played on an organ or as arranged for two flutes is inevitably rhythmical."

X.—"Did you or did you not find the organ as played by Z——, under the conditions I have outlined rhythmical?"

A.—"Why, of course, it was rhythmical."

X.—"What do you mean, then, by saying the organ is an unrhythmical instrument?"

A.—"Why I mean this; if you play the organ in conjunction with the orchestra—"

[*Here the first note of the recital is heard and A subsides.*]

* * *

The other day I heard a rather good story of a certain Exalted Personage, whom I will style T. R. The story teller was part of a musical delegation paying their respects to the Exalted Personage at the White House. He found himself the last of a somewhat long line and when his turn came to shake hands with the E. P. he said "Mr. President, I am the Coda and there is no repeat." T. R. looking somewhat puzzled my friend said again "Coda, Coda." "Ah," said T. R., "from Dakota! Delighted to see any gentlemen from Dakota."

DEATH OF FRANCIS H. HASTINGS

Francis H. Hastings, one of the leading citizens the Town of Weston, Mass., aud one of the most widely known manufacturers of church organs in the country, died on Wednesday, February 23d, in in his eightieth year. Funeral services were held on the following Friday afternoon at his late residence.

Mr. Hastings was born in Weston, in 1836, and at nineteen years of age went to Boston (Roxbury) to enter the employ of E. & G. G. Hook, organ builders. He was admitted to partnership in 1865, and has been the principal owner since the death of Elias Hook in 1881.

In 1887 Mr. Hastings moved his business from Roxbury to a new and larger factory building he had erected on a portion of the old homestead in Kendall Green, Mass., and in 1893 a corporation was organized to carry on the business under t firm name of Hook & Hastings Company.

Mr. Hastings was devoted to his art, giving it l whole energy for nearly sixty years, and was reco nized as the leading organ builder in this country.

During his later years he built up a strong orga zation of younger men, who have been in charge the management for some years and who will co tinue the business.

Established New York, 1851 St. Louis, 1873

TINDALE MUSIC CABINETS

Delighted customers who have actually used them are oftentimes able to express the good points about our Cabinets better than we ourselves can do it—and in fewer words.

Witness this from a patron whose address in Ohio will be given on request:

"We are much pleased with the Cabinet. It is a delightful experience to find a piece of music where we look for it."

Yours truly,
(Signed) C. E. BLIVEN.

We have hundreds of letters from customers in praise of these Cabinets, their convenience, the time saved in searching for music, protection to the music, appearance and finish, etc., etc.

If you would like to know more about them we shall welcome your request for Catalogue 2 with pictures and full details.

TINDALE RECORD CABINETS. These have a separate container for each and every Record.

No handling of heavy Albums filled with several Records to get one Record. Five seconds places the Record in your hand without your handling any other Record.

Send for Booklet 2B.

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment—a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

Sohmer

315 Fifth Ave. New York, N. Y.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY MATHEWS

I HAVE a six-year-old pupil, small for her age, who came to me in October. She has a tiny, baby hand, which I do not know just how to treat. She can reach a seventh and strike second and third positions of triad chords, has a firm tone on scale work, but not much endurance. It seems to me the beginning of a good hand, although there is a tendency to double joints in first joints of fingers. Her older sister (age nine) has a very weak double-jointed hand, but it is built differently from the little one's. She will soon be through the *First Book* and I wish to know if I shall give her second book of *Graded Materials* as I usually do.

There is much of it that seems beyond her grasp and I don't know how much stretching the little hand will stand.—L. W.

Before giving the second grade of the *Graded Materials* I would advise some of the pieces from my *Students' Classics*. All of these can be bought in sheet music form. The following would perhaps be most useful for your pupil as none have octaves. *Song* by Gayrhos; *Sunshiny morning*, Gurlitt, with the hands divided as I have them in this edition; *Soldiers' march*, Schumann; *Once there was a princess*, Kullak; *Children's march*, Merkel, *Dolly's kitchen* and *Birds in the woods*, Hollaender; *At play*, Gurlitt; *Sonatina*, Spindler; *Air and variation*, Gurlitt; *Minuet*, Bach; *Ave Maria*, Burgmüller. Give plenty of technic along with these, using care in the selection of exercises to bring out weak points in the hand and to enlarge the mental horizon of the pupil.

You are very wise to be cautious in giving stretching exercises. I should not give any except the very simplest kind. But I would take a chart of her hand, as that will assist you in getting her interested in stretching the hand herself. You will find that she will try harder to reach than before you took the charts. Don't take new charts oftener than once in two months. If in four months you don't find the octave coming nearer I shall be glad to help you if I can with other suggestions. She is very little and "slow but sure" is the best slogan.

You can do lots of work with her in a general way with pedal exercises. Try No. 10, in Mathews' *Pedal School*. Have her play *Melody with falling arm* and the accompaniment with the same finger only, using bounding arm in the soft way. Have her transpose same in at least three keys using the numbers of the chords in key to assist her.

For instance, the first measure is built on the chord of 1 in the first position, etc. She should be able to put the formula on the board like this given below.

1. First position.
3. Third position.
4. Second position.
1. Third position.
4. Second position.
4. Raised—first position with seventh.

Dominant Seventh.

Answer.

After she has done this she can play the sequence in cadence form and it is a very nice simple harmonization of the scale.

There is so much that you can do for her mentally while the hand is growing naturally. You will find that you can give the second grade easily within four months and perhaps sooner as there are many pieces for small hands and the studies are all for small hands.

Use as much ear training as you can and teach every piece as "singing with her fingers." You will have a lovely time with her and I know you will be amazed at the kind of response she will make to the interpretative work.

* * *

What do you consider the proper tempo for Chopin's *Funeral march*, from the sonata, Op. 35? I have heard great artists play the first part of this piece at a tempo of 70 quarter notes to the minute, and the middle part much slower. It seems to me that playing the first part so fast takes all beauty from the composition.

I play the movement at 60 quarter notes to the minute and make no variation in tempo for the middle part. While it must be played freely, still I endeavor to keep the same tempo in both parts as the change in motion in the left hand seems to me sufficient to keep up the interest rhythmically, while the wonderful melody always satisfies the listener.

Artists are privileged persons and are a law unto themselves. I have heard the best artists play the first four measures of the *Bird as prophet*, of Schumann, without observing the rests on the third beat thereby playing same in a measure of three beats rather than four. Whether they do it consciously, because they prefer it that way, or simply to annoy teachers who send pupils to concerts—after having borne down hard in the lessons that such a thing could never be done—or, whether they are preoccupied when playing and fall into the error I cannot say. You will find, however, that teachers are taking the cue from artists, and are teaching tempi and interpretation as they themselves hear it, rather than as "so and so" from Leipzig passed it down by word of mouth two generations ago.

So play it as *you* like it—only get it over—make it mean something.

* * *

Will you kindly give me the name of some book that will help me with a pupil who is an absolute beginner.—L. S.

I do not know of any book that covers the presenting of the elements of music except my *Conversation Lessons*. This book is designed to meet the needs of piano teachers who desire to awaken an interest in music itself. Without some such method as I have outlined in this little volume, the very first lessons are apt to resolve into the teaching of signs which seem endless to the beginner. I think you would find the suggestions in teaching rhythm and also the forming of the conception of "key" especially helpful.

Such work as you want is generally handled by normal teachers in their summer classes and if you are able to attend one I would certainly do so. If not, this book will tide you over until you can come in contact with a specialist in elementary work.

* * *

Can you give me help in arousing the interest of a girl thirteen years of age, who has just commenced lessons and has never taken things seriously? —D. L.

If I could give a satisfactory answer to your question I should feel as if I owned the United States Mint. All teachers find this a hard age to handle but to the music teacher a beginner of this age presents a very serious problem. Nearly all beginners' books are made from the standpoint of the little child, with titles relating to the incidents in the daily life of the child, such as *Dolls' reverie* or *Children's march*, and girls and boys of that age feel such music very much beneath them. They find no opportunity for self-expression through such mediums. Then too the music is written for small hands and therefore feels awkward for them.

I am a great believer, in such cases, in finding the right kind of material for them to practise. If one can hit on music that is stimulating and then give the lesson in an inspiring way one should generally win out. But these "ifs" are too real to be overlooked.

In the first place avoid any book for the first three months if you can. Give lots of technic,

HE TUNES PIANOS So Can You

He was taught at home in leisure hours by correspondence, in a way that is open to all who wish to learn. He says that **HE MAKES $50 A WEEK.** Send for his name and read his letter. What we have done for him and others we can do for you. The TUNE-A-PHONE, our patented instrument for precisely indicating comparison of sound-beats in tuning proof intervals, makes it easy for any man or woman to become a proficient piano tuner. This device unfailingly teaches first principles that you never forget and is then discarded. Eliminates guesswork or faulty start. Our course includes Action Regulating, Voicing and Fine Repairing. Action model and tools loaned. Diploma granted. Graduates are Big Money makers on salary or at work for themselves. Many of our most successful tuners had no previous musical knowledge. 18 years of correspondence teaching by unfailing and practical plan.

Investigate at our expense. A postal request brings indisputable facts, FREE.

Publication Office: 437 Fifth Ave., S. E. Cor. 39th St., New York

especially arpeggios in four octaves one hand up and the right hand back. I like the Mason changes very much for such pupils. Give every passage-playing exercise with different accents, that is nines counting three, or sixes counting three. Use different forms of measure for strengthening weak fingers such as a measure of four starting on four, when the count will run four, one, two, three, accenting one only. This will be developing and very useful technically.

Explain the chord as growing out of a root and the principles that govern sympathetic resonance. Teach the pedal at once and give the three positions of the triad chord in a cadence formula like Ex. 149 in Mason's *Technic*.

Such things sound grown up and are therefore not to be despised with such pupils.

Have rhythms tapped a great deal, using blackboard work, and having them scanned at sight. Rhythmical questions and answers by the pupil are also very helpful in arousing interest.

But the main thing is to get the pupil to practise. To do that you must choose music that is possible and still interesting. There is so much material that can be bought in sheet music form. I have suggested some in first part of this month's letter.

Then after the selection of the material your attitude toward the pupil and toward your art is the next most important thing. Keep before her constantly how well worth doing it is and urge her to put special effort in the first six months that she may get in touch with the real music that much sooner. Give her just as much help as you can, regardless of whether she pays for time or not. Don't let her go for a week without the inspiration of being with you for a short time. You must teach with enthusiasm. Easy duet work helps, and above all do not put her on programs with little children who can play infinitely better. Use diplomacy and common sense, but do not lower your standards or cater to the pupil. Have her meet you on your ground. Have her feel without your saying so, that it's her business to gain your respect and regard, rather than for you to win hers

BOOK NOTES

Samuel Coleridge-Taylor, Musician. His life and letters. By W. C. Berwick Sayers. Cassell & Co. Price $2.25 net.

The American concert-going public, familiar with the name of Coleridge-Taylor as the composer of the popular and beautiful choral works based on Longfellow's *Hiawatha*, namely, *Hiawatha's Wedding Feast*, *The Death of Minnehaha*, and *Hiawatha's Departure*, many of these are aware that the composer was a mulatto, the son of a Sierra Leone native, a physician by profession and an Englishwoman, but probably only a few are aware that Coleridge-Taylor was recognized as one of the leading composers of England, and that the product of his pen was not only extensive, but covered practically all the important styles of musical composition.

Thus a reading of a list of his works, which forms an appendix to the biography shows Op. 82, besides a number of pieces published without opus designation. Included are works for the orchestra, chamber music, choral works and vocal solos with orchestra, organ and piano pieces, songs, and church music.

This biography is a valuable contribution to the story of music and is a very interesting account of the conditions under which a remarkable genius was developed, brought to successful appreciation, and then to an untimely end at the age of thirty-seven.

Of special interest to Americans is the account of the three visits to the United States, and especially the one in 1910 when he conducted certain of his compositions at the music festival of the Litchfield County Choral Union, Norfolk, Conn., on invitation of Mr. and Mrs. Carl Stoeckel, patrons of the Union.

The reviewer cannot close this note without referring to the valuable consideration of racial musical characteristics in the chapter, *The Apostle of Colour* in which the distinctive negro note in Taylor's compositions is indicated and discussed.

Great Modern Composers. By Daniel Gregory Mason. H. W. Gray Co. Price $1.50.

This book is a sequel to *The Appreciation of Music*, in which Mr. Mason collaborated with Thomas Whitney Surette, which carried the study of music from early times up to the death of Beethoven (1827). This new book takes up the subject from that point, discusses the most important of the composers of the Romantic School, and ends with studies of the two moderns, Strauss and Debussy.

Of special value to the student is the first chapter entitled *Romanticism and Realism in Music*, a clear, practical statement of the characteristics of modern music, essential to the student as aiding in the understanding of the music which is now being produced.

To the reviewer it seems that the author's procedure is practical and practicable, making the book available for use as a text in schools, colleges and clubs. The composers are discussed from the point of view of the listener; their chief qualities are pointed out, a large number of musical illustrations being included.

We recommend the book to clubs and other organizations of students who are occupied with the splendid work of increasing the appreciation of music. If a large percentage of our people learn to know the best in music through real study, American musical conditions will be greatly improved.

NEW MUSIC BOOKS

Vignettes, Op. 28 (for the piano). By A. Louis Scarmolin. Boosey & Co. Price $1.00 net.

A set of five pieces, *Vivacity*, *Pensive Mood*, *Moment Musical*, *Dialogue*, *Scherzino*.

An expression, through poetic musical forms and material, of a variety of emotional states. The music shows good invention and skilled handling of the material, producing numbers which will interest players, teachers and pupils.

Eighty Amens, for mixed, male, and female voices, by various composers. Arranged by Clarence Dickinson. H. W. Gray Co. Price 35 cents.

The collection includes the settings of the *Amen* as used in the Brick Church, Fifth Avenue, New York, where the compiler is organist.

The Piper of Hamelin. By A. Cyril Graham. H. W. Gray Co. Price 50 cents.

A cantata setting of Browning's familiar poem for a three-part chorus of women's voices, with tenor solo, and accompaniment for piano. (Orchestra parts may be obtained from the publisher of the work.) A reading of the score shows melodious choral passages, not at all taxing upon the resources of the average school chorus, and quite in keeping with the character of the subject. A desirable cantata for commencement and music festival use.

Thyre, the Fair, Op. 52, No. 2. By William Lester. H. W. Gray Co. Price 25 cents.

A choral ballad for baritone solo and chorus of female voices, with piano accompaniment. Orchestra parts may be secured from the publishers.

Dramatic in style, vigorous in rhythm, and full of the breath of the Scandinavian Sagas. King Olaf is a central figure in the text. It is an excellent short choral work of not more than moderate difficulty for the singers.

GENERAL NEWS ITEMS

Announcement is made that Cincinnati is to have a permanent organization for the encouragement of grand opera, to be known as the Cincinnati Grand Opera Association. The object is not to form a permanent company of singers, but to promote and stand back of visiting organizations. It is felt that such an organization will be in position to make the best possible contracts.

Dr. William H. Dana, founder and president of Dana's Musical Institute, Warren, O., died in this city, February 18. Mr. Dana was born in Warren, June 10, 1846. His musical education was carried on in the United States and abroad. After his return he organized a School of Music in his home city, specializing in the training of orchestra and military band musicians. He was author of excellent text-books for instruction in the theory of music.

San Antonio, Tex., had a mid-winter music festival, February 15-17. *The Messiah* and *Elijah*

"Iowa Composers" program is a feature of the gram.

make records for the Victor

Victor Records have familiarized millions with the masterpieces of music

A comparatively few years ago the soul-stirring arias and concerted numbers that have immortalized the names of the great composers were hidden mysteries with only an occasional opportunity, at rare intervals, to hear and become familiar with them.

Today millions of people are familiar with them through the wonderful achievements of the Victor. The Victor Records of these musical treasures have revealed their sublime beauty to music-lovers in every part of the world.

They are presented in all their grandeur by the world's greatest artists whose exquisite renditions are the standard by which the artists' actual performances are judged.

They are noteworthy achievements in the art of recording **that have established Victor supremacy on a basis of great things actually accomplished.**

Any Victor dealer in any city in the world will gladly play any music you wish to hear and demonstrate to you the various styles of the Victor and Victrola—$10 to $400.

Victor Talking Machine Co., Camden, N. J., U. S. A.

Berliner Gramophone Co., Montreal, Canadian Distributors

Important warning. Victor Records can be safely and satisfactorily played only with *Victor Needles* or *Tungs-tone Stylus* on Victors or Victrolas. Victor Records cannot be safely played on machines with jeweled or other reproducing points.

Summer Term Begins July 10th

THE Aeolian Choir, of Brooklyn, Mr. N. Lindsay Norden, director, gave a recital of Russian music, *a cappella*, in All Saints Church, February 8. The choir consists of about 50 voices.

THE Pennsylvania State College Chorus, Clarence C. Robinson, conductor, gave Gaul's cantata *Ruth*, February 20.

ERNEST R. KROEGER'S suite *Lalla Rookh*, was played by the Saint Louis Symphony Orchestra, at the sixteenth "Popular" program, February 20.

THE Mayor of Baltimore was so pleased with the splendid support given by the public to the new orchestra on occasion of its first concert, February 11, that he said he would feel justified in using his influence to continue municipal support.

THEODORE SPIERING was honored at a recent exhibit at the MacDowell Club, New York, by a bust which attracted much attention It is the work of Miss Brenda Putnam, pianist of the Edith Rubel Trio.

STUDENTS of the Whitman College Conservatory of Music, Elias Blum, director, of Walla Walla, Wash., gave Nicolai's opera *The Merry Wives of Windsor*, February 16. The Conservatory has won high reputation for its annual opera performances.

NOEL JOHNSON, an English composer, died January 22. We also note the death of Mrs. Arthur Goodeve, well-known by her song *Fiddle and I*, but have not seen record of the date.

MISS GUIOMAR NOVAES, a young Brazilian pianist, has been praised for her excellent art. She is a graduate of the Paris Conservatoire and a pupil of Isidor Philipp.

PROF. LEO R. LEWIS, of Tufts College, will conduct courses in Musical Appreciation and Musical Analysis at the Harvard University Summer School, a six weeks' session.

THE Marshall Field & Company Choral Society, Chicago, will sing Elgar's *King Olaf* at its tenth annual concert, April 11. Reed Miller and Burton Thatcher have been engaged as soloists.

THE Saint Louis Symphony Orchestra, at the "Pop" concert, February 13, played a *Processional March*, by Edwin Litchfield Turnbull of Baltimore, a business man with whom music and composition is an avocation. Mr. Turnbull was active in founding the Baltimore Orchestra which gave its first concert in February.

AN Eisteddfod was given at Lima, O., February 22, under the auspices of the Men's Club of the 1st Baptist Church. The prizes offered were for piano playing solo and concerted singing, recitations, etc.

THE New York Chamber Music Society (piano, wind, and string instruments) gave its third concert March 9. The novelty was Juon's *Kammersinfonie* in B♭, Op. 27

THE Illinois State Music Teachers' Associati will hold its next meeting at Jacksonville, Ill., M 2-5, under the presidency of John B. Miller, Chicago.

THE next meeting of the New York State Mu Teachers' Association will be held at Syracuse, Ju 20-22. Mr. Frederick Schlieder, of New York, president

THE Music Supervisors' National conference w held at Lincoln, Neb., March 20-24. Mr. W Earhart, of Pittsburgh, was president.

WASHINGTON STATE BOARD OF EDU CATION PLAN FOR CREDITING MUSI STUDY OUTSIDE THE SCHOOLS

THE Superintendent of Public Instruction of t state of Washington has issued a statement regard to the granting of credit toward graduati for music study carried on under the instruction teachers outside the schools. The following the salient points in the plan:

The parent or guardian must make applicat and agree to the conditions laid down in the p of study.

The teacher must make a report on the pup present musical standing and be ready to furn such information as to the pupil's progress as m be called for.

The pupil is to be examined at the close of e semester by a committee of three, one or two of wh may be non-residents of the city.

A pupil must have completed a year's study the branch of music he desires to study with a v to receiving credit.

The pupil may be required also to take cou in theoretical music within the school.

For full credit a pupil must take at least two minute lessons or one 60 minute lesson per we He must practise eight hours each week. A stud may be accepted for half credit by taking one minute lesson and practising four hours per we

Lessons must be taken during the entire seme for which credit is desired.

Lost lessons or omitted practice must be made

The teacher of music in the high school may upon students for ensemble or solo performa The teacher will furnish reports on blank for covering the following points. Number of less taken, average number of hours' practice per we technical progress made since the preceding rep list of compositions studied by the pupil, grad of the pupil's work according to the method use school subjects.

———*———

It will pay you to keep an announ ment of your school and its courses THE MUSICIAN. One pupil in hal term pays for a year's publicity.

MANUAL of the ART of SINGING By Emil Tiferro

$1.25

THOUGH there have been many books written on singing, there is always room for a new one which is the practical outcome of experience in teaching, supplementing an honorable career as a public singer. This is the equipment which amply qualifies Emil Tiferro to issue his Manual of the Art of Singing. Born in Cologne, Germany, of an Italian father and a French mother, both possessors of good voices, all the chief musical influences of Europe may be said to have united in his youth. After earlier studies in Munich and Vienna, he finished his vocal training in Milan, and has sung since as first tenor in the leading opera houses of Europe. He was formerly the foremost teacher in Denver, but now has removed to Detroit where he presents his material in the *Manual of Singing* in an admirable manner. The seventy-five exercises contained therein range from the easiest to the most difficult, and are arranged for all voices. They have been tested by constant use, and while the written word can never take the place of personal teaching, the explanations here given, taken with the vocalises, give an excellent understanding of the subjects treated. Singers and teachers can both profit by a close study of this work; the author's directions are very clear and his exercises undeniably helpful.

What Critics Say of the Book:

Many thanks for your "Manual of the Art of Singing," which seems to me to be very practically treated.—E. HUMPERDINCK.

Many congratulations upon your admirable achievement.—DAVID BISPHAM.

Congratulations upon your "Manual of the Art of Singing."—P. AMATO.

I have waited in hopes that I would find time before sailing to examine your interesting book more carefully than I have done. I see, however, that the book is full of original thoughts and that the exercises are exceedingly good, and I am going to go through it very carefully on my return.—HERBERT WITHERSPOON.

LOUIS C. ELSON, BOSTON, MASS., the well-known music critic, and author of the University Musical Encyclopedia, writes about the book as follows:

"Mr. Tiferro has here produced a book which may be of considerable help to the singer who cannot get a teacher, who has had a little instruction, or who needs to supplement his knowledge with good and practical exercises. Good advice is given on vowel and consonant production, on breathing, on the resonance qualities, etc.

"But, best of all, every point is reinforced with many vocal exercises, and these are commendably well-graded and practical. Mr. Tiferro has had abundant experience in both teaching and operatic work, and speaks with authority. He was for a time a resident of Boston, but has been a resident in Denver for many years, where he has used these exercises practically, in his vocal classes. It is pleasant, in the mass of visionary and impractical matter that is written about the voice, to find here a volume that is of real benefit to the conscientious student."

CHAS. H. DITSON & CO. New York — **OLIVER DITSON COMPANY, BOSTON** — LYON & HEALY Chicago

WITH THE SCHOOLS AND TEACHERS

MR. T. CARL WHITMER, for some years past, director of the department of music at Pennsylvania College for Women, Pittsburgh, Pa., will become a member of the faculty of the Pittsburgh Musical Institute at the end of the present school year. Mr. Whitmer is known to readers of THE MUSICIAN as a contributor of a number of valuable articles.

MR. EDWIN ARTHUR KRAFT gave an organ recital at Trinity Cathedral, Cleveland, Feb. 15, one of a series of monthly recitals from November to May.

MR. E. R. KROEGER'S annual Lenten recitals are a feature of Saint Louis musical life. They began March 13; the remaining four were arranged for March 20, 27, April 3, 10. The programs, in succession, are planned to present classic-modern compositions, ballade-nocturne, forest music, fantaisie-scherzo, and works by Mr. Kroeger. The second annual recital by Alumni of the Kroeger School of Music was given Feb. 28. Twelve members assisted.

MR. ALBERT RIEMENSCHNEIDER, director of the School of Music, Baldwin-Wallace College, Berea, O., arranged a series of eight vesper organ recitals during the college year. American composers are well represented on the programs.

THE Lyric Club of Phoenix, Arizona, gave its fourth concert Feb. 16, under the direction of Mr. Wm. Conrad Mills, of the Phoenix School of Music. Feb. 23 the operatic quartet of the school, under Mr. Mills' direction, gave a program of excerpts from operas.

GUY MAIER and LEE PATTISON gave a recital of music for two pianos, at Boston, Feb. 29. Compositions by Mozart, Saint-Saëns, Debussy, and Lopartz were played.

MISS MARGARET B. LOW arranged a recital of piano music to be played by her pupils at Bayonne, N. J., Feb. 15. The program consisted of solos, and a number of pieces for four and eight hands.

MRS. BERTHA PUTNEY-DUDLEY, of Boston, gave a recital of music for voice and piano, presented by a number of her pupils, Feb. 11. She was assisted by Mr. Allen H. Daugherty, pianist. Mrs. Dudley is principal of the vocal department of the Holderness (N. H.) Summer School of Music for Girls, situated on Squam Lake, one of the most beautiful bodies of water in the foothills of the White Mountains.

MISS LOUISE GEORGE arranged a recital of piano music by her younger pupils at the Chicago Piano College, Feb. 5.

MR. JOHN WHITE JOHNSON, a well-known composer of Rochester, N. Y., contributed a violin solo, a fantaisie on the Scotch air, *Bide a wee*, at an annual gathering of a Scottish Association, Feb. 4. His song, *Furth tae France*, was well received.

PROF. CHARLES H. MORSE, of Dartmouth College, gave an organ recital in the college chapel, Feb. 13, assisted by Mrs. Henry T. Moore, contralto.

CARL BUSCH'S arrangement for orchestra of *Old Folks at Home* was well received at one of the recent "Pop" concerts of the Kansas City Symphony Orchestra.

MR. RUSSELL SNIVELY GILBERT gave a recital of music for piano at his Orange, N. J., studio, Feb. 8, assisted by Miss Mabel Beddoe, who sang several songs for Mr. Gilbert.

MR. EMMET LENNON, tenor, gave a recital of songs at Houston, Tex., assisted by Mr. J. W. Watkins, organist.

THE Seminary Choir of the Western Theological Seminary, Alleghany City, Pa., under the direction of Mr. Charles N. Boyd, gave a program of ancient and modern church music, Feb. 14.

SENIOR Students of Miss Edith Torrey, Boston, gave a Midwinter Public Studio Recital, of vocal music. Several opera excerpts were presented.

THE String Quartet of the College of Music, University of South Dakota, Ethelbert W. Grabill, director, gave a program of chamber music, Feb. 4, playing compositions by Haydn, Mozart, and Kaessmayer.

ANNA METCALFE SMITH, for many years organist of the First Congregational Church, Mansfield, O., passed away, Jan. 15, of the present year. A memorial service was sung by the choir of the church.

THE annual concert of the Charleston, W. Va., High School Chorus, under direction of J. Henry Francis, was given Jan. 21. The High School Orchestra assisted. Operatic setting of several scenes was a feature of the concert.

MR. CHARLES N. BOYD, of the Pittsburgh Musical Institute, gave a recital on *Chorales and Chorale Preludes*, Feb. 14. On the 24th Mr. William H. Oetting gave a historical organ recital, the second in his series.

NEW YORK NOTES

BY EVA EMMETT WYCKOFF

AEOLIAN HALL

THE Bohemian pianist, Marguerite Volavy, gave a recital, using in her program two numbers by Enrique Granados, the Spanish composer of *Goyescas*, which had its "première" at the Metropolitan Opera House in January. Miss Volavy plays well.

OSSIP GABRILOWITSCH gave the fifth recital in his interesting series, which he has been presenting in New York, Boston, and Chicago. This recital was devoted to the works of Brahms and Liszt.

LOUISE MACPHERSON, a pianist from the West, gave her first New York recital. She is talented and plays with much feeling.

SUMMER STUDY with Louis Arthur Russell

Author of THE RUSSELL BOOKS for Singers, Pianists and Teachers

THE RUSSELL BOOKS represent the higher thought in Music Pedagogy, offering both the philosophy and the practice material for Students and Teachers, reaching through from the first principles of Self Culture and the practice of Music, to the requirements of the Concert Singer or Pianist and the Studio or Class Teacher.

MR. RUSSELL'S SUMMER NORMALS in New York, Ohio and New Jersey during the past few years, have developed scores of teachers and established Russell Method Centers in all the large music localities in the United States. These Methods are only for the serious Teacher and Student; they have won the approval of many of America's best Teachers, they are thorough and merit close investigation.

For full particulars regarding this year's Summer Normals or Regular Courses of Study, address

The RUSSELL STUDIOS, Carnegie Hall, Manhattan, or The COLLEGE OF MUSIC, Newark, N. J.

Circulars, Bulletins, Programs, Syllabus, etc., on request.

BRAHMS, JOHANNES
Arise, beloved vision (*Steig' auf, geliebter Schatten.* E♭ min. [b♭-E♭]..... $0.40
An appealing song by a master composer.

DAVID, FELICIEN-CESAR
Delightful bird (*Charmant oiseau*). G [d-*b*]..... .60
From the composer's *La perle du Brésil*, and a favorite concert song of the coloratura style.

MEYERBEER, GIACOMO
O Paradise, from bright waves risen (*O Paradis, sorti de l'onde*) (*L'Africaine*). [G♭] [d♭-*b*♭]..... .50
A beautiful tenor aria from the opera repertoire.

MASSENET, JULES
Ah! depart, image fair (*Ah! fuyez douce image*). [E♭] [F-*b*♭]..... .50
Tenor aria from the opera *Manon*.

SHARP, EARL CRANSTON
Yesteryear. ('Cello obbl.) [G] [d-F♯] .60
A song of broad lyric and emotional quality for concert or recital use.

TCHAIKOVSKY, PETER ILYITCH
Cradle Song (*Wiegenlied*), Op. 16, No. 1. [G min.] [d-*g*]..... .50
Did my mother give me life (*Hat die Mutter zu so Schweren Leid*). [E♭ min.] [b-g♭]..... .50
He truly loved me so (*Er liebte mich so sehr*), Op. 28, No. 4. [D] [d-*a*]..... .40
That simple old ballad, oh sing me (*O möchtest du einmal noch singen*), Op. 16, No. 4. [G] [d-*g*]..... .50
To sleep (*An den Schlaf*), Op. 27, No. 1. [C min.] [c-*g*]..... .40
New editions of favorite songs from the Russian repertoire.

WEBER, CARL MARIA VON
'Neath the almond trees that blossom (*Unter blüh'nden Mandelbäumen*). [B♭] [F-*a*]..... $0.50
A classical tenor aria from the opera *Euryanthe*.

MEDIUM VOICE

COWLES, EUGENE
For Jean. [D] [c-F♯]..... .50
A charming ballad by the composer of the popular *Forgotten*.

CRIST, BAINBRIDGE
A bag of whistles. [A] [E-D]..... .50
A song on an Irish theme and a bagpipe; semi-humorous in style.

LOOMIS, HARVEY WORTHINGTON
In the foggy dew. [F] [b♭-F]..... .50
A song in Irish dialect; a big success in a previous edition.

SHARP, EARL CRANSTON
Yesteryear (with 'cello obbl.). [F] [c-E]..... .60
A song of broad lyric and emotional quality.

TCHAIKOVSKY, PETER ILYITCH
Did my mother give me life (*Hat die Mutter zu so Schweren Leid*). [C min.] [g♯-E♭]..... .50
From the Russian song repertoire.

VERDI, GIUSEPPE
Is it thou who hast sullied (*Eri tu che macchiavi*). [D min.] [A-*g*] (bass clef) .50
A famous baritone aria from the opera *Masked Ball*.

LOW VOICE

BRAHMS, JOHANNES
Arise, beloved vision (*Steig' auf geliebter Schatten*). [D min.] [a-D]..... .40
An appealing song by a master composer.

COWLES, EUGENE
For Jean. [C] [(g) b♭-E]..... .50
An easy, melodious ballad; good for rich tone.

HALEVY, J. F. E.
If harsh decree (*Si la rigueur*). [F] [(e) f-*c*] Bass clef..... .50
A fine bass aria from the opera *La Juive*.

MERCADANTE, F. S.
Ah! since vainly I now implore thee (*Ah! s'estinto aucor mi vuoi*). [E♭] [f-*c*]..... .75
From the old Italian repertoire for alto voice, an aria from *Donna Caritea*.

SHARP, EARL CRANSTON
Yesteryear (with 'cello obbl.). [E♭] [b♭-D]..... $0.60

TCHAIKOVSKY, PETER ILYITCH
Cradle Song (*Wiegenlied*), Op. 16, No. 1. [E min.] [b-E]..... .50
Farewell (*Lebewohl!*), Op. 60, No. 8. [D] [a-F♯]..... .40
He truly loved me so (*Er liebte mich so sehr*), Op. 28, No. 4. [B♭] [b♭-F]..... .40
No word from thee (*Kein Wort von dir*), Op. 28, No. 5 [B♭ min.] [B♭-*e*♭] Bass clef..... .40
Serenade, Op. 65, No. 1. [C] [a-E]..... .50
That simple old ballad, oh sing me (*O möchtest du einmal noch singen*), Op. 16, No. 4. [E♭] [b♭-E♭]..... .50
To sleep (*An den Schlaf*), Op. 27, No. 1. [B♭ min.] [b♭-F]..... .40

SACRED SONG—MEDIUM VOICE

DRESSLER, LOUIS R.
Thy way, not mine, O Lord. [D♭] [c-E♭(F)]..... .60
A fine song for the church service, easy and melodious.

Electrotypers and Engravers

85 BROAD ST. BOSTON

HERBERT FRYER gave a Chopin recital in aid of the Fund for Concerts at the Front for wounded, convalescent, and trench-tired British soldiers in France. Mr. Fryer's recital was most interesting.

ETHEL NEWCOMB, a talented pianist, presented a program of much interest.

HAROLD BAUER gave his second recital and repeated by request the Beethoven sonata, Op. 106, which made such a deep impression in his December recital. Mr. Bauer also played with the Metropolitan Opera Orchestra at the Metropolitan Opera House, Feb. 27.

JAMES FRISKIN, the English pianist, is well equipped technically. He played a sonata of his own composition, which proved interesting and melodious.

CLARENCE BIRD gave his first New York piano recital. He plays well.

ARKADY BOURSTIN appeared in a violin recital and Samuel Chotzinoff accompanied. Mr. Bourstin plays with flexibility and ease.

A PROGRAM of solo and ensemble numbers by French composers was given by Kathleen Parlow and Ernest Hutcheson, who appeared in a joint recital. Harry W. Gilbert accompanied for Miss Parlow's individual numbers.

THE Saslavsky Quartet, with the co-operation of Alfred De Voto, pianist, gave its first concert of the season. On this program there were presented three novelties; a quartet by Victor Kolar, a sonata for violin and piano by Guillaume Lekeu, and a quartet by this same composer.

THE New York Chamber Music Society of piano, wind and string instruments gave an interesting concert under the direction of Carolyn Beebe and Gustav Langenus, and ten other artists. They played selections by Beethoven, Brahms, Bach, and Saint-Saëns.

CARNEGIE HALL

AT Carnegie Hall Francis MacMillan and Germaine Schnitzer gave a piano and violin recital. They played a C major sonata by Cyril Scott, this being its first public performance in America. Mr. MacMillan, in his individual numbers, was accompanied by Nicolai Schneer, who gave splendid support to the violinist. Mr. MacMillan's tone is true, steady, and smooth, and Mme. Schnitzer plays delightfully.

THE Minneapolis Symphony Orchestra, under the baton of Emil Oberhoffer, gave a most successful concert with Julia Claussen as soloist.

FRIEDA HEMPEL and WILLIAM WADE HINSHAW each gave successful song recitals to large audiences. Frieda Hempel most gracefully takes her place as a singer of songs. Her voice is lovely. She has unusually good diction and much temperament. Coenraad von Bos played her accompaniments with every quality that gives support and background to the singer. Mr. Hinshaw, with Kurt Schindler at the piano, sang with ease and splendid tone production.

THE big drygoods store of Lord and Taylor has within its walls a cozy and comfortable music hall, called Chickering Hall, in which are given many lightful concerts. Among these was a musical m ince given by the pupils of the American Progress Piano School of which Gustav L. Boeker is the rector. The students were assisted by Master I dolph Boschko, violinist.

MARIE BARRIENTOS, the new coloratura soprano creating a sensation at the Opera with her wonder singing. Her art is such as one seldom hears. T voice is like that of a canary in its perfectness. is consummate art.

MARY WAGNER GILBERT, piano teacher, has pils who have been making prominent appearanc They have played at the Gotham Club and the Li Thimble Theatre. Mrs. Gilbert gives frequ studio musicales.

John McCormack is singing

AT DAWNING (I Love You) By C. W. CADMAN

THE MUSIC LESSON

MAKING MUSIC MORE MUSICAL. An Interview with THOMAS A. EDISON
In this Number

OLIVER DITSON COMPANY
15¢ a Copy BOSTON, MASS. $1.50 a Year

Favorite Songs of Famous Singers

In these beautifully printed books the art of the printer and the book-binder is rivaled only by the art of the composers and of the famous singers themselves

My Favorite Songs

By Geraldine Farrar

High Voice **Low Voice**

Price, each, $1.00 postpaid

THIS gifted singer shows her musical training by the preponderance of German songs in the collection she has brought together. The various numbers have been sought out with indefatigable zeal, largely from treasures of song buried or neglected in the works of great writers, and are therefore, in many ways, new to the average teacher or singer. Songs from other lands, such as Russia and Scandinavia are also included. The book contains a biographical sketch, portraits, a striking portrait on the cameo plate paper cover, in the engraver's best art.

Miss Farrar's selection evidences a most eclectic and at the same time impeccable musical taste.—*Musical Courier.*

My Favorite German Songs

By Elena Gerhardt

High Voice **Low Voice**

Price, each, $1.00 postpaid

As an interpreter of German lyric art, Miss Gerhardt has few rivals. From her recital programs she has selected the most effective and successful numbers to make up this desirable volume, which thus forms a representative collection of vital mastersongs chosen from the works of classic and modern composers of the *Lied.* The book contains an autobiographical sketch in German and English, and portraits.

A notable volume and stands high in the productions of American publishing houses. It is, indeed, a treasury of German *lieder* chosen with rare judgment.—*Musical America.*

My Favorite Songs

By Julia Culp

Books I and II

High Voice **Low Voice**

Price, each, $1.00 postpaid

THE favorite songs of this highly praised *Lieder*-singer are drawn from the music of many different lands, from her native Holland to our own America, and including France, Germany, Ireland, etc. This collection is made up of such numbers as have won Mme. Culp's affection as well as proved their acceptability to her enthusiastic audiences, and the volume is of extraordinary interest. A charming introduction from the singer's own pen and portraits enrich the book.

The triumphs of the singer are reflected in her book.—*The Musician.*

My Favorite French Songs

By Emma Calvé

Books I and II

High Voice **Low Voice**

Price, each, $1.00 postpaid

THE great singer here gathers together her favorites among French songs — mostly modern, some operatic, and a few of the ultra-modern school. To these she adds a group of "Songs my Grandmother sang," making a truly unique and distinguished collection. From these charming old melodies down to the songs of Debussy the singer indicates all that is best in the realm of French song composition. Complete with biographical sketch with portraits and an introduction from Mme. Calvé's pen.

A splendid group of songs valuable to both singers and concert goers.
—*Boston Times.*

Oliver Ditson Company, 150 Tremont Street, Boston

Chas. H. Ditson & Co., New York **Lyon & Healy, Chicago**

A BOOK for ARTISTS, TEACHERS and PUPILS

The Interpretation of Piano Music

By MARY VENABLE

Price, **$1.25** Postpaid

A BOOK for piano teachers and students, consisting of studies in the notation of piano music, the meaning of the various signs on the printed page, and the means of realizing the effects called for through the various forms of piano technic. The book is full of helpful suggestions to teachers and advanced students, and prepares the latter for intelligent study of the classical and modern repertoire, and artistic interpretation. We recommend it as a text book for class study.

"I have read your book on 'The Interpretation of Piano Music' with the greatest interest and pleasure. In treating of so many very important things which are not to be found in ordinary books, you have certainly contributed an extremely valuable book to the literature on the art of piano playing."— KATHERINE GOODSON.

Oliver Ditson Company, Boston, Mass.

TAPPER'S GRADED COURSE

FOR THE PIANO

Edited and Arranged by THOMAS TAPPER, Litt. D.

Author of Tapper's First Piano Book

The only course that provides all the necessary lessons in Theory, Music Writing, Melody, and Form, **when** and **where** they should be given

What a Progressive Teacher Says: "I have never approved of a Graded Course, because I could never find one worthy of serious thought, but I am delighted with Tapper's Graded Course, and I shall recommend it upon every opportunity."

SARAH I. McCONNELL,
Conservatory of Music of Muncie National Institute.

Among the Distinguished Editors of the Work are: M. Esposito, E. R. Kroeger, M. Moszkowski, John Orth, Albert Ross Parsons, I. Philipp, Xaver Scharwenka, W. H. Sherwood, August Spanuth, Bertha Feiring Tapper

The Course Consists of

1. Graded Studies (Grades 1 to 7) . . . . — The Graded Studies constitute a course in technics, and in all problems that develop therefrom.
2. Graded Pieces (Grades 1 to 7) . . . . — The Graded Pieces offer the most pleasing recreations and repertoire selections, grade for grade with the studies.
3. Manuals for Grades 1, 2 and 3 . . . . — The Manuals contain graded lessons in Music Writing, Melody, Analysis, Form, and Music Theory, *applied to real musical composition.*
4. Four-hand Collection, Nos. 1 and 2 . . — The Four-hand Collections are for the double purpose of sight-reading and for ensemble work. They may be used from the third grade.

Price of each grade, $1.00, postpaid. Liberal Discount to Teachers

Latest Song Successes

For You
By LAURENCE H. MONTAGUE
High, in G; Medium, in E-flat; Low, in D-flat; 50c.
A broad lyric song of the ballad type, with a swinging melody that catches and holds the ear.
Orchestra parts, three keys, 50c.

My Rose of Yester-E'en
By MARIE RICH
High, in E; Medium, in D; Low, in C; 50c.
A song of longing and tender appeal in text and voice; of the folksong quality.
Orchestra parts, three keys, 50c.

The Mother Heart
By SAMUEL RICHARDS GAINES
High, in A-flat; Low, in F; 60c.
A Scottish text with a folksong melody; pathetic and full of appeal to all listeners.

A Wondrous Rose
By EUNICE WAITE BURNHAM
High, in A-flat; Medium, in F; Low, in E-flat; 60c.
A ballad for everyone; popular in style, easy, melodious and with a "catchy" waltz refrain. Rare rose title in multi-color.
Orchestra parts, three keys, 50c.

Her Rose
By MINER WALDEN GALLUP
High, in E; Medium, in C. 40c.
An artistic yet simple setting of a charming text. Sung by John McCormack and Mme. Alda.

Japanese Death Song
By EARL CRANSTON SHARP
High, in G minor; Medium, in E minor; 40c.
Full of unusual effects for the voice, with colorful dissonances in the accompaniment. A very striking song. Sung by Julia Culp.

War
By JAMES H. ROGERS
Medium, in D; Low, in C; 50c.
The glamour and tragedy of war are expressed in the text and voiced in the music. Sung by Schumann-Heink, Mary Jordan, Yvonne de Treville and others.

Some Essentials in the Teaching of Music

By FRANK DAMROSCH, Mus. Doc.

Director, Institute of Musical Art, of the City of New York

Price $1.25 Net

CONTENTS

Chapter I
Preliminary Development of Faculties Necessary to the Study of Music.

Chapter II
The Training of the Mind-ear.

Chapter III
Interpretation:
1. Musical Form.
2. Musical Content.

Chapter IV
How to Study.

Chapter V
Correlation of Practical with Theoretical Work.

Chapter VI
Pedagogic Material.

This little volume aims to focus the attention of teachers and students of music on the true purpose of music study, namely, to make music a means of self-expression, not a mechanical recital of a painfully acquired and more or less limited repertory.

It also endeavors to show that, inasmuch as the ear is the channel through which music reaches the consciousness, and is also the faculty which directs and controls musical expression, its thorough training is one of the most important and fundamental processes in the study of music.

Furthermore, the author maintains that the development of technique should go hand in hand with the mental and physical development of the pupil; that technique should not be acquired for its own sake, but should at all times be only a means towards musical self-expression appropriate to the degree of maturity of the student.

MAKING MUSIC MORE MUSICAL

AN INTERVIEW WITH THOMAS A. EDISON

REPORTED BY PAUL J. MORRIS

FROM a mechanical point of view music is in pretty bad shape." Thomas A. Edison had studied usic just three years when he made at remark. Since 1912 it has taken ore of his time than any other sub- ct. At the age of sixty-five he had rned his attention from things elec- ical and mechanical, from the prac- al to the artistic side of life. It as a long step to take. Storage bat- ries and electric lights have little in mmon with operas, songs, and sym- onies. He had paid little attention music in earlier life. Consequently was necessary to start at the bottom his new adventure.

HOW EDISON STUDIED MUSIC

Many persons believe in the theory at musicians are born—not made— d there is another popular belief to e effect that the study of music ould be begun in childhood if suc- ss is to be attained. It is generally ought that there is a time, early in e, after which it is impossible to be- me proficient in any artistic pursuit. To begin e study of music after reaching the half century ark is unusual; to make the start after becoming af is almost unprecedented. Popular theories, wever, did not interest Edison in the least, neither d the fact that he is getting deaf hinder him to e extent of making such studies prohibitive. He n hear all of the tones of a piano except those in e highest octave; he can hear vocal and most in- umental music if it be produced close to him; and placing his ear within an inch or two of the horn a phonograph he can hear records distinctly. is gives him access to an enormous number of mpositions. Strange as it may seem for a man ected with deafness, he studied most of his music ear.

With characteristic thoroughness he started in to niliarize himself with all of the world's music rth hearing, and incidently heard much that was rthless. He listened to the music of every minent composer from the days of Bach and ethoven to the present time. Even the futurists d ragtime writers did not escape his notice. ousands of compositions and the methods of ousands of singers and instrumentalists have been died in his three years' experience as a student of sic. Now his ideas about music and musicians very definite.

Matters of interpretation have taken little of his e. Toscanini, Dr. Muck, Caruso, Kreisler, derewski, and Sembrich can settle such ques- ns.

"There are too many interpreters of music d too few persons interested in perfecting its mechanical deficiencies," he had said in starting his work. To master the technical difficulties of violin playing requires on the average about fifteen years and to learn all that there is to know about singing takes usually ten or twelve years. This did not trouble him as he did not wish to become a musical performer. In three years he had discovered a sufficient number of faults in music to keep him busy for several more to come.

MR. EDISON AT HIS DESK

In spite of his deafness Edison is not a difficult man to converse with, and in my case, it was doubly easy because his enthusiasm for music was such that he rarely gave me an opportunity for a question. He talked steadily and rapidly while showing me the ins and outs of his experimental laboratories at Orange, N. J.

"Have you ever, while listening to music," he asked, "heard discordant noises foreign to the music itself which were produced in the process of making musical tones?

"For instance a guttural sound in the throat of a singer, the harsh scraping sound of a violinist's bow improperly used, or the hard metallic sound of the thumping of the hammer of a piano on the strings which in the highest octave and a half seems to be almost as loud as the musical tone produced. Did you realize that the rattling of the mechanism in the manipulation of the keys of an accordion makes a noise almost as loud as the music which that instrument produces? Did you know that in spite of the fact that almost every composer of violin music has written solos in which occurs double stopping (that is playing on two strings with the same stroke of the bow so as to make two different tones at the same time) it is often an impossibility for human fingers to play many of them in tune with the rapidity at which they are intended to be performed? Undoubtedly you have been annoyed at orchestra concerts by hearing false notes and unmusical sounds not part of the compositions being performed. These are some of the things which I intend to remedy. The mechanical side of music is not what it ought to be. There is too much noise and too little music."

It was a novel idea—an altogether new viewpoint. Everybody has some fault to find with music. Those who prefer dance music or ragtime, those who get their musical nourishment along with their meals in restaurants and smoke-dimmed cabaret establishments, those whose appreciation is limited to grand opera or symphony concerts, amateurs, professionals, teachers, students, all find things in their music which jar on their nerves.

DIFFERENCES IN EARS

It would hardly be an exaggeration to say that no musical performance is perfect; but people's ears are as different as cats and dogs. One music lover can never enjoy a concert at which a singer sings off the key while another will stand for almost anything so long as a performer has personality or dramatic ability. A professional musician may find himself dazed at the wonderfully dramatic climax of the second act of Montemezzi's new opera *L'Amore dei Tre Re*, only to be disturbed by the bored indifference of a musical amateur sitting next to him and remarking impatiently, "Too modern! Can't these new opera composers ever write a melody like Verdi?" It is all in the ears, but most dislikes are based upon real defects. Some can overlook one fault and others another. Edison is trying to locate all of these shortcomings in music and musicians and hopes to find a remedy for most of them. His private laboratory has, of late years, become a sort of musical studio.

"Would you like to see my musical work shop?" he asked shortly after my arrival. It was upstairs. We arose and rushed toward the elevator—Edison does not walk slowly. No elevator boy was in sight, so we entered and he propelled the elevator himself, talking all of the way up.

"I am like a phonograph," he said. "My ears, being a little deaf, seem to catch all of the useless noises more readily than the musical tones, just as a phonograph exaggerates all of the faults of a singer. That is where I have an advantage over others in locating defects."

We entered the library where test phonograph records of thousands of voices were stored away

Each record was marked with the name and nationality of the singer. From every great opera house of the world they had been secured. A look of annoyance came over the face of the inventor as he looked over the long rows of vocal records.

THE VICE OF THE TREMOLO

"The bane of most music lovers," he said, "when it comes to singers is the tremolo. Practically all singers have it to a greater or less degree. I have found one or two voices with so little that it is negligible; but in general it has caused me more trouble than any other vocal fault. It seems as if some singers seek to acquire it. Others don't know that they have it. Vocal teachers don't seem to know what causes it or how to avoid it.

"At first I couldn't understand what it was, but a little study of physiology, showing me that there are two vocal cords, gave me the clew. To produce a perfect tone both cords must be held at the same tension. If one cord is a little looser, it will have fewer vibrations than the other. This conflicting of the vibrations of two different tones produced at the same time is what causes the tremolo with its 'out of tune' effect. I have found that it can be stopped temporarily—for a period of about ten minutes—by a drink of cold water. Some singers have a tremolo one day and are without it the next."

Remembering how effectively Titta Ruffo, the most sensational and theatrical of operatic baritones was accustomed to use a tremolo, or as it is often called when not too pronounced or too "out of tune," a vibrato, on his high notes in the climax of the *Prologue* to *I Pagliacci* after singing the first part with smooth, even tone, I asked Mr. Edison if he approved of using the tremolo for dramatic purposes.

"Such a use of the tremolo should be tolerated. It is like a trill. It intensifies. It is the constant use in lyric passages where a beautiful even tone is desired that I deplore."

Edison's denunciation of the tremolo is typically American. In most European countries it is tolerated, even encouraged, though it is seldom used to excess by the very greatest singers of any country. Like the falsetto tones of a tenor voice, it has been frowned upon by the musical public of this country, and many Europeans have changed their vocal methods for the better while singing in the United States on account of this difference in musical taste.

AN INSTRUMENT TO RECORD EXACT PITCH

Perhaps the most interesting of Edison's musical inventions is an apparatus for recording the exact pitch of each note which a singer or instrumentalist produces. Every tone, scientifically speaking, has a definite number of vibrations. A, the tone to which all orchestra players tune their instruments, has 435 vibrations (International pitch). The octave above has just twice the number of vibrations, and the octave below just half as many. The new apparatus records the number of vibrations.

If a soprano sings in tune—or thinks she does—if the critics say she does not, and teachers also find fault with her intonation, she might ask for the opinion of a great conductor whose ears must be accurate enough to keep a whole orchestra in tune. The final verdict might be correct, but after all, it would be only a personal opinion. The only sure way to settle the question would be to go to Edison. His recording machinery never flatters—never is mistaken. There is no chance for personal opinion to enter in; she could read the number of vibrations for herself.

"Next to the tremolo," continued the inventor-musician, "the worst fault I have to find with singers is that they cannot sing in tune. Here I have hundreds of records of voices from all over the world. How many of them adhere to the pitch regularly, do you think?

"Surely not one in a dozen professional singers can sing a simple scale with anything approaching true intonation, and my records show no better percentage.

"It is next to impossible to find a singer who can sing in tune, whose voice has no noticeable tremolo and who, at the same time, can interpret music acceptably. In general the artists who interpret well are the best known throughout the musical world. Many of the most famous of opera singers sing badly. They may interpret well, but that is a different matter. Only a few artists like Caruso, and Emmy Destinn, combine interpretative ability with faultless voice production.

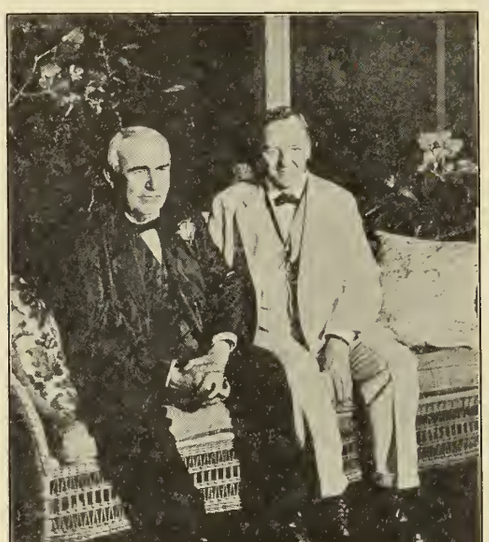
"The most perfect voice which as yet I have found is that of a young man named Donald Chalmers. You probably have never heard of him, since he is neither an opera singer nor a great interpreter of song. Yet my records show an almost perfect vocal organ."

EDISON STRONGLY INTERESTED IN THE OPERA

"What kind of music interests you most?" I asked.

"Opera," was the prompt reply.

"Within two years I expect to have perfected the phonograph to such an extent that I can give grand opera with the help of moving pictures



MR. EDISON AND SEC. OF THE NAVY DANIELS

—real grand opera, the six dollar variety and not some sort of cheap imitation. The operas will be performed complete with the greatest singers of the world in the leading parts. Just now opera is confined to three or four large cities in this country. When I get my system for combining these two industries perfected everyone can hear it and for ten cents an opera too.

"Think of the educational advantages to be derived from 'movie' operas. They say in Europe that we are an unmusical nation. We've never had an opportunity to become musical. To the majority of American citizens the best that there is in music is denied except at rare intervals. With ten cent 'movie' operas, children will become familiar with Verdi, Wagner, Bizet, and Puccini before their grammar school days are half over.

"Talking-moving pictures have been tried, and when I have finished my present experiments with opera they also will be practical."

THE OLDER vs. MODERN COMPOSERS

"What operas do you intend to give?" I inquired.

"Those of Verdi appeal to me most. Verdi and Beethoven were the greatest of all composers. Wagner has written some things that are wonderful, and some that are, well to me, anyway, they a atrocious. Some of Debussy's music I like, b not much of it. Verdi was the last of the gr creative musicians. Among composers he was t greatest inventor. I take off my hat to him. invented more real melodies than all of the co posers after him put together. Since him there h been no great originator of really musical effect"

That was a startling statement. The gr inventor talked so steadily that there was lit opportunity for questions.

"But what about Richard Strauss, Pucc Debussy, Ravel, Max Reger?" I asked quickly

"These modern composers have forgotten t melody exists. They are working along a p verted cubist idea. I have listened recently fifteen hundred waltzes written by living co posers and only two of them were real music p sessing at the same time originality. There h been no great inventions or improvements mad music lately. The composers of today are l imitators or perverters. They have no real sens melody, and consequently they have to resort other things to cover up their deficiencies."

"For myself," I suggested, "I prefer Stra opera *Rosenkavalier* to Verdi's *Il Trovatore.* Strauss tone poems *Tod und Verklarung* and *Heldenleben* have an extraordinary charm. T say something new and to me something beautif

"Nevertheless," he added, "It is a perver taste. For myself I like to chew tobacco, still I know it is a bad habit, which ought to le a bad taste in my mouth. There was a time w tomatoes tasted badly. One can acquire a taste almost anything no matter how unnatural it may

"I have no doubt but that people's ears become accustomed to listen with pleasure to harshest of music. But I don't believe in acqu tastes in music."

Edison's deafness undoubtedly has been resp sible for a lack of interest in harmonic developm the one thing with which the greatest of li composers are most vitally concerned. He melodist, and like the average American with l musical tastes, he looks upon the harmoniza as secondary to the melody. In present day m melody, harmony and form are all of equal im tance. To the modern musician nothing is thrilling as a harsh dissonance resolved into a ple, lovely familiar chord. Richard Wagner those who have followed him have used discord produce wonderful effects which are entirely los ears which hear only melody. But all ears ca hear alike and many harmonists, like Arnold Sch berg, the futurist composer of Vienna, seem have entirely lost an ear for melody, which is equ as bad.

THE BEST VOICES FROM ITALY AND AMERIC

"What countries produce the best voices asked glancing over the international arra musical scales and voice records.

"Italy and America show up the best on records. Russian voices are very bad, and if people think badly of the Germans on accou the war I wonder what they would think if could hear how bad most of my German rec are. Germans are not fitted for singing. make guttural sounds and their notes all h wrong.

INEFFICIENCY AMONG ORCHESTRA PLAYER

"One of the things that has impressed me in my three years of musical study and ex menting is the inefficiency of orchestra pla Listen carefully to even the greatest of symp orchestras and you will hear a host of noises fo to the music. My method for eliminating th sounds is to have orchestra players make ph graph records. You can tell a player that h making false tones or noises that are not part o music and he may or may not believe you. B he makes a record of his playing all of the blem

recorded along with the pure music. He can ar them for himself and will thereafter make an ort to eliminate them.

"Not long ago several members of the string tion of the Boston Symphony Orchestra, which generally conceded to be the best in the country d by some is called the greatest in the whole rld, came to play for me. Scarcely a man rted his notes correctly. The beginning of every ie was way off the pitch. They would slide ir bows around until the correct pitch was nd. To the average ear this would have passed noticed. The players themselves did not believe t they were making false tones until the records ve them proofs. After that they began to try correct their faults.

"I have another efficiency test for orchestra yers. No two men have exactly the same sense perception. When a conductor beats time, some yers follow instantaneously, while it takes others rly a half of a second to respond. Either the ht or the ability to make the muscles respond tantly may be at fault. To equalize this inciency, in my own orchestra I have placed se players whose sense of perception is keenest at some distance from the conductor, while those whose movements are slower are seated very close.

"I have spent much time studying violinists. I find that it is impossible to play perfectly much violin music. It is the composers and not the players who are at fault. No violinist living can skip from a low to a high note and do it perfectly. It is beyond the power of human fingers to move rapidly a distance of say three inches up the fingerboard without anything to guide them and not miss the mark by one thousandth of an inch which is a perceptible interval to delicate ears. Such skips are usual in violin music and in making them violinists produce a false tone at first. Their ears tell them instantly whether to move their fingers slightly up or down for the correct pitch. It all happens so quickly that the average ear does not catch the false beginning, but it is very clearly shown by my recording device.

"I am working on an electrical apparatus to do the fingering which is the mechanical part of violin playing.

"It is my intention to make music better mechanically. When I have perfected an electric violin fingerboard and have found a method for eliminating the useless noise in pianos made when the hammers strike the strings of the highest octave and a half, I will try to improve other instruments. Clarinets and brasses are far from perfect. But it is not alone instrumentalists who are in need of help. The mechanics of voice production is even worse in general.

THE INTERPRETATIVE SIDE NEGLECTED BY EDISON

"In my study of music I have purposely neglected the interpretative side. That is for others to discuss. I do not pose as an authority on interpreting music. It is the mechanical side that has occupied my mind chiefly. My deafness has aided me in my work not only because it has the effect of giving discordant sounds an exaggerated prominence in my ears, but also because it has taught me not to rely upon my own hearing for judgment. Consequently I have made recording instruments more delicate than human ears, showing beyond question whether a singer sings in tune. whether a voice has a tremolo or whether any false notes or sounds are present. The mechanical side of music needs many improvements and I intend to make it as perfect as possible before I finish my musical studies."

SYSTEMATIC PRACTICE

BY WILBUR FOLLETT UNGER

Success in the study of music, as indeed in y other undertaking, depends largely upon inidual effort plus system, and the latter is not the aller factor.

Though poets and artistic temperaments may sing praise of freedom of thought and actions, scients and business men declare that adherence to ict system is the best road to success, and I am ch inclined to agree with the latter.

The day of the dust-covered, cobwebbed studio, h its piles of torn sheet music strewn about miscuously, and with its air of artistic disorder, long past, and in its place we find the music cher with a studio equipped with handsome niture, pin-like neatness everywhere evident, l with a system by which, in a moment, he can lay nds on any desired piece of music, and methods teaching which obtain the maximum of results h a minimum of time and effort.

I have seen so many failures in music through se methods of practice, that I maintain that pils should be made to follow a set plan of pracng which is sensible and which can be adhered to h enjoyment, and is sure to bring results.

The employment of system easily becomes a bit not readily broken once it is fixed. It is a d habit, so long as the user does not become a ve to it. It is true that too much system kills piration, and the slave then becomes a machine which is more unfortunate than having no sys- But it is also true the teacher of today can- afford to be without some system in his work, ne orderly arrangement of ideas and actions ording to some accepted principle, which after all, ut the practice of economy in time, effort, space, l temper—veritably an economy worth while.

For the pupil who has followed no system in his ctice, here is a suggestion:

Make a chart similar to the following, on which can record each day the number of times a cern piece, passage, or exercise is repeated, and the ne consumed. The illustration is self-explanatory. When seen in writing, a small number of times l make the pupil feel ashamed, and his pride will once assert itself in the effort to increase the nber, for it is the number of repetitions (provided t care and accuracy is maintained) which brings earliest success.

The up-to-date teacher will not hesitate to offer rize to the pupil who brings in the highest record the number of times a certain subject has been ctised.

CENTENARIES IN 1916

For the benefit of those who are interested in the subject of anniversaries we mention a few names.

Cipriano di Rore (1516–1565), a famous Venetian composer.

Felice de Giardini (1716–1796), an Italian violinist and composer, known to many by his tune generally sung to the hymn beginning *Thou whose almighty word.*

William Sterndale Bennett (1816–1875), eminent English composer and Principal of the Royal Academy of Music.

George J. Elvey (1816–1893), organist and composer.

E. F. Rimbault (1816–1870), organist and essayist.

A. F. Marmontel (1816–1898), distinguished painist and teacher in the Paris Conservatoire.

Prince Poniatowski (1816–1873), Polish singer and composer, known by his once popular song. *The Yeoman's Wedding.*

François Bazin (1816–1878), French composer and theorist.

W. B. Bradbury (1816–1868), American composer of music for church and Sunday-school.

John Curwen (1816–1880), founder Tonic Sol-fa system.

François Hubert Prume (1816–1849), French composer and teacher.

W. T. Wrighton (1816–1880), composer of popular songs of fifty years ago, best known by his *Dearest spot on earth to me.*

ÉTUDES AND EXERCISES FOR THE PIANO

A Review of Noteworthy Works

BY ISIDOR PHILIPP

IT was about fifteen years ago that my friend, Felix Fox, made known to me a book by James Huneker, the eminent critic of New York, entitled *Mezzotints in Music*. This volume contains an essay, *The Royal Road to Parnassus*, which seemed to me, at that time, the most interesting and most complete list of works of instruction, of études, and of exercises, of which the always increasing number will cause even the most courageous workers at the piano to recoil with dismay.

But time has marched on and a very important series of new études and novelties in the way of exercises has appeared.

Mr. Huneker, who has always treated me with greatest good-will, I am sure will pardon me for completing his very interesting list and even adding to it some older works which he omitted.

About eighty years ago there appeared at Prague a work by Proksch, of which I have recently finished a new edition. Even today this work will serve those who are interested in a truly beautiful piano technic. New formulas abound; technical problems, entertaining to work out, are legion, and I know scarcely anything except the exercises of Czerny, selected from his great method by Clara Schumann, which contain so important an arsenal of invention.

I have also made an edition of a work by a French author, Zimmermann, professor at the Conservatoire in 1830 and father-in-law of Gounod, interesting because it contains a great many very good and useful formulas. It is entitled *Exercises techniques, travail journalier*. Another collection which was brought out in Russia, *Exercises universels de Knina*, contains some precious "finds," as is also the case with a little volume by Aloys Schmitt, *Exercises tirés de l', Op. 16* (Steingräber). Particular attention should be directed to the exercises according to the method of J. S. Bach, made by Eggeling. These exercises, very dry to study, yet including some distinctly new ideas, merit profound study. I regret the neglect into which the simple but excellent exercises of Henselt have fallen. I wish that they might be a *vade mecum* for all pianists. They contain a precious marrow.

Knorr, Mertke, Haberbier, Stamaty (*le rythme des doigts*, Stamaty was the master of Saint-Saëns, which is a title to glory) have useful formulas, and deserve mention, as do those of Villoing, the master of the two Rubinsteins. An abridged edition of this last named work, which is very long, has been published by Heugel, of Paris. It contains the best of the book.

The technical studies of Neupert, imitative of those of Tausig but with a certain originality, are scattered through a number of small volumes, which to my knowledge at least, have not heretofore been collected in one book. *Il Dizionario del Pianista*, by Simonetti, is quite a remarkable work, one which will be interesting to study; and the student will find some very good things in the *Fundament der Technik*, an old work by Pacher.

Much nearer to our time are the numerous works of Koehler whose *Virtuoso Studies*, Op. 120, are very cleverly constructed in the style of Czerny's indispensable school for the virtuoso. I do not cite it because it seems to me original, novel, or inventive. Good works are legion in number; works which have acquired renown without being interesting, alas, are also legion, to cite by way of example, the method of Lebert and Stark, the flattest and most overrated work I know. Why not study the very interesting and ingenious exercises of MacDowell? They will make a modern complement to those of Pischna, certainly among the best which have appeared in the past fifteen years.

The exercises of Bruno Mugellini, an excellent virtuoso who died at too early an age, are very cleverly contrived. One finds in them some ingenious problems for the fingers. Another work which deserves special mention is the exercises selected by José Vianna da Motta from the works of Charles Valentin Alkan, the great French master of the piano. What a vast field of technical problems! What new, interesting, curious combinations! There has been too much of the idea that the French pianists and writers for the piano are "a contemptible little army." A German invention! A school which has given inventors such as Alkan, Saint-Saëns, Widor, and Debussy, and pianists like Theodore Ritter, Planté, Mathias, Delaborde, Pugno, and others, merits respect.

The exercises of Brahms seem to me to be useful as well as new and much more practical than those of Tausig, the celebrity of which is, for that matter, perfectly comprehensible. Another work not well-known but which one will not readily lay aside if one is interested in virtuosity is the *Technique du piano*, by B. Cesi, of which I have prepared an abridged edition for Ricordi (the original is in two large volumes). The pianist will find, even in the didactic works of Hans Schmitt, some new ideas, if not interesting formulas.

If the technical works of Rosenthal and Schytte do not offer anything new what shall one say of the *Advanced School of Technic*, by Joseffy? It is a collection of the most original, most useful exercises for instruction in modern piano playing, for the intelligent teaching of virtuosity. It is one of those rare works which stand out strongly in this appalling over-production.

Special exercises abound. The reader will pardon the personal reference when I allude to my *Exercises in extension*, my schools of octaves, of double notes, of independence and of the trill, and my essay on the scale.

Quite recently there appeared a revision of a unique work, Bonamici's school for the left hand. This author is little known and has nothing in common with that admirable pianist of Florence, G. Buonamici, a charming man and artist who died too soon, and whose son, also a fine artist, founded a school for piano playing in Boston in collaboration with Felix Fox, the excellent American pianist. The work is of the highest order. Exceptionally clever, ingenious, and virtuoso combinations are found on every page of the three volumes which compose an opus worthy of being in the possession of all pianists. The schools for the left hand prepared by Berens, Gurlitt, Krause cannot stand beside the work of the Italian composer.

Before passing to études, and to be more complete, I would mention the exercises of Liszt, not very interesting; the good chromatic exercises of R. Schmidt; some excellent exercises for the fourth and fifth fingers by Motte-Lacroix; the exercises by Alphonse Duvernoy; and the school of double notes by Maurice Moszkowski. The field of études has been doubled since the publication of Mr. Huneker's book.

Honor to whom honor is due! Alkan's *Etudes mineures et majeures* have a high place, beside those of Liszt and Rubinstein. But not well enough known are the three admirable études for the left hand alone, the right hand alone, and for the two hands together. We should also mention his étude, *le Vent*, Op. 15, the most useful chromatic étude in the repertoire, besides a *Perpetuum mobile*, the *Chemin de fer*, and another for the two hand on the Trio.

In a mention of the older études one cann omit those of Charles Mayer, Ed. Wolff, Kal brenner, Sangalli, and Golinelli. In a collection 100 études, entitled the *Nouveau Gradus*, veritab masterpieces of these authors have been broug to light together with études by Thalberg, Sangal Montgeroult, Kullak, Krebs, Pirktzert, Dre schock, Kessler, Willmers, Martucci, Doehler, Esc mann, etc. All the difficulties are represente here; octaves and double notes, chords and a peggios, extensions and scales, trills, and ever variety of combinations.

It is the Russians who are the masters in th special art of the étude. First of all I will mentio Liapounov and his twelve *Etudes transcendante* Wihtol, particularly new and original, whose étud in double notes and octaves (Op. 17, 18, 20, 22, 2 26, 30) ought to be in the hands of all virtuos Blumenfeld (*la Mer* and the Op. 24, 25, and 29 Scriabine, Op. 8 and 42, containing some pages rare musical quality; Liadov, Op. 13, No. 1 (sixth and Op. 40; Glazounov, Op. 31 (No. 1, a charmin étude in double notes (*la Nuit*); Arensky, Op. 4 No. 3, and Op. 74; Bortkiewitz, Op. 15, entertainin combinations; Prokoviev, Op. 2, and 11; Akimenk Op. 40; Kopylov, Op. 9; Stravinsky, Op. 7, by r means revolutionary.

A work of special interest, the author of which is Russian, is the series of études on certain ones Chopin by Godowsky. It seems to me that this the *ne plus ultra* of modern virtuoso technic. Th boldest possible, the most curious, the most i genious combinations are accumulated in this wor The art of the contrapuntist is as astonishing as th art of the pianistic inventor and conjurer. Wi these Chopin études one must name the transform tions of Weber's *Perpetuum mobile*, *Invitation à valse*, *Momento capriccioso*, of Henselt's, well-know *Si oiseau j'etais*, and the *Valses caprices* of Straus

I now come to a higher, noble art, to the ma nificent transcriptions by Ferrucio Busoni, choral chaconnes, toccatas, preludes and fugues of Bac All that is most beautiful, most true, most classic and most modern is in this work. His *Capric Paganinesco* a ravishing étude "pour la jeuness (pour la jeunesse d'un Busoni), his études, Op. 1 should not be omitted.

Here one should mention the transcriptions fro Bach by D'Albert, Emmanuel Moor, I. Philip six études from Bach and a *Passecaille* by Weiss concerto of Friedemann Bach, a transcription mu superior to that of Stradal). To this list we shou add the very difficult and interesting fugues a preludes by Otterström, the fugues of Neruda, tho of Tacchinardi; and we must always return to the of Czerny (Op. 400), indispensable masterpiece the classical pianistic technic.

We now come to études, properly so-called. A in referring to Otterström we must not overlook l six études in double notes, octaves, scales. Th are among the most useful, as also are the études double notes, Op. 7, of E. R. Blanchet, one of t most remarkable musicians of the day, who h recently finished nine études covering various d ficulties, works which all pianists should study.

Mr. Huneker mentioned Saint-Saëns. In l études, Op. 51 and 111 are very ingenious thing but the most original pages are found in the *Prélu* Op. 52, No. 3, in F minor, for the wrist, and t *Toccata*, Op. 111, a beautiful bravura study. Anoth toccata, that of Widor, transcribed from an org work (who does not know this celebrated piec is extremely useful. A German composer, Gentsc has produced six études, Op. 28, of which one very good if not interesting, the third chroma étude. Schumann's études, based on exercises Tausig, are very good.

The twelve études of Debefos, of Liége, in doul notes, very difficult; those of Graham Moore, O 24, chromatic; the interesting études of Brass

d Zarembski; of Moszkowski, Op. 24, Op. 32, ccato; Kwast's rhythmic études; Seiss' bravura ides, Op. 10, the first in sixths, very good; of nil Sauer, 24 études; Poldini's Op. 19, twelve tertaining études; Rachmaninoff, Op. 16, some onishing studies called *Moments musicaux;* E. rnard's three concert études; J. Weiss, twelve tuoso studies; Joseffy's étude in A, perfect for ublo notes; an admirable study in octaves by eutzer; études in sixths and thirds, by Méreaux y difficult; an étude in sixths by Delabordo; rguo's étude in sixths; Conus' rhythmical oblems; Lubeck's *Toccata,*—all these should be ntioned.

Let me pause a moment to take breath. Truly field of technic is a vast one and the repertoire inexhaustible. And the reader should note that ave not mentioned those which the article of Mr. meker set forth and that I am certain to have itted some things. This explained I continue.

Sophie Menter wrote a good étude in sixths; that ster pedagogue of Leipzig, Ruthardt, published ne études in thirds and sixths and a *Passecaille* octaves. Sinding's études, Op. 57; those of Backer-Gröndahl; a very difficult étude, Op. 5, by Halfdan Cleve, are good. The caprices, Op. 53, of Schytte are good, brilliant pieces of virtuosity. The études in octaves and in sixths by Agghazi, a Hungarian composer, those of Beliczay, published in France; those of Leschotizky, an *Intermezzo* in octaves; Frimmel, an étude in octaves; Sinigaglia, staccato étude; Eibenschutz, staccato étude, will be read with interest. We should also mention Gabriel Piérne's three études, masterpieces; three bravura études by Gédalge; three études in double notes and a *Caprice* by I. Philipp; four études by Luzzati; six études by Hans Huber, dedicated to Busoni; four concert études by Lacombe; twelve concert études by Th. Dubois; four études, one of them in double notes, by Szymanowski; and twelve very interesting études for the left hand alone, by Moszkowski.

I shall hope to continue this on another occasion for I am far from finished. I wish to mention, however, that Debussy has finished twelve études which I have read from manuscript, and which are of the first water. They are sonorous études, abound in technical difficulties, and are very interesting.

THE LESSON OF THE NEW PIECE

It is worth the teacher's while, as it is useful to eryone, to pause in his daily work and think out it. If one will reflect he can recall many ments, when he went through his tasks perctorily; the mind was elsewhere, or at least ssive, so far as relation to the duties of the mont was concerned. There was no conscious ention, no direct act of the will in what was being ne.

t is too often the case that our work becomes a tter of daily experience, such a matter of routine t we feel no interest in it; it becomes as a story t has been told to us over and over again; we no impulse to put active energy into it.

This listlessness is, of course, fatal to progress. develop an interest in anything there must be ive and inquiring attention. We must examine rything relating to our special task; inquire into its details; know it thoroughly; note how we can prove upon it. Then we feel that thrill of having ne something which so well repays us for the time l attention given to the matter, for having cked in the real, true way of working.

Nothing that we do is without significance if we l give it thought. Our education should teach to consider our daily acts in all possible relations that we may be prepared to do each separate better next time it comes to us because we derstand it better. If our work be worth doing, s worth study.

For an illustration, take a common incident of studio work, one which occurs so frequently t both teacher and pupil frequently pass it by hout considering its real significance. A pupil been given the task of preparing some new e, exercise, étude, waltz, sonata,—something rely new to him. His attitude toward the work ossibly curiosity, interest, wonder as to the difty, whether he shall find it attractive or whether friends will like it; but rarely does one of the per questions arise. The teacher may have e brief remark about the lesson assigned, as re is something you will like"; "Here is someg that will do you good"; or, "Something that make you work."

oth bear a relation to the point reached in the se of instruction. All education should be gressive. At no point is there repose. There is aim in education, and the assignment of a new has a bearing upon the progress made toward aim. Both teacher and pupil need to keep mind the relation of each to the fact of ning something. The pupil needs the develop- t growing out of his attempt to understand what he is doing; the teacher needs to be keenly alive to his duty of providing lesson material which shall advance his pupil. Every piece studied and learned does something for a pupil, —good or ill; no effort is without result. The teacher fails in his duty if he gives to a pupil work to be done which will not help to a larger growth, to a better and clearer idea of music, and of his own relation to his work.

The pupil fails if he does not strive to understand the work he is doing and the influence it is to have on his growth,—what the new piece is to do for him. That is a part of the teacher's duty. He should make clear to his pupil that the piece is to advance, it may be, his finger technic, pedaling, octave-playing, passage-work, arpeggio execution, to promote a feeling for rhythm, to increase power of expression; the piece may be devoted to work in one or many elements in a music education but, whatever they may be, the pupil should know what he is to work for. A clear understanding of the aim is an indispensable factor to right work. It helps pupils to think, to find ways of their own, to become, finally, independent of the teacher.

Therefore, a teacher needs to exercise great care in selecting the pieces he will use and in assigning them to his pupils. Each piece studied should have a clearly defined, stimulating, educational value for the present stage of the pupil's advancement. The teacher who would be not merely a teacher but a true educator will not give that music which does not demand the full powers of his pupils, which does not advance them,—and he will let them know the particular educational value of the lesson assigned. He cannot waste his own or his pupil's time on a piece merely for entertainment.

MUSIC BY WIRELESS

The *Star Spangled Banner*, by wireless, played by a phonograph, is the latest accomplishment of Harold J. Power, general manager of the American Radio & Research Corporation, at their wireless station at Tufts College, near Boston. The sound of the phonograph music was reported picked up by two steamships of the Merchants & Miners Transportation line, more than 100 miles out to sea.

At the present time the delicate mechanism forming the transmitter for the sound is being closely guarded in the station, and operators declare it will not be tried again until the machine is securely patented.

This new invention of Mr. Power's resulted from experiments while endeavoring to develop the wireless telephone. Working nightly on the secret of sending sound waves, the operators brought into play a phonograph, and after considerable testing they succeeded in recording the sounds in various amateur wireless stations throughout Greater Boston.

Operators at various stations on Cape Cod have reported the recording of strains of the *International Rag*, mingled with the monologue of *Uncle Josh at the Fair.* Until a few days ago this was the supposed limit of sound, but it has since been reported that two steamships coming to Boston picked up the music more than 100 miles from shore. They declared they could hear the tunes as distinctly as if the machine had been in the wireless house.

ONE GOOD USE FOR BACK NUMBERS OF "THE MUSICIAN"

BY EDWIN H. PIERCE

As I write this, there lie on the desk at my side, several copies of this magazine, of various dates, on the covers of which are penciled certain little memoranda, such as "L.B.—42," "B.P.—361" and other equally mysterious signs.

As there can be no object in mystifying the reader, I will explain at once that the letters are the initials of various pupils, and the numbers refer to pages on which may be found some particularly suitable piece for their use. In course of time, all these copies will go into the hands of pupils. Some copies, from which I have already taken clippings for my own use, I shall present gratis: those which are in perfect condition, I shall charge to the pupil at cost, namely 15 cents. In either case, I find it well to explain that the pieces may be obtained from the publisher in regular sheet-music form, if desired.

My object is twofold: First, it interests many in the advantages to be derived from regularly subscribing to a good musical magazine; second, it furnishes a variety of good pieces for the pupil's repertoire at a merely nominal price.

Speaking of the matter of price, and cheapness: although I have never known a pupil who made objections to buying whatever new music or instruction books were necessary, who afterward amounted to anything at all worth while in his or her musical career, yet in the case of those of really limited means, we should endeavor not to make the burden too heavy, both for the pupil's sake, and for our own self-interest. as it may result in curtailing the number of lessons, if we are thoughtless or unreasonable in our demands.

Having alluded above to the matter of taking clippings from some of the numbers, I would say, that I now find that the most satisfactory way of procedure for my own case, as my library, both of books and of sheet music has gradually, in the course of years, outgrown the limits of convenient size; but if I were a young music teacher, with but a small library, I think I should enjoy keeping a complete file of The Musician, having it bound in volumes each year. This need not hinder, however, the buying of a few extra copies for pupil's use, as described above.

Speaking of extra copies leads me to one other point. Local music stores, in response to the repeated suggestions of myself and other teachers in our place now carry in stock a supply of The Musician and certain other good musical magazines each month, and to encourage this arrangement, which we think makes for the spread of musical interest, we think it devolves on us to patronize them, where possible, rather than to subscribe directly for one or more copies by the year. On some occasions I find need of several copies of one issue, and it saves time to know just where I can get them without sending away.

These same music dealers tell me that there is always more or less of a demand for the back numbers which they have in stock, so it seems quite likely that others have hit upon the plans which I have just described.

Doing Things for Music in a Community

Six notes showing what some communities have accomplished, and their ideals

BY THOMAS TAPPER

USE AND PURPOSE OF THE MUSIC FESTIVAL

WHAT value will a music festival have to our community? is a question which business men ask of those who seek their interest in such a matter.

Thomas W. Allen, organizer and secretary of the Newark (N. J.) Music Festival, thus presents the facts in regard to the community value of a music festival. This is the most dynamic and vital presentation we have seen in many a day.

"The music festival can be made a part of the municipal life of any community. It is a factor in the promotion of educational and commercial activities. Of all the arts there is but one which strikes a responsive chord in every home and heart—and that is music.

"Socially, it means much. Lovers of music are gathered from various quarters and conditions of life, all assembling with but one motive, the study of music. Friends greet friends, and the rehearsals often prove excellent meeting places for those with leisure evenings who would otherwise congregate elsewhere, or for those who desire a pleasant change from the every-day business routine.

"Commercially, it has unnumbered advantages. To the trades people it brings added business, especially at the time of the concerts. The taxicab, companies, the street car lines, the restaurant owners, the drug and department stores, the music publishers, the piano houses, as well as hundreds of others, all profit. The music teacher lists new pupils, the orchestra and soloists and others who assist receive their pay, and, in fact, everyone, including the managers, if the concerts are successful, gains in some way. The audience has its share in enjoyment, and the city receives large profits through the splendid publicity and advertising which such an enterprise gives.

"Educationally, it is one of the greatest schools a city can possess. Under the leadership of an able conductor, the best music is studied, and the chorus acquires for little or nothing a training which would be worth many dollars to the individual pupil. The course of music as taught in the public schools is fine, but it is not comprehensive enough for the aspiring student. The guiding hand of a well-known conductor, the knowledge and experience which he can use to splendid advantage, are what the average teacher cannot offer. And the fact that a public performance is to be given on a big scale with a large orchestra and noted soloists is only one of many incentives for the singers to work and study.

"Whether it be ragtime or opera, the world loves music. If we can cultivate a desire for the classical instead of the so-called popular tunes, have we not accomplished much? If we can bring the music lovers of a community into one big organization in an effort to entertain, uplift, and advertise a city, is not the music festival worth supporting?"

IS A COMMUNITY ORCHESTRA WORTH WHILE?

[For the following we are indebted to Mr. William Benbow, a well-known musician of Buffalo.]

AT one of the evening sessions of the Music Teachers' National Association Convention, in Buffalo, last Christmas week, the instrumental accompaniment to Bach's *Kaffee Cantata* was furnished by members of the community orchestra developed by the Chromatic Club of Buffalo.

From the Constitution of this Club we learn that one of its objects is "to promote and encourage the development of musical talent throughout the community." Among its activities looking to this end we mention in particular the "School for Orchestral Playing," which is one of the outstanding factors of the music extension work of the Club. Every community needs more orchestral players, but, so far, it has depended almost wholly upon individual initiative to offer the proper inducement to the would-be student to take up an orchestral instrument. Even when the possible student was encouraged to a beginning, there was little chance for any ensemble work or profitable orchestral experience.

In answer to the appeal of the Club, in April, 1914, a handful of people met in a room given for the purpose by the Y. W. C. A. Rehearsals continued weekly from October to March. This class has thrived so expansively that there is now a class of 60, among whom are Germans, Poles, Italians, Bohemians, and Hungarians of our polyglot city. A young German of lowly birth and occupation was encouraged to undertake the French horn, and after a few months he obtained a position in one of our best bands. The flute was taken in hand by a young lady whose daily work is very humble. As we have 75,000 automobiles in use in Buffalo, we have quite an army of chauffeurs. But we here speak of one who, however much he must "honk" his horn at his duties, elected the clarinet for his art instrument in this orchestral school.

To give an idea of the works studied, these may be mentioned: Haydn symphonies, Wagner's *Albumblatt*, Brahms' *Hungarian Dances*, and Schubert's *Overture to Rosamunde*.

Hitherto the Club had extended financial aid to this orchestral school, but so highly did the school value its privileges that this year it voluntarily asked that it be permitted to finance its own needs.

The President of the Club, Mrs. George B. Barrell, besides being a highly-trained musician and a gifted teacher, combines in an unusual way, administrative ability, the power of forceful speech, and the graces that attract moral support in furtherance of the aims of this flourishing Club of 850 members. Those attending the recent meeting of the M. T. N. A. here had the pleasure of hearing given a short *résumé* of the work of this orchestral school just before the performance of the Bach cantata. Perhaps no more eloquent testimony could have been given of the possibility of development in a community as this group of players giving such a cantata.

The conductor is Mr. A. H. Rodemann, formerly with the Philadelphia Symphony Orchestra.

A LETTER

To the Editor of THE MUSICIAN:—

Dear Sir:—"M. H. H." wants to "talk back" to the gentleman who was so kind as to reply in the December MUSICIAN* to her letter published in the September issue. Believing that there must be others whose opportunities are as circumscribed as her own, she does so with the hope that some one may be able to offer still further suggestions that bear perhaps a closer application to her own immediate needs and those of others in her position.

That letter was most certainly written in good faith, and with no expectation of being construed as a "wail" from a "grouch." A lion IS a lion, though some may cheerfully glance only at its tail and try to convince you that the beast is no worse than a feather duster. If my unknown adviser had been trying for a number of years, with more enthusiasm than training, to stir up and keep a-going a bit of public sentiment for something better than popular ragtime, and then if he had seen that little fire all burn to ashes at a time when he was unable to fan the flame—he might lose some of his optimism. And in his discouragement, no doubt he would long with all his heart to be able to apply himself to music as a business instead of a side-issue.

There used to be a kindly old parson in this village who once accosted a ragged youngster of my acquaintance (the lad was adding his daily mite toward the support of nine brothers and sisters) with the question:

"My little man, have you a Bible?"

"No, sir," piped the boy, hopefully.

"Go and buy one!" was the unexpected rejoinder.

Now, it so happens that the hope of attaining just exactly the remedy so casually advised is the one hope that has been keeping the writer above ground for a number of years; but so far as she can see ahead, she's got to live on hope for some time yet to come. And in the meantime, what?

Why, when she isn't at business, daytimes, and teaching music evenings, she is trying to make every thing bend toward the one end she has in mind. Is there any advice that can be given to one in her position, except to suggest practical books for private study?

Now, the branches of music in which the writer is interested because of some skill already acquired in each are these:

Drilling of volunteer choirs.

Pipe-organ playing and teaching.

Piano playing and teaching.

Theory sufficient to enable one to write compositions correctly enough so as to eliminate the "need of harmonic revision" from the music publishers' lists of reasons for rejection of manuscript.

What books, at once most comprehensive and least expensive, can be studied to advantage to help one along the lines mentioned and at the same time provide the sort of instruction that will materially shorten the period required for completing a Conservatory course?

Even the rank amateurs may be quite as enthusiastic and quite as earnest in their teaching as the best equipped; and probably more of us than will ever be known are starving for the education that would lift us from the ranks of the amateur and so enable us not only to better ourselves, but to do better by our pupils.

With the greater part of the gentleman's counsel I am in such accord that I pass over it to comment on one item in particular:

"Go to the old lady (professional) and find out she views her life so dismally as pictured."

What was only a possibility when my first letter was written you, has since become a realization and I could scarcely expect to picture the tragedy as dismally as the poor lady herself views it. She has been committed to a State institution for the insane, although there are plenty of people walking our streets more unbalanced than she simply because she was too sick and nervous to live alone any longer, and she had no relatives to look out for her. Like a good many musicians, she had the nervous temperament that is difficult to live with; but she had put up a plucky fight for a life time of more than seventy years, and to place a woman of her stamp, cultured, refined, and sensitive, in an institution the management of which has come under public censure, was certainly a terrible mistake, to put it mildly. She herself did not know she was being taken away permanently; she consented to go only because local physicians represented that she would be given treatment for her nerves. After a life of such prominent usefulness as hers, this denouement seems to a few of us to be nothing short of a blot on the community.

A further difficulty that lies in the way of the amateur small-town musician, and one with which

*See page 757, MUSICIAN for December, 1915.

onstantly contend, is the old truth that a "prophet as no honor in his own country." The mere fact hat what one knows has been acquired only by con- derable careful application makes just the people hose help is most needed too cautious and over- ritical. These same persons, however, would treat ven a mild dose of conservatory training with the tmost deference. I do not mean to generalize. I an support these statements with actual facts om my own observation and experience.

I realize that I am asking a good deal of a busy an's time in requesting further help; but, after all, ight it not be worth his while to plan a Library r Musicians that in its scope should rival Dr. liot's famous Book-Shelf? If I have appeared at ay point to have over-stated my case, it is not due lack of sincerity, but to the fact that I am almost ubmerged, and am reaching up for the helping and that most of us need at some time or her, for the fresh hope and courage that it brings.

"M. H. H."

MUSIC IN THE PUBLIC LIBRARY, LOUISVILLE, KY.

The Louisville Free Public Library is young and owing very rapidly without a corresponding in- ease in revenue. In our purchase of books we ideavor to add to all departments equally but it is ecessary to enlarge certain departments from time time.

We have had a small music collection for some ears but this was enlarged considerably recently. he Louisville Conservatory of Music and the usic Teachers' Association of the city assisted in ranging the list for purchase, and are helping us to ing the collection before the music lovers of the ty. Our records showed a circulation of two or ree out of this department before the printed list as issued, *but now the circulation averages from irty to fifty daily.* We are conducting the music partment as any other department in the library, d ask for suggestions for additions to be pur- ased as our means will permit.

We have added to this collection by purchase ce the printed list was issued, the music library rchestra scores, etc.) of Len H. Salisbury (de- ased) former director of the Salisbury Orchestra of icago, together with his special collection of usic for the violin. We are endeavoring in a stematic way to reach the music lovers in Louis- ile and interest them and have them use the music ores and books about music in the library.

George T. Settle, *Librarian.*

MUSIC FOR THE MASSES

In a letter to the Yew York *Times*, Dr. Frank mrosch gives some interesting facts concerning e People's Choral Union.

"It is now twenty-four years since I organized the ople's Singing Classes, which a little later devel- ed into the People's Choral Union. In 1892 I offered teach all those who wanted to learn to sing from tes, regardless of previous knowledge of music d without a previous examination of their voices. the first meeting in Cooper Union 700 presented emselves, and this number grew to over 1000 in the urse of the year. Two additional classes in dif- ent parts of the city had to be established and in s way, year after year, thousands of people have en educated in choral singing. We do not, how- er, promise to teach them to sing *The Messiah* ten lessons. On the contrary, we tell the people t at the expiration of the first season's work in e elementary class they would be promoted into advanced class and then, and not until then, uld they be admitted to the People's Choral ion, which undertakes the study of the great torios and other choral music.

"But the claims of the People's Choral Union for recognition do not rest so much upon these performances, with which it comes into comparison with other established choral societies, but rather in the unique field which it and it alone has filled for nearly a quarter of a century. This field is that of being a community chorus.

"During the twenty-four years of the existence of this people's chorus, no one has been asked to contribute one cent toward its maintenance. The members pay ten cents every time they come for a lesson. The teachers have one and all given their services *gratis*. The only expense has been hall rent, music, and such incidental printing and postage expenses as are required in all organizations, and all this work has been done without fuss and feathers, without attempting any of the sensational advertising methods which are usually adopted by efforts to attract attention to ephemeral schemes which interest the public for a day and a night and then drop for something that has more novelty in it.

FEDERAL RECOGNITION OF MUSIC AS ART

Lecturing before the Gary (Ind.) Musical Club, recently, Dr. Rudolph von Liebich discussed the "Free Orchestral Bill." Dr. Liebich urged the appointment, to the Federal service, of a Minister of Fine Arts. Having established this ministry, it is then urged that the music representative shall approach the legislators of each state and persuade them to pass the "Free Orchestral Bill." This aims to secure a permanent Symphony Orchestra for each state which shall assist communities in various ways.

Finally, every community of two thousand or more should be encouraged to have a municipal band which should give daily concerts. By utilizing the schools for this purpose (in the winter) the use of the school building, as social center, is established.

Singers are (by this plan) to assist the municipal band, and the audiences are to be helped to do their part as community chorus. From all this, it is expected that the pageant will develop.

Dr. von Liebich is by no means an impractical dreamer. He is, in fact, an exceedingly practical doer of extremely worthy deeds. One of his many activities is thus presented in the Gary Public Library *Bulletin.*

The Sunday afternoon lecture recitals given in the library auditorium by Dr. von Liebich are attracting larger audiences who appreciate very much the splendid music. Several local artists have very kindly assisted and aided by varying the program with vocal selections. For the benefit of many who will wish to know about and plan to attend these free lectures and recitals we are glad to print the themes for coming Sundays. They are given from 3 to 4 o'clock and several Gary artists have offered to assist at future programs:

Feb. 13th. OPERA: A verbal and musical interpretation of Wagner's *Der fliegende Hollander.*

Feb. 20th. The Gavotte and the Minuet, with some reference to the Scherzo.

Feb. 27th. Outdoor Music (performed indoors). Music descriptive of the seasons, sea, forest, and mountain.

Mar. 5th. OPERA: A verbal and musical interpretation of Wagner's *Tannhauser.*

Mar. 12th. Personal recollection of Franz Liszt and his music.

Mar. 19th. The Prelude and the Overture.

Mar. 26th. The Prelude and the Overture, continued.

Apr. 2d. Music Drama in its beginning. A verbal and musical interpretation of Wagner's *Lohengrin.*

Apr. 9th. The Suite and the Sonata with some reference to the Sonata-allegro form as used in the Symphony.

Apr. 16th. Shakespearean Song and Music.

Apr. 23d. Some Music of the Redskins.

Apr. 30th. May-Day Dances, Songs and Court ship.

May. The entire month's program will be devoted, by request, to an interpretation of Wagner's greatest Music-Drama, *The Ring of the Nibelung,* in four parts: *Das Rheingold, Die Walkure, Siegfried* and *Gotterdammerung.*

WHAT SCHOOL MUSIC LEADS TO

BY F. H. RIPLEY

Music is, of all the studies in school, the most generally interesting. It is more frequently studied as a pure recreation than any other subject, hence it is more likely that the pupil will avail himself of the power for self-activity and improvement in this line than in any other—hence it is, too, that the school course should lead to a full development of all the powers and faculties of the mind and of the body that are concerned in the intelligent activity on the subject.

In speaking of activity in music and of the exercise of power, it is necessary to keep in mind that some conditions which are ordinarily thought of as passive are, in reality, intensely active and are based upon the careful training of faculties which ordinarily are classed as passive.

Thus when we hear we are acted upon; hence we are, in a sense, passive; but the intelligent hearing of music is based upon an ear training which was intensely active, and the exercise of intelligently listening to a musical composition worthy of the name becomes by no means a passive one.

This is an exercise to which the course in school should lead distinctly and clearly. It is the exercise in music most generally indulged in for the hearers are always more numerous than the performers, and upon this exercise depends, in a great degree, the future of music in our country, for it is necessary only to produce intelligent listeners to secure the performance of that which is highest and best in the most skilful and artistic manner. —*Musical Record.*

CHORUS WORK IN SCHOOLS

In a recent issue of the *Bulletin* of the National Conference of Music Supervisors was a short account of the development of chorus work in a Missouri town of 2500 inhabitants. The essential items are as follows:

Each year a volunteer chorus of mixed voices is raised, about sixty members. The students work on a number until they can sing it from memory.

Twice a week the entire High School, including the members of the faculty, meet for singing.

Other school choral forces are a glee club for boys and one for girls each with a limited membership of twelve.

An orchestra of twelve pieces is under training.

SHALL SCHOOL ORCHESTRAS AND BANDS ACCEPT ENGAGEMENTS?

Indications are not wanting that trouble is likely for orchestras and bands connected with public schools. Officials of musical unions object to the probability of competition with organizations outside their own associations. Industrial schools, for example, which maintain bands among their pupils, are to be debarred from accepting paid engagements for their musical organizations, if a bill presented in the Maryland Legislature should be passed.

It is probably worth while for those who are in charge of the training of school orchestras and bands to take account of this attitude of union musicians, and do nothing to arouse antagonism which might ultimately work harm to the music courses in the schools.

Literary Methods as Applied to Music Study

A Method for the Appreciative Study of Piano Music, Adapted Either to Individual or Class Work

BY CLARENCE G. HAMILTON, A. M.
Associate Professor of Music, Wellesley College

V

This series of articles forms the basis for a practical and successful Course in Appreciation of Music.—Editor THE MUSICIAN.

TYPE III: THE ÉTUDE

FOREWORD. By an *etude* (or *study*) is meant a composition which involves the study of certain technical difficulties. In a piano étude, for instance, we expect to find one or more characteristic pianoforte figures used repeatedly, in order that the player may gain facility in performing them under all sorts of conditions. This emphasis of the technical side of playing has resulted, as might be imagined, in the production of a vast quantity of études which, however great their value for practice purposes, have little or no musical merit. But, on the other hand, this very insistence upon passages of considerable difficulty has, in many instances, furnished the inspiration for pieces of unusual brilliancy and fluency, when such passages are employed as a setting for musical ideas of genuine importance.

Accordingly, from the time when piano music began we find composers often writing in the étude style. Various names were applied to works of this sort, such as *toccata* for an elaborate composition or *prelude* for a simpler one. Many of the preludes of Bach, for instance, consist mainly of the repetition of a short melodic figure, which sometimes works up to a dramatic climax. But in the hands of the later romantic composers, such as Chopin, Liszt, and Rubinstein, the étude assumes larger proportions, often involving a *tour de force* which demands the acme of pianistic skill, and often, too, as in the études of Chopin, becoming the vehicle of rarely beautiful musical expression.

A: FORM

1. Are there distinct divisions? If so, name them.

Shorter études, by reason of their continuous flow, are often cast in a kind of *unit form*, without evident breaks or changes. Others are in the more familiar forms, such as A B, or A B A.

2. Note passages which repeat or are similar to those that have previously occurred. If there are changes in such repetitions, in what do these changes consist?

Repetition, in one guise or another, is the chief device at the disposal of a composer for securing unity of form. When we meet themes or passages in new shapes or circumstances, it is like discovering old friends while on our travels. Take care, in listening to music, to fix important subjects firmly in the mind, in order that they may easily be recognized upon their reappearances.

3. Is the composition well-proportioned? Is it too short or too long?

A common fault in étude writing occurs when a composer plays upon certain rhythmic figures until they become tiresome to the listener as well as to the player. On the other hand, brevity, while it seldom detracts from the interest in a piece, may indicate a poverty of invention on the part of the writer. Happy the composer who is able to adapt the proportions of his piece accurately to the significance of the musical thought which he wishes to express!

B: MOVEMENT

1. What is the meter?

2. What is the tempo? Is this emotionally altered?

Since the étude ordinarily exhibits the writer's cleverness in musical construction rather than his emotional expression, the pace is apt to be uniformly regular, except, perhaps, at the ending, where it may be quickened or retarded. Sometimes, however, the emotional element plays a more important part.

3. What are the rhythms of the chief technical figures?

Indicate these as in Type II, B: III.

4. Are there any opposing or contrasting rhythms?

Two even notes in one hand against three in the other, or three in one hand against four in the other are examples of opposing rhythms. By the term *contrasting rhythms* reference is made to the simultaneous occurrence of rhythms of different character, such as a slow rhythm in one voice and a quick one in another.

C: SUBJECTS

1. How many important technical figures are employed? Sketch the melodic outline of each.

By important figures we mean those which occur repeatedly as constructive elements in the piece.

2. What is the technical purpose of each of these?

That is, in what way is each designed to increase the ability of the player? For example, a figure may tend to aid the performance of trills, scales, chords, double thirds, octaves, etc.

3. Is the technical work designed for the right or the left hand, or for both equally?

In a series of études the writer often devotes each to special technical drill for one hand. Sometimes in successive études the hands alternate in assuming the burden of this work.

4. Are the technical figures chiefly rhythmic, melodic, or harmonic?

Especially useful, of course, are figures which combine two or even three of these elements.

5. Are lyric melodies or melodic fragments introduced, and if so, how?

Modern composers often experiment in adding such lyric features to relieve the technical dryness of the étude.

D: ACCOMPANIMENT

1. Are the technical figures involved in the accompaniment, or do they constitute the principal part?

In études for the left hand the technical figures often serve as the accompaniment to a melody which appears above them. Sometimes the figurated part shifts from one hand to the other, now occupying the center of interest, and now becoming subordinate.

Again we may have figurations in both hands at once, or divided between the two hands.

2. How can you describe the accompaniment as a whole?

This question calls for such adjectives as thin, rich, arpeggiated, chordal, figurated, sustained, staccato, compact, expanded.

3. Is the accompaniment exclusively in one hand, or is it divided between the two hands?

4. What is the nature of the harmony? Is it an important factor?

Often the étude is saved from becoming hopelessly commonplace by interesting harmonic effects. This distinction will be appreciated if we compare the barren harmony of a Czerny study with the rich and elegant chord successions upon which Chopin builds his technical figures in his group of études.

5. Is there much modulation? Where modulation most in evidence?

Quick changes of key are often used to sugge varying shades of emotion. Naturally, these sha ings occur more frequently as a composition gro in intensity of expression.

E: STYLE

1. What is the general mood?

2. How do the pedagogic and musical i terests compare in the piece?

That is, does the piece call attention chiefly the dexterity of the performer, or does this de terity serve mainly as a means toward the int pretation of the thought?

3. Does the same style prevail throughou or are there contrasting passages?

The étude does not necessarily involve stro contrasts, although these occasionally appear.

4. Are there any striking dynamic effect Cite examples.

Dynamic effects refer to changes in loudness softness. These may occur gradually, in a lo *crescendo* or *diminuendo*, or they may be sudde as in the case of strongly accented notes or a qui contrast.

5. Are there any particularly beautiful harsh effects? Cite examples.

One striking difference between the classic a the modern composers is that the former ma tonal beauty their chief aim, while the latter exa the element of personal expression to such an exte that they at times employ even painful discords gain their object.

6. Compare this with a similar compositio

F: COMPOSER

1. Does the composer excel as a pianist teacher?

Since étude writing requires a very intima acquaintance with the instrument and its pedago cal needs, it follows that composers of this ty are as a rule experienced as performers or teache

2. What is his nationality, and where did h chiefly live?

3. What traits of his writings or charact appear in this piece?

Many composers have certain tricks of writi that often appear in their works. Again, a co poser's character may be interestingly revealed his style of writing: Schubert's simple and chil like nature, for instance, is constantly suggested his naïve and spontaneous music.

EXAMPLES

Number the measures and play twice as describ under Type I.

I

Study No. 3, in A minor (Von Bülow edition J. B. Cramer, 1771–1858.

A: FORM

1. Though closely connected, the divisions a not hard to distinguish. The formula is:
A (1–16); B (17–24); A^1 (25–32).

2. Measures 1–4 are repeated in measures 9–1 and again in measures 25–28. Measures 17–2 though written in another key, are closely simil to measures 1–4.

3. Simple and ideally perfect proportions a produced by the eight groups of four measures eac which make up the entire piece. Half of the groups constitute division A; while the remainin half is divided equally between B and A^1.

B: MOVEMENT

1. Duple (2–4).

2. There is little change in tempo, save a sligh retard at the close.

3. The predominating figure is composed of fou even thirty-second notes:

4. Rhythmic contrast occurs throughout in th left hand part, which beats out the time mostly even notes, with an occasional syncopated accent.

C: SUBJECTS

1. Only one technical figure is employed, a zig-g progression of four notes, separated by inter-ls that are sometimes very close, and again broaden t with the octave as the limit of expansion.
2. Freedom in rotating the hand from side to le is the most useful purpose of the study.
3. For the right hand.
4. Each appearance of the technical figure deals th the notes of a chord, which are sounded in elodic succession.
5. A melody is suggested in the upper notes of e figurated part, although it is not emphasized. vo melodic parts play about in the left hand, metimes showing considerable individuality.

D: ACCOMPANIMENT

1. They constitute the principal part.
2. Sustained and dignified.
3. It is exclusively in the left hand.
4. The harmony forms the structural framework.
5. There is not much modulation. A change to major occurs in measure 17, and there is a return A minor in measure 25.

E: STYLE

1. Tranquil, with touches of tender feeling.
2. While the piece is mainly pedagogic, the elodic fragments and suggestions may be utilized the performer to give a delicate poetic flavor.
3. No decided change of style occurs, although e changes of key noted above afford pleasing ntrasts.
4. In measures 5, 13, 22, 29, and 30 variety is ured by throwing the accent in the left hand upon e second quarter of the measure. Such an accent mes also on the fourth quarter in measure 29.
5. The piece ripples on with no very distinctive atures except those noted in the preceding para-aph.
6. See the next example.

F: COMPOSER

1. Cramer won laurels both as virtuoso and as acher of the piano. His playing was much ad-red by Beethoven.
2. Born in Mannheim, Cramer was brought to ndon when an infant, and always considered gland as his home. In connection with his con-t tours he taught at Munich and at Paris, after-rd establishing in London the publishing house of amer and Company.
3. The legato style and the addition of melodic ice-parts are frequent traits of his writings. nventional German harmonies and solid struc-e suggest his nationality.

II

Etude Mignonne, Op. 16, No. 1.
Eduard Schütt, 1856-

A: FORM

. It is easy to follow the divisions. These are: A (1–16)+(1–16); B (17–32); A' (33–48); B (49–64); A'' (65–85); Coda (85–117).
2. When division A returns (measure 33), it is rtened by the omission of the first half, which luded the first ending. Also, division A' starts ch more softly than the first A. Its third ap-rance (measure 65) is announced by a strong a in the bass; and a digression from the first me soon announces the Coda. In the latter, first strain of the theme is heard successively ough four octaves, mounting up from the bass ster to the extreme treble.
. There is apparently an over-repetition of the inal theme; but this repetition seems justified the shortening process above alluded to, and by new effects to which the theme eventually ls in the Coda.

B: MOVEMENT

. Triple (3–8).
. The pace is moderate, with a slight slackening re each new division is introduced, and a quick-g at the end.
3. A persistent rhythm of nine triplet sixteenth notes continues, with modifications only just before and at the ending of the Coda.
4. In measures 75–78 the left hand plays two notes against three in the right hand.

C: SUBJECTS

1. There are many modifications of the melodic outline that clothes the rhythmic figure to which we have alluded (B: 3): but none of these modifications materially alter its original character, which is that of a play upon the notes of a chord, descending and ascending.
2. Facility in performing fragments of arpeggios, combined with melodic expression.
3. Both hands are involved, although the chief burden of the work is in the right.
4. Harmonic, although the melodic element is also prominent.
5. Certain notes of the technical figure are made to serve both as a part of the accompaniment and as the tones of a lyric melody, which fits them like a glove. Skill on the part of the performer is required in order that this melody may sing out distinctly above the accompaniment.

D: ACCOMPANIMENT

1. We have just drawn attention to the dual nature of the technical figures, which involve both melody and accompaniment.
2. Arpeggiated and flowing.
3. It is divided between them.
4. The harmony is sweet and emotional, with luscious chromatic changes in division A'' (65–84), where a passionate degree of intensity is attained.
5. There are a number of rich, emotional modulations, especially in divisions B, A'' and the Coda.

E: STYLE

1. Dreamy and poetic.
2. Display of technic is quite subordinated to the romantic expression of the lyric melody.
3. No essential change of style occurs, although the emotional expression is much varied.
4. A far-off effect is produced when A returns for the first time in a *pianissimo* (measure 33). There is a fiery climax in A'', when the tone gradually rises to a *fortissimo*: an effect which is balanced in the Coda following by a corresponding decrease to a whisper, after which there is a quiet ending.
5. Gracefulness and refinement characterize the piece throughout: qualities which are emphasized in the delicacy with which one division leads into another; in the fine climax in A''; in the gradual rise of the theme during the Coda, until it vanishes in the upper air; and in the few final arpeggiated chords which, though simple in structure, seem to embrace the entire gamut of the pianoforte.
6. Both of our examples are founded upon arpeggio figures; but while that of the Cramer study is in zigzag form, that of the Schütt étude is in graceful undulations. The second example, too, is more highly developed in structure, in harmony, and especially in its emotional coloring; in other words, it represents the Romantic School in full vigor, forming a decided contrast to the restrained style of the first example.

F: COMPOSER

1. Schütt is distinguished as a pianist.
2. He is a Russian by birth. After graduating from the conservatories at St. Petersburg and at Leipzig, he went to Vienna, where he has since resided, occupied as composer, conductor and pianist.
3. German influences are evident in the sweet, full harmonies and the sensuous, somewhat sentimental emotional color of the piece.

COMPOSITIONS OF THIS TYPE FOR FURTHER STUDY

Bach, *Well-Tempered Clavichord*, Vol. 1, Nos. 2, 5, 6, 16 IV
Chopin, *Etudes*, Opus 25, Nos. 1, 2, 9 ..... V-VI
Grieg, *Papillon*, Op. 43 V
Heller, *Studies*, Op. 46, Nos. 1, 3, 5, 8, 12, 14 .. III-IV
Huss, *Etude melodique* ..... IV-V
Moscheles, *Studies*, Op. 70, Nos. 4, 7, 8, 12 V
Moszkowski, *Etude*, Op. 18, No. 3 V
Paradisi, *Toccata* in A major IV
Ravina, *Etude de style* IV
Schumann, *Kleine Studie*, Op. 68, No. 14 II

———o———

LARGE AND SMALL HANDS FOR PIANO PLAYING

SHORTLY after his arrival in the United States in February, Martinus Sieveking, the noted Dutch pianist, gave an interview to a representative of *Musical America*. From the report of the interview we quote here a few paragraphs. In passing it may be noted that Sieveking is a firm adherent of the weight-technic system.

SMALL HANDS BEST

"It is a common error to suppose that unusually large hands are well adapted to piano playing. Look at the hands of Tina Lerner, of Katherine Goodson, of Gabrilowitsch. Large hands, with extremely long fingers, are apt to produce metallic tones; the full, rich tone comes from the small hands, with short fingers and broad finger tips.

"Look at my hands. I always have difficulty with the ordinary keyboard; the keys are too narrow. I require a keyboard with white keys one inch in width and the black ones half an inch in width. It is just as reasonable to expect everyone to wear the same glove or shoe as to expect that the same keyboard should be suited to all types of hands.

"Training the hands, arms, and upper body for piano playing is a matter of careful physical development, as it is a profound mistake to believe that acquiring a technic depends wholly upon the brain. Certainly, mental concentration is necessary in studying, as it is in playing a composition, but the technical part plays the greater rôle. For example, the pianist may know a composition by heart thoroughly within a short time, but it takes him a considerably longer time to play it perfectly, and if he does not play certain parts for a period of time he must practise again in order to play it perfectly. Do you see what I mean now, when I say that technic plays a bigger rôle than brains?

THE IDEAL HAND

"The ideal piano hand? Short, rather broad, with large finger tips. The most perfect piano hand I ever examined was that of the late Alfred Reisenaur. The idea that Liszt had an enormous hand is erroneous. The plaster cast in the Weimar Museum shows his hand to be very long, narrow, with rather bony fingers. It is about a finger width narrower than mine. Rubinstein was the possessor of a perfect type of hand for the piano, but it was too large and he was always complaining that his fingers were too broad to play between the black keys, but, apparently, it did not occur to him to have a keyboard built to fit his hands. There should be at least two sizes of keyboards made, one for large and one for small hands."

In the same interview Mr. Sieveking expresses his views on an elementary point in learning to play the piano.

FIVE FINGER METHOD WRONG

"The usual way of putting five fingers on the piano is wrong," says the eminent pianist. "Putting five fingers on C-D-E-F-G retards progress for a beginner. It does not give each finger its respective place on the keyboard; besides, it makes them crooked and does not develop individual strength. Each finger is differently formed in regard to length and shape, therefore each finger must be treated separately. The first group consists of single finger exercises. It is the basis of my whole method, and, for that reason, the most important one. I have written some special exercises for the thumb preparatory to scale playing. Playing a perfect scale—especially in C major—is one of the hardest problems in piano technic."

THE PROFESSOR TALKS ON INTERPRETATION WITH EXPRESSION

"WELL, here we are again, ladies and gentlemen—forgive me; I should say: 'My dear fellow-workers', for are we not all laboring in the same cause, namely, the propagation and progress of our Art? Thanks to the initiative, the interest and the enthusiasm of our mutual friend, the Editor, here we have been able to meet regularly for advice, debate, and encouragement in the problems and practice of our chosen calling: teaching Music, in one or other of its various branches. I am pleased to state that, far from decreasing, your interest in our talks has so much augmented that our little coterie of the early meetings has grown into an important assemblage of earnest inquirers into musical truths.

"While we may seem to have veered to many points of the pedagogical compass, it must not be thought that we have proceeded without preconceived plan. In spite of myself, I have observed a certain logical order; in such a manner, that we have been able to consider many of the important phases of teaching and of learning, that is to say, both from the teacher's and from the pupil's point of view. As a matter of fact and so far as the teacher is concerned, the two points of view should be identical. **For the teacher's teaching will never be wholly successful until he approaches the pupil from the latter's point of view.**

BLAZING THE PEDAGOGICAL PATH

"Thus, our so-called logical order has permitted us to consider the training of the ear for rhythm and pitch, the mechanical problems, the general esthetical and psychological principles, the teacher's necessary acquirements, pupils' idiosyncrasies, and parents' mistakes. Very much more remains to be said on all these subjects; thus far, we have merely blazed the path for our future deliberations. Nevertheless, we have succeeded in arousing considerable interest in the most important of all the teacher's problems: Efficient Elementary Teaching. In all our teaching art there is no greater problem than this—there is none so great. **For the whole musical superstructure is worth nothing, if the foundation, the elementary instruction, be defective.**

"We are all well aware of this self-evident fact, yet some of us disregard it daily. The haste to make a superficial and illusory progress causes many a pupil's talent to receive a setback from which it may never recover.

"But I must withhold my remarks upon this all-absorbing topic until our next meeting, when we shall be favored with the presence of several newly fledged (I beg their pardon!—'newly graduated') *confreres*."

THE MEANING OF EXPRESSION

"That being the case, Professor, will you kindly give us a few ideas about the rendering of a composition—how is expression to be imparted, so that the performer may really give an interpretation, instead of a mechanical execution?"

"Ah! that word 'expression' is one of the greatest stumbling blocks in music. Everyone looks on it as her or his special gift, with the result that we usually have to suffer from the performer's exhibition of bad or doubtful taste! It is a most ill-used word!"

"Well, Professor, I would say that expression means, to me, the bringing out from musical sounds every substantial thing that is in them, such as life with all its vibrating emotions."

"Excellent, my dear Editor, excellent! And how do you propose to do it?" As the question remained without answer, the Professor continued:

"There are several means at our command to impart expression, none independent but all interdependent and interchangeable: the chief among them are Attack, Rhythm, Intensity of Sound, and Instability of Tone.

THE EXCESSIVE VIBRATO

"Instability of tone is that species of simulated expression which is indulged in (to excess) by players of string instruments, by many vocalists, and by the atrocity known as the *vox humana* in organs, and which is termed by some *vibrato* and by others *tremolo*. This consists in never giving the exact sound to a note, but in accompanying it with a species of upper or lower shake, instead of the straight note. Is it possible for this to express anything short of fright or extreme nervousness? It certainly cannot express emotion of the right sort; for it is usually employed from the first to the last measure of a piece, without the slightest cessation.

"It is worthy of remark that the piano does not lend itself to such perversion of stability and purity of sound—for which we should be duly grateful.

VARYING INTENSITY

"Varying intensity of sound, varying between *pp* and *ff*, by means of a frequent use of *crescendo* and *diminuendo*, has certain advantages of positive value, but it should be employed sparingly. There is nothing so intolerable (except the vibrato) as the constant use by a singer of the *messa di voce*. Of this again the piano is innocent, *Dieu merci!* It has often been my sad lot to sit through a concert or recital and to listen to singers going through their songs with a most exact and religious observance of every *p* and *f*, placidly swelling out the *cresc.* and diminishing the *dim.*, and it is impossible to describe to you the utter aridity and emptiness of effect! This means alone, therefore, does not constitute expression. The teacher, who tells his pupil to exaggerate the execution of expression-marks, is altogether wrong; he should rather endeavor to obtain intermediate shades, half-shades of sound, nothing forced, nothing exaggerated—thus, the singer's soul (if he have any) will have a chance to appear."

"Are you not taking away all our best means of expression, Professor?" asked one of the ladies.

IMPORTANCE OF ATTACK

"Not at all, my dear Madam; on the contrary, I have been clearing the ground of all obstacles, in order to give you the most effective and the surest means of imparting real expression. You have forgotten that I included Attack and Rhythm among my means of expression! Whether for a singer or an instrumentalist, which part of a note do you consider the most important: the beginning, the middle, or the end? The beginning, of course; I knew you would all agree upon that. In fact, we may go so far as to say that if the beginning, or attack, be bad the whole of the note will be bad.

"The singer's voice will sound pure or impure according to the precision of the note's attack. The way in which the pianist touches the key or the violinist stops the string—that is, **the way they attack the note shows us the emotion they feel and endeavor to express to us.** It is the cultivation of this touch, or attack,—the communication, by this means, of their emotion to the voice or instrument, which in turn evokes from the hearer a corresponding emotion—that forms the most powerful means of expression.

"The chief thing, therefore, that the teacher must inculcate is attack; and not one kind only, but all varied species of attack, that the performer may adapt his attack to the sentiment to be depicted."

"When you say 'attack,' Professor, do you not at the same time mean accentuation?"

"Not altogether. There can be no accentuation without a marked attack, but the latter can exist with but very little of the former. There is such a thing as excess of accentuation, whereas attack must always be precise.

ABUSE OF RUBATO

"We have another powerful, though very dangerous, means of expression at our service, namely, Rhythm: that is to say, changing rhythm. To keep inalterably to the strict metronomic beat throughout is as expressionless and unemotional as the steady 'chug, chug, chug, chug,' of the engine on an ocean liner; the equal, plodding march must be broken by a *ritard* here and an *accelerando* there now and then, according to the sentiment of music or words. This is what is termed *tempo rubato*. Like the *messa di voce*, its employment is dangerous. It must be used sparingly and appropriately—not dragged in, in season and out of season. It might best be described as a certain elasticity of movement, a give-and-take, which, while keeping more or less to the metronomic movement, seems, now and again, to go a shade faster and then to compensate by a reverse shade slower.

"Thus it is seen that **the chief factor in expression is attack.**

"All other means are inferior. Therefore, whether for voice or for instrument, attack has to be cultivated chiefly. Varying intensity of sound, fluctuation of rhythm may be employed occasionally, but the vibrato or tremolo NEVER, unless indicated by the composer.

PHRASING

"For instrumental music there is another form of expression, of which I have invariably found the majority of pupils extremely ignorant—especially pianists: I refer to phrasing. By phrasing, I mean the logical arrangement into musical sentences. These sentences are usually indicated, by the composer, by means of a slur. All the notes, few or many, grouped together by a slur form a phrase, the first note of which receives the accented attack—the last part of the phrase being of comparative little importance. In singers' *vocalises* the slur indicates the breathing place. In music for strings the slur requires a changed direction for the bow. In piano or organ music the hands will be raised between the two slurs. But always, whether from the weight of the hands on the keys, or the change direction of bow, or renewed breath by the singer or wind instrumentalist,

"The new phrase is ushered in by a precision of attack which lends its power to the expression as one of the chief factors in interpretation.

"The conscientious teacher will do well to examine very carefully the cheap editions of the classics for mistakes in phrasing. Some editions are good, but a great number are spoiled by numerous faults owing, probably to careless editing or to printers' errors. It will, however, be found most instructive alike to teacher and student, if each piece in study be scrutinized methodically for the grammatical and logical construction of phrases in every composition considered. If found correct, the study will form a good lesson; if found incorrect it will prove a wonderful lesson, full of possibilities to the inquiring mind."

A PEDAGOGICAL PROMISE

"Pardon me, Professor," said one of the young teachers present, "did I understand aright that it is purpose favoring us next time with some instruction in the pedagogy of teaching?"

"Yes, my dear Sir, such is my intention: and if time permits, I may endeavor to entertain you with a few original ideas about the Art of Music.

"Therefore, Mr. Editor, and my dear *confrères*, farewell until our next merrier meeting!"

PRACTISING TO EARN MONEY

Some notes on the money value of practice hours

(No. 9 of "The Efficient Music Teacher" Series)

BY THOMAS TAPPER

F it required no other time to master the art of music than the hours spent with the teacher all would be well, all would go merrily, and we l should be masters.

But there are the other hours! No matter how luable may be the skill and counsel of the teacher, is—in the phrase of the day—up to us to mint the etal of his instruction into our own coinage.

Someone has said that all careers are made after P.M. That is, in the hours one has free from e care and routine of the day one makes future d fortune. Even with pupils who have no inten- on of making music more than a cultural factor life, it is not alone the hours of advice with the acher, but the hours of application which lead results. And often—only too often—the results e meager beyond reason.

Whose fault is it?

Everybody's,—the teacher's, the pupil's, the rents'. And it is the fault of all of these because ey have no mutual understanding, no agreement respect of what it is all about.

If music lessons are worth while, they are worthy serious attention. If a teacher be inefficient in e business of teaching, and the parents depend on his business judgment, isn't it inevitable that e pupil is between the two millstones?

But let us assume the teacher with a definite ogram. He enlists the parents' co-operation at ice in these particulars as relating to the pupil.

1. A specific number of weeks' work during the ar, say forty.

2. A specified number of lessons, say two a ek, the number fixed and agreed upon for a good ason.

3. Fixed holiday periods throughout the year.

4. A clear understanding all around that the sh value of the investment in terms of the teacher's ne finds its equivalent in terms of properly per- rmed practice hours of the pupil's time.

5. Hence, a clear understanding of what the pil's time is worth at practice.

If the year's lessons include work for forty weeks, ch lesson being a half-hour, and there being two ssons a week, the pupil will receive eighty lessons, forty hours of instruction. If lessons are $2.00 ch, the pupil goes to the teacher eighty times, d exchanges $160.00 for something that should as tangible as the money itself. For this he eives eighty lessons, goes home eighty times, sits wn to practice, and attempts to turn the informa- n back into the money.

At this point the mathematical equivalent dis- pears. The pupil has not merely to get $160.00 t of the investment by his practice, but he must ure Knowledge and Training. These may be rth to him ultimately many times $160.00. In t, when good instruction is turned into Knowl- ge and Training by study, each practice hour is rth many times its cost.

Of the countless instances of bad bargains re- lting from the taking of lessons it will be found the majority of cases that they abound with in- icient conditions. Nothing is specified in respect any factor, lesson frequency, length, practice urs, and so forth.

Isn't it worth anyone's while to go to sea in a at captained by a man who has a chart, a com- ss, a route, and a purpose? And by the same ken, isn't it absolutely without value for anyone embark upon an education without similar ed factors? No one should ever "just take les- ns." It is demoralizing to hold anything, par- ticularly art education, in the repute that gathers around a shiftless mental state.

But by all means, let everybody take lessons who fully realizes these essentials:

1. A skilled and reliable teacher.

2. So many lessons a week, of specified length at a specified time.

3. Each lesson for a specified purpose.

4. The lesson price agreed upon in the beginning.

5. The purpose of every lesson realized through earnest practice.

6. The price of every lesson realized as a return investment through proper practice work.

It is a fair business proposition to state it all this way: Lesson period—October 1, 1915, to June 30, 1916.

No. of lessons	80	
Cost at $2.00 each		$160
No. of practice hours in 40 weeks	320	
Value in terms of lesson cost		640
Profit		$480

This is a fair statement and one need look at it only in this way:

1. A serious art-loving teacher advises a like-minded pupil 80 times.

2. The pupil studies as directed, gaining Knowledge and Training through 320 hours of work, making total of 400 hours.

3. The Knowledge and Training thus secured are good for life, a joy, a pleasure, a happiness—creating skill which never wears out but increases the more they are applied.

4. Does not this make $480 a conservative value?

II

Parents who look for the 100 per cent efficient result for their children in the music lessons must give it 100 per cent efficient attention, at least to the extent of co-operating with the teacher, seeing that the demands he makes are carried out. In turn the teacher should leave neither the matter for study nor the method of practice to the pupil. If the lesson given today requires a minimum of three hours' daily practice, let the teacher specify that amount to the pupil, perhaps, better to the parents. He can put it in some way as this:

> **To get the worth of the lesson this week, the pupil should practise daily three hours. Please see to it that nothing prevents him securing this amount of practice time.**

When everything is specified clearly art study is a joy. It is literally a tragedy, however, for a pupil to attempt to spend three hours a day on anything which he does not understand. The only greater tragedy in all the world is the state of mind of his elders who permit it.

The teacher of ten or twenty pupils is, in a degree the director of a small school. He should supervise the study of his pupils in the terms of school responsibility and discipline. These terms are—fixed work days throughout the year; fixed lesson periods weekly; a definite curriculum; a definite practice time at home; and a degree of Fair Play all around that makes for mutual respect. Everybody should be responsible to everybody else for the Health of the Investment.

If the teacher thinks he dare not be so much of a director for fear of losing his pupils, let him take comfort in the fact that slack business habits will lose to anyone more patrons than all other methods on earth.

And let the parent know this: If the child is studying music with a teacher who specifies efficiently exactly what he wants, who gives clear directions, makes exact demands, maps out lesson hours, leisure hours, and practice hours, such a man is the beginning of a great cultural investment for the child.

If the child does not respond to all this, if he fails to make good in regularity and sincerity of practice, he should be regarded as a bad financial investment in the particular activity of taking music lessons.

It is all a matter of this practical query:

Shall I spend $50, $100, $200 a year on music lessons and take my chance as to what my child may get for it, or shall I see to it that all concerned respect this amount of money and govern it economically and for value received?

Am I willing to be a good team worker with the teacher in the interest of the child I brought into the world and the money I am spending on him?

If to these questions one can answer affirmatively, go ahead and spend the money. It will prove a bargain.

The next article will deal with the Conservatory pupil and his educational investment.

CHOOSING TEACHING MATERIAL

BY HERBERT WILLIAM REED

The selection of music for pupils in the early grades should be looked upon as a matter of the greatest importance. Each student's work and progress should be a matter of frequent contemplation, and the new place should be in readiness for the lesson when it is needed. Hurried and careless selection is undoubtedly the cause of much loss of time by pupils; and wasted energy, misdirected effort, undeveloped talent, and vitiated taste are results which often follow.

Two objects should be kept in mind as one considers the child's new piece, namely, mental improvement and finger training. If the selection lacks these qualifications it has no place in the course of study. To cater to the craze for so-called popular music is at once to invite disaster, by stinting mental development and encouraging an unmusical style of playing. There can be no denial of this statement. Taste and technic are ruined by the triviality of ragtime and the frivolity of the popular song. Not that these things are always bad in themselves, or dangerous as an occasional relaxation; but their gradual trend is to pervert and vulgarize musical taste, and to cultivate a jerky, jumpy style of playing, which, once developed, is most difficult of correction.

The musician should have no patience with this class of music which makes the piano a thump-box and the player an automaton. The general run of the popular stuff is not piano music at all, and disgraces the instrument we have learned to revere. While wholly unpianistic in quality, it lends itself very readily to the interpretation of military band and orchestra, and is heard at its best only when so arranged. Let the bands and orchestras have it, but save the piano for piano music.

Give the pupils pieces of which they will not quickly tire. The popular music of the day has no lasting qualities. It is here today and gone tomorrow. Those who crave the latest rag and the most up-to-date song of this month, have no use for them when something new comes out next month.

The piece which is genuinely musical, which tends to improve taste rather than vulgarize it, which has lasting melodic quality rather than a transitory jingle, which tends to better touch and cultivate finger work rather than a slipshod style of playing, this should be our conception of teaching material in the early grades.

HOW THE FLOWERS GOT THEIR NAMES

BY R. E. FARLEY

Material for a Flower Recital

THIS entertainment is suited to young people of from twelve to fifteen years. Each performer tells his story, then plays his flower number, or the stories may be given by a reader. If desired, each performer may be dressed to represent his flower. The music is easy.

THE STORIES

"In eastern lands they talk in flowers,
And they tell in a garland their loves and cares;
Each blossom that blooms in their garden bowers,
On its leaves a mystical language wears."

Forget-me-not: There is a legend that when Adam named the plants in the Garden of Eden, this little flower escaped his notice. Later as he walked through the garden, he repeated the names to see if they were satisfactory. He had nearly finished the list, when a tiny voice close by asked:

"What is my name, Adam?"

Charmed by the beauty of the shy little flower, he answered:

"As I forgot you before, let me name you in a way to show I shall remember you again; you shall be Forget-me-not."

Daisy: It is said that a dryad or wood-nymph while dancing in the field, was seen by the god of spring, Vertumnus, who fell in love with her. But, when he tried to clasp her in his arms, she turned from him in fear and sank to the earth in the form of a daisy.

The daisy is called by the French and the Germans *Marguerite* which means "pearl," indicated by the whiteness of its petals.

Some of the Marguerites of history have taken the daisy as their flower. Marguerite, sister of Francis I of France, wore it, and Queen Margaret, mother of Henry VII, wore three white daisies.

"Daisies, they live in deathless rhyme
'Mid songs by poets given;
Nor blight nor winter mar their charm;
Merrily live for future times,
Fadeless as flowers in heaven."

Ella Ingram.

Water Lily: Wayotah (Blazing Sun) was chief of the Saranacs. Oseetah (The Bird) was the most beautiful maiden of the tribe.

Oseetah loved the stalwart, handsome chief, but her parents had promised her to a younger man and she must obey. Wayotah was an ardent wooer; but, although it cost her bitter tears, Oseetah resolutely avoided him.

On his return from a successful battle, Wayotah followed the maiden across the lake in his canoe; but she sprang from him when he sought to embrace her. She refused to sing for him; and when he went toward her with outstretched arms she leaped upon a rock, and, with a backward glance that told her love, plunged into the lake, and the water closed over her. Wayotah swam to the rescue, but Oseetah could not be found. After long search the chief returned to the village and told the people what had happened.

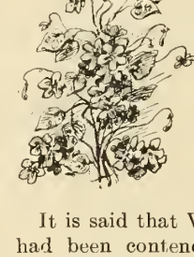
Next day a hunter came running to the village crying: "Flowers are growing in the water!"

The people in their canoes hastened to the little island, where they found the water covered with white and yellow blossoms. It was not so the day before and they besought their prophet to tell them its meaning. He answered: "This bed of flowers is Oseetah changed to this form of life. Her heart was as pure as these petals; her love like the gold they enclose. Watch, and you will see that the flower unfolds to the warmth of the sun, and when it sets, its life will be darkened and it will close and sleep on the surface of the lake."

Iris. Fleur-de-lis: The story goes that one of the early kings of France had as his coat of arms three toads. They were all very well in times of peace, but whenever he went to war the toads on his shield got the worst of it, and it was feared that sometime the sword of an enemy might pierce them and wound him.

One day a holy hermit sat in his cell in deep meditation, when suddenly there appeared before him an angel bearing a shield of brilliant blue; and upon it were three shining flowers of iris. The hermit took the shield to the queen and told the story of its origin. The queen gave the shield to the king who carried it in his next battle, and when it was ended, he was surprised to find that there were no marks of the conflict upon it, and the lilies were as bright as ever. From that time the king was victorious in all his battles and France adopted the iris, or fleur-de-lis, as the royal standard.

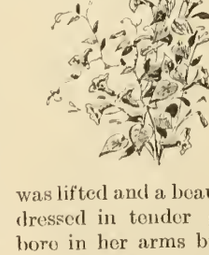
Violet: Greek name, Ion-for Io. One day when Jupiter was amusing himself by flirting with Io, he saw his wife, Juno, approaching; whereupon, to save her from his wife's jealousy, he changed Io into a white heifer. Of course a sweetheart of the king of the gods must have something better than grass to eat, therefore, Jupiter createdthe violet as her special food.



It is said that Venus made the violet blue. She had been contending with her son Cupid as to which was more beautiful, herself or a group of nymphs; and Cupid, the young rascal, pronounced in favor of the nymphs. This so enraged Venus that she beat her rivals until they turned blue and changed into violets.

"No flowers grow in the gale,
Kissed by the dew, wooed by the gale,
None by the dew of the twilight wet,
So sweet as the deep blue violet."—L. E. L.

Arbutus: White-haired old Peboan sat alone in his tepee. Although muffled in furs, he shivered with cold. "Help, Great Spirit!" he cried. "It is I, Peboan, the winter Manitou, who calls. I am old and my feet are weary. There is no food, must I go into the north to find the white bear?" He bent over the dying fire and waited.



Soon the door of the tent was lifted and a beautiful maiden entered. She was dressed in tender grass and young leaves. She bore in her arms budding twigs of willow.

"I am Segun," she announced

"Come, Segun, and sit by my fire. I hav called for help from the Great Spirit, what can yc do?"

"Tell me what you can do yourself," answere Segun.

"I am the winter Manitou. In my youth I w strong; when I breathed the streams stood sti the leaves fell, the flowers died."

"I am the summer Manitou," the maiden replie "When I breathe the flowers appear, when I wa the waters follow. When I shake my hair, tl warm and gentle rain falls. The birds come at n call, the grass springs under my feet. My tepee not dark and gloomy like this. I dwell under tl summer sky. Ah, Peboan, the Great Spirit h sent me to say that you must go."

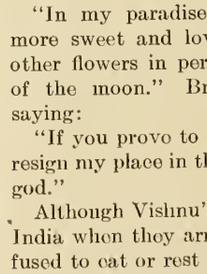
The old man's head fell forward and he slowly sar to the earth. Segun waved her hands above hi and his furs turned to leaves, his tepee to a tr Some of the leaves were covered with ice. Segu put them in the ground and breathed on them ar they changed color and gave out a sweet perfum "When the children find these," she said, "they w know that I am here and that Peboan has go away."

This was the birth of the trailing arbutus.

Narcissus: Narcissus was a beautiful youth w succeeded in winning t love of Echo daughter Aer, though he cared nothi for her. In her grief, h form faded away until the was nothing left of her b her voice; and we can st hear her calling from h hiding places among the roc

Poor Echo was not t only one to receive cr treatment from Narcissus. He avoided the otl nymphs as well, and one of them prayed that might be punished. The avenging goddess swered her prayer. Narcissus happened to cat sight of himself as he stooped to drink from a broo and was so fascinated by his own image that would lie on the brink for hours gazing at hims until he pined away and died. When the nymp prepared a funeral pile for him, his body was not be found; but in its place was the flower we c Narcissus.

Rose: According to Hindu mythology, as Vish god of preservation, was day floating on the water lotus began to unfold its pet When it was fully open Brahma was discovered witl The two gods fell into a pute as to the relative merits the flowers, Brahma declar that the lotus was the m beautiful flower in oxister Vishnu said:



"In my paradise is a blossom a thousandf more sweet and lovely than yours. It excels other flowers in perfume, and its whiteness is t of the moon." Brahma ridiculed this asserti saying:

"If you prove to me that you speak truth, I resign my place in the trinity, and you shall be c god."

Although Vishnu's paradise was a long way fr India when they arrived at the palace, Brahma refused to eat or rest until he had satisfied himsel to the truth of his companion's claim.

In a court of the palace stood a tree that bor single flower—a white rose of immense size. "fairest thing in heaven or earth," said Vishnu.

Then something still more beautiful appear for the rose opened its petals and Lakshmi e forth

"I am sent to be your wife; because you w faithful to the rose, the rose is faithful to you."

Vishnu clasped her in his arms, and Brahma exclaimed.

"It is as you have said. Vishnu shall be chief d henceforth, for in his paradise is the rose, and it is supreme above all flowers."

Most glorious Rose,
You are the queenly belle; on you all eyes admiringly turn."—Mrs. Sigourney.

MONTHLY LETTER FROM A MUSIC TEACHER TO THE PATRONS

BY RALPH B. ELLEN

In sending out my monthly statements and orts I always enclose a circular letter which is a t of a bulletin and trade letter combined. Some the very largest corporations are taking their trons into their confidence. Why should not the sic teacher do the same?

This is undoubtedly one of the most important things for anyone dealing with the blic to understand, whether he be music acher or storekeeper or what. If your patrons rough not understanding the circumstances, e in a way responsible for your troubles mere- explain the situation to them. If you have fair case you will get an immediate and satistory response. If you don't get what you sire the trouble is probably with yourself d not with your class.

When I was giving lessons at the pupils' homes I d an opportunity to explain to the parents what was trying to do. When all my pupils began ning to me I looked for some means of keeping close touch with the parents, and my monthly ter is the result. Of course a letter is a poor substute for personal conversation, but it is a hund times better than nothing at all.

Below are a few paragraphs taken at random m numerous "monthly letters."

TO MY PUPILS:

There will be a recital by pupils of Mr. and Mrs. en in Faelten Hall, June 7, and a concert by adnced pupils June 11, in the same hall.

The theoretical work has been neglected by a y of the pupils and they will be expected to make up fully this month. Practice slips and lesson ps are prepared at a considerable expenditure of ne and money. Why not take the fullest adntage of these lesson helps.

THE MUSICIAN is giving a six months' trial new subscribers for fifty cents. Every student uld take some musical magazine. If carefully d it is just like an extra music lesson coming into home each month. If any pupils want this six nths' trial subscription, I will gladly order it for m and charge the amount on their next statement.

While some of the largest music schools in Bosn have this season made decided cuts in their establishments, I find it very gratifying that I have had a slightly better season than last year.

I want to thank you for your loyal support and efforts throughout the year. Almost everyone can show a distinct advance for their year's work. I have some new ideas regarding the work of the class which I shall explain in the Fall.

Wishing everyone an enjoyable and profitable Summer, I remain,

Sincerely yours,
RALPH B. ELLEN.

[In a future article Mr. Ellen will tell how he arranges his collections so that they are most satisfactory to teacher and pupil.—Editor THE MUSICIAN.]

THE BEST-KNOWN TUNE

To the query as to what is the most famous song in the world a writer answers the tune to which we are accustomed to sing "For he's a jolly good fellow," or "We won't go home till morning," the original text being *Malbrough s'en va-t-en guerre*. There is controversy as to the origin of the tune, some ascribing to it a French origin, period of Louis XV, while others claim that certain crusaders brought it from the East to France.

NOTES ON THE MUSIC IN THIS ISSUE

EVERY month we have a number of letters commenting upon the musical compositions included in each issue of THE MUSICIAN. Some of these letters are generally favorable in tone and indicate that a considerable proportion of the pieces are useful to the average teacher or player. That is the special object we have in mind in selecting the fourteen or fifteen numbers each month.

Some of our readers wish music for recreation, such as can be played either fairly well at first sight or with a minimum of practice. We are glad to meet such a demand, but feel that we shall be doing less than our duty if we do not include at least one number which will require more than a little practice, and thus afford worthy material for lesson assignment.

Anita (valse de ballet), Op. 21, by Eber C. Hamilton, is from the pen of an American composer who has the knack of putting together interesting melodies treated effectively from the point of both harmony and rhythm. Beginning with the seventh measure is a flowing theme to which the dotted quarter notes give a very definite "cross" rhythm against the even flow of three beats to the measure furnished by the accompaniment. The result of this is a feeling of restlessness and capriciousness which may be well in keeping with the temperamental characteristics of the party represented by the title. The various themes are well-contrasted and, as a whole, work up to brilliant effects. This is an excellent piece for recital programs in summer concert.

Rose petals, Op. 212, by Leo Oehmler, is the work of a California composer who has marked facility in the composition of music of a recreational character which also has educational usefulness. The three main themes are graceful and melodious and always right under the fingers. In part, they give useful drill in playing a melody with the thumb of the right hand, a broad effect which is very satisfactory. Here is an excellent number for a spring or a flower program.

Procession, Op. 9, No. 1, by M. Ostroglazov, is in reality a procession in march rhythm, coming from a distance, and working up moderately to a strong climax. Give this a very definite martial character, a sort of fanfare by trumpets being an evident feature. It offers excellent material for the playing of full resonant chords in a snappy style. It is from the pen of a Russian composer who is probably for the first time introduced to American teachers.

Menuet in G, by N. Sokolovsky, is also taken from the Russian repertoire of music for the use of elementary players. It is a charming little piece in the classical style and has good teaching points.

Arbutus waltz, by Florence Nickerson, is a delightful little piece especially suited for use on spring or flower music programs. In New England the arbutus is generally known as the Mayflower. The music is as dainty as this charming little flower.

The fountain, Op. 35, No. 4, is a "study," or study piece, by the popular American composer Charles Wakefield Cadman, and is one of a set of ten easy pieces descriptive of the events of a day in the lives of two children, the general title being *Saturday in Town*, a set which any teacher can use to advantage in a recital to close a season's work. In learning the piece commence with a slow tempo and gradually carry it up to the speed indicated by the composer.

May morning, by James H. Rogers, in title as well as music, suits the present month. It is a lively little piece which a young player should enjoy learning. Indicate the phrasing very clearly, as if the spirit of the lovely spring morning is calling you to come out and enjoy the beauties of nature.

The wood-nymph, Op. 8, No. 8, by Cedric W. Lemont, is one of a set of *Springtime sketches*, and is therefore available for recital programs at this time of the year. It is in waltz rhythm, the most striking feature being the passing of the melody from one hand to the other in the opening theme, beginning in measure 9. Be sure to follow the guide lines which are placed between the two stave lines to indicate the course of the melody.

At dawning, by Charles Wakefield Cadman, is the composer's own transcription of his wonderfully popular song. It makes a delightful number for the piano, broad in style and thoroughly lyric in mood. Give it to a pupil who can make melodies "sing."

Gipsy serenade, for four hands, by Franz Behr, is an effective piece for the ensemble class, not at all difficult, and in the true Hungarian style. Teachers will find it worth while to devote considerable time to work with groups of pupils, especially in preparation for recital programs. Here is a good number to open or close a program.

Minuet and gavotte, by Francesco M. Veracini, is a violin number from old Italian classical repertoire, edited by Mr. Eugene Gruenberg, of the New England Conservatory, and by him thoroughly prepared for teaching use. It is a fine study in the classical style.

A wondrous rose, by Eunice Waite Burnham, is a song in the popular ballad type which has been taken up by some successful singers, and bids fair to rival other well-known songs in popularity. It is easy to sing, and filled with fine vocal effects. Try it in your summer programs.

Maytime, by Mary Turner Salter, has a title in keeping with the season of the year, and is an ideal spring song, or song of May. It can be used to especial advantage in Maypole festivals and flower programs, and will be effective if sung in unison by a number of girls.

Thy way, not mine, O Lord, by Louis R. Dressler, is a fine sacred song, easy and melodious, set to a text which is useful for general occasions. Singers will be delighted with the fine climax near the close.

Night holds a secret, by Charles T. Ferry, is a short art song in which voice and piano part unite to work out the atmosphere indicated by the text. The harmony is rich and colorful and thoroughly suggestive of the ideas set forth by the poet. We consider this an eminently useful song of high artistic value.

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

THE INDIVIDUAL AND THE MASS

HAVE you ever wondered why it seems so difficult to make progress in the musical upbuilding of a community? Have you been struck with the great disproportion between the work accomplished in the case of a number of individuals and the net results when spread through a community?

One teacher seems to do fine work. So does another. And a third, and a fourth also show good records. And this good work is duplicated by four others. And yet the totals seem small.

And then you wonder why!

An efficiency expert suggests a clue. According to him collective effort is not the sum of individual efforts. He says that eight horses working together under ordinary conditions pull only four times as much as one horse.

A good worker can maintain regularly, for six days, one-half the exertion necessary to make a world record.

The average efficiency of crop raising is only one-eighth the maximum possible, only one-quarter what we should confidently expect.

Just two lessons stand out for the teacher of music.

First, the absolute necessity of increasing the efficiency of his individual exertion. It will not be lost. It may not raise appreciably the sum total of pedagogic achievement but it will be worth doing nevertheless.

Second, the absolute necessity of reaching definite, intelligent co-operation with other teachers, so that the sum total *will* show a gain.

If ten teachers in a community determine to increase the quality and quantity of their work with each individual pupil under their care the result will be worth while, for it will be appreciable.

We believe it is some such feeling as this, perhaps not formulated or expressed, yet definitely felt, which is the basis for the sincere efforts to raise music education to higher levels, and to accept higher standards as a necessary preliminary step.

Commence with yourself. You can do better work than with some one else whose weakness and strength you do not know so well.

The Musician Prize Competition for Piano Music

TO STIMULATE the composition of music for the piano THE MUSICIAN offers the following prizes on conditions set forth below:

One Prize of $100, and royalty of 10% of the retail price on every copy sold in sheet form
One Prize of $75 Two Prizes of $50 each Four Prizes of $35 each

CONDITIONS

1. *As to Grade:*
   Compositions must not exceed Grade III (or advanced III) in difficulty in a scale of *seven* grades.

2. *As to Character and Style:*
   They must be melodious and attractive, and have educational value, that is, useful for teaching purposes. They may be in dance rhythm, but mere dance music is not wanted. They may be descriptive or poetic in style, in such forms as the Intermezzo, Nocturne, Romance, Song without Words, Serenade, Idyl, etc.

3. *As to Manuscripts:*
   Only manuscripts clearly written will be considered.

4. *Who may Compete:*
   The contest is open to residents of the United States or Canada, with no restrictions as to nationality or sex.

5. *How to Compete:*
   Address your manuscripts to MUSICIAN PRIZE COMPETITION, care of Oliver Ditson Company, Boston, Mass. Compositions submitted must not bear the composer's name, but, instead, a *nom de plume* or other distinguishing mark or motto, and be accompanied with a *sealed* envelope on the outside of which shall appear the *nom de plume*, etc., inside the composer's name and address. Competitors may submit more than one manuscript.

6. *When to send Manuscripts:*
   No manuscripts will be considered which are received after October 2nd, 1916. The decision of the judges will be announced in THE MUSICIAN as soon thereafter as possible.

7. *The Judges:*
   Ernest R. Kroeger, St. Louis; Prof. H. C. Macdougall, Wellesley College, and Constantin von Sternberg, Philadelphia.

8. *Publishing of Prize Compositions:*
   The compositions to which prizes are awarded, with the exception of the one awarded first prize, shall become the sole property of OLIVER DITSON COMPANY, upon payment of the awarded prize. The OLIVER DITSON COMPANY shall have the option to purchase compositions to which prizes are not awarded at the usual current prices for piano numbers of similar grade and character. The prize compositions shall be published in THE MUSICIAN.

Oliver Ditson Company will not be responsible for loss of manuscripts in the mail.

THE TEACHABLE PUPIL

HE is worth having. It is a pleasure to teach him, because he wants to be taught.

There is a pupil who feels it a reflection upon him to admit that he needs instruction, although he presents himself in the studio lesson after lesson. When the teacher begins to explain some doubtful point the pupil, apparently to save his self respect, hurriedly interrupts to say, "Yes, I understand."

Common sense, to say nothing of true courtesy, would indicate that he should keep quiet and get all the suggestion and explanation he can from the teacher.

There is another pupil who constantly refers to his determination to succeed, who is ready to do big things, but will not attend to details, which the teacher insists upon, but which seem unimportant to the pupil.

The teachable pupil does his best to follow instruction intelligently and thoroughly. Try to develop this kind of pupil.

USE "THE MUSICIAN" WITH PUPIL

TEACHERS find it worth while to u material outside the regular lesso and text books. THE MUSICIAN h many valuable ideas for pupils.

Everyone knows how necessary it is to repe certain things over and over before they si definitely into the consciousness of a pup THE MUSICIAN helps in this discipline.

And we must not forget that a stateme noted in print often makes a stronger impr sion upon a pupil than the same thing stat orally. Many persons are "eye-minde rather than "ear-minded." This is wh THE MUSICIAN with its assembling of educ tional ideas is invaluable. One teacher writ

"I know THE MUSICIAN well, and use it in m work a great deal. There is a big change late in the magazine. My pupils note it, too

It will pay you to read every pa carefully for at least one idea which has val to you. That is the way you grow. (IDEAS which you can APPLY.

The SINGER and His ART

MUSIC AND PSYCHOLOGY

THE THREE MENTAL PHASES WITH SPECIAL REFERENCE TO SINGING

BY DR. HERBERT SANDERS

THE word "phase" has been defined as "the aspect or appearance of that which presents various aspects." There are three phases (or functions) of the mind, namely: 1, Perception; 2, Intellect; 3, Volition.

PERCEPTION is of two kinds, *a*, Physical or sense perceptions, something we feel, taste, smell, hear, or see; *b*, Mental perceptions which are the emotions, such as love, hate, joy, sorrow and so forth.

INTELLECT. A baby of a year has no intellect. It has sense impressions but it is not until these impressions, or "percepts," as they are called, are correlated that knowledge begins or the intellectual function can be said to operate. The intellectual function includes knowledge, the powers of reasoning, deduction, and imagination.

VOLITION is that part of our mentality which results in physical or mental action, or, on the contrary, the exercise of will in order to abstain from action.

It must be clearly understood that we have not three minds, but *one* mind with three *phases* or functions, and it is their interaction, or the predominance of any one of these three phases at a given moment which accounts for a man's individuality, temperament, and character. We speak, for instance, of Mr. Smith's "hard" character. Mr. Smith's emotion easily gains the ascendant over his intellect, but he is not always "hard." The Cornish folk have a rather original expression: they speak of "comfortable" people, that is, those who never allow the more violent emotions to come to the surface. We may attribute such a temperament to Mr. Brown. Intellectual persons are often of this type. But differing from both Mr. Smith and Mr. Brown is Mr. Robinson, who is what we generally designate as a "practical" man. He is all action. On his physical side his "willing" phase is strong.

And so it is that the absolute and relative development of the Perceptions, Intellect, and Volition, and the quickness of one mental phase to control the other two phases which account for the varying characters of men. With but three mental phases men are far more different mentally than physically. It is said that no two leaves on a tree are alike; similarly no two faces are alike; but far less alike are the minds of men.

A study of the various aspects of the mental functions should be theoretically and practically fruitful to *a*, the Teacher; *b*, the Student; *c*, the Performer or Public Singer.

THE TEACHER

As our sense impressions grow numerically we begin to correlate them. This correlation is the beginning of knowledge as generally understood. But as our knowledge grows we go farther; we classify, co-ordinate, and generalize with our new materials. It is here that constructive thinking begins; and the difference between competence and incompetence lies largely in the fact that the former reaches the constructive stage of thinking while the latter stops at the accumulation of facts.

The man who has formed the habit of thinking constructively soon begins to theorize, and no man does more theorizing than the singing teacher. He appears to have an instinct for it, so much so, that we have voice theories galore.

It is, of course, beyond the soope of this essay (which is necessarily merely suggestive) to examine these theories. But we will briefly examine one by bringing to bear our analysis of the mental phases. This proceeding will doubtless make easy the subsequent examination of any other theory. We will take the natural theory.

DEFINITION OF THE NATURAL THEORY OF TEACHING SINGING

According to this theory singing is an instinct, and it is only as we become self-conscious through the analysis of our vocal powers, that we imitate wrongly produced voices, or employ brute force instead of singing with ease, that voices are wrongly produced. By instinct, in this case, is not meant that we can sing as readily as we can see or hear, but that when the time for singing has come, in the imitative way we learned to speak so we learn to sing. We hear somebody speak and we can reproduce the sounds exactly without being conscious of the physical or psycho-physical operations required for production. Similarly, according to the natural method, we learn singing through our imitative faculty, and knowledge of mechanical processes is of no help whatever; on the contrary, any other than musical knowledge is positively harmful because it causes self-consciousness—the malignant foe of natural singing.

AN EXAMINATION OF THE NATURAL METHOD

The fallacy underlying this theory is that it does not take cognizance of all the facts of nature, in that it treats old and young alike. It assumes that the imitative instinct is as active and responsive in adults as in juniors. This is not the case. For about the first two years we live on sense perceptions only; towards the end of the second year the imitative faculty begins to dawn as is evidenced at the first efforts at speech; from the second to the seventh year Perception and Volition are stronger than Intellect; from the seventh to the fifteenth year the mental phases more or less balance each other. But as we grow older the instincts and powers so far neglected begin to lose their natural responsiveness. As Intellect develops the powers of imitation largely atrophy.

So that while it may be possible to teach juniors by the natural method, with seniors it is not always a possibility and is often an impossibility. This is nearly always the case in the production in the finer-vowel tints, for singers, unless they are students of foreign languages, can by means of imitation only reproduce the broader and easier sounds.

It is easy to ask a pupil to imitate a sound, but suppose he cannot produce a sound anything like the model! What is a teacher to do? There is only one method open to him, and that is to appeal to Intellect instead of instinct. In other words we must harness instinct with knowledge.

In this case the requisite knowledge is the position of lip, tongue, jaw, and so on. Where instinct is defective there is only one remedy and that is a thorough knowledge of the mechanical processes which all teachers should have at their finger tips.

THE NATURAL METHOD AND FOREIGN LANGUAGES

The belief seems to be generally held that the only way to learn a foreign language in later years is by means of the natural method—as in childhood. A moment's thought will show the absurdity of it. In childhood, as has been already remarked, the imitative faculty is far stronger than the intellect. In later years Intellect outweighs instinct—even the imitative instinct. The youngster cannot easily compare, classify, co-ordinate his knowledge or generalize on it; the mentally healthy adult can. The adult student of languages will, by studying words according to their roots and derivations, learn a hundred words in the time that a junior can only learn five. Moreover, he will compare and classify the sounds themselves; he will notice the ways in which they are variously expressed and train his eye to recognize them at a glance; and he will utilize his knowledge of the fact that the learning of a foreign language depends, as a matter of fact, more on the eye than on the ear. The time is due when all singers should sing their songs in the language in which it was written. In translations the relation of verbal to musical accents is proverbially bad.

THE STUDENT

The baby does not at first look mentally inward, but outward. In due time he distinguishes between himself (the subjective) and everything or everybody outside himself (the objective). It must be a day of wonder when the subjective-self first appears and for the first time makes a survey of the objective-self. This inward look is the beginning of all personal education, and all subsequent education can be successful only as the subjective-self can criticise the objective-self.

The ambitious student will take stock of himself and find his value in terms of Perception, Intellect, and Volition. The way then will be open for him to CONCENTRATE ON HIS WEAKEST PHASES until they are developed to the standard of strongest function. He will then be the possessor of a man's greatest asset, namely, A BALANCED MIND.

But he will not have "discovered" himself very long before he finds he can only improve him mind by SELF-education, for education has two aspects: the passive, when the teacher educates and the pupil is educated; the active, when the pupil takes an intelligent interest in his work, asks the why and wherefore, and brings self-criticism to bear. A pupil's success begins here. Mr. Tobias Matthay

has some wise words in this regard in his *Musical Interpretation*: "To begin with, let us recognize the fact, that, accurately speaking, we cannot 'teach' anything—in the sense of our being able DIRECTLY TO LODGE any knowledge of ours in another mind.

"All we can really do is to stimulate another mind TO WISH TO LEARN, and suggestively to place before that other mind the things which it is desirable should be apprehended. It is always the other mind which has to make the effort to apprehend; and unless that effort is made nothing can be learned.

"Undoubtedly, one of the first things we have to combat in a pupil is the wish to be saved all trouble and effort, and to have the 'learning' done by the teacher. Indeed the ordinary student invariably starts with the notion that all he has to do is to be passive and 'receptive'—like a laboratory funnel with a mouth widely gaping, and ready to receive any chemicals (pleasant or otherwise) which the operating chemist may see fit to pour in. This attitude must be at once kindly but firmly combated and the pupil must be made to see that it is for him to try to learn, for him to try to apprehend and assimilate those things to which the teacher is anxious to call his attention." When the pupil has passed from the passive to the active state, when he can hear himself as others hear him when he can criticise himself as others can criticise him, then, and not until then, is he on the way to complete and assured success.

PERFORMERS

The public singer or performer with a little reflection will see that the interaction and absolute and relative development of the three mental phases results in what we call "Temperament."

This is an ill-used word. When somebody says "Miss Jones sang with considerable temperament" they generally imply that the singer's style was very impassioned. Strictly speaking, this shows a want of temperament, for *temperamentum,* in Latin, means a MIXING IN DUE PROPORTION, that is, an equal development and activity of the mental functions. In these days there is a tendency among musicians, and among singers especially, to consider the impassioned style as the summit of achievement and the crown of temperament, and the concomitant tendency to judge both music and performance with that false standard in mind.

In music itself it leads to an erroneous critical standard. It admires a preponderance of color; violent contrasts of tone; in the cheap device of starting fortissimo and gradually reducing the tone to next to nothing and *vice versa;* in other words, "effects" are preferred to intrinsic worth. In the singer it leads to bigness instead of beauty of tone; the inartistic high note in the penultimate bar; to the supreme effort of self-expression when the "self" is not worth expressing, instead of the more desirable effort of self-repression which is essential if the emotional content of the composer may be properly realized.

The crown of "temperament" is when Perception (or Feeling) and Volition are perfectly controlled by Intellect. The temperamental singer is the BALANCED singer, of which there are few.

It is unfortunate, too, that these are not always appreciated on account of the prevailing false standards attributable to the lack of study of the subjective-self, and the general failure to follow the sensible advice of old Solon, who immortally said: "KNOW THYSELF."

———o———

WHAT IS SINGING?

BY W. J. HENDERSON

Go where you will among singers and listen to their talk and you will hear an endless reiteration of one thought—how best to produce beautiful tones. It is not at all astonishing that this should be the case for the method of tone-formation presents problems of immediate import to the singer. If he cannot fathom the secrets of his throat he must stop at the very threshold of his art. When he essays to sing he discovers that certain tones refuse to flow, that they are veiled, or that his throat is unduly strained in their delivery. Something is wrong with the method.

Again he sets out on the weary search for a voice teacher. Again he finds one who has rediscovered the secret of Porpora. Again he trudges through weary pages of *solfeggi.*

At length he tries once more to sing songs, and lo! now he has troubles with tones which before flowed spontaneously.

This is a very sad and common experience among singers. No wonder that they think and talk altogether of the art of tone-production.

Yet from this custom a grave misfortune comes upon the art of song. The edifice stops too often with its foundation. We get tone, tone, and tone. Singing becomes *vox et praeterea nhil.* All the world is a music box and all the men and women merely tinklers. The human voice is treated purely as a musical instrument, and it performs melodies inarticulately, as a violin does. Nine-tenths of the songs we hear are songs without words. And when we do hear the words they are either mangled in the formation or neglected in the matter of significance. We are furnished with little books containing the texts of the songs to be sung. These little books are useful to those who do not understand the language in which the texts of the songs are written. They ought not to have any other use. When they are employed to tell us what is the meaning of the song which the singer is singing, they are a confession of great weakness. . . .

Singing is the interpretation of text by means of musical tones produced by the human voice.

Hence the force of the paradox: If the tones are not beautiful they cannot be musical. Therefore it is right that the singer should first learn to make musical tones. If he stop there he is wrong. He must use the tones to interpret the text. It is no concern whatever of the real artist that his hearers are willing to accept half a loaf. He must insist upon the dignity of his art. He must refuse to allow the burial of its intellectuality.

To sing mere sounds is a senseless performance no matter how much these sounds tickle the ears of the dear public, no matter how large the price paid to the singer for their utterance. . . .

The opera is a wholesale destroyer of high ideals of song. Two-thirds of the people who attend it do not make the slightest attempt to find out what the singers are saying, and content themselves with drinking in the merely sensuous elements of vocal music. It is no wonder that many opera singers become slothful. Others, whose enunciation is admirable, substitute mere articulation for interpretation.

There is a vast difference between the two.

The evils of mere sound singing come from a misconception of the nature of song. If every singer would write on the tablets of his mind the definition of singing given in this paper it would be a happy thing for vocal art. Let it be a daily maxim: Singing is the interpretation of text by means of musical tones produced by the human voice.

Let it be understood that in song as in the Wagnerian drama, the music is not the end, but a means. The radical error of the entire Italian school of singing, despite its proclamation of other belief, lay in the fact that in actual practice it held that the ultimate purpose of vocal technic was the production of beautiful tone. The fundamental truth is that the object of vocal technic is the vitalization of text by musical tone, and that the creation of the tone must be for that purpose and that alone.—From *The Musical Record.*

A PLEA FOR BETTER MUSICIANSHIP

THE UNPREPAREDNESS OF THE AVERAGE SINGER

BY WILLIAM J. FALK

Much is being said and written at the present time, regarding preparedness. Shall we build a larger army and navy? Will the country be at an advantage to back up its demands if the army and navy are greatly increased? I do not intend to discuss this subject as I am willing to leave the solution to the President and his counselors; but I do wish to draw a parallel.

If two typists seek positions will not the one who is neat and quick in her work have an advantage over one who does not spell well and is slow and inaccurate? Is this not the rule in all walks of life? I think this much will be conceded by all. Therefore I want to call attention to the lack of proper preparation on the part of many students of music, and particularly on the part of singers.

From my experience, ranging over twenty-five years of teaching, I find that many students of vocal music,—I might almost say, most vocal students—are willing to practise their songs or vocalises, but unless the teacher insists and makes them alive to the importance of the matter, they are perfectly willing to neglect the musical side of their education.

By the musical side, I mean all that which does not pertain directly to the technical side of singing, but which tends to make a better musician of the student. I mean the study of the history of music; I mean the knowledge of at least the elements of harmony; and I mean some ability to play the piano, however poorly; and to read music.

Is this neglected because it is so difficult to acquire? Not at all. If the student cannot afford teachers for this branch of his education, he can learn much by reading. All cities contain public libraries with books on most of these subjects only waiting to be called for and read. Could an actor protray a rôle he did not understand?

Yet many singers attempt songs without a proper understanding of the poem. And how much more interesting does a song become, when one knows something about its story.

What a field of investigation is opened by the study of a song like *Margaret at the spinning wheel* by Schubert. First, there is the life of Schubert. Then one finds that this poem portrays an incident in the story of Margaret, the beloved of Faust. If this leads to the reading of Goethe's masterpiece who would not be improved by such reading? Then the life of Goethe. And, perhaps, who knows one may become sufficiently interested through this to want to learn of the customs of the German people at different periods.

A song like *The two grenadiers* leads one to study the lives of Heine and Schumann, and almost compels one to read of Napoleon's exploits; and especially of his disastrous Russian campaign. Does anyone fail to see how this will affect the singing of such songs?

Most singers look toward a church position as their first professional step. But how do they prepare for it? Can they read music or do they take it for granted that they will get along somehow?

Too many are ill-prepared. They do get along somehow—usually not very brilliantly—and then are surprised if a better reader, with perhaps not so good a voice, is preferred. It is this lack of reading ability which makes such difficult work for all voices except sopranos when they sing in quartet.

Let singers, like anyone else seeking a livelihood be as well prepared for their work as possible. A good voice is essential, but it is not the only requisite. With systematic training, everyone can learn to read music at least fairly well; and a singer with a pleasing voice, good interpretation, and fair reading ability, can almost surely rely on a successful career.

THE HERMAN KLEIN PHONO-VOCAL METHOD

Based upon the Famous

School of Manuel Garcia

Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

THE SPEED MANIA IN THE VOCAL CAREER

Mr. George Hamlin, the well-known Chicago opera and concert tenor, has contributed a series of special articles on singing to the Chicago *Herald*. The following, taken from a recent issue, contains some ideas of great value to young singers:

This is the age of speed, but too much speed is dangerous. It was found necessary to place a speed limit on automobiles and so there should be one on singers.

Every one familiar with musical affairs knows that America is a land of beautiful voices, but that the percentage of successful singers is appallingly small, and one of the chief reasons is the speed mania. Most American singers begin to think and talk public appearances in concert and opera almost as soon as they commence to study, and those having particularly good voices to start with usually find little trouble in getting a hearing long before they have had time to gain the requisite knowledge of how to use the voice or have acquired anything approximating a repertory. If some of these gifted ones have meteoric successes they seldom hold their high positions for any length of time, and many times their fall is swift and sad.

Ambitious singing teachers on discovering fine young voices think to gain effective free advertising and reflected glory by pushing such pupils forward. The inexperienced pupil, anxious, of course, to get into the public eye and not realizing the dangers of inadequate preparation, does not resist the selfish action of the teacher and is led to attempt things beyond his ability.

To say nothing of the necessity of a comprehensive repertory, students of singing must acquire an adequate knowledge of voice control and a progressive experience to be able to understand how to conserve the voice while at the same time gaining the maximum result therefrom, before they are ready to continue successfully in a public career. A singer improperly or insufficiently prepared will be certain to suffer sooner or later.

Very few of the public singers of today are well and completely prepared for the work they are attempting to do. We need only listen to such a singer as Schumann-Heink, who has been able to hold her own for over thirty-five years because of her thorough foundation work, and then to the "half-baked" singers often heard at her side to see the contrast and to appreciate the value of real preparedness. The general public does not always know the reason for this difference, but it does know the difference is there and it responds instinctively.

TO YOUNG WOMEN WHO WANT TO SING IN OPERA

BY LILLI LEHMANN

I am frequently asked: "If a young girl should come to you for advice, before beginning to study for opera, what would you tell her?"

I am asked that question by apparently sane people who would laugh at me scornfully and justly, if I were to say to them: "Your plants,—they look very well indeed; all your varieties of ferns and palms and orchids and garden roses, and your trees and vegetables look well. Tell me, what do you do to them to make them grow?"

They would tell me that one plant needs much sunshine, and another but a little; that one needs great care, and another needs to be let nearly alone; that one must be watered weekly, and another daily; that some varieties need cold weather, and others die because of it. Yet they say to me: "How do you make a talented girl successful?"

Every girl of talent has her own road to success. Therefore I can never say what that road is for girls. But I can, perhaps, help them to find it. There are some things that all girls must have or must cultivate who wish to become great singers. Suppose that a girl has great natural ability, and a good temperament—an illusive word, but a necessary qualification—there are four things she must have to insure success, namely: Intelligence, Diligence, Memory, a good Master.

In writing this, I am laying down no "rules for a career," as they are absurdities to consider. Such rules are impossible of application and are never asked for by a girl who intends to win success at any cost. These four suggestions are merely hints to the girl who has ability and boundless determination. She will understand that what I am now saying to her insures nothing whatever, but will simply help her not to make certain mistakes in her work,—mistakes which often take years from one's usefulness as a singer, and seriously, if not permanently, in ure the voice.—*Success.*

DOES THE TRAINING OF THE VOICE PAY?

BY K. R. UMFLEET.

Within the past few years the American people have come to realize the importance of systematic training of the body as well as that of the mind. In the mad rush of business one almost forgets his physical being until it suddenly reminds him with a blow of illness or a nervous breakdown.

Many are reading the increasing number of magazines and books on how to strengthen the body thereby fighting and keeping disease away. Others are buying certain physical apparatus and devoting hours every day in order to keep their health. All this is very profitable, providing the training is guided right.

But why not train the voice and the lungs, which supply the most vital element for maintaining the health?

Does high vitality resulting from deep breathing appeal to you? Do you want to banish stomach and intestinal troubles? Try diaphragmatic breathing.

Do you have throat trouble? Does a few minutes of singing or loud talking make your throat sore and harsh? Try to support your voice on your breath and to use your head as a sounding board.

Do you desire a long life of happiness? Then sing. If you will search the long list of singers you will find very few who died before the age of sixty, and many are doing their best work at that age; and they are certainly the most happy and contented people on the earth.

Do you wish to possess a well-modulated, resonant speaking voice? You admire a speaker with a good voice, and you notice how he always holds his audience, just because of this personal magnetism. This result is obtained by making the vowels in the way they should be formed.

To change the habits of breathing of a lifetime from shallow, gasping efforts of the chest to the deep, muscular control of the diaphragm; to open the chambers of the head for resonance; to change one's impure vowelization and correct one's slovenly enunciation, requires mental concentration and painstaking effort; but it pays to have all these requisites under control.

The Twenty Vocal Lessons

given in fundamental voice training in my Summer Course, beginning June 10th, will give you a thorough insight into correct principles and practice, besides placing your voice on a sure foundation for further development. Send for an outline of the work.

COMPOSERS OF THE MONTH

Remember at your music-club meetings and recitals during the month of May the birthdays of these composers:

Johannes Brahms, who was born May 7, 1833.

Peter Tchaikovsky, on the same day, in 1840.

Our own almost forgotten Louis Gottschalk, who was born in New Orleans, May 8, 1829.

Two composers who wrote most charming music for young players, and both born in 1814: Henselt, May 12, and Stephen Heller, May 15.

The English Sir Arthur Sullivan, May 13, 1842, and the Russian Rimsky-Korsakov, May 21, 1844.

Wagner's birthday is the 22d; Raff's the 27th; and Moscheles (who was Mendelssohn's very wise teacher) is the 30th.

WHAT THE OTHERS SAY

Is it not often this way with you children? Before you took lessons you did not think much about music except that you liked the way you felt when you listened to it, and perhaps this caused you to wish to be able to make music yourself. So you were quite ready when your mother decided that it was time to begin your music lessons.

You liked your music teacher. What she gave you to do was not really difficult, and you did not mind spending an hour at the piano every day. You listened to all the good things that mother promised would come to pass if you practised faithfully; you did not know any reason why you should not do as your mother and your music teacher wanted you to, and you were very happy in knowing that you were pleasing them both by being faithful in your practice.

Then, perhaps in the school-yard, or walking home from school, or in the whispered conferences in the dressing room you began to hear:

"I only practised fifteen minutes yesterday, but I put forty-five on my practice slip, and then the old cross-patch said, 'Could you not have made it an hour?'"

Or you hear: "Do you really practise every finger exercise six times? My teacher *says* six times, but I never do more than three, and I get by all right."

Or a girl will say to you with an air: "I don't see how you can *bear* to count aloud! I never do." Or, "I never practise each hand alone, although my teacher's always talking about it. It's too dry."

Then you'll hear: "I hate recitals!" "I hate these old music-club meetings, I'd rather go to the moving pictures."

It is all so different from what you have heard at home, yet there is something very smart about it all. You never would have thought these things by yourself, but when you hear "the others" say them, they sound quite like the way that all bright, independent young folks should think and speak; and more often than not, when you do begin to shirk at your practice it is not because it has grown distasteful to you, but because of "what the others say."

Do not pay any attention to what the others say, children.

Is it not better to have the love and approval of your mother and teacher than the admiration of those of your own age whose idea of being "smart" is to get their own way in everything, and to do, not as they are told, but just as they please?

I'm sure there are many little boys and girls in your school and neighborhood like yourself who really do like to do the right thing. These are not the ones who talk; they are the quiet ones; so you will have to "hunt them out"; but do this, it will be worth while, and make these your playmates. They are really much more fun than those girls and boys who talk so differently from your mother.

Never be ashamed that you do what your teacher tells you to.

Instead of being ashamed of this, it really is something to be very proud of.

So never mind what "the smarties" say. You just go right on doing what mother and your music teacher want you to, and you will be a happy little musician.

Helena Maguire.

A LESSON IN PATIENCE

Anyone who needs a lesson in patience when "things don't come right" has only to read about the musical instruments which the soldiers in the trenches are making—"violins out of cigar and prune boxes, supplemented by hair from horses' tails, ham-strings, and zinc from gutters; 'cellos made from kerosene cans or packing cases; flutes made from bicycle pumps; and mandolins made from helmets, gun-stocks, bones, and telephone wires. And in the hall where these are exhibited in Paris every afternoon, an orchestra plays at least one selection on these instruments just to show they are real instruments, capable of making good music. They are to be preserved in the Museum of the Army by the nation, as a proof of the patience, the endurance, and the greatness of soul of the French army.

WITH THE MUSIC CLUBS

GAME:—"DO YOU KNOW THEIR 'FULL' NAMES?"

BY ADELE SUTOR

Cards and pencils given — names read (Bach), wait 20–30 seconds for the writing of *full* name.

A prize offered for best card:

1, Bach; 2, Handel; 3, Haydn; 4, Mozart; 5, Schubert; 6, Beethoven; 7, Schumann; 8, Liszt; 9, Chopin; 10, Weber; 11, Wagner; 12, Mendelssohn.

ON BEING NERVOUS

Why should little children talk about being "nervous" when they play at a recital? Being "nervous" is a condition only of those who have used up or abused their nerves, just as being dyspeptic is a condition of people who have "used up" or abused their stomachs and has no relation whatever with you young people. I think that most of you do it because you hear older people talking that way and you think it is "smart" to do so, too. But it isn't, in the least. It is just very silly.

What some children are at a recital is—frightened; just plain frightened. And I think that if they once realize this they will make every effort to overcome it, and be very much ashamed indeed to show the "white feather." There is nothing "smart" about being frightened; this is something to be very much ashamed of. So do not confuse being "*nervous*" with being *frightened.*

Now it is natural for children to be frightened at any strange experience, and there are two things which might make children "scared" the first time they play in public. So let us talk these over and get the right idea about them, so that you may take your part in a recital just as calmly and naturally as you sit down to play in your own parlor.

First, when you go onto the platform to play, the piano is different from your own, and, if you have been practising on an upright piano your position is different—that is, the music rack is higher than your own, the pedals seem further away, the whole instrument seems "strange" to you, and you wonder how you are ever going to manage this strange instrument. This is one of the things which frightens and excites many children, and the best way to get over this is just to realize that a concert grand piano is bigger and different in shape from an upright, but that there is really

difference in playing it, and that you have st got to start in and do the very same ing you do at your own piano; then you will ry soon forget the difference, and feel "at me."

Second, when you begin to play, your selec- n sounds strange in your ears. This is cause at home the walls are quite near you d send the sounds you make quickly and udly back to your ear; but when you play in large hall the notes you play have got a large ace to travel over, and when they get back to ur ears they are not so loud as you are customed to hear them; you think there is mething the matter with your touch, or with e piano—so many times little pupils have ne back to the green-room and complained their teachers that "they could not get a t of sound out of that piano she had hired." is simply because you are playing in a larger ace than you are accustomed to. And so u need to *realize* that your selection will not und just the same as it does at home, but at this is nothing to get frightened at. You e to keep on doing just what you do at me, and it will be all right.

Let the older girls talk all the silly talk they ill about being "nervous"; little girls and boys ave nothing to do with such nonsense, and e little boys and girls who read this depart- ent are surely too brave to get "scared" cause conditions at a recital are different om what they are at home or in teacher's udio. Just say to yourselves, "I know things ill be strange, but this can't scare me into aking mistakes or forgetting my piece; ot much!"

HILDA'S FIRST RECITAL

BY ELIZABETH A. GEST

Once upon a time there was a little girl amed Hilda, and every afternoon after school e would go to visit her friends, but, oh, dear! hey were *always* practising. One day when he went to see Betty, she said:

"I am never coming to see you or Helen or lsa again. You are *always* practising, and I ust hate to hear people practise."

"Oh, but it is great fun," answered Betty. You should try it yourself and see how nice t is. Shall I play my pretty pieces for you?" nd Betty played her little pieces for Hilda

"Now, don't you wish you could play too?" sked Betty.

"Oh, I don't know," answered Hilda slowly. But she *did* wish she could play, because she ever wanted to see anyone do something that he could not do, and she even wanted to do verything *better* than anyone else.

"Why don't you take music lessons?" asked Betty. "All the girls in our class do. You now you are the only one in the class who can- ot play—why you can't even play a scale!" aunted Betty. "In five weeks," she con- inued, "we are all going to play at Miss Blank's recital. *Then* you will be sorry that you can't play."

That night at supper Hilda was very quiet, but she was busy thinking of her visit to Betty, and of the big piano in the parlor that no one ever played on.

Finally she said, "Mother, may I please take music lessons?"

"Why yes, dear, but you always said you did not want to."

"But I have changed my mind. I want to begin tomorrow."

"Very well," answered her mother. "Tomorrow is Saturday, and we will go to see Miss Blank right after breakfast."

"Oh, that will be fine!" said Hilda, "but please do not tell anyone about it. It is to be a surprise, and I am going to learn a little piece to play at Miss Blank's recital in five weeks."

"Why, Hilda! Only five weeks! You will have to work *very* hard."

"I know, but I am going to do it."

Finally the day of Miss Blank's recital arrived, and that morning in school Betty teased her again, saying, "*Now*, don't you wish you could play the piano!"

But Hilda only smiled. Then three o'clock, and the recital began. Betty was all dressed up, and she played her piece quite well.

And Hilda said to herself, "She is thinking more about her pink hair ribbon than about her piece. I am going to play *much* better than that."

Then it was Elsa's turn and she played her piece quite well, too.

But Hilda said to herself, "She is thinking more about her new shoes than about her piece. I am going to play *much* better than that."

Then she heard Miss Blank say, "Now we are going to listen to a little girl who has been taking lessons for only five weeks, but she has practised very hard."

And as Hilda walked up to the big piano, she said to herself, "Of course my piece is easier than theirs, but I have practised hard and I know my piece perfectly, and I am going to play better than anybody else." And before she knew it, she was back in her seat smiling all over, and listening to the people clap their hands in surprise. And they clapped so much that she had to stand right up and make a real bow.

A WOODLAND MUSICAL PAGEANT

BY LAURA ROUNTREE SMITH

(Book rights reserved)

THE PAGEANT

Hold the Musical, if possible, outdoors, and have the piano on the grounds or on a porch near. Very simple costumes will add to the interest. If the Pied Piper plays a flute so much the better.

At the beginning and end of the program the entire pageant passes. While the program is given they line up in groups. If a longer program is desired one of the tales of Robin Hood can be told or dramatized.

Recitations from Shakespeare may be used as *Airy Nothings*, *Come unto these yellow sands*, *The Tempest*, *Fairies' Lullaby*, *Midsummer Night's Dream*, and *The Greenwood Tree*, from *As You Like It*.

The Spirit of the Woodland and Echo are concealed behind the trees.

The Maypole has arched hoops at the top covered with ropes of roses, and streamers of rose and light green.

The following characters take part:

Characters in Pageant: Spirit of the Woodland, Echo, Pied Piper, Robin Hood and Merry Men, Maid Marion, Gipsy May Queen, Shepherdesses, Fairies, a Jester, the Butterflies, the Roses.

1. Recitation. Spring.

Spirit of the Woodland:

I'm the spirit of the woodland,
Our musical today
We'll hold beneath the singing trees,
Whose banners gently sway.
Come, Shakespeare's dainty fairies,
And waken Robin Hood,
Pied Piper, with your ancient charm,
Awake the sleeping wood,
Oh woodland sprites, awake! awake!
And every heart will sing,
The magic of the woods partake,
When Echo wakes the spring.

Echo:

Wakes the spring.

Pied Piper:

'Tis merry, merry springtime,
Whichever path I tread,
The Pipes o' Pan are calling me,
So I flute on ahead.
The fairies too are in the wood,
Ariel, Puck, and Robin Hood.

Echo:

Robin Hood.

Spirit of the Woodland:

Piper, pipe that tune again,
Sing, sing, sing,
Up and down the leafy glen,
Spring, spring, spring,
To your mountain in the hollow,
Fairy folk will follow, follow.

Echo:

Follow, follow.

2. Piano. *Elfin Dance.* Spindler.
(Children give a little dance.)

3. Recitation. Fairy Things.

Fairy things, fairy things,
Little seeds with birdlike wings,
Laughing, whirling in the air,
Seen in springtime everywhere,
Fairy things, fairy things,
Merry springtime always brings.

Fairy things, fairy things,
In my heart there's something sings,
Sings of bird and daffodil,
For spring comes tripping o'er the hill.
Fairy things, fairy things,
Every stream with music rings.

4. Song. *The hunt is up.* (*Folk Songs for Children.*)

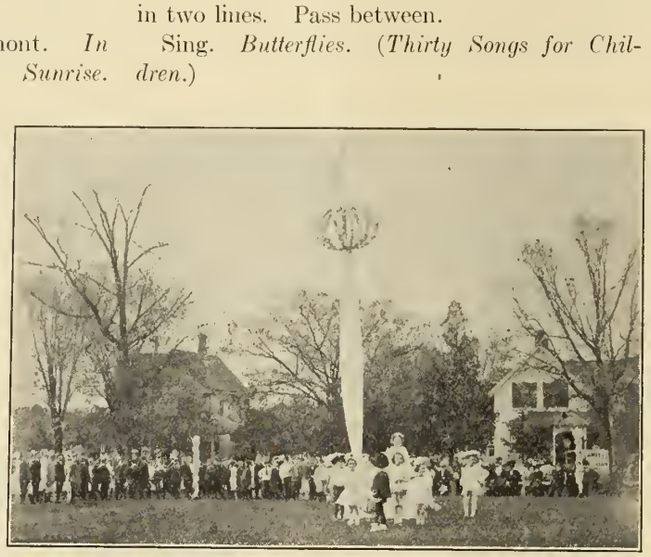
5. Piano. *A Roundelay.* Lemont. *In Springtime.* Manney. *Song at Sunrise.* Manney.

6. Recitation. Voices. The Merry Green Woods.

Voices in the woodland,
Voices in the breeze,
Awake again to melody,
All the budding trees.

Voices in the meadow,
'Mid the gentle showers,
Waken thus to rhapsody,
All the sweet spring flowers.

Voices in the valley,
Singing by the streams,
Woo Sir Robin back again,
Wake him from his dreams.



MAYPOLE DANCE

The Merry Green Woods (by the Jester).

Come to the woods, the merry green woods,
Come at the break of day,
Come to the woods, the merry green woods
In the bonnie month of May,
Birds are a-wing, they merrily sing,
Carols in Maytime to greet the glad spring.

7. Song. *Spring's Arrival.* (*Thirty Songs for Children.*)

8. Piano. *May Bells.* Bohm. *Gipsy Band.* Engelmann. *The Carol of the Shepherdess.* Kern

9. Recitations. Lady Laughter and Gipsy Queen.

LADY LAUGHTER

They call me Lady Laughter,
They call me Lady Spring,
With song of bird and budding flower,
Happy hours I bring.
Springtime brings delight and pleasure,
Many gifts you cannot measure!

GIPSY QUEEN

Merrily sing to greet the spring,
I am the Gipsy Queen,
With a glad heigho, to the greenwood go
With its gold and silver sheen.
Then sing, sing, sing, we'll form a ring,
Heigho, for the Gipsy Queen!

Echo:

Heigho for the Gipsy Queen.

10. Song. *Summer is a-comin' in.* (*Folk Songs for Children.*)

11. Piano. *Butterflies.* Williams.

The following Butterfly dance is given by children with white dresses and yellow dresses, wearing white or yellow bows on the hair and wings. Enter right and left, dance forward, bow to audience and to each other. Skip round in couples. Put arms on shoulders of those in front, skip in lines. Form a circle, every other one goes to the center and back. White butterflies stand still, while the yellow butterflies skip round them. Reverse it.

Yellow butterflies skip in pairs. White butterflies in pairs. Skip forward and back in two lines. Pass between.

Sing. *Butterflies.* (*Thirty Songs for Children.*)

Form two circles, skip round and off.

BUTTERFLIES:

Over the grass, the whispering grass,
Hark! how the fairy zephyrs pass,
Little white butterflies two and two,
Dance o'er the flowers when skies are blue.
Sweet springtime again, 'mid sun and rain,
Butterflies, butterflies all in her train.

12. Recitation. Robin Hood. Heller.

How good it seems to be in Sherwood forest with my Merry Men. This very tree under which King Richard and I have often sat, bears my name, *Robin Hood Oak.* If by chance some day its wood be made into pianos, what wonderful woodland tones it will produce.* How the musicians loved the woods! Here comes Stephen Heller!

HELLER: How I love the greenwood in May! I was born in May and you know how I loved the woods when I tell you I wrote about *The brook, Flowers and sunshine, A Spring morning, A forest song, A hunting song,* and many other nature pieces. Many of you have played my preludes and études.

13. Piano. *Spring Song* or *Flowers and Sunshine.* Heller.

14. Recitation. Little Brook.

Little brook, little brook, sing me a song,
As you go laughing and dancing along,
Of a wonderful world, with flower-bell curled,
Little brook, little brook, sing me a song.

15. Piano. *The Brook Prelude, No. 3.* Heller.

16. Song. *When all the world is young* (*Folk-Songs for Children.*) (Sing first verse only.)

17. Piano. *To a Humming Bird.* Macdowell. *To a Wild Rose.*

18. Recitation. Dreams. (By Spirit of Woodland).

Dreams that flutter in the breeze,
Dreams in the woodland flowers,
Dreams in the happy song of birds,
Dreams in the greenwood bowers,
Dreams in the forest, field and brake,
Call to the sleeping world awake.

19. Piano. *Song without Words.* Spindler. *The Rose.* Bohm. *In the Rose Garden.* Geibel.

20. Rose Drill and Maypole Dance. For the Rose drill, little girls wearing red dresses and red hats form a circle, nod heads, awake, rising slowly, every other one winding in and out among those in the circle. Nod to audience and each other, wave arms to and fro and go through any pretty short drill as the music is played. They are then led by the Gipsy Queen in the Maypole dance.

21. Piano. *Maypole Dance,* Turner, or *Maypole Dance,* Oehmler.

22. Song. *Come lassies and lads.* (*Folk Songs for Children.*)

A PROGRAM FOR YOUNG MUSICIANS

1. I WILL try to learn from the experience of others, not believing that I can know things otherwise.

2. I will follow my teacher's instructions because they are intended to benefit me.

3. I will not consider my present likes and dislikes, but try to learn to like the right things.

4. I will not boast of what I am going to accomplish, but will bend my energies to equip myself for future work.

5. I will be honest with myself, my parents and my teacher.

6. When I study and when I practise I shall put my whole mind in the work.

CAN YOU TELL WHO THIS IS?

* The Robin Hood Oak over one thousand years old is being made into Conover Pianos.

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

EVOLUTION OF A STRING QUARTET CULT

BY EDWIN H. PIERCE

SOMEWHERE in the last chapters of Richter's *Manual of Harmony* there are a few quotations from Beethoven's quartet in E flat, Op. 74, printed out in full score, to illustrate certain points in the text. When I was a young student of harmony of some quarter of a century ago these few excerpts from a quartet-score first roused my curiosity greatly, and later when I had learned to "read score" and render them approximately on the piano, they exercised a powerful fascination upon me, which, in the course of events, was destined to bring forth results. It is possible that some persons who may not be specially interested in string quartets, *per se*, may find it encouraging to follow this account of the spread of musical taste in one particular line, through a number of years.

In the small city where my story begins, there was, in my boyhood, a good amount of activity in piano and organ playing, more or less vocal music, but practically no interest in the violin and its kindred instruments, outside of a few common dance-music players. Personally, I had a great love for the violin, and would have preferred to study it, but there was no really competent teacher available. In a neighboring village, however, lived an uncle of mine who was a very earnest amateur violinist, of high ideals though limited technical attainments, and he not only made me a present of a violin, but taught me to play on it, after a fashion. It would not be correct, however, to say that he gave lessons" to me, as the method of instruction was what might be called, for want of a better name, the "Socratic method *reversed*," for the pupil learned entirely by asking questions of his teacher.

Playing Pleyel's duets for two violins with this good man had taught me some of the charms of chamber music, and putting this and that together —my actual experience with violin duets, and the far more highly developed form of music hinted at in the excerpts from the quartet scores,—I made up my mind once for all, without ever having so much as heard a quartet, that string quartet music must be the most delightful and satisfying of any sort in existence. Although this opinion was founded on such very slender experience at the time, I have seen no cause to change it since—no, not even after hearing the greatest operas, oratorios, and symphonies.

As the reader would easily imagine, my next wish was to organize a string quartet, but it was very uphill work. The only man in the place who had ever been a really efficient 'cellist, had met with an accident which made him an invalid, and he played no more. He lent me his 'cello, however, and I taught myself to play, after a fashion, meanwhile keeping on the lookout for a viola player. I never found one, but some twenty years after, curiously enough, I found that there had been one living here all the while, an old German who would probably have been glad to join my proposed quartet, only we had not known of each other.

Two or three years went by, and I took an opportunity to spend a few months in a larger city, taking violin lessons of a really competent teacher. About the same time one friend of mine took up the study of the 'cello, and another of the viola. The 'cello player was a middle-aged man who had played the instrument in former years, but who was badly out of practice. The viola player was a good pianist, but had not the violin technic, consequently, as might be expected, his tone was very unsatisfactory. However, we got together a few times and played some of the easier Haydn quartets, along with one or another local violinist. Before long I took up the viola myself, and found it an instrument particularly fitted to my taste and temperament. It has been a favorite with me all my life.

After a year or two more spent in study, I went to a college town in the West, where I had a position as organist, and also taught in the musical department of the college. Although my teaching was nearly all piano, I succeeded in organizing a string quartet in this place, and although we were four young, inexperienced players, yet we practised together so diligently, that by the close of a year we were playing Beethoven's quartets, Op. 18, with great enjoyment, if not with all the perfection that might be wished.

At the close of this year I at last saw my way clear to go abroad to study, and the last of September found me in Leipzig, registered at the Conservatory. At the very first Conservatory recital I attended—only two days after my arrival—a very pleasant little surprise awaited me. It was only a chance coincidence, but if the Conservatory people had known all about me and planned the whole thing for my express benefit, they couldn't have hit on anything that would have pleased me better. The very first number on the program was Beethoven's E flat quartet, Op. 74—the very one that had so roused my interest years before, when I saw it quoted from in Richter's *Harmony*. I had longed inexpressibly to hear it, but it was far too difficult for any of those "scrub" quartets that I had organized to attempt.

At the earnest advice of my friends, who considered me a much better pianist than violinist, I entered as a student of piano and theory, but the call of the violin was too strong, and after a very few months I obtained permission to register for violin lessons. As might be expected, I played in several chamber music organizations, sometimes violin, sometimes viola. From the point of view of immediate worldly success, I did a bad thing, probably,—spoiling a possible virtuoso pianist to make a very ordinary violinist and a merely passable pianist, yet I can't say that I'm altogether sorry, for I would have been all my life dissatisfied to have been shut out of the string quartet. But this is not intended to be an autobiography, except so far as is unavoidable, so I will hurry on.

On my return from Europe I accepted another college position in the West, but at the close of the year decided to return to my native place and spend my days as a private teacher, also, to organize a string quartet. You see I was always getting back to this point—it had become an obsession with me, like that of the old Roman statesman who used to end all his speeches with "*delenda est Carthago.*"

One of my most intelligent and appreciative friends endeavored to dissuade me from such a step, because of the unpromising outlook. He said, "Why there are simply no players—you will have to wait for them to be born, and then train them while they are growing up." I answered him, not without a trifle of bravado, perhaps, that that was not impossible—it only required patience.

The outcome of events proved us both to have been right.

Passing over subsequent events as briefly as possible, I will merely say that I taught here some five years at that time, then I spent another year in the West, a year each in Buffalo and in New York city, and some six years in Massachusetts, returning then to this place, where I have spent eight years more. There are now quite a number of string quartets in the city, and of their membership, my pupils average three out of four players.

At the present time I know of eight 'cellists in the town, and about the same number of viola players. Violinists are numbered by the hundred. There is rather an excess of violin teachers now, but the opportunities for earning money by various forms of playing are more numerous than formerly.

There is even some demand, off and on, for string quartets to play at receptions, etc., though I am disposed to rather deprecate that, for reasons about to be described. "String quartet" means not merely a certain combination of instruments—two violins, viola and 'cello—but *a certain style of composition*, first developed by Haydn, Mozart, and Beethoven, and followed in general by the best modern composers, however advanced in their views. I mean something quite other than merely "classical" in feeling—namely, that the quartet is normally made up of interwoven melodies, forming four-part harmony, and that anything like "melody and accompaniment," unless for a very brief space of time, or anything like one large mass of harmony moving bodily to another large mass of harmony, as in piano or in orchestra music, is opposed to true quartet style.

Consequently, "arrangements" of even very good music for string quartet are apt to be unsatisfactory. What it needs is music specially composed, and this is to be found in great abundance, but seldom in a "popular" vein. For dance music, the string quartet is simply out of the question.

If one wishes to use a small combination of instruments, having some of the refinement of chamber music, and yet adapted for popular selections or even for dancing (at a pinch), the best thing is either a trio for piano, violin, and 'cello, or a string quintet for two violins, viola, 'cello, and double-bass. The addition of the double-bass takes it at once into the class of small orchestras and makes it suitable for quite a different sort of music.

I should not digress so widely from my subject, but that I see that the string quartet is in danger from the very fact of its growing popularity. If it is used for purposes for which it is but ill-adapted it will do its cause more harm than good.

Author of SYNTHETICAL VIOLIN TECHNIC (the acme of material for left hand), CULTIVATION OF VIOLIN VIBRATO TONE (indispensable to the violin student).
STUDIO, KIMBALL HALL - - CHICAGO, U. S. A.

But to return to the growth of the string quartet cult. In every city where I went, during my several years absence from this place, I either found a string quartet to play in, or organized one. Some of these are still in existence, with slight changes in membership. With a few minutes' telephoning I am able to call together a small but choice circle of friends, on almost any evening, some to play quartets, others wishing to listen to them. Outside this circle I am known more as an organist and choirmaster—I have never become an eminent violinist, but I need not tell you which I enjoy the most. How curious that all this should come about because old Richter happened to select a particularly attractive theme from a quartet, as an illustration in the *Development of Melody* and the *Development of Accompanying Voices.*

———o———

THE VIOLIN TONE

BY ARTHUR HARTMANN

WHAT is a real violin tone?

What is the mystery by which a great artist fascinates in a simple cradle song, while another's playing of the same composition does not create a glow?

No matter what the art, no matter what the science, we all are charmed by that which has its source in beauty: we all admire sincerity and we all follow "personality."

Just what this latter magnetic force is, perhaps the alchemist can best answer, for while it is largely acquirable (being influenced by diet, for instance) yet it is not all spiritual or mental.

Personality, like all art, is a higher sex manifestation, and tone—real tone, vital, magnetic, haunting and beautiful tone—can no more be taught than can a teacher give a student the *feeling* for color.

There are "tricks" or accessories which teach the material way of acquiring things and one of these, necessary to beautifying a violin tone, is the *vibrato.* Alas, that we should want to dissect a rose, petal by petal, to see where the intoxicating charm of it is hid Yet there are truly excellent violinists who say, "If it can be gotten by hard work I can get it," only to know some day (for every intelligent man some day *knows* what he *knows* and more especially knows what he does *not know*) that *it* has escaped him as hopelessly as the evaporating perfume of dried rose leaves. . . . If art were within reach of all, if all the fantastic imaginings could be gotten by rote, by investing in a primer, why would the highly cultured pay reverence to every slightly new achievement in an art which, after all, always has been?

For music is and has been since the sky has been what it is, and it was only with man's development that he got sufficient instinct cultivation to hear what imaginings the songs of the birds, the murmur of the forest and the seas, the roar of thunder and the passions within himself inspired.

ABUSE OF THE "VIBRATO"

Recognize then that the *vibrato* is a potent factor n adding to a tone quality (though the *vibrato* itself does not *make* quality) we now find it, alas necessary to speak with some bitterness on the abuse of an art-nuance which ought in its truest sense to be only a dynamic, an emotional and inner expression and not an artificial and loathsome mannerism.

One must never lose sight of the fact that the violin is constructed on scientific principles of vibration and is, therefore, about as perfect a little temple of acoustics as can be invented.

The *vibrato,* to repeat, is elementarily an emotional expression and can only then be perfect and ring true if the vibrations, or, in other words, the pure intonations are not interfered with. Of late years we notice a tendency to exploit *cabaret* music in concert halls with the ever present *vibrato-maladetto,* the simpering whining of which, with the cloying sweetness and disgusting hypocrisy of its manufacture, make one wish one could go where violinists cease from troubling and *artists* may find rest—and truth.

Some years ago I had a pupil, Siegfried Eberhardt, son of the famous violin pedagogue, Goby Eberhardt, who tried hard to analyze the peculiarity, for instance, of my tone. He pays me the compliment of mentioning this in his book on violin *vibrato,* yet all he evolved for his pains was to advocate placing the first finger on A of the G string, draw the bow, count up to thirty-two, very slowly, and on the thirty-second count give the finger a lurch toward B flat. And there were and are hundreds who believed him, for the world always wants something without being willing to pay the price for it.

WALLOWING IN EMOTIONALISM

There are a few violinists today who are being fêted and who have wallowed in "emotionalism" to the full delight of the hyper-sensitive gush-adorers. To hear them play, always trivial transcriptions of cabaret stuff, one wonders how the violin itself escaped weeping huge tears, for their playing is so excessively "emotional" that some ladies "just enjoy a real good cry all by themselves."

Yet observe their hands and you will see that they oscillate between *three half-tones,* thus—C, a little more than C, back to C, and then a little less than C—giving a gypsy-like hysteria to their playing which the sensual listener enjoys and which is prostitution of art.

True vibrato is felt but can scarcely be seen, for the finger adheres firmly to the true pitch and the vibrating is merely the agent of the inner intensity of feeling.

The influence of the art of men like Ysaye and Sarasate has been ennobling and surely we may all weep if the younger generation is wilfully to cultivate mannerisms and hypocrisies, because they can still their conscience and make a "popular appeal," though the dignity and sincerity of their art be sacrificed.

Back to Bach! As surely as that we would not have had a Wagner or a Debussy without Bach, just as surely no violin art is greater that that underlying Bach's violin works, the study of which goes deeper into a man's nature, discloses more psychology of music and the violin than all the "moderns" put together.

AVOIDING THE OBVIOUS

Let a new era ring out for those who avoid the obvious, who despise trivial music, who make no concessions and who work for the ever greater spirituality and glorification of Art, disdaining to be false in even one principle. May those artists meet with success and glory to whom the violin is like the painter's palette, who paint with subtle tints and who know how to "orchestrate" effectively the four different colors of the choral (and chordal) body they control; to the artist who, in other words, *knows* what *string-levels* and *string-crossings* mean to those who will definitely kill the old belief that "phrasing must be learned of the singers."

And let us not fail to acclaim the accompanist who in giving "A" to the violinist will *not* strike the D minor chord but, at least, the F major—not to mention the fact that on the chord B—D—F—A one really tunes all four strings of the violin, best —From *Musical America.*

———o———

A KIT OF TOOLS

EVERY violinist and student of the violin should have a little kit of tools. of such size that they can be carried easily in the violin case. Among the number which would prove of the greatest assistance on many occasions are the following: a pair of scissors for cutting broken hairs out of the bow, cutting strings, etc.; a good penknife, which will come in handy for a great variety of purposes; a pair of tweezers for pulling the string through the peg in putting on strings, and for other purposes; a sound post setter for use in case of accident. Besides these it is always well to carry in the case a piece of tail gut, an extra bridge and soundpost, an extra peg or so, a complete set of strings, a small piece of chalk to rub on the pegs if they slip, an extra tailpiece, an international pitch A tuning fork.

With all the above articles at hand, the violinist is safe in most cases of accident. Many a violinist has been completely "put out of the business" while filling a professional engagement from the lack of one or more of the above named articles. The student should learn to make simple temporary repairs until he can have the work done by a first class professional repairer.

———o———

THE POSITION OF THE THUMB IN HOLDING THE VIOLIN

A CORRESPONDENT has raised the question of the position of the thumb in holding the violin. He believes that the tip of the thumb should be below the level of the fingerboard.

Bearing on this point we were interested to read what Mr. James Winram, an English violinist and writer on violin questions has to say on this subject in his book, *Violin Playing and Violin Adjustment.*

He calls this position "the new way of holding the violin." He says:

"I have come to the conclusion that at the beginning of a pupil's study the new way is not conducive to the best results. There is great danger of bad intonation, and this statement applies to a student whose ear is nearly perfect.

"The reason is not far to seek, for the left hand—which is weak at the first lessons without being handicapped in any other way—seems totally unable to put the fingers down with strength and control, until the thumb is projecting above the fingerboard a *little*—but mark carefully, only *little.* An improvement as regards strength of fingering and surety of intonation immediately follows.

"As a matter of fact, however, I do not condemn the new way; on the contrary I entirely approve of it, but not at the beginning of a pupil's studies. It should be adopted by all advanced students, and great improvement in the command of technic will be the result."

He gives the following directions for holding the violin:

Place the thumb about one inch from the nut. ought not to project too much above the finger- rd, and should be pointing slightly outward, not ning over toward the other fingers. The first ger should be placed well back to the nut, so that third joint of this finger is resting on the neck the violin, ready to play F natural at any time. Keep the palm of the hand off the neck of the lin. It is necessary to pay attention to this, or vill greatly interfere with the student's progress· er on if such a fault be persisted in. Every- ng in connection with the holding of the violin the bow is of the highest importance. If the left mb be held inward every tendon in the back of hand will be tightened. Flexibility in the back the hand, and also in the wrist, must be acquired. taking a firm hold of anything the thumb comes ward the other fingers (inward) quite naturally; if the thumb is bent outward the power to p is considerably lessened.

"The arm should be brought well under the lin. This is very important, so that the subse- ent fingering will not be interfered with. This sition sometimes causes a slight pain in the upper n, but practice and perseverance soon remove the comfort. The habit observed in many players of ting the left arm against the body cannot be too ongly condemned."

Mr. Winram approves of the use of chin rests and ds, the latter proportioned to the height of a yer's neck, that is a thicker pad for a player with long neck than for one with a very short neck.

THE SLOW BOW

BY JAMES WINRAM

THERE is a mistaken idea among many that a eat player when practising a concerto, for instance, ays it repeatedly from beginning to end. This not the case. A first-class performer—to keep playing up to form after he has acquired pro- iency and gone through the mill—practises exer- es that have a great bearing on successful violin aying. Knowing, as he does, exactly what his incipal weaknesses are, he gives them accordingly e closest attention.

It may be a surprise to some to learn that all the inent virtuosi have devoted great care and study one phase of violin playing in particular, the slow w—that is to say, practising drawing the bow slowly as possible across a string without stopping e action of the bow for a single instant, at the me time producing a tone of good timbre.

It seems to be absolutely impossible, however, convince many violin students that the practising this bowing is of the highest importance, and ould be most rigorously studied. It is certainly onotonous work to draw the bow slowly on one te. But the value of this exercise is inestimable.

Piano Teachers Write for "Teacher's Proposition"

The reason that so many violinists have practically no "sing" in their playing, is due to the fact that they do not give sufficient attention to the point herein described, and are at the same time inclined to treat the matter with a certain amount of levity, so far as convincing them of its value is concerned.

It would be well, therefore, if those who study the violin accept the statement that it is the firm conviction of the writer of these lines that the slow bow is, of all phases of violin playing, first in importance, and must be conscientiously studied and treated with great seriousness, thereby conducing to an improvement in the playing that will be more than astonishing in its ultimate result.

To explain clearly what is meant by slow: The bow should take sixty seconds to go from one end to the other; this will necessitate the bow's going very slowly, and at first trial it seems impossible. It is done daily, however, and the best way to time the bow's speed is to put a watch with second hands on the music stand, and practise accordingly. After the bow has started on its journey, it will be noticed that it stops at every alternate inch or so, and curiosity is aroused as to why this should be. It is the pulse which causes the mischief, coupled with inability on the part of the student. Practice will overcome the defect, and ultimately produce good results.

After some success is gained in the playing of this bowing, it will be noted that as the bow gets within six or seven inches of the point—down bow—the tone gets weaker. This can be remedied by exercising more pressure at this part of the bow. The same fault takes place when playing up bow, and more weight should be brought to bear accordingly. But it is the successful playing of an up bow that is the bugbear of all violinists, for the principal defect occurs not at the point, nor in the middle, but when playing with the remaining six or seven inches near the nut. The tone produced there is, in many instances, of a most unsatisfactory character, and practice is the only cure for the deficiency.—From *Violin Playing and Violin Adjustment.*

WHAT MAX BENDIX, THE GREAT VIOLINIST AND CONDUCTOR, THINKS OF THE "BELGIAN SCHOOL OF VIOLIN," EDITED BY OVIDE MUSIN

New York, March 28, 1916.

Mr. Ovide Musin,
New York, N. Y.

My dear Ovide:—

Having carefully read through the four books of your "Belgian School of Violin," it gives me great pleasure to say that for conciseness, consistency and scientific application and development they far surpass any works of similar character that have come to my notice in the thirty-five years of my experience as violinist and instructor.

Any teacher who denies himself the privilege of using your invaluable work is, in my opinion, depriving himself of a simple yet great aid.

Wishing you the greatest success, I am with best regards and esteem,

Yours sincerely,
MAX BENDIX.

CONDUCTED BY H. C. MACDOUGALL

THE ORGAN DUET

BY ORLANDO A. MANSFIELD, MUS. DOC.

Performances *à quatre mains* on the modern organ,—an instrument in which the pedal part is so important—are inconvenient and less effective than an ordinary solo. Several German organists have, however, produced specimens of the organ duet; amongst these being Hesse, Höpner, and Julius André, the latter of whom has written 24 educational pieces, Op. 35. Gustav Merkel originally wrote his organ sonata in D mmor, Op. 30, for two performers, but afterwards rewrote the work in the form of an ordinary solo.

The chief difficulties in the execution of an organ duet are mechanical rather than artistic. Owing to the *primo* performer being on the right and the *secondo* on the left, neither performer has satisfactory control over the pedal board. To each the scale is unusual. To both the distance between any given interval is unfamiliar. This, of course, applies more particularly to the modern concave radiating pedal board.

On the old English "G" and "CC" organs plural performances were as easy and as effective as on the piano. This because the pedal clavier—when it existed at all—was comparatively unimportant, being usually confined to the compass of an octave of pedal pipes. Hence there existed a considerable amount of organ composition and arrangement for four hands.

Organ duets performed by Benjamin Jacob (1778-1829), the celebrated organist of Surrey Chapel, London, and Samuel Wesley (1766-1837), the son of Charles Wesley, the poet, and the nephew of John Wesley, the founder of "the people called Methodists," were important features in the recitals given by these illustrious old English organists in Surrey Chapel about 1808.

On one occasion Wesley wrote a "Grand Duett in three movements for the Pianoforte," a work, says his daughter, Miss Eliza Wesley, which was composed expressly for Vincent Novello to perform with Wesley at the Portuguese Chapel, in South Grosvenor Square, London. Vincent Novello (1781-1861), it is perhaps scarcely necessary to remark, was one of the finest of the old-school English organists; and as one of the founders of the house of Novello it is to him that we are indebted for the first octavo editions of the oratorios of the great masters, set out in vocal score with a pianoforte accompaniment adapted from the orchestral parts.

The late Mr. Edward Holmes has left us some interesting records of his personal knowledge of, and participation in, Wesley's organ duet playing. He says that there was at that time in the German church at the Savoy, "an old-fashioned beautiful organ by Snetzler. Of all the London organs, this was one of the most favorite instruments of Wesley. After music in the morning the two genial organists (Wesley and Novello) . . . had more music which consisted entirely of Bach's fugues, played in the easy and effective form of duets. Wesley kept almost entirely his seat at the bass, and played with every one in turn,—the party in the church was only four,—giving to each as he came, the choice of his own fugue."

The year 1812 was remarkable for two interesting organ duet performances. Of these the first was given at Surrey Chapel, London, on May 21st, when Benjamin Jacob and Dr. Crotch (1775-1847), sometime Professor of Music at Oxford, gave an organ performance lasting three to four hours, and containing no less than 46 pieces! These concluded with the *Hallelujah Chorus,* played by Crotch and Jacob as an organ duet.

The second remarkable performance of the year was on June 5th, at the Hanover Square Rooms, when Wesley and Novello played Bach's well-known organ *Prelude* in E flat,—the one now associated with the fugue known in England as the *St. Ann's Fugue.* The duet was played from a manuscript copy, on the title page of which Novello afterwards wrote, "We played the *obbligato* organ part as a duet on that occasion, each filling in the harmonies according to the feeling of the moment, and endeavoring to enrich the effects to the utmost, for the sake of Master Sebastian." This piece seems to have been a great favorite with Wesley, as it was performed by him and Novello several times.

But although Wesley's admiration for Bach caused him to allude to that great master as THE MAN (it is difficult to see how the cause of "Master Sebastian" (as he called him) or any other master could have been advanced by "filling in the harmonies according to the feeling of the moment." A modern performer doing this would certainly be in danger of the judgment of the critics, either singly or in council; and might even have to endure, for a greater or lesser period, the fires of adverse general criticism.

The late Mr. Orlando Steed, an English composer and author, who died in 1881, relates the following anecdote of his master, the late Sir William Sterndale Bennett, sometime Professor of Music at Cambridge. "Some years ago," says Mr. Steed, "Dr. Steggall said to me, 'Come to church on Christmas morning with me. Bennett and I are going to play *For unto us* as an organ duet!' I went and heard it, and afterwards I said to Dr. Steggall, 'I did not know that Bennett was an organist,' and he said 'No, neither is he a pedalist, but his perfection of pianoforte playing enables him easily to overcome the manual difficulties of the organ.'"

An organ trio, that is, a composition for three performers on the king of instruments is certainly a novelty. Indeed, it is so great a novelty that so far as we are aware it has never occurred but once in any great or notable organ performance. But in Grove's *Dictionary of Music* there is a description by the late Dr. E. J. Hopkins, of the organ in St. James's Church, Bermondsey, London. This is described as having at one time "the most complete GG pedal organ that was ever made." It possessed three pedal stops, each two complete octaves in compass. The builder was J. C. Bishop, the inventor of the Clarabella stop, the concussion bellows, and the composition pedal. The singular thing about this instrument was that it possessed, and still retains, "a keyboard on the left hand side of the manuals, acting on the pedal organ." Above this extra little manual the pedal stops and coupplers are duplicated, so that a third performer could and was intended to, sit at this manual and play the pedal part with his hands.

The organ was opened on April 23, 1829, and amongst other good things, Bach's fugue in E flat (*St. Ann's*) was played as an organ trio by the organist of the church, Mr. J. Blackbourn, and by Mr. G. C. Sale, the organist of St. George's Hanover Square, at the manuals, with Mr. J. MacMurdie, organist of the Philanthropic Chapel at the pedal keyboard.

Another item in the program was an arrangement of the choruses, from Handel's *Israel in Egypt,* "He rebuked the Red Sea," and "But the waters overwhelmed them." In the latter chorus the "rolling bass" of triplets undoubtedly gave MacMurdie a fine chance. Dr. Hopkins states that he has actually seen the printed copy of this arrangement.

Seriously speaking, the writer of this article is of opinion that such a pedal clavier as this might be of use in some country church organs in districts in which there are plenty of manual players available, but few competent pedalists.

THE CHOIRMASTER AND HIS WORK

BY WILLIAM REED

The successful choirmaster is necessarily something of a personality; one combining within himself an aggregation of qualities in excess, if anything, of those required in most other teaching capacities. And these qualities must be undeniable, convincing, compelling.

The ability to organize and maintain a sufficient force of useful singers is, of course, an understood preliminary. This, in common with the other requirements, is correlative. What are they?

Briefly: 1. Musicianship. 2. Some Vocal Knowledge. 3. Discipline, Sympathetic Tact. 4. Method—Resourcefulness. 5. Personal and Social Qualities.

The foregoing list suggests a large order, one, in fact, by no means always or easily filled. A consideration of what it means will, at least, throw some light on a choirmaster's work and increase respect for an office which is apt to be summed up in the trite expression "running a choir."

MUSICIANSHIP

The choirmaster must, of course, be familiar with church music of all kinds, constantly adding to his repertory through the study of catalogs and new publications.

But his outlook will be widened and his influence strengthened if he be also a good general musician. His knowledge of the voice should be such as will enable him, not only to train his choir in matters concerning correct choral vocalization, but also to develop individual voices—a point which is usually more or less necessary.

This latter "office-work" constitutes in reality the *inner pulse* of a choir. Few choirs exist which can make an effective tonal showing without it.

DISCIPLINE

The choirmaster should begin as he means to ntinue. In dealing with boys, a stringent type disciplino is imperativo. A mixed choir, on the er hand, alters conditions, but only in the manner discipline. This implies an understanding of man nature (especially choir human nature) and management, tempered by sympathetic tact, alities which are to be acquired largely through perience. On them much of a choirmaster's ccess will depend.

METHODS

Aside from everyday principles of method, every irmastor is likely to use some system of his own. natever this may be, it should, while thorough, d as directly as possible to results. Unnecessary petition at rehearsal, constant interruptions for vial reasons, lengthy and unclear explanations, ., waste time and cause irritation.

Rehearsals should commence punctually and dom exceed a specified hour, every moment of the e being occupied with profit to some section of singers. A short evening of interesting and sinesslike work will send them away pleased. long one, unprofitably spent, will cause dissatis- tion. On such a basis rests the main question to how to keep a choir together, or *vice versa.*

The temporary depletion of a choir from any ise calls for resourcefulness.

An approximate readjustment of part-balance, gether with an altered scheme of music may often effected acceptably by forethought and pro- ion. Here, again, the efficient choirmaster is iable.

As supplementary to this section, the following vice to choirmasters in general is added:

Be strict, but not autocratic. The principle of ive and take" applies here as elsewhere.

Do your best by your singers, but don't spoil m. Encouraged to think a little for them- ves, their work will gain in intelligence.

Unaccompanied singing should form an important ture of most rehearsals. It shows the singers ir weak points and begets confidence.

In the study of individual parts or troublesome ssages, the accompaniment assisting should be: Single notes; 2, 3 and 4-part harmony; 3, the nted accompaniment.

When breaking new ground, piano accompani- nt is preferable to that of the organ. The in- iveness of the piano assists attack and phrasing. "rubs in" things.

Final rehearsals, however, should always be held church. Also, since the singers should know the tual assistance to be counted on, the organ ac- mpaniment as definitely intended must be given. en some familiarity with registration points is of sistance.

The efficient choirmaster, while not necessarily genius, is always a conscientious musician and nager. He likes his work, identifies himself ole-heartedly with the work of his church, and ssesses that social *savoir faire* which counts his relations to those with whom he is in any y associated.

A NEW HARMONY BOOK

KEYBOARD HARMONY, by Uselma Clarke Smith. e Boston Music Company.

All of us are familiar with harmony books which parently confine their instructions to paper work; her methods emphasize the importance of playing e written exercises; some of our conservatories ist that every harmony lesson shall be both a per lesson and a keyboard lesson, the paper work wever always taking the first place. But here is work advocating keyboard work as primary. t the author tell this in his prefatory words.

"In the preparation of this book most of the stand- d academic treatises on harmony (which the rnest, advanced student will himself become miliar with in course of time) have been consulted, and obligations to them are frequently acknowledged in footnotes. But in the treatment of the subject, and in the point of approach, the author has departed from traditional methods. Instead of *words* it has been his endeavor to treat of SOUNDS, and in the conviction that it is only at the keyboard that the rudiments of harmony can be adequately impressed in their true importance upon the pupil's mind, he has striven to present the subject from a point of view adopted, to the best of his knowledge, by no other treatise on the subject."

———o———

THE AMERICAN GUILD OF ORGANISTS

WE call the attention of our readers to the announcement on the following page of the A. G. O., an organization of the greatest importance to church musicians. The following facts are worth while repeating here:

The Guild was founded in 1896, Dudley Buck, Prof. J. K. Paine, Arthur Foote, and Prof. Horatio Parker being prominent in the organization. From the Regents of the University of the State of New York authority was received to hold examinations for the certificate of Fellow and Associate.

These examinations are held in Boston, New York, Philadelphia, Baltimore, Atlanta, Cincinnati, Oberlin, O., Detroit, Chicago, St. Louis, San Francisco, Los Angeles, Toronto, Minneapolis, and other centers.

The subjects included are organ playing, keyboard harmony, transposition, counterpoint, figure, composition and orchestration. The general examiners are Prof. Horatio Parker, of Yale, and Prof. Samuel A. Baldwin, of the College of the City of New York. Every year shows a satisfactory increase in the number of applicants.

At present the Guild has 100 Fellows, 175 Associates, with a total membership of 2000, and 25 chapters in the United States and Canada.

We trust that the next examinations, to be held May 31, will be well attended. Any organist who aspires to higher standards will find it worth while to get a set of examination papers previously used and thus acquaint himself with the character of the tests, which call for nothing which a capable organist and choirmaster should not be able to meet.

INTRODUCTION RATES — ONLY 3 CENTS FOR A SAMPLE COPY

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS: MIXED VOICES

BROOME, EDWARD
No. 12,937. **The Lord is my shepherd**.....$0.12
A short anthem without solos, marked by effective and interesting part-writing.

HARKER, F. FLAXINGTON
No. 12,936. **Te deum laudamus,** in B♭..... .20
An interesting setting, varied in style, without being broken up into a large number of little tunes; it has unity, and is effective without being in the least difficult.

MELVIL, M. A.
No. 12,794. **O salutaris**..... .10
A setting of one of the hymns for the Catholic service, for a quartet or chorus of mixed voices; includes a short solo for soprano.

RIGA, FRANCOIS
No. 12,907. **Ecce sacerdos**..... .10
Four-part anthem for the Catholic service.
No. 12,909. **Haec dies**..... .12
For the Easter service of the Catholic church; includes short solos.

SCOTT, CHARLES P.
No. 12,904. **Who is like unto Thee?**..... .12
A short anthem with obbligato solos for soprano and tenor or baritone, making a fine six-part effect; for general or festival use.

PART SONGS: MIXED VOICES

TUCKER, HENRY
No. 12,828. **Sweet Genevieve**..... .10
The air is in the tenor part, the other three voices furnishing a humming accompaniment.

WOOLER, ALFRED
No. 12,938. **Song of greeting**..... .12
A fine number for school chorus use; easy, melodious, and effective.

PART SONGS: WOMEN'S VOICES

CHADWICK, GEORGE W.
No. 12,949. **Silently swaying on the water's quiet breast** (*On the Chiemer See*)..... .16
A fine concert number for a chorus of women's voices; includes a section for double chorus. From the pen of one of the most famous of American composers.

CLOUGH-LEIGHTER, H.
No. 12,878. **Wild fawn**..... .16
For three-part chorus, with brilliant piano accompaniment.

CURSCHMANN, KARL FRIEDRICH
No. 12,892. **Farewell, ye groves and pleasant halls**..$0.06
A graduation chorus; arranged for two sopranos and alto.

MATTHEWS, H. ALEXANDER
No. 12,876. **A morning in Spring**..... .12
A beautiful song for three-part chorus suitable for concert use.

TUCKER, HENRY
No. 12,827. **Sweet Genevieve**..... .10
The soprano carries the air, the other two parts furnishing a humming accompaniment.

PART SONGS: MEN'S VOICES

COWLES, EUGENE
No. 12,913. **Beneath de willers in de grass**..... .10
A charming number, part of it consisting of the air, supported by humming in the other voices. By the composer of *Forgotten.*

LISZT, FRANZ
No. 12,935. **The loreley** (*Die Lorelei*). Arr. by H. B. Hatch..... .20
A fine concert arrangement of Liszt's celebrated song.

TUCKER, HENRY
No. 12,829. **Sweet Genevieve**..... .10
An easy, effective number; humming accompaniment.

MUSIC FOR SCHOOLS

HARRISS, CHARLES A. E.
No. 12,891. **Old Tubal Cain**..... .12
For school chorus with bass *ad lib.,* and a two-tone anvil to add to the descriptive effect. A great number for school concerts.

MACY, JAMES C.
No. 12,899. **Here they come!**..... .12
A vocal march for boys' glee clubs, easy and melodious.
No. 12,895. **Stepping together**..... .10
A march number for the use of boys' glee clubs, without solos.

NEVIN, GEORGE B.
No. 12,894. **Song of the armorer**..... .08
A fine concert number for boys' glee club use; solo for bass.

WILSON, G. F.
No. 12,901. **Daybreak**..... .10
A tuneful school piece in gavotte rhythm, with duet passage for soprano and alto; a useful and attractive number.

WILCOX SCHOOL OF COMPOSITION

C. W. WILCOX, Director

Dept. "A." 225 Fifth Avenue, New York City

THE ECHO ORGAN

BY H. C. M.

Is there any subject about which there is more difference of opinion than the subject of musical performance? This question suggested itself to me after hearing two friends express themselves as to the merits of an English organist who has just visited Boston. One friend was loud in praise of the recital which the player alluded to had given. I asked, "What was his style?" "It was the clear, rhythmical style," was the answer. Further questions brought out the opinion that his improvising was quite remarkable, quite unusual, wonderful, in fact. The people in his vicinity had been carried away with the supreme skill exhibited.

A second friend I saw later in the same day. To my astonishment, I found no enthusiasm whatever for our English player. "Well," I remarked, "his extempore playing was great, was it not?" "Particularly bad" was the reply. "It was just rambling around, without theme or sequence or connection of any sort."

* * *

In the quest of movie-organ adventures I wandered into three Boston theatres the other day. I had evidently chosen an inopportune time, for the first theatre used the organ but a few minutes, and not as an accompaniment to pictures. I noticed a very effective use of a flute stop with tremulant to the accompaniment of the theatre's orchestra.

* * *

The next theatre had a rather light organ, but it was very agreeable in tone. The organist had a good sense of tone-color and of rhythm, and the music he played (apparently of an extempore nature) was well-considered, characteristic, and worthwhile. The suggestion from the pictures was direct and strong. When, however, the film was changed, the playing was not so suited to the pictures. When I left the organ was trolling forth a pretty waltz as "interpretation" to a pathetic scene! By the way, Why is a waltz?

* * *

As we entered the third theatre the organist was playing (or trying to play) a well-known offertoire by Batiste. It was evident that this player had had no real instruction in organ-playing, for his touch was not legato, his phrasing was *nil*, and he was unable to play even the notes of the composition selected. His registration in the picture music was stereotyped and there was little or no tone-color attempted. Altogether the organ in the third theatre was irritating.

* * *

Do people who attend the "movies" *listen* to the music? I presume the answer to this question must be "No"; for music is so all-inclusive in its demands that it is hardly possible to intellectualize the pictures and at the same instant grasp the music as organized sound.

Is it possible to *hear* the music and at the same time really get the pictures? I doubt it. I imagine that the people who are really getting the pictures are only dimly conscious of the music. I presume that if the music were stopped they would note the fact, and that is all. The music is apprehended almost subconsciously. It would appear, then, that the music supplies merely an atmosphere, in which the pictures appear to advantage.

* * *

Movie organists who write of their "art" have a good deal to say of the playing of airs which are associated with the particular mood of the scene on the screen. But I doubt very much whether any considerable number of the audience note that, for example, during the proposal by the hero, the organ breathes out "O promise me." In fact music is such a jealous mistress that she will allow no rival. You must either listen to the music or not listen to it. There is no middle ground.

* * *

We musicians must admit, I am reluctantly convinced, that music has at last met her match in the cinematograph. We have pointed out, in our music-history classes how music has tyrannized over the drama; how in every stage of the evolution of the art (from Gluck to Wagner) all attempts to make the divine art play second fiddle to the drama had ended in failure. Now we find music playing the "secondest" of fiddles to these wiggling, inconstant, eye-tiring, absorbingly-interesting screen-pictures. It is a come-down for the glorious art, whose dignity we have felt inviolate. The eye-gate is wider open than the ear-gate.

* * *

But—and there is a "but"—anyone who has read Vachel Lindsay's "The art of the moving picture" must know that the miserable artistic abortions exhibited nightly on thousands of screens are by no means what might be there. Consider how few of the pictures one sees are beautiful! When as much effort is put forth to make them PICTURES as is now put forth to get "pep" into them, there will be a place for music in the cinema show,—and not till then. At least that is my present opinion.

* * *

A. H. writes: "I am anxious to know something about the employment of the pedals in accompanying and playing over hymn-tunes. Will you not say something about the subject in The Echo Organ column?"

Organists differ much in their use of the pedals in playing over and accompanying hymn-tunes, but there are some points in which they are fairly well agreed. One of these points is that the Pedal Open Diapason, 16 ft. ought not to be used steadily. A student fresh from his Bach study will fancy that he is not playing the organ unless he has the heavy 16-ft. pedal out all the time. But let this same student note his Bach fugues and see how the episodes have no pedal part. Let him also look at the orchestral scores in his private library (for every organist ought to own scores, and if in any way possible, play an orchestral instrument) and see how the double bass, the orchestral prototype of the 16-ft. pedal, is used; he will find that it comes on and goes off the scene as the needs of the music dictate. Just so should the 16-ft. organ pedal be treated; let it cease from time to time.

As regards the playing over of the tune, some organists make a practice of using manuals only, drawing the diapasons; others give out the tune as a solo, using pedals and appropriate accompanimental stops; others treat the tune as strong, four-part harmony with a *mezzo forte* combination and heavy 16-ft. pedals. Much depends on the sentiment of the tune.

* * *

In the accompaniment of the tune, the congregation singing, the first stanza might be played with the 16-ft. pedal, the second stanza with the pedals omitted on the first and third lines of the hymn, the third stanza with the pedals omitted altogether, and the fourth stanza like the first. In tunes of a quiet nature it is often effective, in intermediate stanzas, to use the 16-ft. pedal on the last two chord (cadence chords) of each line of the words; but i doing this the very common fault of disconnectin these two pedal notes must be avoided. Sure if the legato is ever necessary it is necessary at th cadence.

These suggestions may help A. H. to work ou the problem for himself.

A CENTER OF MUSICAL ACTIVITY I CHICAGO, LYON & HEALY'S NEW BUILDING

The visitor to Chicago is impressed with th great concentration of musical activity. A numb of the leading educational institutions are within few blocks of the business center of the city a within the same area many of the prominent priva teachers have their studios.

Foremost among Chicago's musical enterprises, the great musical supply house of Lyon and Hea for many years located at Wabash Avenue and Adar Street, and now installed in their new building on t Northeast corner of Jackson Boulevard and Waba Avenue, in the very heart of the "Loop."

The building is not a sky-scraper, going up in t air only the modest height of nine stories, the upp four floors having office or music studio accomm dations. On the first floor is a Concert Hall which complimentary concerts will be given by t firm during the day, and which will be available f recitals in the evening. Readers of The Musici on a visit to Chicago should not omit a visit to t great music house.

Graduating Presents

A gift must needs be, first of all, an article of taste; thus it becomes the greater compliment to the one receiving it.

If, in addition, the article is a useful one, it is still more acceptable.

If also it is enduring, the longer will the giver be remembered. If the article be somewhat out of the ordinary — so much the better.

In May and June of each year it has always been our privilege to supply a number of Tindale Music Cabinets for Graduating Gifts. These Cabinets are immeasureably useful to anyone having the handling of music. They are simple, practical, and convenient; and are dustproof. The music is held safe and orderly, where it can be quickly and unerringly found when wanted.

They will last a lifetime. They also are handsome pieces of furniture, an ornament in the home, distinctive in appearance, and not unduly expensive. An ideal gift for any music lover.

And last, but not least, one of these Cabinets would be a good gift for your own self.

Catalog No. 2 describes 17 different styles and sizes, with pictures and prices. Glad to have you send for it.

A place for every piece
Every piece in its place

We also make a superior **RECORD CABINET** for Talking Machine discs. A separate Container for each Record. A simple device doing away with albums. Ask for Booklet 2-R.

TINDALE CABINET CO. Ditson Building 8-10-12 East 34th Street **NEW YORK**

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment — a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

Sohmer

315 Fifth Ave. New York, N. Y.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCHE DINGLEY-MATHEWS

Will you please tell me what you consider the portant points of the second grade? I am using e *Mathews Graded Materials.* M. C.

Persistent and painstaking effort in the direction making the pupil musical and also independent, at is perfecting the method of study.

I am a firm believer in individual work, and I ant the lessons I assign prepared at home intelli- ntly that I may spend the lesson hour in creating music life for the pupil and expanding her idea of chnic and the quality of her study. Pupils must ave the class room full of inspiration and with an lift which will tend to illumine their practice riods through the week. How can they do this we are occupied during the lesson hour with the rrection of wrong notes and bad rhythm?

Therefore in my work of the second grade— d this seems to me most important—I bear down rd on a method of study for melody work and also the rhythmic structure of compositions studied. Every melody has to be practised in certain ways acquire, first, the quality and volume of tone sired on the melody finger; second, the fingering; ird, proper balance between melody and ac- mpaniment; fourth, the pedal. The pupil is pposed to be able to play any part alone, naming e chords upon call. She is not merely memorizing t she is acquiring the physical power of expression well as forming habits of thought which will able her to study intelligently any melody piece. ne manner in which she gets at the piece in the st practice hour is emphasized and given as a rking principle.

I deem the study of the rhythmic structure of a mposition very important and at the same time ry interesting to children. By this I mean, st, the basal rhythm, which is given at the begin- ng of every piece (time signature). The child ust tap this. Second, the rhythm of the idea. is must be tapped, the child counting the basal ythm against this. Third, the rhythm of the ompanying voices tapped against the basal ythm.

This work has many advantages. First, the ild must know where the ideas are before she can p them; this means looking at the music and read- g it not merely as notes, but as notes meaning something. She must disassociate the essential from the padding. It develops the reasoning faculties and still does not leave the music divided into mechanical divisions, as she is tapping, and not playing on the piano. There are no mental breaks to overcome as in careless memorizing where the student stops always at the end of a measure. The rhythmic structure is tapped completely through and the student feels the life-giving principle of the regular pulsation against the individual rhythm in the idea and the accompaniment. By putting the metronome on the basal rhythm, the teacher taking the accompaniment and the pupil the rhythm of the idea, the piece can be tapped in its entirety, and the pupil will be alive to the importance of each in a far finer way than by the old-fashioned way of presenting rhythm.

If you are using the *Graded Materials* try this work on No. 2; *Off for a Vacation.* Be sure that the pupil realizes that the idea goes into the left hand part in the third line. If the pupil is tapping the rhythm of the idea she should be able to skip wherever the idea is, whether in the right hand part or the left. Remember you are asking her to tap ideas, not merely the right hand part.

The pupil's conception of technic should be considerably enlarged in the second grade, and you will find the Mason exercises wonderfully useful at this time. The rotation exercise in the arpeggios is a good beginning along the lines of endurance, and the scale work in the different rhythmic treatments extremely helpful and inspiriting.

I am also a great believer in pedal studies, used not alone for pedal work but for tone quality and transposition.

The second grade is one of the most troublesome and at the same time one of the most interesting grades to handle of any in the elementary work. There are countless teachers who are doing exceptional first grade work and many patented "systems" which are very strong in the first year as well, yet fail absolutely when the second grade presents itself. How to go on and how to develop the pupil and hold her interest so that she will enjoy the preparation of her lesson—that is the difficult point. To blend the new thought with the technical perfection of the old requires great insight into what piano playing really is, and much experience in handling the advanced grades.

I am glad you are using the second grade book for it is an exceptionally good book to hold the interest as well as to bring out the points I have mentioned. Use Nos. 2, 9, 15, 20, 24, 25 and 26 for the tapping work. The *Melody Study,* No. 5, is the best piece I know for beginning serious melody study. Do not use the studies in this book for speed but for accuracy in the new fingerings. Develop your speed in Grade 2 through your scales and arpeggios.

If I am not asking too much will you give me a list of teaching music of Chopin for the fifth and sixth grades? E. D.

Grade 5: Waltzes in E flat, A flat, and C sharp minor. Nocturnes in G minor and E flat major. *Funeral March* from sonata in B flat minor. Preludes No. 2, 9, 15, and 20.

Grade 6: Polonaises in C sharp minor and A major. Preludes Nos. 1, 3, 8, 10, 11, 12, 13, 14, 17, 18, 22, 23, 24, and Op. 45.

Nocturne in G major.
Fantaisie Impromptu in C sharp minor.
Impromptu in A flat.
Etude, Op. 10, No. 3.

* * *

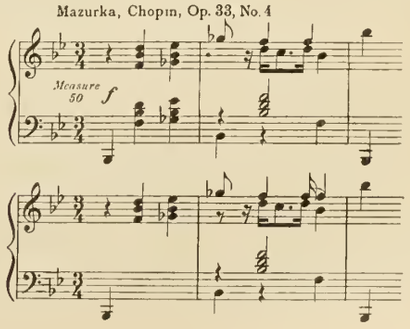
Will you kindly explain to me how the "two against three" from the *Musette* Suite, Op. 1, by D'Albert, may be played so that the triplets will be even. I can make them even, when I play them separately; but when I put both hands together they are uneven. A. C.

Try counting each triplet note with "oo" between two and three as follows: One, two-oo, three, one, two-oo, three, etc. Be sure to keep the count steady and not ritard when you count the "oo" between two and three. Do this first with the right hand alone, then count in the same way and play the left hand part alone putting the second eighth note of each beat on the "oo." Then play hands together counting as before. I have found this helpful with pupils who could not get the rhythm even any other way. Pupils generally hurry between the last note of the triplet and the first note of the new triplet, so guard against any unevenness in the counting.

* * *

Will you kindly tell me how these measures figure out as to time? I have long been interested in your department in The Musician.

Mazurka, Chopin, Op. 33, No. 4



HE TUNES PIANOS So Can You

He was taught at home in leisure hours by correspondence, in a way that is open to all who wish to learn. He says that **HE MAKES $50 A WEEK.** Send for his name and read his letter. What we have done for him and others we can do for you. The TUNE-A-PHONE, our patented instrument for precisely indicating comparison of sound-beats in tuning proof intervals, makes it easy for any man or woman to become a proficient piano tuner. "This device unfailingly teaches first principles that you never forget and is then discarded. Eliminates guesswork or faulty start. Our course includes Action Regulating, Voicing and Fine Repairing. Action model and tools loaned. Diploma granted. Graduates are Big Money makers on salary or at work for themselves. Many of our most successful tuners had no previous musical knowledge. 18 years of correspondence teaching by unfailing and practical plan.

Investigate at our expense. A postal request brings indisputable facts, FREE.

OVER THIRTY YEARS IN MUSIC

"The World's Greatest Musical Weekly"

MUSICAL COURIER
A WEEKLY JOURNAL

Published Every Wednesday

Contains all the news on classical music and musicians the world over. Read by all intelligent musicians

Publication Office: 437 Fifth Ave., S. E. Cor. 39th St., New York

In Chopin's notation he has one sixteenth too little in the soprano voice on the third beat of the second measure which I presume is where you find your difficulty.

To have been exact it could have been written as I give it below your example. His writing is easier and gives the effect desired which undoubtedly was an intensification of the syncopation through a harmonic effect on the short note.

SUMMER MUSIC STUDY

In the last issue of The Musician we published a review of the movement known as "the summer music school," mentioning certain schools and teachers in different sections of the country. Since then we find occasion to add a few names to the list as published in the April issue.

Starting in the East we note that Mr. F. Addison Porter, principal of the Pianoforte Normal Department of the New England Conservatory of Music, Boston, will give a special summer course in pianoforte instruction and normal training. The course will include lectures and lessons on pedagogics, teaching material, demonstrations of normal work and practical teaching.

Mr. Alvah Glover Salmon, well-known as pianist, teacher, composer, and lecturer on Russian music, will have his Boston studio open. He offers special courses for teachers and students of repertoire. Boston with its many points of historical interest, its famous cool "East Wind" right off the Atlantic Ocean, offers an opportunity for summer music study under exceptionally fine advantages.

Mrs. Evelyn Fletcher-Copp, the well-known authority on musical kindergarten work, will conduct courses for teachers and students at Brookline, most beautiful of Boston's many suburbs, the instruction covering a period of eight weeks.

From Boston we move to the hill country of Connecticut, where Herbert Wilber Greene, of New York, conducts a flourishing school at Brookfield Center, specializing in vocal music. Mr. Greene is one of the pioneers in the field, and out of an experience of fifteen or more years has developed thoroughly practical and efficient courses for teachers and students.

The student of piano technic will be interested in the courses offered by Emile Schoen, of New York, who is an authorized representative of the Macdonald Smith system known as "From Brain to Keyboard," which claims to be a system for the rapid acquisition of perfect touch and technic.

Mr. Gustav L. Becker has prepared a condensed course for pianists and teachers, giving special attention to modern technical principles. And we are glad to inform our readers that Katharine Burrowes will conduct classes in kindergarten and primary work in Carnegie Hall, New York, as well as in her home at Detroit.

Still moving west we go to Chicago, which claims a larger number of music students than any other city in the country, summer and winter. Here Fanny Church Parsons will hold a school for teachers and students, offering courses in kindergarten music specializing in rhythmic work, audition, and interpretation, including her new course in "Picture Harmony."

Roy David Brown, who has succeeded to much of the work of the late Emil Liebling, will conduct a class for teachers and serious students in his studio in the new Lyon & Healy building, for a period of ten weeks or shorter term if desired.

We make a correction in regard to the work done by Mrs. Crosby Adams, who will conduct a Teachers' "Class" and not a camp school for music students, at Chicago, as well as Montreat, N. C.

BOOK NOTES

Studies in Musical Education, History and Aesthetics: Papers and proceedings of the Music Teachers' National Association at its 37th annual meeting, Buffalo, N. Y., Dec. 28–30, 1915. Waldo S. Pratt, Editor. Published by the Association, Editorial Office, 86 Gillett St., Hartford, Conn. Price $1.60.

This volume is valuable to anyone who is interested in music education in the United States, for the addresses fairly indicate the current of musical activity year after year. The papers presented and the topics discussed are thoughtful and authoritative, and should be read by all earnest musicians, for example, the report of the theory, piano, and public school conferences, and the discussion of the subject of standardization. A new feature was a consideration of liturgical music as used in the Synagog, Gregorian, the Lutheran, Greco-Russian, and Episcopal services. Musicians interested in church music will find this section especially helpful.

Tonal Functions: Scales and Intervals. A revised method of Harmony instruction eliminating the old figured bass system. Book I. By Dirk Haagmans. J. Fischer & Bro. Price $1.50 net.

We find this book full of excellent material. The arrangement is especially practical and helpful, particularly the consecutive numbering of all paragraphs which contain directions on principles to guide the pupil in his work. It covers the material used in elementary harmony study, reserving the consideration of chromatic and modulating harmonies for a later book.

Thirty-three Suggestions in One Lesson. For the guidance and encouragement of those who play the piano. By Milo E. Benedict. C. W. Thompson & Co. Price, art board cover, 75 cents; paper, 50 cents.

A series of short practical talks on matters connected with the study and mastery of piano playin by a pianist and teacher who was a member o Liszt's class at Weimar. These are supplemente by "A letter to the reader" in which he discusse certain phases of the playing technic such as "ove key" action and "subpendant" action, which latte seems to be identical with the more familiar ter weight-playing. Put in a short statement, here i a little book which has many helpful suggestions f pupil as well as for teacher.

The Piano and Organ Purchaser's Guide for 191 Compiled by John C. Freund. Music Trad Co., New York. Price 25 cents.

A handbook of the musical instrument trade in th United States.

BOOKS OF MUSIC

The Junior Song and Chorus Book. By T. Giddings and E. W. Newton. Ginn & C Price 50 cents.

The authors indicate the place of this book in t educational scheme by stating that it may follo the Intermediate Song Reader of the New Educ tional Music Course. The special difficulties school voices have been kept in mind by givi considerable space to music for unchanged voice with other sections for soprano, alto, and bass, a another of songs and choruses with bass *ad lib.*, well as four-part choruses. Many of the numbe have piano accompaniment.

A Guide for Beginners in Piano-playing. B Elizabeth Coulson and Grace H. Spoffor Boston Music Co.

The material in this Guide consists of the work theory, that is note writing, spelling words wit degrees in which notes are placed, notation, rhyth scales, chords, key, etc., such as young players ne to supplement their work at the keyboard.

How lovely, Lord of Hosts (Psalm 84). Motet f contralto solo, chorus, violin, harp, and orga By T. Carl Whitmer. Western Theologic Seminary, Pittsburgh, Pa. Price 60 cents.

A work of broad, lyric quality along modern lin and with definite ecclesiastical character. T part-writing is effective and thoroughly polyphon in style, the solo voice part an effective piece work. The composer has placed about the voices rather peculiar and colorful atmosphere through t accompaniment furnished by the instruments me tioned.

GENERAL NEWS ITEMS

The next music festival of the Bach Choir 2 voices will be held at Lehigh University, Sout Bethlehem, Pa., under the direction of Dr. J. Fr Wolle, May 26 and 27. The *Christmas Orator* will be sung the first day, the *Mass* in B minor the second day.

The ninth annual meeting of the Music Supe visors' National Conference was held at Lincol Neb., March 20–24. The presiding officer was M Will Earhart, of Pittsburgh. The program w very complete and kept all delegates on the jum to be in touch with what was being done. T Conference is a body of live, aggressive men a women engaged in work of the greatest importan to music education.

Pupils of the dramatic department of the Ne England Conservatory, Boston, with the assistan of pupils from the vocal department, gave a recit March 24 and 25. Mr. Charles Bennett, of t voice department, was in charge of the music, and costumes were designed and made under the supe vision of students of the School connected with t Museum of Fine Arts, Boston.

The National Opera Club of America held i second annual grand opera performance Ap 3 at New York. The performance was follow by a Divertissement Spectacle and ball.

THE California Music Teachers' Association will hold its next convention in San Diego, in July.

THE Mendelssohn Glee Club of New York celebrated its 50th anniversary in February. The number of active members is limited to 60.

THE Ohio Music Teachers' Association will hold its 34th convention at Springfield, April 24–26. During the convention there will be a music festival to commemorate the opening of Springfield's new Memorial Hall. A chorus of 200 will participate.

MARIA BARRIENTOS, the Spanish coloratura soprano, who appeared at the Metropolitan Opera House, New York, during the season now almost at a close, became a pupil in the Conservatory at Barcelona when she was six years old, studying piano, violin, and composition. Vocal study was not begun until she was about fourteen. She believes that the mastery of an instrument and some study of composition are essential to singers.

BRAHMS' *Song of Destiny* was sung at the April concert of the Oratorio Society of New York, Louis Koemmenich, conductor.

SIGISMOND STOJOWSKI's cantata *Prayer for Poland* was given by the Schola Cantorum, New York, under the direction of Kurt Schindler, March 7.

ANN ARBOR, MICH., will have its twenty-third annual music festival, May 17–20. The Choral Union of the University of Michigan, under the direction of Prof. A. A. Stanley, will present two choral works *Paradise Lost*, by Bossi, and *Samson and Delilah*, by Saint-Saëns. A children's chorus will appear in Pierné's *Children of Bethlehem*.

THE People's Orchestra of the Boston Music School Settlement, Jacques Hoffman, conductor, gave its fifth anniversary concert, April 6. The orchestra was assisted by Heinrich Gebhard, pianist.

THE Musicians' Club of Pittsburgh, entertained the Associated Artists of the city, April 6. A program of compositions by members of the Club was presented.

SIR GEORGE C. MARTIN, organist of St. Paul's Cathedral, London, died Feb. 23. He was born June 11, 1844, in Lambourn. After various appointments he was made deputy to Dr. Stainer, at St. Paul's, succeeding him in 1888.

THE Sinfonia Fraternity of America offers $100 for the best composition in the form of a chorus for male or mixed voices, with organ or piano accompaniment, or both, the time of performance not to exceed five minutes. The competition closes Sept. 1, 1916. Full information may be obtained from Charles S. Quinn, 632 Adams Ave., Scranton, Pa.

THE Wisconsin Music Teachers' Association met in Fond du Lac, May 2–4. The first examination by the Examining Board of the Association for the Licentiates' diploma was held at the same time.

THE Music Teachers' Association of Iowa held its annual convention April 17–19 at Des Moines.

NEW YORK CITY members of the New York State Music Teachers' Association had a dinner at the Hotel McAlpin, March 30. The guests of honor were Charlotte Lund and Dr. Otto Kinkeldey who delivered addresses.

Victrola
The instrument of the world's greatest artists
It is natural that in the musical world there should be singers and instrumentalists whose transcendent art places them in the forefront of their profession.
These artists have attained their commanding positions by reason of their superb artistry, and it is no mere coincidence that they have chosen the Victrola as the instrument to carry their sublime art into the home with the utmost fidelity.
The Victrola is the greatest of all musical instruments not only because it brings you the exact renditions of the world's famous artists, but because it has through sheer merit and through world-wide recognition by millions of music-lovers earned this high honor the artists have conferred upon it.
Any Victor dealer will gladly show you the complete line of Victors and Victrolas—$10 to $400—and play the music you know and like best.

SUMMER SCHOOL ANNOUNCEMENT

Fannie Church Parsons

Will Hold Her Annual Summer School for Students and Teachers this Year in Chicago, July 5—August 5

Every day will be a Red-Letter Day for new ideas.

Each of the one hundred twenty hours will be filled with instruction to the students' utmost profit.

Pleasant location; quiet surroundings; and most reasonable prices.

Mrs. Parsons is known throughout the Musical World as the originator of the Kindergarten Idea of presenting Music. Her inventive genius, coupled with pedagogic intuition, made innovations in piano instruction inevitable. This system makes a specialty of Rhythmic work, Audition and Interpretation.

HARMONY

3-YEAR COURSE IN ONE MONTH

Many years of teaching along most advanced lines have now resulted in the publication of a text-book which presents equally original ideas for teaching Modern Harmony. This plan makes the pupil HEAR, SEE, FEEL and UNDERSTAND all the usual and unusual chords of a tonality.

Mrs. Parsons will present her new course in Picture Harmony in connection with her Normal Work, which has been revised and greatly enlarged.

Enroll with the originator and get the benefit of her methods first hand.

Further information and literature sent upon request.

Address **FANNIE CHURCH PARSONS COLLEGE—4040 Ellis Ave., Chicago**

THE FLETCHER MUSIC METHOD

THE ORIGINAL MUSICAL KINDERGARTEN AND SIMPLEX METHOD OF AMERICA

Brought to America through the interest of the New England Conservatory eighteen years ago; and during that time taught to over 700 music teachers (every one of whom could be employed in Boston alone); the demand is growing rapidly for Fletcher Music Method teachers in spite of the many cheap copies of this system.

The Summer School will be divided into two classes: the first opening May 20th, and the second opening July 10th.

In the 200 hours of instruction, which lasts eight weeks, more ground is covered in practical harmony than is covered in any Conservatory in two years.

Read "What is the Fletcher Music Method?" price $2.00.

For full information regarding Normal classes and lectures for Educational, Musical, and Mothers' Clubs, apply directly to

MRS. EVELYN FLETCHER-COPP, 31 York Terrace, BROOKLINE, MASS.

New School Operettas

Miss Muffet Lost and Found

A Mother Goose Play by Katharine C. Baker.....50c
Available for children of Primary and Intermediate Grades.

The Witch of Fairy Dell

A Light Opera for Girls' Voices.
Words by Frances V. Hubbard.
Music by Frederic W. Mills.....75c
Available for High Schools.

The above are musicianly works written in most attractive, tuneful style. Both are bright in character, have plots with a point and are interestingly told.

Demeter and Persephone

A Prologue or Masque.
Story by Thomas Wood Stevens.
Music by George Colburn.....75c
For Festival or other occasions.

A well written work, attractive in its story and its musical setting. Particularly fitting for High School entertainments.

Helena Bingham's *Crossing the Bar*, by a quartet of girls, was a special feature. The same quartet arranged for men's voices was given in Trinity M. E. Church, Denver, March 18.

Pupils of the Wm. A. Wolf Institute of Pianoforte and Organ Playing, Lancaster, Pa., gave a recital April 1. The Institute issues an attractive *Monthly Bulletin*.

Mrs. Claude L. Steele, soprano, gave a song recital at Muskogee, Okla., before the New Century Club, March 23, presenting a program of songs from the classical and modern repertoires including some on Indian melodies. She also sends to The Musician a number of interesting programs given by her pupils in singing and piano playing.

Pupils of the Pianoforte Normal Department of the New England Conservatory, Mr. Addison F. Porter, director, gave a recital March 30, including several numbers with orchestral parts on second piano.

At the Intercollegiate Glee Club contest held in New York in March the Glee Club of the Pennsylvania State College, Clarence C. Robinson, director, won second place.

Mr. Frank M. Church, of McKendree College, Illinois, sends us a number of interesting pupils' recital programs given under his direction.

Mr. Ralph L. Baldwin, Hartford, Conn., gave his fourth and fifth lectures in his symphony course on Beethoven and Dvorak. March 17, the glee club of the High School gave a concert under Mr. Baldwin's direction, giving Jordan's cantata (school edition) *Barbara Frietchie* among other numbers. March 19 the Choral Club of Hartford, 80 men, under Mr. Baldwin, assisted in a concert at the Springfield, Mass., Y. M. C. A.

Prof. Charles H. Morse, of Dartmouth College, gave an organ recital in Rollins Chapel, March 26, presenting a program mostly of modern works. This was one of a series of Sunday recitals.

Pupils of the American Progressive Piano School, New York, Gustave L. Becker, director, gave a recital of solo and ensemble numbers at Lord and Taylor's Music Rooms, March 16.

Mr. D. A. Clippinger, Chicago, gave a lecture recital on the songs of Hugo Wolf, at Kimball Hall, March 25.

Mr. Gordon Campbell, pianist, and Mr. Lewis Randolph Blackman, violinist, of the faculty of the Cosmopolitan School of Music and Dramatic Art, Chicago, gave a recital March 25. On the 24th a Junior piano recital was given in which twelve pupils assisted.

Miss Laura Littlefield, soprano, gave an interesting program of modern songs at Boston, March 23.

Mr. Robert Andrew Sherrard, gave his second organ recital in the First Presbyterian Church, Johnstown, Pa., March 23.

Pupils of the Raymond School of Music, Boston, gave a recital March 20, presenting solo and ensemble numbers.

Mr. Charles N. Boyd of the Pittsburgh Musical Institute, gave a lecture recital on *Chorales and Chorale Preludes*, March 14, presenting selections from the 17th century up to modern times.

A musical service as a memorial to the late C. B. Hawley was held in the First Congregational Church, Detroit, March 19, under the direction of J. Trumann Wolcott, organist.

Mr. Gordon Balch Nevin gave a recital at Buffalo, March 12, the 215th of the series of free organ concerts. March 10 he played at Dover, O. In addition to his work as organist and choirmaster at the Second Presbyterian Church, Cleveland, Mr. Nevin is teacher of piano and organ at Hiram College, O.

The Lyric Club of Charles City, Iowa, Frank Parker, conductor, gave its second concert of the season, March 21. At the last concert about Ju Mr. Parker will sing the new song cycle *The of Joy*, by Deems Taylor.

Mrs. May Sleefer Ruggles, of the Li heim School of Vocal Music, Auburndale, M was soloist at the benefit for the Bulgarian Cross, in Madison Square Garden, March March 29, Mrs. Ruggles and her brother, Rev W. Sleeper, gave a musical lecture *Echoes the Balkans* in the Columbia University co course.

The Faelten Pianoforte School *Bulleti* always interesting to one who is looking for of an educational character. The various prog list music suited to all kinds of needs, solo ensemble.

Miss Mildred Shaughnessy, contralto, pu Mr. Nelson Alexander Chesnutt, of the C Conservatory, Philadelphia, gave a successfu cital, demonstrating the excellence of the instru received.

Mr. C. S. Morse, director of the San A Tex., School of Music, sends us an interesting gram of a mid-year recital by pupils of the sch

In Pianoforte Instruction and Normal Training
June 26th to July 29th, 1916
or further particulars address: F. ADDISON ORTER, New England Conservatory of Music, oston, Mass.

Harry M. Gilbert, accompanist. The second given by Mr. Daniel Protheroe, of Chicago, ted by Mr. Sybil Vane, Mr. Daniel Beddoe, Frederic Martin, and a selected choir of six- mixed voices.

DOLPH GANZ, at the end of this season, will do ore teaching for at least one year. He will go ie country in July and give up his summer to ation and the preparation of his programs for oncert tour beginning in October.

IE Von Ende School of Music, during March, five concerts at the School, including the ls of Alberto Jonas, Sigismond Stojowski, ur Hartmann, and piano recitals by artists of aculty, Lawrence Goodman and Alberto Jonas.

IE Metropolitan Opera Company announces xtension of manager Gatti-Casazza's contract lay 1920.

April 1st the Opera closed for the season, the a House remaining open for four weeks for the production of performances given by the Russian Imperial Ballet.

ARTHUR BODANZKY and GIORGIO POLACCO, the two new directors at the Opera, have most ably filled their positions, to the extent that their contracts have also been renewed.

THE last week of the opera brought forth *Carmen*. *Rheingold*, *Butterfly*, *Rigoletto*, *Lucia*, and *Siegfried*.

AEOLIAN HALL

THE third concert of the New York Chamber Music Society was given in March. Carolyn Beebe and Gustav Langenus are the directors of this organization. They played an octet by Schubert, sonata by Brahms, a *Rhapsodie* by Loeffler, and *Kammersinfonia* in B♭ major, by Paul Juon.

THE Flonzaley Quartet closed its season in March, playing compositions by Taneiev, Bach, and Schumann.

EDDY BROWN, violinist, has given four recitals in this Auditorium. He is a fine artist with clear, clean technic, and producing a beautiful tone. George Falkenstein was at the piano.

AFTER an absence of four years, Boris Hambourg, the Russian 'cellist, gave a recital. On this occasion Mr. Hambourg played four of his own compositions and his program was interesting and beautifully played.

PAULO GRUPPE, Dutch 'cellist, who is associated now with the St. Louis Symphony Orchestra, and consequently has not been heard in New York for several seasons, gave a recital with the assistance of Coenraad von Bos at the piano. Mr. Gruppe is an unquestioned artist.

HAROLD BAUER and PABLO CASALS gave their last joint recital of the season to the usual packed house. The combination of these artists, both giants in their chosen professions, could only produce a unity and virility of which such players are capable.

HAROLD BAUER also associated himself with Ossip Gabrilowitsch for a second piano recital. They appeared jointly last spring and the result proved so popular that a series of joint appearances in other cities was arranged for this season. Mr. Gabrilowitsch has concluded his historical recital series. They have been a success in every sense of the word and he should feel repaid for the effort it cost him to prepare and present such programs.

HAROLD HENRY. pianist, whose previous performances have aroused much interest, gave his third recital in New York and again proved his ability, which asserted itself at his previous performances.

THE young Brazilian pianist, Guiomar Novaes, who was heard last season, gave a program of variety and novelty. She is gifted and serious, has much temperament, and is absolutely sure of herself.

CHARLOTTE LUND, the soprano, gave her song recital made up of interesting and some seldom heard songs. Clara Clemens was, as usual, accompanied by her husband, Ossip Gabrilowitsch, who greatly adds to the interest of her programs. This was her third recital this season. Marcella Craft is an artist with a beautiful voice, sometimes becoming so intense in her interpretations that the voice loses its life, and flatting results. Mr. Harold Osborne Smith accompanied. Elsa Kellner, from the West, with Chas. Gilbert Spross accompanying, sang well, displaying a naturally good voice.

THE greatest artists of the month were Louis Graveure and Julia Culp. Mr. Graveure's art is ripening. He has an unusually beautiful voice, and intelligence to use it to the best advantage. Mme. Culp's singing is flawless, and Mr. Bos who accompanied both these artists, assisted them in every way by his masterful accompanying.

CARNEGIE HALL

LEGINSKA'S only piano recital of this season was given the last day of March in commemoration of the death of Leschetizky, whose pupil she was. Mme. Leginska played his suite *Souvenirs d'Italie*, Op. 39. Temperament and great art characterize her playing.

VICTOR TALKING MACHINE RECORDS FOR MAY, 1916

A PROFESSOR in a prominent technical school of the United States in speaking of a study he has made of the Talking Machine and its reproductions of musical performance by means of records called attention to his belief that the best are those made by the human voice and stringed instruments. The records for May are of this character. Any reader of THE MUSICIAN who is choosing records for summer use will find it worth while to look through this month's issue. Here are some to which we call attention.

Braslau, Sophie, contralto: *Last night,* by Kjerulf, a charming song from the Norwegian repertoire.

Caruso, Enrico, tenor: *O sole mio* (*My sunshine*) by Di Capua, a very popular Neapolitan folk-song which travelers in Italy have learned to know.

Culp, Julia, contralto: *Mondnacht* (*Moonlight*), Op. 39, No. 5, by Schumann, one of the great composer's finest songs by a famous singer of German *liedcr.*

Elman, Mischa, violinist: *Country dance* (*Landlicher Tanz*), by Weber, a taking number from the classical repertoire, arranged by Mr. Elman.

Gluck, Alma, soprano: *Musetta Waltz,* from Puccini's opera *La Boheme.* The same artist also gives a delightful rendering of the famous American song *Listen to the mocking bird,* with bird calls by Charles Kellogg, the well-known "nature singer."

Journet, Marcel, bass: Russian national hymn, *God save the Czar,* by Lvoff. Sung in Russian and in French.

Kreisler, Fritz, violinist: *Viennese waltz* (*Wienerisch*), by Godowsky, the famous pianist.

McCormack, John, tenor: *The old refrain* (*Viennese popular song*), by Kreisler, a big success in the popular tenor's recent concerts. Mr. McCormack also sings *Flirtation* (*Das Fensterln*), by Meyer-Helmund, to which Mr. Kreisler plays a delightful violin obbligato.

Ruffo, Titta, baritone: *All'erta marinar* (*What ho! Mariners*), from Meyerbeer's opera *L'Africaine,* a great dramatic number.

Schumann-Heink, Ernestine, contralto: *Before the crucifix,* by La Forge, a sacred song of great power and appeal.

Whitehill, Clarence, baritone: *Some day,* by Wellings, a song which has moved many a heart; one of the most popular of the English ballads of twenty-five years ago.

Witherspoon, Herbert, bass: *Rose-Marie,* by Molloy. Melodious and appealing to the ear of the music lover.

And we are glad to note that the Victor String Quartet have made records of two movements from Beethoven's quartets, namely, the *Menuetto,* Op. 18, No. 4, and the *Schcrzo* from Op. fine double-faced record. Those who do not themselves an opportunity to hear chamber m miss a delightful musical treat.

One singing teacher in a large city ordered more than 100 copies of SO THING TO SING (50 songs for first pupils) for use by himself and assis teachers.

Christine Miller IS SINGING

GOOD NIGHT by Mary Turner Salter
THE NIGHTINGALE by Ward Stephens
THE NIGHT HAS A THOUSAND EYES by William Arms Fisher
TO ONE I LOVE by Louis Victor Saar
A WOMAN'S LAST WORD by William Dichmont
EXPECTANCY by William Stickles
THE UNREMEMBERED by F. Morris Class
GAE TO SLEEP by William Arms Fisher
OLD IRISH MELODIES: The Little Red Lark; A Song of Glennan; Nelly, My Love, and Me; The Passing of the Gael. All arranged by William Arms Fisher.

The MUSICIAN

THE HARP

The Harp is dual-natured: Heaven and Earth
Are parents of its birth;
Heaven, the radiant mother, Earth, the sire
Whose unappeased desire
Reverberates and rings
Along its throbbing strings.

In sounds more eloquent than any words
The Heavenly Mother speaks—in tender chords
And tones that seem the echo, from God's lands,
Of singing choral bands.

The Spirit of Celestial Music floats
Great argosies of soft melodious notes
Down the high octaves to their port and goal,
The human soul.

Then from some deep sea place,
Where dwells the resonant bass,
All suddenly the mortal passions wake
And, like wind-driven billows, rush and break
Upon the heart and flood it with an ocean
Of memory and emotion.
Ambitions, aspirations, hopes and dreams,
Past, present, future, swirl in those great streams
Of harmony; and over and above
Sounds the clear call of love.

Into her confidence has Nature taken
The wondrous Harp. So oft her strings are shaken
By voices of the wind,
By eerie laughter of the elfin kind,
By ripple of the brooks, by fall of leaves,
And by the ebbing tide that sighs and grieves,
By whirr of wings at dawn, by that sweet word
Uttered in deep wood trysts 'twixt bird and bird
At mating time—yea, all that Nature feels
And knows and understands the Harp reveals.

Favorite Songs of Famous Singers

In these beautifully printed books the art of the printer and the book-binder is rivaled only by the art of the composers and of the famous singers themselves

My Favorite Songs

By Geraldine Farrar

High Voice **Low Voice**

Price, each, $1.00 postpaid

THIS gifted singer shows her musical training by the preponderance of German songs in the collection she has brought together. The various numbers have been sought out with indefatigable zeal, largely from treasures of song buried or neglected in the works of great writers, and are therefore, in many ways, new to the average teacher or singer. Songs from other lands, such as Russia and Scandinavia are also included. The book contains a biographical sketch, portraits, a striking portrait on the cameo plate paper cover, in the engraver's best art.

Miss Farrar's selection evidences a most eclectic and at the same time impeccable musical taste.—*Musical Courier.*

My Favorite German Songs

By Elena Gerhardt

High Voice **Low Voice**

Price, each, $1.00 postpaid

As an interpreter of German lyric art, Miss Gerhardt has few rivals. From her recital programs she has selected the most effective and successful numbers to make up this desirable volume, which thus forms a representative collection of vital mastersongs chosen from the works of classic and modern composers of the *Lied.* The book contains an autobiographical sketch in German and English, and portraits.

A notable volume and stands high in the productions of American publishing houses. It is, indeed, a treasury of German *lieder* chosen with rare judgment.—*Musical America.*

My Favorite Songs

By Julia Culp

Books I and II

High Voice **Low Voice**

Price, each, $1.00 postpaid

THE favorite songs of this highly praised *Lieder*-singer are drawn from the music of many different lands, from her native Holland to our own America, and including France, Germany, Ireland, etc. This collection is made up of such numbers as have won Mme. Culp's affection as well as proved their acceptability to her enthusiastic audiences, and the volume is of extraordinary interest. A charming introduction from the singer's own pen and portraits enrich the book.

The triumphs of the singer are reflected in her book.—*The Musician.*

My Favorite French Songs

By Emma Calvé

Books I and II

High Voice **Low Voice**

Price, each, $1.00 postpaid

THE great singer here gathers together her favorites among French songs—mostly modern, some operatic, and a few of the ultra-modern school. To these she adds a group of "Songs my Grandmother sang," making a truly unique and distinguished collection. From these charming old melodies down to the songs of Debussy the singer indicates all that is best in the realm of French song composition. Complete with biographical sketch with portraits and an introduction from Mme. Calvé's pen.

A splendid group of songs valuable to both singers and concert goers.

Creole Sketches

By Cedric W. Lemont

Composer of *Dream Pictures*

For the Piano. Op. 15.

PRICE **$1.25** Postpaid

This collection of piano pieces is a worthy companion to the same composer's *Dream Pictures*, which has had so favorable a reception. They show the same spontaneous melody, colorful harmony and fluent invention; in addition they reproduce the picturesque special features of Southern environment justified by the title. Having lived in the Creole state the composer has caught his impressions at first hand. The cover is a splendid piece of color printing.

"Mr. Lemont has a free, melodic inspiration which often reminds one of the late Ethelbert Nevin. A set of bright, melodious little pieces of only medium difficulty which undoubtedly will have an extremely wide popular appeal."
—*Musical Courier.*

Oliver Ditson Company, 150 Tremont St., Boston

Chas. H. Ditson & Co., 8-10-12 E. 34th St., New York City

CHARLES HUERTER

The first compositions by this versatile composer were issued two or three years ago, but they already have attained very great popularity. His newer pieces are full of color and have artistic attributes in abundance.

Mr. Huerter was born in Brooklyn, N. Y., and after completing his school education in New York City and Geneva, N. Y., he entered Syracuse University. Here he studied piano and harmony with Prof. Joseph C. Seiter; later he took up counterpoint and composition under the guidance of William Berwald. In 1913 Mr. Huerter went to Berlin continuing his studies in counterpoint and composition at the Royal Academy with Paul Juon, the celebrated Russian composer.

NEW SUBSCRIPTIONS may commence at any time during the year.

EXPIRATIONS AND RENEWALS.—When a subscription expires a notice is sent with the request to renew.

We do not send receipts for subscriptions. On the wrapper of the first issue sent after your order is received is the date to which your subscription is paid. This is a receipt.

COMMUNICATIONS ARE WELCOME from all interested in the teaching and study of music, and in furthering the success of *The Musician.* All articles or communications submitted for publication should be clearly written on one side (only) of the sheet. Those which cannot be used will be returned. These communications must invariably be addressed to the Editor of *The Musician.*

We decline to be responsible for unsolicited manuscripts. We shall always be glad to consider them for publication in *The Musician,* and we will return them if postage and full address are enclosed.

SPECIAL NOTICE: The publishers should be notified of a changed address before the 5th of the month. Otherwise the next month's issue will be sent to the old address.

All REMITTANCES should be addressed and made payable to

TAPPER'S GRADED COURSE

FOR THE PIANO

Edited and Arranged by THOMAS TAPPER, Litt. D.
Author of Tapper's First Piano Book

The only course that provides all the necessary lessons in Theory, Music Writing, Melody, and Form, **when** and **where** they should be given

What a Progressive Teacher Says: "I have never approved of a Graded Course, because I could never find one worthy of serious thought, but I am delighted with Tapper's Graded Course, and I shall recommend it upon every opportunity."

SARAH I. McCONNELL,
Conservatory of Music of Muncie National Institute.

Among the Distinguished Editors of the Work are: M. Esposito, E. R. Kroeger, M. Moszkowski, John Orth, Albert Ross Parsons, I. Philipp, Xaver Scharwenka, W. H. Sherwood, August Spanuth, Bertha Feiring Tapper

The Course Consists of

1. Graded Studies (Grades 1 to 7) . . . . — The Graded Studies constitute a course in technics, and in all problems that develop therefrom.
2. Graded Pieces (Grades 1 to 7) . . . . — The Graded Pieces offer the most pleasing recreations and repertoire selections, grade for grade with the studies.
3. Manuals for Grades 1, 2 and 3 . . . . — The Manuals contain graded lessons in Music Writing, Melody, Analysis, Form, and Music Theory, *applied to real musical composition.*
4. Four-hand Collection, Nos. 1 and 2 . . — The Four-hand Collections are for the double purpose of sight-reading and for ensemble work. They may be used from the third grade.

Price of each grade, $1.00, postpaid. Liberal Discount to Teachers

Twelve Impressions for Violin and Piano

Played and Featured by

Fritz Kreisler

1. Larghetto Lamentoso
2. Profile (Chopin)
3. Legend
4. Tyrolean (Schuplattler)
5. Andante Cantabile
6. Perpetuum
7. Elegy
8. Valse
9. Valse Macabre
10. Orientale
11. Saga
12. Viennese (Wienerisch)

These compositions may justly be claimed as the most important novelties of the year.

They are unusual in character, poetic in design and imbued with glowing inventive originality.

All the Violin parts are published under the editorial supervision of **Fritz Kreisler,** enabling an intimate insight into his own interpretation of these solos.

MADE SUCCESSFUL BY THE TEACHERS THEREFORE EVERLASTINGLY FOR THE TEACHERS.

WILLIS SERVICE

WILLIS SERVICE means the supplying of everything in music to musicians under the best possible circumstances. It stands for promptness, generous discounts, and minimum transportation charges. It is supported by perpetual courtesy, careful attention to every order, and a painstaking way of seeing that every patron is being treated the way they want to be treated. It is made possible by a large and great catalog of copyrights, and an immense stock of the publications of all the other publishers. It is something new and unquestionably good in the music business, and immeasurably separated from the obsolete "our own publications only" policy.

Latest Song Successes

For You
By LAURENCE H. MONTAGUE
High, in G; Medium, in E-flat; Low, in D-flat; 50c.
A broad lyric song of the ballad type, with a swinging melody that catches and holds the ear.
Orchestra parts, three keys, 50c.

My Rose of Yester-E'en
By MARIE RICH
High, in E; Medium, in D; Low, in C; 50c.
A song of longing and tender appeal in text and voice; of the folksong quality.
Orchestra parts, three keys, 50c.

The Mother Heart
By SAMUEL RICHARDS GAINES
High, in A-flat; Low, in F; 60c.
A Scottish text with a folksong melody; pathetic and full of appeal to all listeners.

A Wondrous Rose
By EUNICE WAITE BURNHAM
High, in A-flat; Medium, in F; Low, in E-flat; 60c.
A ballad for everyone; popular in style, easy, melodious and with a "catchy" waltz refrain. Rare rose title in multi-color.
Orchestra parts, three keys, 50c.

Her Rose
By MINER WALDEN GALLUP
High, in E; Medium, in C. 40c.
An artistic yet simple setting of a charming text. Sung by John McCormack and Mme. Alda.

Japanese Death Song
By EARL CRANSTON SHARP
High, in G minor; Medium, in E minor; 40c.
Full of unusual effects for the voice, with colorful dissonances in the accompaniment. A very striking song. Sung by Julia Culp.

War
By JAMES H. ROGERS
Medium, in D; Low, in C; 50c.
The glamour and tragedy of war are expressed in the text and voiced in the music. Sung by Schumann-Heink, Mary Jordan, Yvonne de Treville and others.

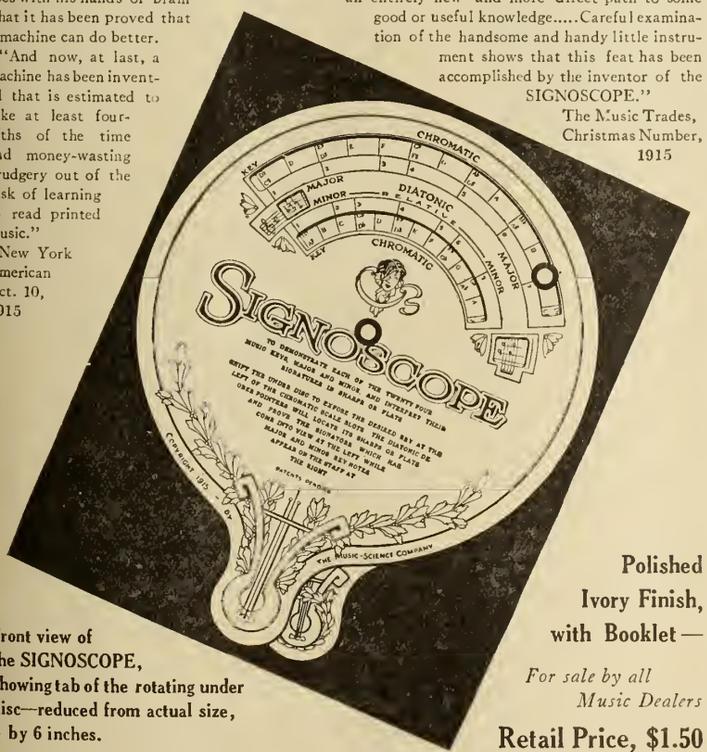
3 East 43d St. G. SCHIRMER New York

"In nearly every human vocation nobody any longer does with his hands or brain what it has been proved that a machine can do better.

"And now, at last, a machine has been invented that is estimated to take at least four-fifths of the time and money-wasting drudgery out of the task of learning to read printed music."
—New York American Oct. 10, 1915

"Once in a great while some daring person, with courage as firm as his convictions, blazes an entirely new and more direct path to some good or useful knowledge.....Careful examination of the handsome and handy little instrument shows that this feat has been accomplished by the inventor of the SIGNOSCOPE."
The Music Trades, Christmas Number, 1915



Front view of the SIGNOSCOPE, showing tab of the rotating under disc—reduced from actual size, 5 by 6 inches.

SIXTY IRISH SONGS

Edited by WILLIAM ARMS FISHER

ISSUED IN TWO EDITIONS—FOR HIGH VOICE—FOR LOW VOICE

Bound in paper, cloth back, each . . . $1.50, postpaid
In full cloth, gilt, each . . . . . 2.50, postpaid

The age-old folk-music of Ireland is regarded by many critics as the richest and most varied in the world. In this volume of THE MUSICIANS LIBRARY the editor has collected, besides familiar and favorite airs, a large proportion of wordless traditional tunes to which he has successfully wedded suitable lyrics by modern Irish poets—thus presenting the most significant volume of Irish song that has been published. For all these airs the editor has written accompaniments which express, through modern musical resources, their racial and emotional spirit; thus making of them songs that present day singers will delight in.

TESTIMONIALS

"Will be of great value to me in my teaching."—J. Bertram Fox.

"Ably edited and will prove a valuable addition to the library."—Helen von Doenhoff.

"I am perfectly delighted with them and shall recommend them to my pupils and singer-friends."—Leontine de Ahna.

"These volumes will be of great value to every singing teacher, also to the artists in making up their recital programs."—Oscar Saenger.

"I find these collections exceedingly interesting and of great value to the serious student of music. They will prove invaluable to me in my work."—Wilfried Klamroth.

OLIVER DITSON COMPANY, Boston
Chas. H. Ditson & Co., New York Lyon & Healy, Chicago

FIRST GRADE PIANOFORTE COLLECTIONS

MRS. CROSBY ADAMS

Op. 12. OUTLINE MELODIES.....$0.40
Op. 14. TONE STORIES.....$0.40
Op. 15. CHURCH MUSIC (a Sunday Group).....$0.40

The composer has gone back to the very foundation of piano playing, and has furnished music that actual beginners can play with both pleasure and profit.

GENA BRANSCOMBE

IN A FAIRY GARDEN.....$0.50

At the Fairy Ball	A Fairy Frolic
The Fairy and the Rose	Fairies in a Ring

CORNELIUS GURLITT

Op. 197. FIRESIDE FANCIES.....$0.60
12 Little Tone Pictures on Five Notes.
(*Schmidt's Educational Series No. 50*)

Many varieties of rhythm occur in these little pieces, and each hand is treated independently. Gurlitt shows what can be accomplished with the hand in a stationary position over five notes.

MUSICAL SKETCH BOOK.....$0.75
A selection of favorite pieces, including *Viennese Waltz*, *Maypole Dance*, *Always Merry*, etc.
(*Schmidt's Educational Series No. 11*)

JOHANN E. HUMMEL

Op. 486. THE TREASURE BOX.....$0.75
12 Favorite Compositions:

Soldier's Lay	The Rose Festival (Waltz)
Margaret's Doll	
At the Fair	Wanderer's Evening Song
In Graceful Rhythm (Minuet)	The Little Minstrel
The Young Volunteer	The Hunter's Call
Violet at the Brook	Mountain Greeting
	The Bubbling Spring

R. KRENTZLIN

Op. 19. VILLAGE SCENES.....$0.75

A Village Holiday	The Cuckoo Calls
Perversity	Playing Soldiers
Dance in the Meadow	Golden Sunset

(*Schmidt's Educational Series No. 59*)

FRANK LYNES

Op. 28. EIGHT FAIRY TALES FOR MUSICAL CHILDREN.....$0.75

Cinderella's Wedding March	Little Bo-Peep's Slumber Song
The Dancing Bear	Curly Lock's Waltz
Darby and Joan	See-Saw, Margery Daw
Cock Robin's Funeral March	Jack and Jill Polka

Op. 47. A PLEASANT BEGINNING AND OTHER TUNES FOR LITTLE FINGERS IN ALL THE MAJOR AND MINOR KEYS.....$0.75
(*Schmidt's Educational Series No. 19*)

The addition of rhymes makes these pieces particularly suitable for young players. Pieces in all the keys are included.

FLORENCE MAXIM

THE MUSIC LADDER.....$0.75
16 Easiest Tunes and Rhymes.

The presentation of several versions of the same tune will enable the teacher to select from an abundance of material that which is best suited to the requirements of the pupil.

THE PUPILS' LIBRARY

FIRST SERIES. Two Books. Each.....**$0.60**
35 Easiest Pieces.
(*Schmidt's Educational Series No. 43a-b*)

The aim has been to create a genuine love of music by providing selections for the player's recreation, and for the delight of his friends. At the same time the books form an admirable series of teaching pieces to be used in conjunction with any pianoforte method.

G. P. RITTER

FIRST AMUSEMENTS.....$0.75
Twelve Pieces on Five Notes.
(*Schmidt's Educational Series No. 27*)
Contains the well-known favorites *The Echo*, *Happy Child*, *First Waltz*, etc.

WARREN STOREY SMITH

Op. 15. EFFORT AND PASTIME
Book I.....**$0.60**
24 Melodious Pieces in All Keys.
(*Schmidt's Educational Series No. 38a-b*)
In use at the Faelten Pianoforte School, Boston.

ANICE TERHUNE

THE CHILDREN'S KALEIDOSCOPE..$0.60
16 Easy Pieces with Rhymes.
(*Schmidt's Educational Series No. 99*)
Attractive numbers, with words, for the youngest players.

MABEL MADISON WATSON

FIRST VISITS TO TUNELAND.....$0.75
A Collection of Rhymes and Tunes to teach the notes up and down from Middle C.

A SECOND TRIP TO TUNELAND.... .75
More Rhymes and Tunes for Little Players.

TWELVE MAGIC KEYS TO TUNELAND..... .75
Thirty Pieces in all the Major Keys.

LITTLE TALES FROM TUNELAND... .75
34 Simple Tunes with Rhymes.

SCENES FROM TUNELAND..... .75
Six Little Pieces on Five Notes.

"Miss Watson has done much towards helping to make music an interesting and greater reality for children."—Ethel Syford in *The New England Magazine*.

PIANOFORTE DUETS

MRS. CROSBY ADAMS

Op. 13. FOUR DUETS FOR TWO BEGINNERS.....$0.60

Boatman's Tune	Old Folk Melody
The Nodding Grass-Star	A Voyage

FLORENCE NEWELL BARBOUR

RAMBLES IN MUSIC-LAND.....$0.75
First Duets for Pupil and Teacher.
(*Schmidt's Educational Series No. 105*)

The Beginning of the Journey	Twilight Hour (Romance)
A Little Song	The Chase
Onward We Go (March)	Among the Fairies (Waltz)

The part for pupil and teacher alternates between treble and bass throughout the set.

CHARLES DENNÉE

Op. 18. THE CHILDREN'S FESTIVAL..$0.75
10 Easy Duets on Five Notes.
(*Schmidt's Educational Series No. 6*)

Of unusual melodic interest and contain much variety in style and rhythm. The pupil's part alternates between primo and secondo.

CORNELIUS GURLITT

Op. 178. TENDER BLOSSOMS.....$0.75
20 Easy Duets.
(*Schmidt's Educational Series No. 35a-b*)

Primo and secondo parts are written in a melodious vein, and both are interesting and of equal degree of difficulty.

THE PUPILS' DUET ALBUM

FIRST SERIES. Book I.....**$0.60**
16 Duets by *Dennee*, *Foote*, *Franke*, *Gurlitt*, *Lynes*, *Orth*, *Sartorio*, *Schytte* and others.
(*Schmidt's Educational Series No. 46a-b*)

ARNOLDO SARTORIO

Op. 400. PICTURES FROM YOUTH..$0.60
12 Melodious Duets.
(*Schmidt's Educational Series No. 58a-b*)

Excellent for the pupil who has gained slight independence in four-hand playing and is ready to take up a Primo that is not strictly the same for both hands throughout.

PIANOFORTE, SIX HANDS

(Three players at one piano)

CLOVER LEAVES

A Collection of Favorite Pieces for PIANOFORTE, SIX HANDS

Arranged by
EDMUND PARLOW

(*Schmidt's Educational Series No. 118a*)

A TALK WITH MARTINUS SIEVEKING ON THE DEAD-WEIGHT PRINCIPLE

BY HARRIETTE BROWER

(All rights reserved)

A MAN who, according to his own account, has solved all problems of the keyboard, a man who, during a dozen or fifteen years of unremitting effort, has built up for himself, a perfect piano mechanism, is truly a unique figure in the pianistic world.

Few pianists are willing to make such a claim. Even the greatest of them confess to some limitations; they admit there are some problems a little beyond their reach. The eminent Dutch pianist believes he has solved them all; he is sure there is nothing beyond his ken.

Mr. Sieveking tells us his piano method is founded on scientific principles "unknown up to the present time." The most important of these is the principle of dead or relaxed weight. But here in America, for over thirty years, we have been familiar with Dr. William Mason's exposition of the principle of relaxation and devitalization. Some of the most prominent teachers and pianists among us today were students of Mason, use his method, and are working along the lines laid down by him. They cannot forget the ease and power this principle gave to their master's playing, or his beautiful touch and tone. Godowsky is a modern master who preaches relaxed or dead weight of hand and arm upon the key. It is the vital principle of Hofman's wonderful art. A host of others have testified to its value and necessity:—Powell, Carreño, Schnabel, Leginska,—to say nothing of the Breithaupt book on weight touch.

And now we are told that the principle of dead or relaxed weight has been unknown up to the present time! What does it all mean?

Thus I mused, as I proceeded to keep an appointment with Mr. Sieveking, who has recently arrived in this country from Paris. We well remember that he toured America years ago, and proved himself a brilliant pianist and most excellent musician. I mentally resolved to settle this subject of weight touch with him the very first thing, before taking up other technical points which had occurred to me.

Let it be recorded that I came, saw,—and became convinced that here was one who has solved most of the difficulties of the technic of the piano. While it may be too much to claim that the principle of dead weight has not been understood until now, it can be truthfully stated that the famous pianist has discovered a means of imparting and applying this principle in a manner that will improve the player's touch and tone in a short time. **If his directions are implicitly followed the fingers will almost immediately become stronger and the tone increase in volume and sonority.**

His authoritative words and manner bespeak the autocrat; but a man who has spent his life in devising means to obtain a big, luscious tone, strong fingers, fluent technic, and has succeeded in a remarkable degree, has a right to be autocratic. Details of this conference will surely be of deep interest to every teacher and student of the instrument.

MARTINUS SIEVEKING

I found Mr. Sieveking in his spacious studios, a man of commanding presence, winning manner, speaking English fluently. Two grand pianos, one of foreign, the other of American make, stood side by side in the center of the music room. The French instrument had been built for his especial use; not only were the keys wider, but the whole keyboard was tilted a little downward at the back, which he explained was a decided advantage.

THE METHOD

"You want to know about my method of using relaxed weight?" he began. "I will gladly tell you. What is more, I will show you each step. Let us sit here at this piano and demonstrate as we go along." As he spoke he caught my hand by one finger and held it up to test its weight. In fact he let it hang by one finger and then by another as he talked.

"Many persons think they are using dead weight in playing, when the truth is they do not really understand the principle at all. I could mention a few pianists who use it. Godowsky does so to a considerable extent, Carreño also. It requires absolute concentration from the start, until it has become so much a part of one's being that it is 'second nature.' Its use increases the volume of tone to a wonderful degree."

All this time my hand had been held suspended in air. Now he let go of the finger, and the arm fell.

"You have an understanding of the dead weight in the arm. Now we will see if you will put it in the fingers." The second finger of right hand was placed on the key, in a firmly arched position. The other fingers were well-curved and raised, thumb was extended, the arm hanging down naturally at the side. Mr. Sieveking believes in arched hand, well-curved fingers and high, free finger action, for all technical finger exercises. He says:

"The fingers should be raised as high as possible (without strain). I insist upon this important point, as I do not believe it is ever possible to develop a fine technic without it. Sometimes the flat finger is employed by virtuosi to secure a beautiful tone, but at first the student should confine himself to the curved finger."

The second finger, resting on the key and supporting the entire weight of hand and arm, was now tested over and over, by being lifted up and then allowed to fall back on the key. Arm weight obviously increased as thought was consciously directed to this point.

"*Perfectement!* Now you see what I mean,—now you have it! With arm supported on the tip of the second finger, play a down stroke with the third finger, over and over again, always maintaining this heavy weighted feeling in the hand and arm. Of course you are familiar with the different sets of muscles which work the fingers, some of which lie on top and others on the underside of the arm.

"The extensors on top of the arm do the lifting, and as the lifting is more difficult to accomplish than the dropping or falling, we must give greater heed to the raising of the finger, that it may be done with quickness and exactness."

EACH FINGER BY ITSELF

Each finger in turn was now used as support, while the one next it was exercised with quick up-and down-movements. No weakness or bending, no hesitation in movement, no lifting except in an exactly straight line were allowed.

The stroke was made with as much power as possible.

Every player and teacher must feel the need of some quick, sure way to gain power with the right conditions. I had made my own experiments along these lines; now it was a satisfaction to find a master who had worked it out so logically.

"This is the first exercise I give to students who come to me. The second goes a step farther. As you see, the first step only employs one finger at a time; for I consider it a great mistake to play so

called five-finger exercises, at first. The only sound basis for technic is to use one finger at a time. The second step employs two fingers in legato, but always with dead weight of arm, supported on the finger tips.

"We must be conscious of this condition at all times, which means, at first, constant thinking. One should also play with each hand alone, as concentration is a most important factor of all the work.

THE PROOF

"The player who has taken the two steps, as we have just done, has already the proof of what this method will do for him. In one hour I can convince him of its benefit. With two hours' daily practice for one week, he will find his tone increased and his fingers appreciably stronger."

OCTAVE TRAINING

"What about octaves?" he was asked.

"We need strength and rapidity for octaves. These do not come from the wrist. I have special training for octaves. They call in requisition the muscles of the forearm; the wrist is but the hinge between the hand and forearm. With the hand in arched form, the playing fingers curved and firm, we cultivate each finger in turn, with quick hand strokes on the key. Of course, for octaves, the first and fifth are most important, though the fourth is used on the black keys. But, as I said, all fingers can come in for this sort of training.

"At first use four repetitions on each key, and play up and down the keyboard, at least four octaves. Use the diatonic and chromatic scales. After these have been learned, I have invented various exercises which employ octaves, sevenths, sixths, fifths, and fourths, in this way," and he ran over these forms with the greatest ease and speed.

TRAINING THE THUMB

"I have also many exercises for the training of the thumb in scale playing. Here is the first one:

"With the second finger on a black key and the arm weight suspended on it, the thumb passes from the white key on one side of it to the white key on the other side of it, the thumb describing an arched movement from one key to the other. We also train the thumb to pass under other fingers.

"Have you any special counsel to give in the matter of memorizing?"

MEMORIZING

"In the first place, try to have the pupil learn something of harmony; even a little is helpful, it is better than nothing. It will enable him to analyze the music so that he will have some little idea of what he is trying to play.

"Take a small portion of the piece, two measures at a time, learn one hand and then the other. Know them thoroughly, so the notes can be recited or written. Thus one can think out the piece away from the instrument.

"I have had and have now students of great talent and attainments, studying with me, several of them winners of the *premier prix* in Paris. They all testify to the benefits received from careful study of my exposition of the principles of dead weight. I have embodied these principles and exercises into a system. The work will shortly be published." Mr. Sieveking took a book from the table and asked me to look it over. The text and illustrations were all made by his own hand, and were written in clear, elegant English.

"This is my life work," he said; "I want to aid the teachers and students; for everyone must learn these principles. I have come to America for this reason, leaving my home and family in Paris. I intend to return after accomplishing my mission here. Oh, yes, I shall concertize in America. But I especially desire to compose. Here is a little piece, a *Nocturne*, which I began in Paris, and finished in New York. Would you like to hear it?"

He began to play, and I was soon absorbed in listening to the beautiful quality of his tone, so big, so sweet, and penetrating. Once he turned to me,—"Do you like it—it's nice, isn't it?" After a little he broke off.

"I really cannot play on an ordinary sized piano, and the keyboard to my French piano is being repaired. On this one my fingers seem to get between the black keys, and I can't get them out." And he held up his wonderful hands, surely the largest, most muscular and perfectly developed among piano hands.

"You see that photograph of two hands?" pointing to a picture on the wall. "One is Rubinstein's and the other my own, side by side. They are almost identical. Rubinstein's fingers had cushions on the ends. I believe these are necessary to play the piano successfully.

"Oh, yes, I use the metronome; you see I have one of extra size standing there."

The Holland master is a thorough believer in hard work. "I condemn my pupils to hard labor," he says.

"Technic is brains, plus the rightly trained muscles and nerves. To make a technic, to keep it up, and then constantly to improve it, should be the object and aim of every pianist." And he adds, that the technic should be gotten in the shortest time possible for good work.

MAKING THE SUMMER PAY

Two classes of teachers of music should be much interested in the matter of summer rest and recreation and whether one should use part of the period for special work or study.

Some one will say that a teacher's work is so exacting, so wearing upon the nervous and physical energies, that a long and complete rest is essential to put him again in good condition. There is truth in this claim.

But there is another side. It is in the large cities, where competition is keenest, that the wear and tear on the teachers is greatest. But the teaching season is short, from some time in October until early in June. It is contrary to the teachings of physical culture and health building for one to have a rest period of approximately four months. And it is also wasteful from a financial point of view. Here is what a prominent teacher in a large conservatory says:

"During the fifteen years I have been spending at a certain camp I have always put in a few hours daily in writing (composing, editing, arranging, and studying teaching material, etc.) My friends used to protest when I would not set aside my working hours to fish, boat, swim, or tramp. But today I am sure I am better physically for mingling work and play. And I also have the satisfaction of knowing that the work I did adds about $1000 to my annual income, mainly in royalties."

The other class of teachers is composed of those who find it impossible to lay aside their work during a winter season to take up special or graduate work. Everyone knows that with the advances made in pedagogic science, and with the new ideas in music as well, the teacher must, to preserve what he has and to maintain his professional standing, "brush up," to use a common phrase, by spending some time in study.

The summer is the logical and most satisfactory time for such study. If you have not hitherto devoted a part of a summer to special study in normal methods and strengthening your repertoire, make up your mind to do so. You can find good teachers within easy distance of where you live, some in the city, some in the country, others in the mountains, and still others at the seashore.

Have you made your collections for lessons due? Be businesslike at the close of the year.

MUSICAL GAME OF ANSWERS

BY SAMUEL RICHARDS GAINES

Q.—Who dealt out some of the most beautiful music of the 15th century?

A.—Arcadelt.

Q.—What modern Sir Walter resembles a cockatoo?

A.—Sir Walter Parratt.

Who was Joe Green?

Giuseppe Verdi.

Who was the dean of the Neo-Russian School?

Boro*dine*.

Whose "auntie" determines the tempo of so many compositions?

Andante.

What musical instrument is used in the synagogue?

The jew's-harp.

There are *various* makers of violins famous in musical history. Which one stands supreme?

Stradivarius.

In whom is classic musical *art* most natural and charming?

Mozart.

What composer was sensitive about his name owing to its bibulous suggestion? What was his original name, and what his subsequent name?

Jacob Beer. Giacomo Meyerbeer.

Whose name and fame would England be least likely to *sell?*

Purcell.

What early American composer of church music suggests secret societies generally?

Lowell Mason.

What man in musical history is most identified with footwear?

Schumann.

What modern composer, must, at all cost, be kept from the door?

Wolf.

Who is the fop of modern French music?

D'Indy (dandy).

What form of music is most in vogue during Lent time?

The canon.

What composer, with the name of a church dignitary, wrote the music for the most beloved song in the English language?

Bishop.

What ancient musical instrument is still mentioned affectionately despite its untruthfulness?

The lyre.

What English conductor and composer has been dubbed "Westminster Bridge"?

Sir J. Frederick Bridge.

A *brook* flowed on, so stately and pure.

It flows for us now, and will ever endure.

Bach (German for "brook").

He is a Saint, in name at least.

Saint-Saëns.

As chicken, how would a famous Italian woman singer be served?

Patti.

What selection, entirely of masculine gender is sung in churches?

Hymn.

Which way do many go, when they go to buy a piano?

Steinway.

Socrates was the great quizzer of ancient times. He taught many a lesson to his followers by means of the questions he asked.

Music teachers should make sure that their pupils know their lessons thoroughly. Determine this by asking questions, and encourage pupils to question you. It will do you good.

VOLFGANG AMADEUS MOZART (1756-1791)

(THE IDEALIST OF FORMAL BEAUTY)

BY FREDERICK H. MARTENS

N a day of uncontrolled musical license, when such catch words as "verism" and "futurism" serve to justify any extreme of cophony, and an iconoclast like Arnold Schönrg may dispense with all accepted ideas of tonality, nsonance, and form, retaining only rhythm and lor for working use, on the plea that "his music a mere emanation of himself, which has no relaon to the receptivities of its auditors," it is a relief revert for a moment to the compositions of usic's most perfect classicist, Mozart, the idealist formal beauty. Their serene charm and exessiveness, their rejection of mere anti-climax d effect for effect's sake, offer a restful antidote to e cataclysmic dissonance we are so often asked admire.

The activities of Mozart as a symphonic and eratic composer, as a writer of chamber music d religious choral works, however, do not come thin the scope of this article, which is primarily ncerned with Mozart the pianist and author of e sonatas, concertos, and fantasias; the exponent those ideals of absolute beauty in structure and velopment which permeate his compositions for e piano, and which found practical expression in s playing.

Mozart, all his life long, was *par excellence* a yboard virtuoso. He may be called the most mous eighteenth century exemplar of the genus nfant prodigy," whose name was afterward to come legion. And if it be true, as is asserted, at his father Leopold Mozart considered himself orally bound to further in every manner the velopment of his son's undoubted gifts, the fact at the latter was on the way to play legato thirds the clavier at the age of three, must have been lm to his father's conscience.

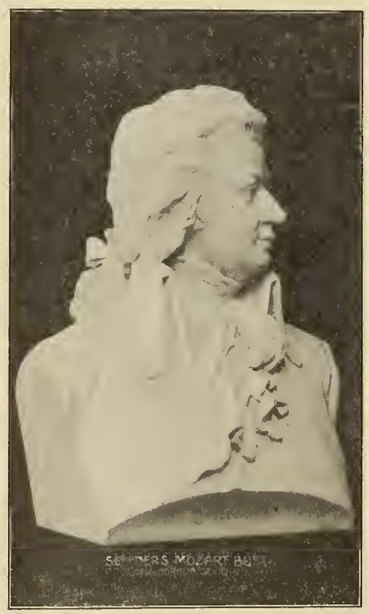
Yet the strict musical education given him by this ern parent did not affect the child Mozart's happy sposition. He was a genuine boy, sensitive, wever, to a degree—in this respect the child was ather to the man"—and anecdote bears witness his entire unaffectedness. There is the pretty ory of his slipping and falling as he trod a waxed rquet-floor in the Vienna *Hofburg*, where he ayed at the age of six for the Empress Maria neresia; and how, of the two arch-duchesses standg near, only Marie Antoinette ran forward and lped him up; and of his boyish promise to marry her recognition of her kindness. And an even onger testimony of his straightforward way of eaking to the great of the earth is offered by his dignant remark, when at Versailles, in 1763, me. de Pompadour, who was heavily rouged, used his kiss out of regard for her complexion: Who is she not to want me to kiss her, when I've ssed the Empress herself!"

It was this natural sensitiveness, this receptiveess to the impression of the moment, which later as to express itself in the music which has endured our day. And joined to this passionate emotional nse, and persisting despite physical ailment, was a rtain artistic sanity which in a measure explains e exquisite poise and balance of his every tonal rase.

His development as a virtuoso pianist, princilly in the interpretations of his own works, is not sy to trace with exactness. He was gifted with a tural finger facility which, cultivated from earliest ildhood, was matured in the constant habitude of ncert performance under all imaginable condions, as he himself passed from youth to manhood. letter from Paris, addressed to a German prince in 1763, speaks of "his overcoming the greatest difficulties with little hands that could barely stretch a sixth" and asserted that he could render "the technically most pretentious composition on a keyboard covered with a cloth." And at the time Mozart was no more than seven.

Though Mozart laid the foundation of his keyboard virtuosity at spinet and clavichord, he was quick to realize the superiority of the piano, especially as he played almost as frequently in hired halls as in the music rooms of the Viennese and Italian aristocracy. And, as Bie says: "he had to bring into use the special features of the instrument he adopted, the rippling scale-passage, the variety of tone, the *forte*, the *pianissimo*, the hundred gradations between these extremes, the altogether new possibilities of sentimental expression which were now at the disposal of the public performer."

The Viennese piano at its best, made by the celebrated Stein, with its "Viennese mechanism" (the



MOZART, FROM SEIFERT'S BUST

hammers playing in brass sockets) is the instrument associated with Mozart's playing after 1771. And Philip Emanuel Bach's *Essay on the True Method of Playing the Clavier*, which Mozart had studied, with its insistence on the use of the thumb and the consequent development of the technic of fingering in the modern sense of the word, together with the light responsive action of the Stein piano go far to explain Mozart's use of purling scales, graceful ornamental embellishment of the melodic theme, and the restoration of movement to the accompanimental chord by breaking it up into arpeggiate figurations. This dominance of the brilliant, the virtuoso in the style of his sonatas would tend to make them old-fashioned, were it not for their genuine interest of thematic content, and the deeper feeling which pervades their more serious movements.

Mozart's touch was exceptionally sweet and drew a full round tone from the keys. The testimony of his contemporaries proves that he played his own compositions and desired others to play them, not too rapidly, but rather with good taste and much expression. In this connection we might quote his strictures on the Mannheim composer-organist and clavier-player, Georg Joseph Vogler. Vogler visited Mozart when the latter was in Mannheim in 1778. Mozart says:

"After dinner he had two of his claviers brought, which were tuned together, and also his tiresome engraved sonatas. I had to play them while he accompanied me on the other clavier. At his insistent request I also sent for my sonatas. Before dinner he had murdered my concerto, reading it at sight. The first movement he took *prestissimo*, the Andante *allegro*, and the Rondo *prestissimo* indeed. . . . It was not to be borne, because I could not venture to say to him: Much too fast. The art of reading *prima vista* lies in playing a piece in the correct tempo, as it should be played, executing all the notes, appoggiaturas, etc., with proper expression and taste, as they stand, so that the hearer may think that he who plays it composed it as well."

When he played he strictly observed the time; though in his adagios the right hand moved in *tempo rubato*, the regular beat of the measure in the left was never interrupted. The wonderful dexterity of his left hand when the composer played in Naples, at the *Pieta dei Turchini* Conservatory, in 1769, was seriously ascribed to a magic ring which he wore on his little finger. He was obliged to take it off before he was able to convince his listeners that he was not dependent on magic for his virtuosity. The fact that the left hand usually has a good deal to do in Mozart's piano music corroborates this legend of his skill.

In 1781 he won the palm in a contest for pianistic superiority with Muzio Clementi, the author of the *Gradus ad Parnassum*. This was in one of those tournaments of free improvisation in which the contestants, turn and turn about, tried to outdo each other in the development of some given theme, varying it in melody, harmony and rhythm, and ornamenting it with a brilliant *fioriture* embroidery of scale and passage. In this improvisational playing Mozart was inimitable, and showed his artistry as a virtuoso beyond all chance of cavil.

And these ideals of grace, of clear-cut rendering and exquisite poise which distinguished Mozart's virtuoso playing were, after all, but the reflex of the same qualities in his compositions. Yet in the latter formal beauty is a vital part of the texture, not a matter of embellishment. His *andantes* and *adagios* excel in a quality of tender charm, an almost religious sensibility; his *allegros* and *prestos* share stylistic purity, simple directness, and formal correctness. Whether it be the sonata in C minor, contrapuntally conceived, full of passion and with a Beethovenian breadth, the expressive sonata in A minor, whose every least part affirms its symmetry with some other, and which shows affiliations with the French dramatic music of the time, or the last the composer wrote (1789), the sonata in D major, in each "the quest for a more scholarly style seems to anticipate that taste for beauty in the abstract and more than earthly grace which were to lend *The Magic Flute* the magic of eternal youth."

And it is not too much to say that this Mozartean ideal of formal beauty, so admirably sane from the artistic standpoint, may still be considered a potent influence at a time when iconoclasm would throw all form and tradition aside as incompatible with individualistic development.

A VICTOR HERBERT PROGRAM

A PROGRAM made up of compositions by Victor Herbert was given at the Newtown (Borough of Manhattan) High School, April 14, under the direction of Mr. C. I. Valentine, who is in charge of the music in the school. Mr. Herbert was present and addressed the pupils on the advantages of learning while in youth to appreciate the best in life, particularly in music.

This program is one of a series presenting works by American composers, given by Mr. Valentine.

Literary Methods as Applied to Music Study

A Method for the Appreciative Study of Piano Music, Adapted Either to Individual or Class Work

BY CLARENCE G. HAMILTON, A. M.
Associate Professor of Music, Wellesley College

VI

This series of articles, begun in THE MUSICIAN for January, 1916, forms the basis for a thoroughly practical course in the Appreciation of Music, a subject which is now receiving much attention, and for which no adequate text-book is at hand. Our readers will find Prof. Hamilton's suggestions helpful and well-planned.—Editor, THE MUSICIAN.

TYPE IV: THE ÉTUDE-LYRIC

FOREWORD. Some compositions contrast the brilliant or flowing style of the étude with passages in the style of the lyric song. Presenting, as it does, excellent opportunities for variety of color treatment, this type appeals strongly to writers of the romantic schools, who make use of it in short compositions termed by such names as Impromptu, Ballade, Moment musical, or Nocturne. A popular form for these is the *A B A*, often with a coda, and generally with modifications of *A* upon its second appearance. Sometimes the étude division precedes the lyric, and sometimes the reverse order is observed.

Each of the distinctive divisions may constitute a complete little piece in itself, which could be studied under type II or type III. It is better, however, to treat the two styles together, in order that their bonds of union may be appreciated.

A: FORM

1. Note the large divisions. Which of these are essentially lyric, and which are étude in style?

Melodies may, of course, be involved in the étude divisions; and, conversely, figurated accompaniment may attend the lyric portions. In either case, however, it should not be difficult to decide which of these factors dominates the situation.

2. Are the two kinds of passages distinctly separated, or are there connecting devices? If the latter are present, in what do they consist?

Often the composer guards against an unpleasantly abrupt change from one style to another either by adding a connecting passage, or by altering the mood of an ending until it approaches that of the division which follows.

3. Does each principal division comprise sub-divisions? If so, what are they?

As was the case with the dance type (No. 1), each division may take the form *A B*, or *A B A*. Sometimes, however, a division is purely transitional in character, assuming the unit form.

4. Which of the two styles seems to be first in importance?

The fact that one of the styles is heard more frequently or for a longer time than the other does not necessarily prove that it is of primary importance. A brilliant running passage, for instance, which precedes and follows a short song-part may serve mainly to set off the latter, just as an elaborate frame may enhance the beauty of a small picture.

B: MOVEMENT

1. What is the movement of each style, and how are these movements related?

Since the unity of such a composition depends upon bonds of both similarity and contrast between the two styles involved, the lyric and étude divisions should appear to supplement each other, presenting two aspects of the same general thought.

2. Does the meter change, and if so, how?

Radical changes of meter do not often occur in a short composition, although a new meter is sometimes implied for a few measures.

3. How do the varying styles affect the tempo?

We expect to find more flexibility of tempo (*rubato*) in the lyric than in the étude part.

4. How do the rhythms of the two styles compare?

C: SUBJECTS

1. Sketch the first phrase of the principal subject of the étude and of the lyric divisions, combining the rhythmic and melodic outline of each.

It is possible to indicate both the rhythmic and the melodic outline at the same time by writing the dots and dashes which represent the note-lengths so that their relative positions above or below each other may at the same time suggest the changes in pitch.

2. In the étude divisions, what is the nature of the technical figure or figures?

That is, what kind of technical work do they require of the player?

3. Does the lyric element enter into the étude divisions, and if so, how?

Sometimes a lyric melody is added to the étude section upon its second appearance, when the technical figures assume the office of an accompaniment.

4. What is the register of the melody in the lyric divisions, and how does this register affect the mood?

Melodies in the upper register tend toward lightness and brilliancy. Those in the middle register are naturally more soulful in character, while those in the bass are profound and dignified.

5. In the lyric divisions are there contrasting melodies or melodic fragments?

D: ACCOMPANIMENT

1. Where is the accompaniment located in each division?

That is, what part of the piano does it occupy, and how does it lie, relative to the principal parts?

2. Of what is the accompaniment composed?

3. What is the degree of importance of the accompaniment in each division?

Sometimes the accompaniment is a mere shadowy background, serving mainly to beat out the time or to furnish an harmonic framework. But again it may become an emotional factor that adds tenfold lustre to the melody which it supports.

4. How does the harmony of each division compare with that of the others?

The possibility of employing plain harmonies for one style and more emotional ones for the other, or of signalizing each style by its peculiar key furnish further opportunities for contrast in compositions of this type.

E: STYLE

1. What are the intellectual values of each style?

By intellectual values we mean the factors which appeal most directly to the intellect of the hearer, such as good proportions, clever development of themes, skill in the use of imitative passages and logical cadences.

2. What are the emotional values of each style?

By emotional values we mean those factors which especially affect our emotions, such as strong accentuation, syncopated rhythms, sensuous or dramatic effects of pitch, contrasts of *piano* and *forte*, chromatic chord progressions, and lengthening or abbreviation of phrases.

3. Point out the climax in each division. Does one climax rise above all the others, and if so, which one?

In compositions of a serene nature the climaxes are not so obvious as in those of a more stimulating cast; hence they are sometimes neglected by performers, with flat and uninteresting results. A piece of music without a centralizing climax is like a body without a head.

4. What features does the piece possess which would naturally tend to make it popular or the reverse?

Out of the vast number of piano pieces that are constantly coming from the hands of the publishers, only a few possess qualities which secure for them a wide circulation. Some distinction of style, some novel turn of musical speech, or even certain figures which prove useful for teaching purposes may bring a piece into general favor; while obscure or commonplace expression, tiresome length, or irritating demands upon a player's technic may correspondingly consign the piece to speedy oblivion.

5. What is the comparative value of the various factors in this piece?

Some compositions are particularly noteworthy for their melodic flow, others for their rhythms, harmonies, etc. Point out any of these factors in the piece which are conspicuously interesting or dull.

6. Compare this with a similar composition.

F: COMPOSER

1. What is the nationality and musical record of the composer?

2. In this piece, what traits are purely general, and what ones are national or personal?

Our musical system is built upon balancing phrases, defined by conventional chord progressions and cadences which are easily recognized, in whatever form they appear. When we hear effects which seem quite out of the ordinary, these can, as a rule, be traced either to some national influence or to the peculiar ideas of the composer himself.

3. Quote any criticism of the composer or his works that you can find which has a bearing upon this piece.

Magazine and newspaper articles, dictionaries and books may be drawn upon for such material.

The illustrations for this article will be published with analysis in THE MUSICIAN for July. They are Rheinberger, *Ballade* in G minor, Op 7, No. 1; Chaminade, *Les Sylvains*, Op. 60.

POOR PROGRESS

BY SAMUEL RULON-FOSTER

Is your child progressing slowly? Does he read poorly, and grasp new ideas with difficulty? Does he stumble and stutter, and go up in the air?

He has a disease. It is called *Lack concentrationitis*. It is a poisonous disease, fatal to the musical system. There is no cure. It is like writer's cramp, you have to get rid of the cause.

A man once had a pair of shoes, which rubbed his feet. He tried olive oil, and lotions, and salves all of which did no good. Finally he decided to go and see a doctor about it. The next day the shoes were nestling snugly in the ash can.

Get rid of the cause. Maybe an open window claims part of your child's attention, or perhaps he is practising with his right eye on the piano and the left eye on the clock. Then again someone may have a habit of breaking in and talking to him or showing him something.

If a firm employs a superintendent and he fails to hold up his end, is a detriment, rather than help, to the business, he is promptly removed.

It's up to you to make good progress.

THE JUDGES IN "THE MUSICIAN'S" PRIZE CONTEST FOR PIANO COMPOSITIONS

Ernest R. Kroeger

Constantin von Sternberg

Hamilton C. Macdougall

The Musician Prize Competition for Piano Music

TO STIMULATE the composition of music for the piano THE MUSICIAN offers the following prizes on conditions set forth below:

One Prize of $100, and royalty of 10% of the retail price on every copy sold in sheet form
One Prize of $75 Two Prizes of $50 each Four Prizes of $35 each

CONDITIONS

1. *As to Grade:*
Compositions must not exceed Grade III (or advanced III) in difficulty in a scale of *seven* grades.

2. *As to Character and Style:*
They must be melodious and attractive, and have educational value, that is, useful for teaching purposes. They may be in dance rhythm, but mere dance music is not wanted. They may be descriptive or poetic in style, in such forms as the Intermezzo, Nocturne, Romance, Song without Words, Serenade, Idyl, etc.

3. *As to Manuscripts:*
Only manuscripts clearly written will be considered.

4. *Who may Compete:*
The contest is open to residents of the United States or Canada, with no restrictions as to nationality or sex.

5. *How to Compete:*
Address your manuscripts to MUSICIAN PRIZE COMPETITION, care of Oliver Ditson Company, Boston, Mass. Compositions submitted must not bear the composer's name, but, instead, a *nom de plume* or other distinguishing mark or motto, and be accompanied with a *sealed* envelope on the outside of which shall appear the *nom de plume*, etc., inside the composer's name and address. Competitors may submit more than one manuscript.

6. *When to send Manuscripts:*
No manuscripts will be considered which are received after October 2nd, 1916. The decision of the judges will be announced in THE MUSICIAN as soon thereafter as possible.

7. *The Judges:*
Ernest R. Kroeger, St. Louis; Prof. H. C. Macdougall, Wellesley College, and Constantin von Sternberg, Philadelphia.

8. *Publishing of Prize Compositions:*
The compositions to which prizes are awarded, with the exception of the one awarded first prize, shall become the sole property of OLIVER DITSON COMPANY, upon payment of the awarded prize. The OLIVER DITSON COMPANY shall have the option to purchase compositions to which prizes are not awarded at the usual current prices for piano numbers of similar grade and character. The prize compositions shall be published in THE MUSICIAN.

Oliver Ditson Company will not be responsible for loss of manuscripts in the mail.

We want you to participate in this contest if you have Musical ideas.

MUSIC TEACHERS' NATIONAL ASSOCIATION ACTIVITIES

THE success of the Music Teachers' National Association meeting at Buffalo last December, and the rapidly growing interest in the work of the Association, has led to a number of new plans for the coming year.

The officers for 1916 are: President, J. Lawrence Erb, University of Illinois, Urbana, Ill.; Vice-president, Adolf Weidig, Kimball Hall, Chicago, Ill.; Secretary, Charles N. Boyd, 4259 Fifth Avenue, Pittsburgh, Pa.; Treasurer, Ralph L. Baldwin, 81 Tremont St, Hartford, Conn., and Waldo S. Pratt, Editor, 86 Gillett Street, Hartford, Conn. Executive Committee: The above officers with William Benbow, Buffalo, N. Y., Kate S. Chittenden, New York City, Rossetter G. Cole, Chicago, Ill., O. G. Sonneck, Washington, D. C., Calvin B. Cady, New York City, D. A. Clippinger, Chicago, Ill., Charles H. Farnsworth, New York City, and Francis L. York, Detroit, Mich.

The thirty-eighth annual meeting will be held at New York City, December 27–29, 1916.

At the Buffalo meeting it was decided to elect a group of Counselors, to aid the Executive Committee in its work, and the following were chosen: Rossetter G. Cole, Chicago, Ill., J. Lawrence Erb, Urbana, Ill., Charles H. Farnsworth, New York City, Peter C. Lutkin, Evanston, Ill., and Waldo S. Pratt, Hartford, Conn.

President Erb has appointed several committees to make a canvass of the situation in their particular line and to make a report at the annual meeting. They are also encouraged to suggest readers of papers along their lines for the annual meeting. The Committees so far appointed are:

COMMUNITY MUSIC, Miss Chittenden, Chairman, Messrs. Pratt, Benbow, Cole, and Lutkin.

STANDARDIZATION, Mr. Farnsworth, Chairman, Messrs. Cady and Weidig.

PUBLIC SCHOOL MUSIC AND ACCREDITING, Mr. Baldwin, Chairman, Messrs. York and Clippinger.

By a recent vote of the Music Teachers' National Association, a limited quantity of the reserve stock of its Proceedings is now offered at reduced prices, including postage, as follows: All ten volumes at $1.10 each, $11.00. A corresponding reduction in price is made for smaller numbers; single volumes are, as heretofore, $1.60 each ($1.70 to points beyond the Mississippi).

This offer is made primarily to those who already have one or more volumes, and who may wish to complete their sets or to present an entire or partial set to friends.

The above special terms apply only to orders that are made direct (not through booksellers), with remittance in full to Waldo S. Pratt, Editor, 86 Gillett Street, Hartford, Conn.

ROSENTHAL ON MEMORIZING

YOUNG pupils often wonder how to go about memorizing a repertoire. Some lay stress on frequent playing of a composition, others claim that the player should analyze thoroughly the various details of a composition, cadences, harmonies, phrases, etc., and approach the memorizing from the intellectual side. Rosenthal, the great virtuoso, says:

"I have no method of memorizing. After playing a piece over a few times I know it. The memorizing process is not conscious. Practising for the sake of memorizing is not necessary with me. Upon knowing a work with the brain I also know it with the fingers. I may say that the shorter pieces are acquired after being played two or three times."

It is probably true that the average student should use both methods, namely analysis of a composition, phrase by phrase, accompanying this with as frequentplaying of phrases and sections as may prove necessary.

THE MUSIC TEACHER AS A PLANT

How to Give This Plant Actual Community Value

BY THOMAS TAPPER

I

MUSIC teaching has been described as a professional activity that falls to pieces in June and attempts to reconstruct itself in October.

Why should a public service so useful and necessary, so valuable and essential in the national life as music teaching, close its office and go out of business for three or four months in the year?

There is no reason why this should be so. The aim of this article is to suggest ways and means of keeping busy when it is hot, if for no other reason than to make us forgetful of the temperature.

Business men who handle material things can easily take account of stock. They merely count the units of this thing and of every other thing and that gives the statement as of today. It is harder for the teacher to go over his stock in trade at the end of the year, say in June, and to put a value on all his terms. And so, few try to do it, though it is worth while.

Thus the Community of Self-Interest instead of the Community of Other-Interest arises for the moment.

A manufacturer said to me recently that all his workers, unskilled as well as skilled, could understand the word Plant as applied to the entire manufacturing establishment. They understand, he says, why the Plant must be kept in first-class condition. Hence such words as the following are quite familiar to them: Upkeep, Overhead, Material, Equipment, Supply, Use, Deterioration. "But," he added, "I cannot make one out of fifty of them understand that he is himself a Plant."

"And yet," he went on, "he should apply to himself the operations of these very terms. He should watch his Upkeep and Overhead. Like our mill he must be properly equipped for his own work. His Time, Materials, and Supply must be adequate. His Use of himself must be justified by results and must not end in Abuse. To offset Deterioration he must study tissue repair and replacement until he knows his Energy of mind and body as well as I know the power plant of my factory."

Let us submit then to the music teacher that he is a Plant

As a Plant he consists of a mental and physical equipment, which is governed by the Superintendent (his Inner Self). The Plant is located, let us assume, where it can best do its business. Upkeep, Waste, Repair, and so forth, are carefully considered. The Plant is busy to a profit. Hitherto it has run eight months in a year. Now it is to run twelve months.

(The analogy between the personal Plant and the manufacturing Plant should be worked out for illumination.)

PRELIMINARY EXAMINATION

It may be best to look at the Plants themselves after the following manner to determine whether Forethought or Chance is superintending the operations. Here is a Plant established to produce small findings in the metal trade. Before it was built, the owner studied the project in this way:

1. PRELIMINARY: From my past business experience I know that the small goods which I propose to manufacture will pay. I am familiar with the market, the supply, demand, cost, and profit.

2. I am going to set up a shop because I know how to run it and make it pay.

3. I shall build it in the town of B——.

4. The land I own there will permit the growth of the shop to three times the floor space of the building I shall first put up.

5. Supplies can be delivered at the shop at the lowest cost.

6. There is every facility for shipping manufactured goods.

7. Labor is plentiful.

8. A liberal wage scale can be established and still leave a safe margin for profits.

And so on. For months the owner worked out his plans, considering every possible contingency. He tested the location and every other factor until he knew that to begin operations in the town of B—— was justifiable. There were no long hauls, no hill between factory and railway. There was plenty of power and a good municipal lighting system.

So, the undertaking was launched, and because the author of it knew his business from A to Z the plan succeeded.

I have dwelt upon this operation (which is not musical, but which has the orderly beauty of music) because it shows that a highly successful Plant in business is the creation of an accurate designer. It does not just grow up. It is not an accident, a come-by-chance, or a piece of luck.

It is the logical result of logical thinking.

II

Anyone could finish this article because the line of comparison is self-evident. To make it easy to handle, however, let us present the facts to ourselves in question form. By regarding each question worth a maximum rating of ten, we can get our average.

AS TO THE MUSIC-TEACHING PLANT

1. Is my location favorable to my profession?
2. Could I do more in this community if I desired to?
3. Is my purpose as a teacher clear to me? Have I an object?
4. If I knew more, could I secure more business?
5. Am I still learning, that is, increasing my equipment?
6. Am I prepared so to give lessons that the greatest benefit and satisfaction results to the pupil?
7. Is my physical Plant, my teaching room, well located? Hard or easy to reach? Pleasant to enter?
8. Is my equipment adequate?
9. How much equipment that I own do I never use?
10. Have I an Ideal as to a teaching room and does mine come up to that standard?

AS TO THE YEAR'S BUSINESS

1. How much business have I done in the past year?
2. How does that compare with previous years?
3. Am I planning to do more next year?
4. On what grounds do I propose to make the increase?
5. Have I rendered the best service to every pupil?
6. Have I lost business during the year? Why?
7. Do I merely want more money next year, or do I want to give more service?
8. Am I inspired by an Ideal of Attainment for each individual pupil?
9. Have I given just return to the community for the business it has given me?
10. Does criticism make me angry or thoughtful?

AS TO NEW OPPORTUNITIES

1. What have I learned from the past year's work?
2. What new points came up that I have not yet mastered?
3. Along what lines should I strengthen my equipment?
4. Would an expenditure of time and money for lessons during the summer make me a better teacher next year?
5. I graduated ten years ago. Have I kept abreast of education since I left school?
6. Could I graduate from that same school now?
7. Am I a teacher of ten years ago, or of today?
8. Why do I shiver when some one says "Scrapheap"?
9. Am I fairly well up on current musical events?
10. On what basis can I be sure to be a going concern for a long time?

AS TO UP-TO-DATENESS

1. When and where was Claude Debussy born?
2. Name two recent works by Richard Strauss.
3. Who wrote *Maru*, *Mona*, *Boris Godounoff*?
4. Of what nation is each of these: D'Indy, Glazounoff, Massenet, Nedbal?
5. Who is Enrique Granados? How did his death occur?
6. What are some of the best recent text-books in my specialty?
7. Who are the leading violinists, vocalists, pianists now before the public?
8. Who are these: Elman, Dufau, Gabrilowitsch, Hinshaw, Bantock, Taylor?
9. What are five of the most significant recent operas?
10. What is the most significant musical experience that has befallen me these twelve months past?
11. (Extra) Why do significant experiences befall me so rarely?

One can hear the chorus exclaim, "What a mean lot of questions!" Truly, these are not for the purposes of twilight revery or Oriental introspection. They are to furnish directions for practical stock taking. Anyone can make a better lot of queries than these. The main thing is to apply them.

Are we being buried in the Potter's Field of our Indolence long before our time? Or, are we taking deep breaths and pushing energetically on through the loitering crowd?

III

This last question about the loitering crowd will furnish the material necessary for the Coda:

The Community of Self-Interest is not of selfish interest. There is a wide and significant difference between them. What is selfish may not be best for self or others. What is for best self-interest is always best for other interest as well.

So, if there is no water to run the mill in the summer, let us see if it isn't worth while to study the Plant, the Customer, and the Shop-keeper. Let us try to find how to do more and better business, more and worthier service; to live more joyfully and happily, and to pass along the secret to others.

Perhaps, after all, the four months of stock-taking are the most profitable of the year.

FROM THE REPORT OF THE NEW YORK PEOPLE'S MUSIC LEAGUE

ABOUT one hundred and fifty concerts were given in public schools and in Cooper Union by the People's Music League during the season 1915-1916, exclusive of the many concerts given by the musical organizations connected with the League.

The plan followed by the Program Committee in placing these concerts is to select schools in congested sections of the city where the love of music is most evident and the ability to pay to hear it is lacking. At about twenty such music centers free concerts are given monthly, rather than scattering the concerts all over the city—one evening at one school and another evening of music in a different locality. Such promiscuous placing of concerts would merely serve to give a neighborhood

ie evening's enjoyment, the effect of which would only transitory.

The plan of the People's Music League is to imulate the interest in and love for music by giv- g at regular intervals concerts of good music— peratic, national, orchestral, and folk—with ex- llent artists whom we are able to pay a small sum. this manner the musical taste of a neighborhood trained and improves from year to year. This shown by the nature of the requests for music hich the audiences wish to hear at their concerts w as compared with their requests in former ars.

It is the cumulative effect of good music on the thetic and social lives of the people which is so luable. It is to this end that the People's Music eague is directing all its energies.

UILDING A CHORAL SOCIETY IN THE COUNTRY

An article in The Musician for March in so any respects resembles my experiences of the st winter that I relate them with the hope that ey will help others.

Fate decreed that I should be "set down" for y summer vacation in a beautiful country town Connecticut nestling among the hills, with blue ies overhead, green fields and flower-bordered ads underfoot.

Surrounded by relatives and friends, with whom had become acquainted at previous visits, e short vacation was nearly over when there me a surprise.

For some time we had dreamed of having a little me in the country to go to in the summer, event- ally to live there permanently. Therefore we de- ded to rent a house and so be on the spot to secure small "farm" if we should chance to hear of one. Thus, instead of going back to the city, I found yself and sons domiciled here.

My husband being an organist and a singer, and yself a singer, we soon found ourselves in demand assist in the choir. Every Sunday afternoon ring the summer there was a concert at "The ake," furnishing a diversion for the visitors and wn people as well, by a band composed of about enty-five young men, amateurs of course, who ay remarkably well.

As the days flittered away. and life settled down r the autumn and winter, I discovered that while was happy, I missed the musical environment of e city. The round of concerts, recitals, and era ceased, no more Oratorio Society, of which I d been a member, no choir concerts.

In my lonesomeness and through my desire to do mething, I conceived the scheme of forming a ging society, feeling sure that there was material ough to do some good work. At a sociable held the Town Hall I made my desire known with the sult that a committee was appointed to ascertain e sentiment of the people regarding it. After a ek the committee reported great enthusiasm and a hearsal was called the following Thursday evening, th an attendance of forty-three, a large number. During the winter this number dwindled so that our concert in March, which closed the season, e chorus numbered twenty-seven, but the parts ere fairly well-balanced. At each rehearsal we d some practising for the benefit of the choir. Thus, our work progressed. Quite a number re, I fear, skeptical of the result, but I insisted at with attention, patience, and hard work we uld succeed.

Behold! my propheey came true.

In the face of one of the worst snowstorms of the inter we had a good sized and enthusiastic audience. he Band, in uniform, played our overture and ale. The program consisted of choruses, solos, ets, male quartets, and a very talented reader. young lady and gentleman (violinists) furnished violin obbligatos and assisted the pianists with the choruses. Some of our numbers were:

Choruses, *O hush thee, my baby*, Sullivan; *Sweet and low*, Barnby; *Three blind mice* (round) and the *May song* (from *Joan of Arc*) by Gaul; duets: *Barcarolle* (from the *Tales of Hoffmann*), *Carry me back to old Virginy*, soprano (as sung by Mme. Alma Gluck) with the full chorus humming the refrain; *Listen to the mocking-bird*, soprano, the refrain being whistled by two young people. These, together with other charming numbers made a complete program of fourteen numbers.

It was a successful concert, many saying that nothing had ever been heard like it in the town and I believe it was a revelation to the people.

It also proved what an ambitious, thorough, and faithful leader can accomplish, even with untrained, but faithful members.—G. S. L.

CREDIT FOR MUSIC STUDY

Entrance credits are given for music to students who apply for admittance to the University of Illinois. From a circular we gather that "These credits are given not only for work done in music in the high schools, but also with outside music teachers (applied music). Music students can now, when entering high school, continue their work without interruption, and have sufficient time for practice.

"Music may receive one, one and one-half or two credits. Nothing less than one or more than two credits will be allowed."

The gist of the matter is that music is on practically the same basis as other studies.

———o———

MUSIC CREDITS IN THE HIGH SCHOOL FOR WORK OUTSIDE THE SCHOOL

In March the Hartford (Conn.) *Courant* took up the question suggested in the caption to this note and published a symposium of the views of leading teachers of music in the city. It is significant of the attitude of musicians generally that there was practically not a dissenting voice.

Observers of conditions in music education are in accord in this matter the view being that proper organization and regulation of the work offered for school credit will have a great influence upon the growth of music and musical life in the United States.

Bearing upon this matter of accrediting teachers, that is teachers whose work will be accepted by school authorities, The Musician repeats what was told to the Editor by the Superintendent of Education in one of the flourishing New England cities of about 20,000 population.

When the Superintendent offered to the music teachers of the city to put in effect a plan by which pupils in the High School who would carry on their music studies on lines which he would formulate could apply for examination and receive credit if successful, he met with criticism and indifference on the part of certain teachers who seemed to think their work so high in grade that people would continue to demand it.

After a year's trial, when it was demonstrated that parents were turning to teachers whose work was officially recognized by the school authorities, those who stood aside at first were ready to give their adherence to the plan.

———o———

MUSIC EXTENSION WORK IN A WESTERN UNIVERSITY

The University of Arkansas, Department of Fine Arts, has worked out a scheme with the slogan "More and better music for Arkansas," which is in line with the strong sentiment for musical culture in the community.

According to this plan any club or school which has the use of a Victor Talking Maching can have the loan of four sets of fifteen records each, to be used for instructive purposes, each set of records being accompanied by a typewritten talk explaining the music about to be heard, and giving a few interesting facts regarding its origin, the instruments, the singers, etc. Each set of fifteen records will provide a complete entertainment for one evening.

The work will be under the direction of Mr. H. D. Tovey, head of the Department of Fine Arts, Fayetteville, Ark.

———o———

CHAMBER MUSIC CONCERTS FOR SCHOOL PUPILS

Some months ago music lovers in a large American city conceived the idea that it would be a good thing to offer tickets to a chamber music concert at a low price to students of the high schools. It is said that the attendance of boys and girls was gratifying.

One of these boys was interviewed by an enterprising reporter. Among other things he said: "That stuff's over my head. Suppose that's because I'm ignorant, though. The other fellows? They didn't care anything about. They just sat and punched each other and kicked each other and had as good a time as they could, waiting for it to be over. . . . They played the wrong kind of stuff."

No doubt the boy was right. It is a question of attitude. Boys in the high school will listen to a string quartet, but the "stuff" must be "right" to interest them. There is music for the four instruments which can be placed on a program for school children. The mistake made by these worthy enthusiasts was in taking boys and girls to a concert not made for them, and possibly forming a prejudice against chamber music very difficult to change or modify in later years.

If a special class of persons is to be interested in music by means of a concert the program should be made for that class of hearers. And there is music which will fill the bill.

———o———

SHAKESPEARE IN A DEPARTMENT STORE

For three weeks a Shakespeare Festival has been carried on by the Wanamaker Store in New York. The Director announced the Festival in this manner:

The purpose of these concerts is to give a brief outline of the indelible impression which William Shakespeare has made upon the various phases of musical composition: the song, the opera, the orchestra. They have been planned along popular lines, and should prove an interesting interlude in the pageant of commemorative events culminating in the great Shakesperean Masque.

A sample program included:

Overture to *Merry Wives of Windsor*, Nicolaï

A Talk on the Influence of Shakespeare on Opera, by W. J. Henderson of the *New York Sun*.

Excerpts from Gounod's *Romeo and Juliet*.

———o———

OPEN AIR MUSIC

What is announced to be the "most grandiose open air musical performance ever attempted in this country" is a presentation on Sunday, June 4th, of Verdi's *Requiem* with a chorus of 1200, an orchestra of 120, and distinguished soloists at the New York Polo Grounds.

THE COUNTRY TOWN TEACHER: THINGS WE FORGET

BY JO-SHIPLEY WATSON

(Read at a meeting of the Kansas State Music Teachers' Association)

We are apt to forget that when our grandfathers came out West they didn't fly into it on a home seeker's excursion with a return ticket if they didn't like it.

They came in ox teams and blazed their own trails; they came, too, with the purpose of staying and settling down and making something out of the place and out of themselves.

Going to the country town to teach is not going to vegetate as some of our city confréres think. For after all the substance of the musical profession is not the Paderewski, Bauer, Zeisler type of musician, but the countless numbers of earnest teachers scattered all over our land. And it has been these zealous teachers who have created enthusiasm and gathered together audiences for just such artists as those mentioned, and in just such small towns as yours and mine.

Not so many years ago the ordinary music lesson consisted of reading notes, usually quarters, from ten lines and eight spaces and of hitting a few white keys around middle C.

Today the music lesson is rather more complex and its success depends upon a countless number of things not set down in "the method." And it may be a solace for some of us to know that we did not have to take a "summer session" somewhere to find out what these things are.

One of the first things of which the teacher should think is the patron's viewpoint. We forget that while we are sizing him up as a work-a-day nobody without the proper appreciation of "art" he is wondering how to approach us and these are some of the questions he asks his neighbor:

Is she agreeable?

What does she charge?

Is she competent?

And not one word about "the method."

Agreeable? Of course we are agreeable! That is, under certain favorable circumstances. Who could expect one to be agreeable in this place where the people talk nothing but politics and know nothing but corn. We are amazed at the thought of cultivating agreeableness just for Jane's tiresome mamma. But agreeableness and tact are more necessary than the diploma or "the method."

The honest self-denying country mothers who come to our recitals "to see the fingers" may not be appreciative from our standard; but they are usually willing converts to "art" because they "want to know." They are such an important factor in our musical life, they figure so largely in our success, that it will pay to cultivate their needs; without their regard and support our "method" is useless.

We forget that through the country mother we may keep that ever recurrent tide which carries our pupils to such prodigious heights at the June recital from ebbing to a mere riffle the remaining months of the year.

It is not enough to know music, we must know people as well.

What does she charge? This thought is inside the mind of every new patron, and much depends upon the answer.

We forget that "the method," the technic, style, finish, repertoire and what-not, for which we paid the Herr Professor six dollars per thirty minutes is absolutely useless to us now. We cannot copy the master's pose or his prices, and the temptation to imitate him leads us into all sorts of difficulty.

In reviewing those lessons in the light of our present environment it is evident that we cannot sell in the country what we bought from him. Our manifest duty is to sit right down and make over and piece together enough plain material from our store of common sense to keep Jane's lessons from chilling to death. And so it frequently happens that the most valuable and unforgetable lessons are those taken right at home, in our own country town studio.

Is she competent? Naturally we think we are—there is "the method," the technic, style, finish, repertoire—but we forget that the community takes it all largely on trust; even our most indulgent friends have to "be shown" when it comes to our music.

The pupil is usually quite normal when he comes to us. He comes with ideas and a mind of his own. In our nervous haste to save time we manage to turn him into a musical cripple by propelling him through the lesson by the aid of our minds. We rarely allow the unfortunate fellow to think even once in a while.

We count aloud for him; we sit anxiously with pencil in hand ready to jab down fingering, phrasing, accents, accidentals, and we tinkle away at the upper end of the keyboard boosting him along in rhythm. In fact the lesson is so personally conducted that the pupil cannot escape us; if by any chance he is left to find things for himself he will either burst into tears or utter that time honored war whoop "I can't."

Ten Ways of Making a Child Dislike Music

By Lucile Corbett

1. Give an hour lesson.
2. Teach in the abstract.
3. Always be serious, never smile or play with him.
4. Be interested only in his music, not in his life or anything he does outside of music.
5. Always be a grown up person; never be a child with him.
6. Never have time or inclination to tell stories connected with his music, or to amuse him after he has tried hard to have a good lesson.
7. Instead of attractive little tunes with words to be sung, give him technical exercises and easy selections from the classics.
8. Never offer special inducements of prizes or certificates for practice or rapid progress.
9. Teach him in the same way as the other twenty-five pupils. One set of rules for all.
10. Have him play your way. Discourage all individual ideas.

It seems unfair, too, to put the entire responsibility of piano playing upon the fingers. First teach the pupil to use his mind and his ear—there will be plenty of time left in which to curve the fingers—some great pianists never curve the fingers at all!

Much as some of us would like to get down to abstract technical work for a year or even two, it seems impossible with our class of pupils. Hard, dry technic, the kind taught on table tops and on soundless keyboards, has always seemed nothing more than the husk of music—why not go into music from the first lesson onward—why do so many of us hold it away at arm's length?

And can anyone tell why we should keep on playing scales? If we cannot get away from the scale habit, if we feel "called" to implant the time-honored plan of playing scales so many minutes each day why should we persist in teaching the pupil to play them in just two directions, up and down? Why not break up the routine by having them played down and up, contrary, diagonal, sidewise, crosswise, and every other wise; when we take a scale out for exercise we must do something more than merely walk it up and down.

Then, again, why should we continue to use the old études. Our own composers have made études just as good and better than Czerny, Clementi, and Cramer. Indeed, pupils are far more interested in playing those of Foote, MacDowell, Rogers, and Preyer than in scrambling through the battered copies of Czerny which their grandmothers used in their youth.

We forget that student days are far too short to waste time in teaching anything but the very best; if sometimes we must deal out Godard, Wollenhaupt, Lack, and Lange, let it be as little as possible. The classics do not have to be sugar coated to go down. Pupils like them on their own account; for instance the Bach *Partita* and *French* and *English* suites; the Haydn and Mozart sonatas; Handel's suites; the waltzes of Schubert; the romances of Schumann; the preludes and mazurkas of Chopin; no matter how near certain pieces and studies may be like the classics the fact remains that there is nothing so near like a thing as the thing itself.

We are reminded on every hand of our haste and lack of thoroughness. It is a glaring fault in our education that we are not made to be exact.

We forget that even in the country town where we are inclined to look for the worst, that it is imperative to teach exactly so. The great satisfaction to the country town teacher is not fame or money. We get little of either. Money may buy better food and better clothing, but it cannot buy the satisfaction of knowing that wherever our pupils are located they are taking with them the knowledge, the ideals, the impulses received in our country town studio, and when the city teacher falls heir to our pupils he will rise up and bless us.

BRIGHT SPOTS

BY C. W. FULLWOOD

Many are the hours of discouragement in a teacher's experience, but there are also many bright spots, which proves the law of compensation. For instance:

A bright little pupil, nine years old, had to go to the hospital for an operation on the day for her music lesson. She said to her mother:

"Oh, if I could have taken my music lesson today before going to the hospital." That is one of the greatest compliments I have had in my teaching experience.

Another: A young girl was seriously injured in a coasting accident last winter. She was taken into the school building. The superintendent said she must be taken home at once.

"But," she said, "this is the day for my piano lesson," and she worried because she had to miss a lesson.

Another young girl had to discontinue her lessons on account of financial troubles in the family. When she came to tell me she cried and sobbed.

Another bright pupil, as the family was about to move from town, thanked me heartily for the pleasant and profitable hours she had in her music study.

I could amplify these incidents, but I give these few to show the high spots in music teaching.

NOTHING TO BOAST OF

"I was in a Missouri town two years ago," said a local dramatic producer, "trying to get up a show. The landlord of the chief and only hotel seemed halfway intelligent, and I interviewed him, as a preliminary.

"Your town boasts a band, does it not?" I asked.

"Well, no, stranger," he responded. "We've got a band, but we don't boast of it. We jest endure it."

GHT-READING SUGGESTIONS FOR PIANO PLAYERS

BY KATE L. CHITTENDEN

At the 1915 meeting of the New York State sic Teachers, in New York City, Miss Chittenden e three talks to piano teachers, one of them h the general subject of *Reading, Rhythm, and utine.* From this we have taken the following agraphs which have special value to young yers. It is far too frequently the case that dents whose lesson assignments are in the fourth fifth grade are unable to read at first sight, ately, and at correct tempo, many pieces not more anced than the latter part of the second grade. be a ready and accurate sight-reader is an asset igh value to the player, and we urge the readers THE MUSICIAN to devote as much time to subject as they can. The easier numbers in music section of THE MUSICIAN will prove ful.—Editor of THE MUSICIAN.]

AN English woman with a wide experience once mented to me upon the inability of the general of American pianists to read, saying that among associates whether a girl could play difficult gs well or not, she was equipped to read ordiy music at sight.

Our deficiency on this side of our teaching seems arise from several causes, such as too short and equent lessons, or impatience on the part of ents for their children to make a display, or the eral revolt of our young people from any kind of cipline and restraint. It takes time and patience be a good reader, but probably no investment of or that we can make will reward us with more

Reading books are issued by many publishers, etically all of which give too little material and gress too rapidly. If we try to recollect the ndreds of examples that we did in our childhood le learning to add and subtract, let alone mul- y and divide, successfully, we ought to realize t the fundamentals of music reading cannot be stered with a correspondingly less amount of l. In teaching reading we fall into the same ors of judgment that sway our other efforts in cation.

We do not realize that the eye itself has to be ned in steadiness. How many persons can nd twenty feet from a bookcase, and count ckly and accurately each book on a well-filled lf? The distances measured by the eye in ing up and down the filled staff in most instances not more than a thirty-second of an inch, yet a l-trained music reader has an eye so accurate t lines and angles in pictures or other objects t deviate only a sixteenth or thirty-second of an n are instantly perceptible.

The tactile acquaintance of the keyboard surface to become stamped in the memory. After mere h has become automatic, rhythmic patterns must ome familiar; therefore all of the combinations half notes, quarters, eighths, and enths, with their dots, should be ped or clapped quite independently out keyboard contact. All the inary combinations of eighths and rters ought to be a matter of rse to a first-grade pupil of nine or at the end of a year. If pupils e compelled to spend twenty to nty-five per cent of practice time eading, there would be better piece ving and more freedom and poise a we now obtain.

The difficulty in securing adequate erial and enough of it is so great so expensive to the pupil that only hope for a teacher is to acmulate for himself a comparatively e amount of easy music and disute it as a loan from lesson to lesson. One way by which we can accommodate such reading matter is to invest in one of the document cases sold by the Library Bureau, measuring $10\frac{3}{4}$x16x5 inches, price fifty cents, and one hundred sheets of the manila folders to fill it, price sixty cents, together with a tube of library or photographic paste.

All of us subscribe to a musical magazine and out of the many pages of sheet music contained in these books there is a goodly proportion that is really easy. Cut it down and trim the margins and paste on the manila sheets. In the course of time you will gather a lot of easily gradable reading matter which you can carry in a straight portfolio and leave with pupils for use between lessons. In this way a surprise is always in store for your pupils because what is brought is new and the same material can be used for many persons.

In choosing the selections try to carry a uniform rhythm through a goodly number of examples. For instance, do not abandon equal notes until pitch has become thoroughly recognizable. Have the same rhythmic pattern carried through as many tunes as possible. Do not attack thirds or chords until single notes are mentally established. Invest in some rather wide-lined music paper and copy with a blue or waxed carbon pencil easy fragments from such pieces or studies, which, taken as a whole, would be too difficult for the pupil at a given time.

THE PARISH CHOIR

MUCH OR LITTLE DAILY PRACTICE

WHAT an interesting thing it would be to get at the precise amount of daily practice which great musical artists put in! I was struck with the idea after reading what Kreisler, the violinist, said about it. He believes that if one practises strenuously when young the fingers should retain their suppleness later, and that the notion of being compelled to practise many hours daily is the result of self-hypnotism, which really does create the necessity.

That is Kreisler's view. But then listen to Pablo de Casals, the 'cellist. He says that he is a firm believer in hard work and constant practice. "I give every moment I can to practice. I envy the fortunate ones who can dispense with it, but for myself, I cannot." Some of the eminent vocalists declare that they don't practise much. Mme. Clara Butt, for instance, says that for days before a concert she never uses her singing voice. "There is no use in tiring it out unnecessarily," she adds. So many men (and women), so many minds! I remember Sims Reeves (in his palmy days) remarking to me that he was "always singing."

I suspect that the artists who do not practise much are the exceptions. "There is no genius like the genius of labor," said Napoleon. It seems to be true. Liszt, the "emperor of the keyboard," for many years practised not less than ten hours a day. Spohr put in the same time.

Paderewski, in his year of special training, as a pianist, is said to have often practised during fifteen out of the twenty-four hours. On the other hand, D'Albert asserts that his maximum daily practice is two hours. Sauer says he practises about four hours daily. And so on.

On the whole, I am inclined to agree with Kreisler. From a theoretical point of view, it would be hard to conceive of more than six hours being beneficial for the advancement of any human powers, mental or physical. Even with the gymnast and the oarsman any excess in the hours devoted to practice means grief. What said Friedrich Wieck, the father of Mme. Schumann? This: "If it is the number of hours' daily practice that gives the measure to the position of a virtuoso, then my daughters are among the most unimportant ones, or they do not at all belong to that class of persons." But perhaps Clara Wieck practised much more than her father knew.—*Monthly Musical Record.*

BOOK NOTES

Conversation Lessons for the Beginner in Music. By Blanche Dingley-Mathews. John Church Co. Price $1.00.

The book presents such material for the study of rhythm, melody, harmony, and notation as should be a part of the lesson work of beginners in piano playing. The fundamental principles which the best teachers of today recognize belong to the first lessons.

Readers of THE MUSICIAN who are familiar with Mrs. Mathews' work as a teacher, educator, and writer, do not require the assurance that the material is excellent, and that it will enable them to understand what they play as well as enjoy their music. We particularly call attention to the splendid arrangement whereby it is possible to place the instruction before a class or a single pupil, step by step, just about as much as can be learned from lesson to lesson and recited in a small portion of the time ordinarily allotted to a piano lesson. It can be used with any "graded course," and will be particularly effective if used in weekly class meetings of young pupils, covering the most important points in first grade work.

BOOKS OF MUSIC

A Summer Pilgrimage in the White Mountains. Six pieces for the piano. By Arthur Hinton. J. Fischer & Bro., New York. Price $1.25 net.

The separate titles are: *Romance* (By the Ammonoosuc), *Idyll* (Among the hills), *Scherzo* (Fireflies), *Reverie* (At Sunset Hill), *Country Dance* (At the husking), *The passing of Summer.*

These pieces are poetic in conception and very interesting to the player as the composer has worked them out. They require an ample technic and an understanding of the means whereby ideas are expressed in music.

THE MUSICIAN calls attention to two items of special interest:

1. The liberal prizes offered for piano compositions, see another page.
2. The splendid combination offer:

THE MUSICIAN
One Year.

SOMETHING TO PLAY
45 Piano Pieces.

SOMETHING TO SING
50 Songs.

The three for $2.00
For new subscriptions, or renewals.

THE FUSS OF PLAYING AND SINGING

BY LOUIS ARTHUR RUSSELL

The time is quite within the memory of present-day concert goers, when singers, especially tenors (and perhaps sopranos), claimed attention according to their external mannerisms. By many a tenor was judged by his "manner," and a climactic high tone was accompanied by a "killing effort," showing the auditor how great a thing it was to sing so high. Fanciful mannerisms were considered evidences of good artistry in days gone by, though happily much of this is now considered bad form as well as inartistic.

FUSSINESS NOT AN AID

While many of the extremes of mannerisms have been eliminated, the vocalist still clings to some of the traditional "artistic" contortions of the older regime, and we still suffer the sight of distorted faces, showing the agony of the vocalist as she sings with heaving, high and low, of the ample bosom, showing the "full sway" of the singer's emotion, with now and then a tip-toe reach for an especially high or effective tone. These grimaces, eye rollings, lip contortions, shoulder shruggings, chest heavings and bodily writhings were all done "for the sake of art" and were by many considered the acme of artistry, a measure of ability; and, even in church service this emotional or "operatic" manner of voice delivery and platform conduct was accepted and enjoyed by many, perhaps I may add, especially by the singer who indulged in the habits.

Happily indeed these mannerisms are now known to be unnecessary, and nowadays such idiosyncrasies of physical deportment are considered distractions, making a "funny stunt" of a fine art.

The real artist of today seeks simplicity in his public work.

He knows that external effort is not to be in evidence as he sings; that shooting out of the lips or stretching wide of the mouth, etc., does not aid in pronunciation or in tone quality; that the puffing of breath, the heaving of the upper chest, and other external display of the machinery of the voice are distractions, not only to the auditor but also to the art of the singer.

Today we are fortunately bringing the art of song to a more normal status and simplicity of delivery is recognized as a part of the fine art of singing, the demand is now that the singer shall stand before his hearers as an orator with a message, delivered in song, not as a freak performing a feat.

MANNERISMS

When Rubinstein came to this country his playing aroused the greatest enthusiasm and he was watched closely in all of his public work. He had one mannerism which caused much comment. When he held a piano key down for a sustained tone he frequently raised his wrist so high that his hand and fingers were at practically a right angle with the keyboard, and as his hand was in this position his arm and hand wriggled as if he were boring through the key.

This mannerism was copied by teachers, and given by them to their pupils as a means of eliciting a singing tone; it became famous in certain circles as the "Rubinstein bore." Today we have similar mannerisms forced upon our attention, some teachers and performers adding various writhings, wrigglings, depressions, raisings, pushings, pressings, caressings, etc., to their playing processes, with the idea that these contortions of the hand affect the quality of the tone.

HOW TONE IS MADE

With all thoughtful teachers, it is a well-established fact that once the key has been pressed or struck, and the tone produced by the stroke of the hammer on the string, no amount of pressure or any sort of manipulation of the hand or finger on the key can alter the character of the tone. The hammer has done its work and rebounded back toward its resting place, and the key lever has no further influence over it until, upon the release of the key, by the finger, it (the hammer) drops to its resting place behind (or below) the tripping jack, ready for another blow by another stroke of the key.

The holding down of the key has only one true object. It holds the damper off the wire, allowing the tone to continue in its diminishing force until its vibrations spend themselves and cease or are "cut off" by the falling of the damper as the key is released. The weight of the hand is more than sufficient to hold the key down and the damper off the strings; no amount of pressure or motion of the hand can aid in this mechanical item of pianoforte action.

We should guard against any of this unnecessary and often grotesque play of the hand upon the key surface, which is but fussiness, or in mildest critical terms, a mannerism, at once inartistic and (often) vulgar, a mere appeal to the gallery, an external display.

It is deplorable that artists frequently stoop to this sort of appeal for public approval, but since the spectacular element in art has its appeal to the masses, there are bound to be men and women, otherwise artistic, who will allow vanity or illogical theories to intrude themselves in their public performances, and weak-minded teachers and students are bound to copy these idiosyncrasies, to the distraction of the thoughtful and the injury of the art.

METHODS OFTEN JUDGED BY MANNERISMS

A true method develops playing habits along rational lines, finding no need and no room for faddish mannerisms which have no direct use in playing and serve only to confuse the student and befog his mind as to the true playing efforts.

It is an inexplicable fact that methods of teaching which find public favor are often known by students, teachers, and the public at large only through a few more or less vulgar mannerisms, leading many to believe that the virtues of a method are revealed by fuss and show in the manipulation of the playing apparatus.

It is part of our mission as teachers to prove the full efficiency of a rational playing manner, and the needlessness and impropriety of grotesque external display in our art.

EXTENT OF MOVEMENTS SHOULD BE MINIMUM RATHER THAN MAXIMUM

With all of this said, we must not conclude that the player must sit at the piano with body erect and motionless and hand so firmly fixed on the keyboard as to allow a coin constantly to lie unmoved on the back of the hand; for this condition would be a travesty of repose. The modern pianoforte is capable of tremendous waves of emotional expression at the hands of an artist, and to sit before an instrument performing a composition of deep emotional content with motionless body and arms would be as ridiculous as are the actions of some of the poseurs whose gyrations of body and wild throwing of hands and arms make of the playing a feat resembling that of the tumblers and gymnasts of the vaudeville stage.

Both of these extremes should be avoided and proper elasticity of arm and body cultivated by pianists.

THE FOREARM

The great artistic dependence we now place upon the weight of the flexible arm, in tone production, passage playing, etc., calls for a free and exceeding active forearm. The graceful movement of the hand and arm in long skips from one position on the keyboard to another should be through a low segment of a circle. The undulating wrist is at once a source of freedom and of touch variety, and the lateral action of the hand and forearm at the wrist is a necessity in many passages of extended arpeggios, direct or repeated. The rebound of the hand (up-spring from the key surface) is an artistic requirement in many phases of chord and single-tone playing; yet with all of these requirements and many other still subtler items of finger, hand, arm and body flexibility, there is no call for wriggling or sawing of the elbows, or for the hands springing up to a line above the head or reaching (as I have seen) around the shoulder; nor do we require the constantly "teetering" loose-wrist hand action in playing.

There are graceful externals in artistic pianoforte playing which all recognize as necessary, giving freedom of playing action, allowing the artistic use of the weight of the playing apparatus (a most important item in pianoforte playing), and, finally within artistic limit, adding grace and fulness of emotional expression to the interpretative performance.

All of these surface items must be in perfect balance. Fussy mannerisms overdo the physical requirements of pianoforte playing. Evidences of tremendous emotion and effort are ridiculous in the performance of a commonplace passage; the mere physical labor of playing should not be in evidence; the mechanical element is not what we are displaying, the disclosure is of the musical content of a composition.

Pianoforte playing is an art, its artisanship is to be concealed by apparent physical ease. The evidences of power or of delicacy are shown only in phases of emotion; the ease or the difficulty of the performance are never to be paraded; the mighty result shows itself not as due to the player's "strain" but everything is in balance; the show of force is warranted not by the degree of physical effort required but by the emotional content of the music.

Display for the sake of showing the player's skill and energy is unworthy the artist, who effort, at all times, should be self-effacement a workman, revealing himself as an interpret always on a plane of equality with the conte of his program.

Creative Power in Musical Art

By G. H. H. Howard

Creative power in musical art depends, in interpretation, composition, or improvisation alike, on 1. *Vision;* 2. *Use;* 3. *Vitality.*

1. *Vision* is the capability of observing what exists in music. Vision enables one to observe what music has been produced, what laws are in operation, what limitations restrict, what possibilities invite, what resources are available.

2. *Use* enables one to combine, to construct, to develop, to proportion, to balance, and to evolve with completeness. It is, broadly, the technic of musical composition.

3. *Vitality* enables one finely to finish a work, to polish it with highest lustre, to endow it with every form of living power. It thus becomes a strong personality, penetrating to the very center of the heart life of civilization. A work of musical art is not so much paper and ink and so many characters, but a living person, doing a work in the world through decades and centuries. Is not the Beethoven *Eroica* or the *Ninth* symphony doing more in the world today than ever before? Are not more people hearing these works today than ever, and are not those who have heard them for ten or twenty years hearing them today with a deeper sense of their meaning and power than ever? They are new works to them with every hearing.

Thus a work of art is reproductive. It creates itself anew with successive hearings.

Great works not only have this self-developing power; they also stimulate and occasion the production of new works.

EFFICIENCY IN ITS HIGHEST APPLICATION

BY THOMAS TAPPER

No. 10 of the Efficient Music Teacher Series

I

THE whole gospel of applied efficiency has been adequately told more than once, but never better than by Maurice Maeterlinck, in his story of the little bulldog that gloried in the name of "Pelléas." This namesake of a great hero was born in Paris, but was taken to the country to acquire an extensive education while nature attended to its growing up.

HOW PELLEAS BECAME EFFICIENT

The biography of "Pelléas" relates how in a lifetime that lasted but six months the dog attained, because Life compelled it, a high degree of individual efficiency which it gained through pain, discomfort, and self-abnegation, purely because it desired above all things to be an efficient institutionalist. That is, its desire, intention, and its accomplishment was to become the highest possible type of a team worker.

It may seem at first sight ridiculous to attribute so lofty a motive to so lowly a creature, but absolutely nothing less inspired it. Let me see:

He mastered his lord's estate, repelled strangers; gave kindly warning of the coming of friends; ignored the world beyond the fence; lived through the terror of the night alone, while his lord slept comfortably; and braved cruel darkness to be a true sentinel. Despite the alluring temptations of propinquity, he kept his tongue out of the stewpans; resisted the desire to steal the fish on the kitchen table, not so much as looked at the tidbits of meat that lay within reach.

And all these restraints which he put upon himself were a burden borne for the common good. One can see that he could have done many of these acts to his own immediate benefit, but he renounced them for the sake of a family that he honored by his presence.

Would we do as much for a present lord, or would we cheat him and ourselves when his back was turned and the tidbits on the kitchen table within our reach? I wish every teacher of music would read the chapter in Maeterlinck's *Double Garden*, which tells of the experiences of little Pelléas." It embodies all the philosophy and technical necessities of that much-talked-of topic, called Efficiency.

THE APPLICATION

One would not fail to notice in studying the career of "Pelléas" that in proportion to his attainment as a team worker, so he gathered strength as an individualist. The great about him fed the small within him and made it great. And it came to be that he built himself for himself in proportion as he built himself for others.

And therein is all Efficiency. Devoted to selfish aims and purposes its value is reduced to the minimum; but devoted to the well-being of others, its potency is without limit. For some months THE MUSICIAN has advocated that wider application of the private music teacher's activity which results in some form of community work. The value to the community is always obvious. One has only to master the main line of effort in the life of "Pelléas" to know that the individual gain to the teacher is great and indispensable.

II

FORGETTING SELF FOR OTHERS

Let us then, following the inspiration of the little bulldog, take the subject of Institutional efficiency under advisement. Most of us can handle the self in connection with self-affairs very well; but we hesitate to come out into the open when a greater call bids us to come away from ourselves. There is something about the free open space of a big salon that makes us nervous. In our early life, eons ago, we were compelled to defend ourselves and our family, so we backed up into a ravine where we could fight with the natural protection of a fortified background. We wanted a wall around us so that we could see our enemy in front of us.

Oh, it is a very short way back to our origin. We have veneered our primitive self; but the original impulses are still slumbering beneath the surface, and it takes only a scratch to make them cry out in alarm.

It is a trifle hard to give up primitive impulses and to stop working in our own immediate circle of a yard or so from our feet. So it comes that we conquer too little of the environment. Then, there come exercises, like technics in piano-playing which we must make up our minds, as "Pelléas" did, exist for the benefit of others; we must learn them for their well-being and to our own pain. Hence the desirability of the investment in Community Music to the one who inaugurates it. It helps the great family of sustaining lords about us, but at the same time it is mighty in the way it helps the humble practitioner within us.

WHAT AN ORGANIZATION MAY MEAN TO US

Few of us master organizations. We partake of them. But because we are afraid we rarely receive all they would give us, if we knew the secret of their possession. Let us ask ourselves this: In the family life of which we are a part do we more or less unconsciously receive, as a natural heritage? Or do we consciously contribute to its uplift and betterment? The main question here is: *Do we think about it constructively?*

The same query most appropriately applies to the group of pupils forming the music teacher's class. Do we receive their patronage with checks, and for checks, or is there in our intention toward the class a constructive form of thought forever at work for their well-being?

This concentrated habit of working for the self leads us frequently out of our own domain, and we fail to perceive the *greater* instances where we should work for ourselves. To be specific: It is a most beneficial and surprising exercise to practise any one of the following technics:

1. What can I contribute to my family to the end of happiness and joy, that is the peculiarly original outcome of my constructive thought?

2. How many things can I name now, this minute, that a class of pupils may do to the group-benefit and which mine do not do?

3. I attend a Conservatory: Do I know its every department? What each department can do for me to my future benefit? What I can do by thinking about it to bring credit to the school?

4. Next winter (let us change the pronoun) you are to live in Boston or New York and you are going to study music; it matters not in what form.

Now a great city has its libraries, museums, lectures, concerts, its church music, its municipal activity, and so on. A little efficiency properly applied will make you aware of the total of all this activity. You will master the library, for example, its floor space divisions, its rules, regulations, and benefits. You will know its music department and its other special departments that may have value to you, and you will accomplish this so instinctively that you can use the entire library as readily as you can use a pen or a pencil; that is, by forethought, by earnestly entering into and co-operating with the library and its purposes it will become yours as completely as your gloves and your living rooms are yours. It will cease to be an Objective and will become a Tool with which you build your career.

Then you will find next winter, when you live in New York, that the extent and variety of its church music is amazing. Here are distinguished men and women, organists, singers, directors, and composers, performing their most efficient and perfect acts. To be witness of such work is an education without price. Here is the best of its kind doing its best, offering an opportunity so rare that no student in New York should be without a calendar of

Great Opportunities to be enjoyed In New York City

MISSED OPPORTUNITIES

That he does not possess such a calendar is less his fault than it seems to be, and yet it is his fault. The trouble is, our educational scheme still persists in giving us information but it does not make us keep keenly perceptive of what environment holds for us. It does not teach us to analyze our surroundings readily. And so we fail to see that we are literally living amid "Acres of Diamonds." Most of us are marked, literally branded, by a negative; by the scars of the opportunities that we have failed to grasp. The mixed metaphor is recognized but not regretted. We come to believe that the distinctive biographies of the future will be written by men who have *not* made good. If we could have an honest expression of fact, such books as these would be among the Best Hundred.

1. How I Lost My Opportunities.
2. How I Failed in Life, by One Who is a Failure.
3. Blind to the Chances of Fortune.

III

Individual Efficiency is easily overdone, ridden to death, made too much of. It is more or less useless unless applied. And its application lies in the mastery of institutionalism, for the sake of, 1, direct benefit for upbuilding; 2, direct means for the multiplication of oneself into service.

The moment we so individualize ourselves that we speak out from ourselves alone, we have reduced our power to its lowest terms.

THE VALUE OF ORGANIZATION

The world's best workers have always managed to speak through some form of organization for the purpose of obtaining greater intensity. The man who speaks through the organization as its Secretary of State is multiplied by a marvelous resonator that carries his silver-tongued oratory to enormous distances. But let him speak from the flat-land of his own state and it is as if he whispered.

The teacher who acts for himself alone and *receives but gives not* is a turtle with the shell closed. He cannot travel for his legs are tucked up too tight. But even a class of two pupils will let him out into public manifestation of Service that will make him feel like a full river flowing to the benefit of the sea rather than like a milk pail.

It becomes then an interesting question for one's self-development:

1. What institutions are available to me, now existing? What ready to come to life at the call of my voice, by which I can be benefited even as I give benefit?

2. Have I mastered the Institution of my town *thoroughly*?

3. Does my town know me as an Institution?

4. Or does it think of me as a sort of Man Friday who makes about one footstep in the Sands of Time?

5. Am I aware of concurrent benefits? Do I know what is at one hand to take and at the other hand to give?

And being aware, am I willing to act?

AN EFFECTIVE SYSTEM OF LESSON REPORTS

BY RALPH B. ELLEN

I

As a rule the simplest part of a teacher's work is to tell pupils what to do. The difficult thing is to get them to do it. A pupil beginning to study should have *daily* lessons as in public schools. As this is generally impracticable, the alternative is to enlist the aid of the parents during the practice hour.

The weekly practice slips are valuable in that they enable pupils to see how much, or how little time they really spend at the piano; and by the way, they are as great a help to some of the older pupils as to the children. I supplement these by a monthly report which will explain itself.

Report of .....month of.....191....

Technique .....

Studies.....

Pieces .....

Repertoire .....

Average Daily Practice .....Hours.....Minutes

REMARKS:

Reports are based upon the individual ability of each pupil.
Pupils should practise not less than one hour daily. Seldom or never do they do enough technical study, as finger gymnastics, scales, etc.. etc.
Most pupils work better with some attention from their parents. With young pupils supervision of the practice is absolutely necessary.
Time spent at the piano is worse than wasted unless the mind is concentrated upon the work.
Parents are urged to attend the lessons occasionally in order better to assist the pupil.

The highest grading or "excellent" I use in frequently. Some pupils never get it. By these reports the parents know just what grade of work the pupil is doing and are able to assist them along the lines which the teacher feels are most necessary.

Of course I use a card system for my cash accounts and on the reverse of each card I have printed (gelatine process) the following form which gives a concise record of the pupil's work:

Age	Ability			Persistence			Previous Study	Grade

CORRECT, BEAUTIFUL AND EFFECTIVE PIANO PLAYING

BY GUSTAV L. BECKER

I

It may seem but reasonable that correct piano playing should be insisted upon before much thought or attention is given to the beautiful playing, or that some students are content if they can play fairly correct and agreeably, even though their playing is far from effective.

Most teachers, if they are bent upon success, will correct and try to remedy the faults of their pupils, or, better yet, will strive to help their pupils entirely to avoid them.

It would be best though not to have any faults at all, either to encounter or to cure. To many this may appear to be a millennial vision. Yet it is something not far from possible for those, with sufficient mental equipment, who start right and continue right, that is, with enlightened and comprehensive guidance. The time-honored way was to experiment and struggle with an enormous mass of crude, erroneous, and jumbled impressions, mingled with aimless, inadequate, and misguided efforts, in the striving and craving for the attainment of some but vaguely discerned goal!

How much better it would be to have, from the beginning, clearly defined aims and concepts, which by degrees, should lead quite habitually towards accurate, precise, and in every way efficient action. Such ideal attainment may some day be brought about through scientific training, training in which the accumulated fund of centuries of observation and experience illumined by modern exact research, is fully taken advantage of for the greater benefit of the students of the day.

We should educate our students more toward keeping well in mind all that is good, right, beautiful, and best, to the end that they shall make it their constant endeavor, freely, abundantly, and spontaneously to express these things in every outward manifestation, especially through all action which produces tone.

This were better than hampering their musical powers of self-expression by excessive injunctions towards caution, often bordering on fear, because of the struggle with the accumulated faulty habits and tendencies, in the old way inevitable. The all too familiar admonition "don't!" tends to let numerous inhibitive forces, along our nerve tracks and in our minds, become effective.

It is thus, for example, better to say: "Let your wrist be free and hold it naturally poised," than to scold: "Don't stiffen your wrist!" It is vastly better to fill the pupil's mind plentifully with model impressions and to lead him securely to form only correct habits, both of thought and action, than to let him plunge, unprepared, into musical briars, tangles and pitfalls, to emerge confused, discouraged, and sorely damaged mentally!

If most persons could only realize that the faults committed unintentionally will leave their injurious impression upon the mind just the same—after leading to the formation of most undesirable habits—we would not go on excusing or forgiving ourselves for such faults.

A good way to avoid ordinary faults is at first to learn to think and act deliberately, giving ample preparation in heart as well as mind. Yes, we must *learn to love our work*, to love the ideal of it, to be happy in striving for its perfection, trying always to *express* its perfection, its beauty, and its wholesomeness! With such an attitude of mind, faithfully maintained, an increasing sensitiveness for what is right and good in music will be cultivated, that will most naturally lead its possessor towards doing, in an anticipating way, that which is correct and desirable, and, of course, will enable him most readily to detect almost any errors which might after all occur.

But, the reader will say, what about those less gifted ones, who, moreover, have not had the advantage of modern *constructive training* and guidance, those whose minds are veritable battlegrounds for the conflict of good intentions with bad habits, who are even further accumulating erroneous impressions and confirming unprofitable trains of thought and ruts of action? How may these, as it were, be snatched from their path of failure and started off in the right way?

Recent experiments in educational psychology have shown good results in cases of persistent, undesirable habits, tendencies, and impulses by causing a *strong diversion* of attention or effort with the purpose of relaxing the hold of the habit, etc., and then, if feasible, to cause efforts of mind and muscle to be made of *diametrically opposite kind and effect* from those found objectionable. This method has proven much more expeditious than that of simply trying to do the right thing in exactly the right way. In the latter case the objectionable habit or tendency would, for some length of time, again and again reassert itself, while with the more radical procedure, that employing counteracting efforts, the fault would, in most cases, soon vanish.

The mental effect of such method may be compared to one's getting a semi-elastic wire to assume a desired curve or angle, by bending it just beyond its natural point of resilience; the wire, when released, will then, of its own tendency, spring back only so far as to assume the desired line or position.

And just as a wire which has never been bent and again unbent, will show more strength and elasticity, so will prove the better fitted for success the mind which has been spared the innumerable, but possibly erroneous impressions and accumulation of useless and obstructive habits, also considering the saving of time and energy subsequently needed for effacing and unlearning these impressions and habits.

Yet while there is abundant vitality left, and there are millions of alertly receptive and ready to be active brain cells available (as in time of youth and prime), no one, who really desires to be successful, need despair. One must be filled with earnest purpose and eagerness to find out exactly *what* is necessary to do, rather than just *how* it is be to do it. After these points are definitely estal lished one will go on perseveringly *doing* the rig thing the right way often enough.

———o———

WHAT SHOULD A SYSTEM OF HARMONY EMBODY?

BY CAROLYN A. ALCHIN

We live in a day of new standards and new va ues. With the modern needs and accompanyi problems, teachers and students are confront with the question, "Does my system of study me these needs?"

The methods of harmony show fewer chang than those of any other subject, and progressiv thinking teachers who desire practical results agr that the old systems are inadequate.

We should use a system of harmony which dea with musical effects; which appeals to the ear, cu tivates discrimination and a feeling for tone qualit We should use a system which deals with vit music principles, instead of stuffing the memo with arbitrary rules. We should use a system whi emphasizes the importance and relation of rhyth one of the two determining factors in the choice harmonies.

The building of chords, note by note, accordi to fixed rules, makes very little impression on t aural sense. To acquire a true harmonic perce one should hear each tone in key as root, thi fifth, etc. To be of practical value, the parts mu be heard melodically and in relation to the acce not only of measure, but in the larger forms. O must think in larger units as the work progress In harmonizing melodies the choice of harmonies considered in the larger relations only.

If the student is to feel and hear the varie harmonies, they should be introduced progressive It is only the especially gifted who realize the cha acter and mental effect of each chord, when all of t chord material is given at one time.

Melody construction should be developed on t rhythmo-harmonic basis, which is very simple principle and with never-failing results.

A text-book of harmony should contain a lar number of good melodies to harmonize, patter for transposition at the keyboard, a considera material for analysis from the best musical liter ture of the contrapuntal, romantic, and impressio ist schools. Analysis that includes the architectu of music increases the appreciation of music to high degree.

PREPAREDNESS

BY CARL HOFFMAN

With the grim spectre of war behind it, the ord "preparedness" just now has an ominous gnificance. So tenso is its meaning in fact, that y ordinary application of it may seem trivial and en flippant. Nevertheless, it has a very practical plication to the piano teaching profession at this ne when conventional methods, generations old, e involved.

Anyone who keeps at all in touch with the litera- re pertaining to music pedagogy, must have served that new, revolutionary ideas in piano chnic are coming to the fore. Moreover, it ap- ars that these ideas have already passed the oradic stage and become crystallized in methods. We seem to be at the parting of the ways,—the w against the old,—where we must needs adjust rselves to changed conditions. To make ef- tive the complexities of modern music, readjust- ents of playing forces are imperative. Here is here the call to preparedness makes itself heard. s we see, these ideas have acquired cumulative portance and we are bound to examine them en-mindedly. It may be, of course, that not all e ideas advanced will finally survive. It is so sy to yield to empiricism in the search for rock- ttom foundations. Again, there is a natural ndency in new systems to over-emphasize one or nother of their phases, so that the proper balance forces may not at first be clear.

But for all this, science and common sense are idently back of the protest against the conven- nal methods of piano teaching. Matthay, the ponent in chief of the forearm rotation principle, akes the "roll" the controlling factor in all tone oduction. He says:

"We see that it is practically impossible to play y note on the piano without the intervention of is ever present principle (i.e., rotary action)." Breithaupt, Steinhausen, Bandmann, and others note apply the arm-weight principle, together th forearm rotation, to tone-making efforts, and nsider all finger action as secondary. "The ger is simply the swinging part of a swinging ole,—the arm." Again: "In weight play, finger xibility to the utmost is needed but not individual tivity."

The only finger action admitted by any of the w authorities is one which begins at the nail int followed by a sweeping motion towards the lm of the hand until opposed by the depressed y. The loosely held arm reacts to the pull of the ger by a forward movement which gives an up- ard thrust to the wrist. This is applied to single tes in melody forms, and also to rapid notes ken serially.

The habit of basing all technic methods upon etacarpal action, with still hand and rigid arm, is strong that it comes as a distinct shock to be told at such a habit is false, unscientific and even nhealthful." From observation we know that tists in their performances make little or no plication of the technic units on which the gulation teaching and practice spend so much time d energy. Now, real efficiency would seem to mand that teaching methods conform to the quirements of artistic interpretation. Prolonged, earisome exercise, day after day, only to attain a nd of finger skill which is not essential (or at best secondary importance), in good piano playing, us appears to be a lamentable waste of time and rve force. Would it not be better to develop chnic strictly according to the ends it is to serve? It is a common saying that theory lags behind actice. This means that established systems eld reluctantly to new advances. Here is a allenge to the progressive music teacher. It quires initiative and courage of no mean order go against the current of convention, but where y notable advance is made these qualities are nerally in evidence.

NOTES ON THE MUSIC IN THIS ISSUE

June marks the close of the main teaching season, and the beginning of the period of summer work. Therefore we must still have regard for the needs of the teacher and the serious student. The music which we have incorporated into the present issue readily shows its special character and usefulness. The following suggestions may prove interesting to our readers:

Valse courante, by Walter Rolfe, is for the more advanced among our readers, a concert or recital number, brilliant in style, and with considerable rhythmic variety, more than is usually found in a waltz. Not so fast until you have gotten it well learned by the fingers, a section at a time; then increase the speed up to that usually employed in a concert waltz. The section marked *con brio* has just a little of the "ragtime" element, one may say. Play it with a light, flying touch to get the best effect.

A blush rose, by Thurlow Lieurance, is especially suited to June musicales, for it is a flower song with the delightful melody and rich harmonies one might reasonably expect. Don't take the tempo too fast, and give the melody a full legato effect, so that it sings. In the section marked *maestoso* make the crossing of the hands as easy and free as possible, keeping the melody in the right hand broad and very legato. A little later add the grace note arpeggios lightly, so as to avoid a thump on the principal note.

A Man and His Work

It is for every man to determine in which class he shall fall, and how the community shall rate him.

For the man who loves his work there will ever be work; for no one can love his work and do it ill.

For him whose daily companions are dissatisfaction and indifference there will be short shrift and a swift reckoning.

Let us, then, do whatever comes to our hand to the limit of our powers; to each task give the best we have of intelligence and skill. The world has no use, and assuredly will make no place, for the shirker, the pretender, the bluffer, or the incompetent.

(From a house organ of Taylor & Taylor, San Francisco)

Will-o'-the-wisp, by Cedric W. Lemont, Op. 16, No. 5, is a delightful little descriptive piece, marked *allegro*, and to be played with a light, free touch in the style one would deem correct to represent the flight of the will-o'-the-wisp. Move the hand from one position to the next without stiffness or hesitancy. Be sure just where it is to land, that is prepare for the next position while in the air. This is a useful little teaching or recital number.

A lament (Plainte), by N. Sokolovsky, is from the Russian elementary repertoire. Play the melody, whether in right or left hand, with a sustained legato; but the supporting chords must be given with a light, free, caressing effect, wiped from the keys, as it were, always subordinated to the prominence of the melody. And do not forget the melancholy which the minor mode tends to impart to the theme.

Cry-baby (Pleurnicheur), by N. Ladoukhine, is also from the Russian repertoire, more distinctly national in character. Some of the young readers of The Musician may not be pleased at first with some of the harmonic combinations (chords) which the composer uses. They should keep in mind that the composers of the present day use discords far more than did those of a generation or two back. For example the G♯ in the second measure gives an effect rather infrequently met by the young pupil. Play G♮ as a contrast, and then come back the G♯, and decide which appeals to you the more strongly. In the fifth measure the first E in the left hand makes a sharp dissonance. Do not dwell on it but go right on to the D. Measures 11 to 13 have some striking chords. Study them carefully and memorize them so as to be sure before you strike the keys.

Hobby-horse (A cheval sur un baton), by N. Ladoukhine, is from the same set as the previous number, a bright little piece for young players, boys especially. Note the alternation of the notes of the melody between the right and the left hands in certain measures. This is a neat and interesting technical effect which will appeal to young players. It is a piece worth learning.

The mammy's lullaby, by Constantin von Sternberg, Op. 110, No. 1, has a little of the popular style which we will call syncopation rather than ragtime. Be sure to use a slow tempo. The composer introduces a fragment from an old plantation song with good effect. Work out the indicated realisms of the last few measures. These make a very good study in light, caressing touch.

A gipsy dance, by Frederick A. Williams, Op. 19, No. 3, has life and grace, with a suggestion of the Oriental origin of the race. Here is a good study or teaching piece, specially helpful for the right hand technic.

Barbara (Valse sentimentale), by Robert Leonard, Op. 156, is for the more experienced player in a key which brings into use a large number of the black keys. Follow the fingering as marked so as to get the most favorable positions. It ought not to be a matter of much difficulty to reach considerable speed in playing this waltz. It is effective.

Song of the North (Chant du nord), by Gustav Lange, is from the pen of a well-known composer, presenting broad melodic character with a touch of the vigor and virility of the North. If the passages in octaves are troublesome, practise them at first with the right hand alone and slowly until you can shape the hand for each changing position. This will virtually make octave studies out of these passages.

Elegie, by Julius Lammers, is from Op. 39, a set of easy little pieces, the one under consideration representing certain broad, lyric qualities which give an elegiac character to music. It is not very difficult and should make a good recreation piece for the average player. Note the crossing of the hands.

Moment musical, Op. 94, No. 3, by Schubert, transcribed for the violin by Karl Rissland, makes available for teachers and players of the violin a piece which has long been a favorite for the piano. It is worth adding to your repertoire.

A cradle song of the war, by Margaret Ruthven Lang, is certainly suitable to the present period. Judging from the text it might be a Belgian or a Polish mother who addresses her child, for reference is made to the benevolences of the American people. It will be especially appropriate for concerts in aid of European war sufferers.

Never again, by Louis Schmidt, is a light song, with a humorous or satirical touch, which will especially suit summer musical programs. It is not difficult and is attractive rhythmically. It is worth adding to your repertoire.

Be brave, be strong! by Alfred Wooler, places before our readers a fine sacred song by a composer who has a number of successes to his credit. As usual in his compositions we find here a flowing melodic quality which at once interests both singer and hearer, the voice part amply supported by effective harmonies and kept within the range of the average voice.

Prelude in E Minor, Op. 28, No. 4, by Chopin, transcribed for the organ by H. Clough-Leighter, makes available for organists a favorite piano piece from the classical repertoire.

The Musician

A MONTHLY PUBLICATION

W. J. BALTZELL, Editor

PUBLISHED BY

OLIVER DITSON COMPANY

Boston, Mass., U. S. A.

THE MUSICIAN aims to supply the members of the musical profession with practical aid on all subjects connected with music, to stimulate students to earnest work and artistic ideals, and to raise the standard of musical taste and appreciation throughout the United States.

EDITORIAL NOTES

THE GRADUATE

A PSYCHIC EXPERIENCE

ALL of us would like a peep into the future. We want to know what of success—rarely do we anticipate failure—the days and months to come may have for us. Here is an account of an experience reported by a young man soon to complete a course of study at a prominent conservatory:

I have always inclined to think in pictures, to visualize an idea. Hence it seemed natural to me the other night in thinking about my future work as a musician to project pictures upon the screen of my imagination.

First I saw myself with eager intent face looking straight before me. And then back of me, as I stood there, one by one, out of apparent obscurity, appeared faces which I seemed dimly to recognize. And as these became clearer I knew them for Paderewski, Leschetizky, Rubinstein, Liszt, Chopin, Czerny, Clementi, Beethoven, Mozart, old Bach, and other heroes of music. And as I gazed in blazing letters appeared the words:

"These men prepared the heritage of music which is yours."

"As you have received so must you give."

"You are an understudy to some master of the present."

"The contest for the big prizes of success is open to all comers."

My mind was filled with the power and responsibility of these thoughts. What I had gained I must give out again. I am but one link in a great chain stretching from the beginnings of art into eternity. As those heroes worked so must I work. As they developed themselves so must I develop myself. As they aspired high so must I aspire to the highest. As they maintained courage under all conditions so must I keep up my courage.

And now the picture changed! In front of me gradually appeared the great army of those who are to come in the future days. In the eyes of each one was an appeal to me to do my full duty. And then I knew that in the days to come I should find my greatest happiness in doing my best for my art, with regard to the blessings of the past and the opportunities of the future.

We add a few words of comment to this young man's account of his experience.

Every one of us is building on the experience of the past. Bach studied the works of his predecessors. Haydn studied the structure of Emmanuel Bach's sonatas. Mozart, and then Beethoven, further developed the principles. Today composers study form in order to write in free style.

This chain of master and pupil is the great secret. The pupil of today must be the master of tomorrow, ready to take up the work as it is laid down.

You *can* be a leader according to your abilities. The president of a great American corporation some time ago stated that he was always looking for men worth $10,000 a year. Quite recently he said that his company can use all the $10,000 men he can find. It is plain therefore that he has not found many. But don't forget that a man must feel that he is worth $10,000.

The great prizes in the world of science, politics, letters, art, are always open to the men who can take them from others. The presidency of the United States may be changed every four years.

You feel that you must work up the ladder. You want to deliver your share of the work. And the price you will have to pay is determination, originality, character; determination to keep you at work, originality to give value to your work, and character to give it the stamp of quality.

Up to now the graduate has been working with the thoughts of others. From now on he must make these thoughts his own, must assimilate them, must melt them in his own individual crucible, and recast them into ingots of thought and action which are his own.

He must now supply his own motive power and be ready to give to others. Around him are competitors many of them straining every nerve to win ahead. Our graduate must pay the cost of success as they do. Some are inclined to think that they deserve more than they get. The truth is that most of us deserve just what we get.

Many a graduate feels that if he could spend one year, two years, or more in additional study he will be much better prepared for work. There is some truth in this. On the contrary it is possible to remain a student for too long a period, fixing himself in the student attitude, rather than that of the one who is to apply what he has gained.

A professor in a prominent theological seminary remarked that the faculty frequently forced students to give up graduate study and go into the active ministry in order that the men might develop their own resources.

A writer says: "Folks grow long-headed when they grow short-handed." The European war has shown the people of the United States how dependent they had become on another country for certain articles, dye stuffs, for example. Now manufacturers are at work to make our own. We have depended upon the nitrate deposits of South America for fertilizing products, and explosives. Now it is proposed that the National government erect plants to extract nitrogen in inexhaustible supply from the air.

The musician need not fear difficulties in the work he has laid out for himself. The will and endeavor to solve the problems generally brings success. What may seem impossible or ridiculous today is an accepted fact of common experience a generation later. Therefore test out every idea which comes to you.

A commencement sentiment: May the graduate of 1916 be the master of 1937.

TWO NOTES OF APPROVAL

OUR policy is to get our readers to THINK about their art and their profession. For when a man thinks there is a probability that he will translate thought into ACTION.

Letters like the following give us encouragement to put still more good things into THE MUSICIAN. The director of a flourishing western school of music writes: "I am enjoying your editorials and Mr. Tapper's article on efficiency in teaching very much. I know they have been responsible for much of the 'pep' in my work this season." We hope many more have had equally good help.

Another reader, a private teacher, writes thus to the Editor: "I take this opportunity to congratulating you on the great work you are doing for community music and for more efficient music teaching. You have grasped two great needs of our time and your journal is leading the way in splendid fashion. I also appreciate the very instructive series by Prof. Hamilton on *Literary Methods as Applied to Music Study.*"

We have given value on three points to the reader. We want to have at least one BIG IDEA ON EACH PAGE for every reader.

Make your summer count for your musical benefit. It is too long a time to be idle.

To Mr. Hans van den Burg, New York

The SINGER and His ART

REMEMBER that success is partly (I should say largely) due to character. Do not be satisfied with vocal studies only, but strive to add to your general knowledge, and grasp every opportunity to improve yourself, not only as an artist but also as a human being. It is astonishing how nothing learned is wasted. Develop your powers of observation and appreciation. Expand your imagination. The better the brain power, the better the artist! Read fine books. See fine pictures. Hear the best in music. Be patient but determined, and "Hitch your wagon to a star." —Liza Lehmann: *Practical Notes for Students of Singing.*

SET DOWN BY WILLIAM ARMSTRONG

MME. JULIE CULP

HOLLAND is a land with a charm all its own; the canals in the twilight, full of mystic shadows, pink reflections in the still waters, and a crescent moon; the gorgeous tulip fields near Leyden in April; at all times, on every hand stretches of landscape whether beneath mist masses or lazy sunshine, a perfect picture in their composition; surely such beauty in nature must inspire to expression of the beautiful in art. And to many among us Madame Julie Culp, through her interpretations, has brought a closer realization of the Dutch temperament, the Dutch sense of beauty, and the Dutch delicacy of appreciation in musical art.

To the majority Madame Culp's career as a singer is so familiar that a brief summary of it will suffice to refresh memory. Born in Groningen, in 1883, as a tiny child she sang; at seven she began the study of the violin; at fifteen she gave her first public song recitals in her native town and Amsterdam. Subsequently she studied at the Amsterdam Conservatory with Corneli van Zanten. Following this came her Berlin début and withdrawal from public appearances to study with Etelka Gerster in that city. Since then she has sung throughout Europe, frequently in conjunction with famous composers. Her American début was made in Carnegie Hall, New York, in January, 1913, before a distinguished audience which included Madame Nordica, it being the last concert she attended prior to that fatal journey shortly to follow.

THE SINGER SHOULD GIVE HAPPINESS

In speaking of her art Madame Culp gives in the following a frank expression regarding certain experiences and impressions of things as she finds them in the singer's life. Her first words summarize her individual point of view as to her mission: "A singer before the public wants to give happiness to all." And then she turned logically to an explanation of the absence from today's programs of many songs by classical composers.

CLASSICAL AND MODERN SONGS

"Though beautiful intrinsically, they are ungrateful. The same fact exists in the case of songs by moderns, which remain unknown. Brahms, for instance, has given us some songs not of so much worth, but Hugo Wolf one cannot sing too often. In this connection it may be said, too, that composers complain, and often unjustly, that their best songs are neglected. I do not believe that composers are able to judge correctly which songs are really their best; it remains for the singer to prove by actual test which are the best, and the best are pretty sure to be singled out.

"So far as this aspect which I will mention is concerned, the whole world is as one big town. I sing many things that the public does not understand, and that do not go from heart to heart. Even in Germany and Holland I sing songs with tears in my eyes, and yet those songs do not appeal to the general public. It is just the same with pictures and literature.

"Perfect beauty, not on the surface, but beneath it, is not universally understood.

"And so I cannot blame artists when they select for records, *The rosary, Little grey home in the west,* and kindred songs. The general public loves to hear them, and when artists like Alma Gluck sing them I love to hear them too. On the other hand I understand quite as fully why, with the cultivated, only the greatest things will please

THE SINGING OF LIEDER

"With those who would sing *lieder,* one gay of mood and perhaps the one next following steeped in sadness, response, intellectually and temperamentally, must be exactly that of a great actress. But in the case of *lieder* this condition surely exists. Time will teach all to sing the sad things; life itself, which grows more beautiful as we grow older, because of experience and a calmer, broader outlook, teaches us to sing songs that are sad. But life will never teach us to sing gay things, if the spirit of gaiety is not inborn; neither will experience and years bring sense of humor if it fails to exist as natural gift, for humor, too, cannot be learned.

HOW MADAME CULP STUDIES A SONG

"In studying a song, I first *read the words aloud to find the accent,* and the beauty in them; the melody I acquire easily, for I read well. But it is one thing to sing a song at home, and quite another to sing it in public. There are singers who claim that it is impossible to get the voice into proper condition for a program unless they begin it with the old Italian. That is merely habit or imagination. One should be equally able to begin a program in any language.

SINGING IN PUBLIC

"Poise and authority can best be learned by singing in public. It is a sad and difficult way, but it is the only one. Things that go so beautifully at home, do not go beautifully before the public; nervousness may interfere with the breath; the sense of responsibility that one must do one's best may prove a handicap; perhaps one is not in the mood; but in all these things control comes through experience, even though nervousness increases the longer one sings in public. There may be such a thing as saving oneself in a recital before the public, but I only know this. Sometimes with a big and trying concert ahead for the following day, I decide upon a program of songs to show only the voice, and find myself so carried away by their beauty that I give out the best I have.

CHOOSING SONGS FOR A PROGRAM

"The making of a program costs me many sleepless nights; it is a matter of such tremendous importance. This branch, too, is a something which cannot be learned, but must exist inherently. If one be never so good an artist, and yet have no taste for program making, hope is gone.

"In making a program there must be something for every taste. The musically conservative prefer rather a strict adherence to the traditional in selections. In Germany only *lieder* will be tolerated in a *lieder* program, and yet, after my American experiences in giving mixed programs, at first I must confess against my wish, the desire has grown with me to wake German audiences from the old, set fashion, and make them less conservative. In arranging these mixed programs, I try to select the best.

"Of Dutch song composers we have interesting and good ones, such as Bernard Zweers, Kor Kuillen, and van Rennes, who has composed some children's songs which are charming. Among the men of today in Germany, Hugo Rasch and Paul Schwers have both written lovely songs. I sing the songs of Sandby, the Danish composer, and love many of them; to Erich Wolf, who was for seven years my accompanist, we owe thanks for lovely *lieder*, and his early death was surely a sad loss to art.

THE SINGER CAN LEARN FROM THE VIOLINIST AND 'CELLIST

"There is no greater help to the singer than studying the violin,—I know this from my own early practical experience with the instrument,—neither is there any better way to gain extended knowledge of breathing, phrasing, and tone color than by listening to great violinists and 'cellists. I go to their concerts to listen and to learn, and in turn have been made happy by having them tell me that in hearing my recitals they can learn from me.

"To me there is only one answer to the question 'Is English a good language in which to sing?' and that is that I love to sing it. I wish that I might sing it always. I love difficulties and to overcome them. As to the softness of the English language, one can sing it like Italian."

———o———

SCIENCE AND THE ANCIENT TEACHING

A NEW BOOK ON SOUND AND MUSIC

BY F. W. WODELL

We have in the new book by Professor D. C Miller of Cleveland,* who delivered the remarkably popular Lowell Institute Lectures on *Sound Analysis* two years ago. a series of analyses and syntheses which sustain the "overtone' theory of vowel formation, and incidentally give a scientific reason for the use of the vowel *Ah* (as in father) in fundamental vocal training.

The theory of vowel formation illustrated by Professor Miller's diagrams and photographs may be stated thus:

The mouth cavity is an adjustable resonance chamber. When it is shaped in a particular form it naturally "selects" certain overtones for reinforcement or strengthening, and we hear the vowel *Ah*. When its form or shape is changed, it "selects," reinforces, another overtone or group of overtones, and we hear, say, the vowel *E* as in feet.

If the pitch of the note sung be changed, but the shape of the mouth cavity remains unaltered, the vowel emitted is recognizable as the same vowel that was produced on the first pitch used. Our author says: "When the air from the lungs passes through the larynx, a composite tone is generated, consisting of a fundamental of a given pitch accompanied by a long series, perhaps twenty in number, of partials (overtones) usually of a low intensity. The particular partials in this series which are most nearly in unison with the vibrations proper to the air in the mouth cavity, are greatly strengthened by resonance, and the resulting effect is the sound which the ear identifies as the specified vowel sung at the specified pitch. If, while the mouth cavity is maintained unchanged in position, the vocal cords are set successively to different pitches and the voice is produced, then one definite vowel, the same throughout, is recognized as being sung at different pitches. In this case the region of resonance is constant, though the pitch of the fundamental may vary."

The overtone or group of overtones which result in a given vowel are called its "characteristic." And here we come to a point of especial interest to teachers of singing as confirming ancient practice. The experiments of Prof. Miller have shown that each vowel can be sung with greatest ease and perfection upon a pitch corresponding to that of its "characteristic." Some pitches set by composers are higher than the "characteristic" of the vowels assigned to them. and therefore the singer has difficulty in sounding a pure vowel on those pitches. But note that our author says: "The vowel *Ah* (father) has a 'characteristic' higher than any singing tone, and can be sung under any circumstances of voice or pitch. Thus there is a scientific reason for the free use of such syllables as 'tra-la-la' in vocal exercises."

And thus are the Fathers justified of the modern scientists.

Referring to the question of translations for operatic use, the author points out that "The effectiveness of vocal music is not dependent upon the nationality of its words, but upon the suitability of melody to vowels, a condition which the composer fulfils through his artistic instinct. The translator of an opera must secure this adaptation by his skill; he needs to be not only a linguist and a poet, but also a musician and even somewhat of a physicist, since he must constantly be guided by the facts represented in the curves of vowel characteristics."

Professor Miller gives full and interesting descriptions and illustrations of his work in producing "synthetic vowels" with the aid of organ pipes, and in this connection his remarks regarding the possible origin of speech are worthy of study by the vocal teacher. He says: "The analyses of vowels show that the highest pitch, articulate sound of the human voice is *Ah* as in father; if while intoning this vowel, the lips are closed and opened alternately the result is the word 'ma-ma; if the nasal passage is also closed the word is 'pa-pa.' Perhaps the automatic production of these sounds by the infant when in need of attention explains the origin of these names for the parents." The vocal teacher will find here food for thought. It would seem that if the *Ah* be the fundamentally "natural" vowel; the *M* the first and most "natural" consonant having vocality, and the *P* the first and most "natural" "explosive" consonant, these combinations are indicated for use in first study for tone and word production.

Many vocal teachers will be interested by the description of vowel analyses on the basis of "whispered" vowels, and also through the use of the phonograph.

The book is a model of clearness of statement and illustration, and typographically is a credit to all concerned in its production.

A FEW NOTES ON SINGING

In an article in *Scribner's Magazine* several years ago Mr. Francis Rogers, of New York, discussed the subject of singing and the teaching of singing. The following are pertinent remarks made in the course of the article:

Discourses on physiology are less effective in voice training than metaphor.

Give the pupil what he hears, not what he has read or seen.

A good voice and a wish to use it are what the singer starts with, but healthy development cannot begin without a good teacher.

The singer is a professional breather, for voice is breath converted into sound wages, and the lungs are the motor.

Technic does not interest the public, but a beautiful voice does. Technic often seems to transfo a mediocre voice into an excellent one.

The teacher must train the pupil to hear in his o voice the defects which the teacher hears.

The singer must be his own critic.

The singer's progress depends on mind as well tone. In no branch of art is theory of less va than in singing.

What the singing teacher needs is experien patience, enthusiasm, sympathetic insight, imagi tion, much more than scientific knowledge.

TONE PRODUCTION AND DICTIO

BY HOMER MOORE

If we are to have opera in English we m have the words pronounced so that they can understood. There is no more euphonious l guage in the world than the English if it is prope pronounced. It contains eleven vowel sounds eight consonants that can be vocalized and two its supposed consonants, besides these, are re words. A legato as perfect as can be produced Italian can be produced in English. and there is end to the varieties of tone color that its vocabul makes possible. Singing teachers should study English language as carefully as they do their t production. Indeed the two are inseparably in woven. A correct pronunciation will do much insure a correct tone production. Without a c rect pronunciation the tone must suffer, and it ways does suffer. (From an address before Missouri Music Teachers' Association.)

CARELESS VOCALISE PRACTICE

The other day while in the waiting room o teacher of singing I heard a pupil singing vari exercises.

I am not a singer, but a musician who has t to learn the fundamentals upon which arti musical performance is based, and I tell you c didly, the young lady whom I heard showed t she had not been taught these fundamentals or not cared to master them. At first I said to self: "She is only a beginner." But that was true for later I heard her attempt an aria fro modern opera.

What was the conclusion? The teacher did know certain fundamental points in the execut or if he did know them he did not care whethe not a pupil observed them. Here are some of things I heard:

When the pupil sang a scale passage, say from 5 and back again, in eighth notes, two to one b the upper two notes, 5 and 4, were always une rather shorter than the others. The smooth which distinguishes a similar passage by a violi was altogether lacking. If the passage were n

THE HERMAN KLEIN PHONO-VOCAL METHOD

Based upon the Famous

School of Manuel Garcia

Highest Award Panama-Pacific Exposition

A perfect and complete method of vocal study for teachers, singers, students. The exercise lessons are wonderful voice records, sung by well-known artists, and are perfect in tone. This method provides a properly graduated series of exercises; and a model that illustrates every branch of vocalization. It is endorsed by leading singers and vocal instructors in both America and Europe. The voice records can be used on any Disc Talking Machine, Columbia, Victor, etc. Booklet containing opinions of Mme. Tetrazzini, Signor Zenatello, Mlle. Lipkowska and other leading artists, also particulars, sent on request.

nded the execution was similar, the two upper s were always jerky. And, which is more ificant still, the tone was always thinner and ter, never the same as the lower tones.

'o my mind the explanation was that the pupil not consciously go to the highest note of the sage but rather just added the upper note to the below it. As a verification of the surmise I ll an exercise which I heard in another studio. e pupil always sustained for a moment the high- tone before descending. The effect was satis- ory.

When the pupil referred to previously sang a g florid passage without piano accompaniment rhythm became vague and uncertain. Starting in groups of sixes it was not long before one felt t the singer was thinking in groups of four. th a rapid tempo when the unit should have been roup of eight notes the singer would put in accent iously, four, six, or eight notes to a group, erally according to the construction of the phrase. t is useless for a singer who has not been care- y trained in these and similar fundamentals of le to expect to attain proficiency in coloratura ging.

Listen to a violinist play a florid passage. Or en you attend an orchestra concert note the ooth legato execution of rapid passage work the flute or clarinet. They offer good models a singer to use in the practice of vocalises.

n this kind of work the voice is an instrument l the execution should correspond to the rules ognized in other instrumental performance. If notes are sixteenths, sing them all as sixteenths, some of them shorter, others longer. Concen- te your ear on the execution and make all of m equal in time value and equal in weight or ssure.

And don't forget that vocalise practice is essential forming a correct, artistic vocal habit.

———o———

BREATHE AND BE WELL

The attention of readers of The Musician is led to a book* recently issued with the title which pears as a caption to this article. It is an old ry to singers and teachers of singing that cor- t breathing is essential for artistic work. Dr. ward goes much farther in his book. His sition is that men and women "are not upon niliar terms with their bodies. They are better quainted with diseases than with health. Poor alth, in distinction to disease, is almost invariably due to lack of understanding that the body is a machine which must have proper fuel for combust on and its boilers, pipes, and exhausts must always be kept clean—that oxygen must be supplied in sufficient quantity, must burn up waste material every living minute as well as supply energy and new living stuff. The secret," he says, "is in knowing how to enlarge the combustion chambers and control intake and outgo."

Breathe and Be Well is a presentation of the bearing of correct breathing in connection with certain physical exercises upon general health and high mental and physical efficiency. It is not a physical culture book but one on personal hygiene in which breathing exercises are all-important. If the author may seem to some readers, to be over-enthusiastic as to the value of the principles he sets forth, it is well to recall that it takes a tremendous amount of enthusiasm to get the average person started even along a road which he knows he should travel.

We recommend this book to all teachers of singing, to all students, and to all singers. That is quite a large number. And then each one of these persons can honestly tell their friends of all sorts of occupations that if they will learn to breathe efficiently and persistently they will greatly promote their health. It's worth a trial.

Breathe and Be Well, by William Lee Howard, M.D. Howard J. Clode, publisher, New York. Price $1.00 net.

SOME POINTS FOR A VOCAL STANDARD

At the last meeting of the Northwest Music Teachers' Convention, Mr. George Hotchkiss Street, of Portland, Ore., read a comprehensive paper on the above subject. We present the following abstract of the address which will interest those of our readers who are teachers of singing or singers.

A teacher of singing should be able to convince an examining board that he knows what the requirements or elements of good tone are, and in explaining how he would impart this knowledge further convince the board that a pupil of ordinary intelligence and talent following his instructions would learn to use his voice in an artistic manner. That he or she know and illustrate the standard vowel sounds of the English language. To enunciate and pronounce correctly, to phrase in a way to bring out the meaning of a text, and know the meaning of the marks of expression and dynamics, and to show a knowledge of the different styles demanded by opera, oratorio, and song repertoire.

That it be demanded by the board that the teaching of repertoire be limited to English unless the applicant prove his knowledge of the diction and style of other tongues.

I believe that all vocalists should study harmony, piano playing, and history, if they have the essentials of singing first.

I also believe that a general knowledge of the physiological process of singing is of considerable value to the teacher, to enable him to talk about or answer intelligently any pertinent question which might be asked by the pupil; so that the words, "diaphragm," "larynx," "pharynx," "palate," "resonance," "vibrations," "support," etc., be not merely words of mystery or sources of confusion.

THE FIRST SONGS AND THEIR USE

BY FRANK E. MORSE

In the examination of voices the vocal teacher detects faults which are common to many, others which are peculiar to the individual. The first vocal training should aim to overcome these difficulties and to lay a foundation for future work. This is preliminary to the study of songs and in the technical development so important to the work of the vocal student.

In the study of vocal music, the selection of songs for the student is frequently most perplexing and difficult; not because there are too few songs, but because the selection should be made to put into practice principles already laid down, and with regard to the faults which the pupil is trying to overcome.

The fact that no two voices are alike and that no two pupils have the same individual habits in singing must be considered in the choice of songs.

The compass of the voice is always to be regarded, for it is better in the beginning to have songs selected within the extremes; that is in an easy compass. Many song writers have a superficial knowledge of the voice in singing and write combinations which, while musically correct, are vocally extremely difficult and not singable.

The first songs for the pupil may be easy English or Italian selections, the latter better, if the student understands the language.

It seems to me that it is better to allow a pupil to sing a song with his own interpretation than to have him sing it as the teacher "feels it."

[Teachers and singers who have definite convictions in regard to the characteristics which should be found in "first songs" will be repaid by an examination of the collection, *Something to Sing*, compiled by the Editor of The Musician. It contains fifty songs especially selected from ten times the number of songs recommended by a large number of teachers of singing. They are all unusually valuable for teaching use. From the English, Italian, French, and German repertoires.—Editor of The Musician.]

CONDUCTED BY HELENA MAGUIRE

CHORUS

(From an unpublished drama written when Tennyson was a boy)

Each sun which from the center flings
Grand music and redundant fire,
The burning belts, the mighty rings,
The murm'rous planets' rolling choir,
The globe-filled arch that, cleaving air.
Lost in its own effulgence sleeps,
The lawless comets as they glare,
And thunder through the sapphire deeps
In wayward strength, are full of strange
Astonishment and boundless change.

THE BIRD CORNER

Do the little readers of this Department know that our Government is so interested in the welfare of our friends, the birds, that it has published literature about the care of these, and about the building of their houses, which any of you may have for the asking?

The *Ladies Home Journal* employs a man whose work is to supply this literature to those interested in it, and if you send a two-cent stamp to the *Journal*, you will be sent all the pamphlets which Uncle Sam wishes you to read. Be sure to state that you are a friend of the birds.

———o———

[The following poem will make an effective recitation to use in connection with a pupils' recital program. It was published some years ago but not complete. This is the authorized version, sent to The Musician by Mr. Bolling.]

WHEN PADEREWSKI STARTS TO PLAY

BY ERNEST L. BOLLING

With all that ha'r flopped down his back,
I thinks about a fodder stack,
An' mules an' horses eatin' hay,
When Paderewski starts to play.

His ha'r, my friends, is ter'bly red,
An' runneth wild upon his head;
But not a darn keers he 'bout that—
He bangs the keys an' knocks 'em flat.

When out he comes upon the stage
The girls all git into a rage;
They "creen" thar necks as if to say
"Now hesh! for Paddy's goin' to play."

O yes, the girls git all a-flutter
An' look like melted "Elgin" butter—
They gits into hysteric ways
When dear old Paddy ups and plays.

He's dumb as some ole oyster shell,
But when he plays he plays like—well,
'Tis best I should not name the way
How Paderewski starts to play.

At times he plays so high-fa-luten
When up an' down he goes a-scootin',
It fa'rly takes my breath away—
When Paderewski starts to play.

As if the keys had "sassied" him
An' with a switch that's long an' slim
He fa'rly spanks the iv'ry keys
Like infants on thar mother's knees!

At times he's chasin' butterflies
Or flingin' women languid sighs—
You see these things, an' sometimes more,
When Paderewski has the floor.

'Tis true he's but a long-ha'r'd Pole,
But piano playin' is his rôle—
The stars in heaven turn this way
When Paderewski starts to play.

The angels seem to hover 'round
An' listen to the magic sound,
An' smile in all thar bright array
When Paderewski starts to play.

He slaps the keys an' then gits sorry,
An' plays some chune like "Annie Laurie";
The birds in all the treetops sing
When Paderewski's in the swing.

The roses on the bushes dream,
On ev'ry face thar is a beam,
When red-ha'r'd Paddy comes this way
And takes his seat an' starts to play.

I hear the surgin', angry waves,
The bark of beasts that dwell in caves,
The shrieks of devils in dismay,
When Paderewski starts to play.

The March winds howling down the lane,
The din of thunder, hail an' rain
Are pictur'd on my mind, some way,
When Paderewski starts to play.

Sometimes thar comes a mountain gloom,
A grief like Poe's sad "Ulalume,"
An' phantoms pass, in black an' gray,
When Paderewski starts to play.

The lilies yield thar best perfume,
The dewdrops sparkle and illume
The roses at the close of day,
When Paderewski starts to play.

Gee-willikins! that whirlwind rush—
That jam an' tussle, bang an' crush!
He's playin' football on the keys,
Or I'll take snuff an' give a sneeze!

The girls are wreathed in radiant smiles,
An' tiptoe down the crowded aisles,
An' thar's a tumult an' a shout,
When Paderewski saunters out!

I see the gay in merriment,
The poor in rags an' tatters bent—
The lights an' shadows of a day—
When Paderewski starts to play.

He's devil, angel, man in one,
But when he plays the battle's won;
For all the world gits on its feet
When Paderewski takes his seat!

———o———

TAKING STOCK

You children have doubtless listened o
while the business members of your fa
talked about "taking stock." Everyone
does business, however great or small,
take account of stock at the end of each
and one of the greatest reasons for the su
which certain persons have attained has
in just this, that they knew everything
there was to be known about their "sto
they knew, at the end of each year, just
much stock they had received, just how
they had used; just which stock had
profitable, and just which must be assigne
"losses"; furthermore, they knew ex
what they had to begin the next year
and what it would be necessary for the
buy in order to keep on their business.

Now with June ends *your* musical
And I wonder if any of you have ever tho
of taking account of your musical stoc
the end of your musical year? Yet this
necessary to your future success in
as it is to the business man's future success

Let me tell you how to do it.

Sit down with any little blank book
you may happen to have, and divide each
into three equal columns.

Then put down in one column every
you have studied during the year, s
finger-exercises, and studies as well as
and duets; *everything*, omit nothing.

That is easy. Now in the next co
put everything of the first list which has
profitable to you. I mean everything
has *taught* you something, which has
creased your "wealth of knowledge." I
you stop to think about it you know

ly well that you have spent hours prac-
ng things which have not "sent you ahead,"
sically, one jot. And this not because
things were not good in themselves so
ch as that you did not make good use of
n. Many a merchant has good goods on
shelves, but if he does not advertise them,
them in the window, they just remain on
shelves, and have not brought him a
ny at the end of the year.

o, too, you know that if you have practised
es and have not learned scale-fingering,
n these scales are simply so much goods on
shelf. They cannot go into the "profit
mn." Just as if you have simply "run
r" your finger exercises without lifting or
rcising your fingers, you have not developed
pianistic fingers for which these finger
rcises were made, and you have gained
hing.

Then you may go through your studies
l your selections one by one, and tell your-
honestly just which ones have been profit-
e to you, and which have not. You know
rself better than anyone else does just
at each thing that you have studied meant
you at the time you were practising it, just
ich may go into the second, or profit column,
l which must be assigned to the third, or to
sses."

Then, when you have made out your three
umns as carefully and honestly as you can,
through them, and find out what you have
ually *learned* during the past year. Count
how many scales you actually *know*, not
t the names, or the signatures, but the
gering, the formation, the relative and paral-
minors, and all the other things which your
cher has hoped that she has really taught
1. Do the same with your studies and
ir selections, of the latter only permitting
rself to say that a selection is really yours
en you have memorized it. Put this all
vn as your "stock in trade." Then pro-
d to find out in just what you need to
ock up" for the coming year's musical
siness. Spend some of your vacation time
ing up the empty musical shelves, memoriz-
selections which did not get memorized
ring the year, developing finger muscles
ich were allowed to go slackly and un-
ought of during the year, and in doing the
ding which you always meant to do but
ver "got round to."

By this musical "stock-taking" you will
rn your own needs, and no one needs to know
m more than you yourself. Then you
l be ready for a good start in September,
d you will certainly delight your music
cher.

H. M. Maguire.

A FOLK MUSIC PROGRAM

(May be used for an outdoor recital)

BY LAURA ROUNTREE SMITH

(Book rights reserved)

(If the children can wear costumes of the various countries it will add to the interest of the program. Folk-dances may be given at pleasure. The music is all published by the Oliver Ditson Company. The songs are found in *Folk-songs for Children*, except the *Indian Pawnee Song*, which is found in *One Hundred Folk-songs of all Nations*. Additional dance music is found in *Selected Pieces for Violin and Piano*. Where costumes cannot be provided the children can carry flags of all nations.)

Spirit of Music: I am the Spirit of Music. I come tonight to greet you all. Hark! I hear the songs, here they come, here they come!

(Enter three children carrying banners on which are written, *Dance Song, Legendary Song, Patriotic Song.*)

Dance Song (tripping to and fro): I am the folk-dance. I was first sung and then played on various instruments. You will find me still, wherever you go in France, Italy, Spain, Germany, and all over the world. I can show you the customs of the people who sang at their work.

Legendary Song: I am the song that is made from old legends, and the country rich in legends is rich in song. I am a national folk-song.

Patriotic Song: I stand for love of home and love of country. I help to make a nation's history. If we had time we could tell you what songs are sung by the jester, minnesinger, and troubadour.

Spirit of Music: Here come the folk-songs, we will welcome them all.

(Children enter and are seated in a semi-circle, taking part from time to time in the program.)

Spirit of Music: Folk-songs of all nations have much in common. They differ also on account of different instruments used for the dance, and different scales are used from ours. Many of the folk-songs are written in the minor key and with great variety of rhythm.

1. Folk-songs of Germany.

The minnesingers of Germany have long been famous. The town pipers also danced and played. Several dances combined were called a *suite* in Italy and France, and a *partita* in Germany. They were later developed by Bach.

The partita numbers were not all dance music. They were in the same key but contrasted in character.

1. Song. *Meeting.*
2. Piano. *Folk-song* (A minor), Mendelssohn.
3. Violin and Piano. *Bourree*, No. 1.

2. Folk-songs of Italy.

The Italian folk-song is a love song, a fishing song, or a tarantella. In the latter song it is supposed that a peasant girl has been bitten by a tarantula and must dance the poison away.

The Italian folk-song is used much in opera since the year 1600.

1. Piano. *Tarentelle.* Anton Strelezki.
2. Song. *Santa Lucia.*

3. Folk-songs of Spain.

The favorite instrument in Spain is the guitar and the fandago is the popular dance. Spanish songs are sung in South America, and at Buenos Aires there is a great opera house.

1. Song. *Regimental March.*

4. Folk-songs of France.

The folk-songs of France emerged into the ballet. The dances were used in opera in the seventeenth century. The troubadours wandered about the land singing the folk-songs. Many songs were written during the Revolution, the most famous being *The Marseillaise.*

1. Song. *The Marseillaise* or *Come, Aurora.*

5. Folk-songs of Hungary.

Hungarian music is preserved for us by Liszt who learned the folk-songs of the gipsies.

The Hungarian scale is our minor with an augmented 4th. A great variety occurs with the use of this scale and the gipsies were fond of turns and trills and cadences. Gipsy bands wandered about playing on the dulcimer and violin. The czardas is the most popular dance, having first been danced at an inn bearing that name. It consists of two dances, the *Lassen*, danced slowly and the *Friska* danced in a lively manner.

1. *Gipsy Dance.* Lichner.

6. Folk-songs in Russia and Poland.

In Russian folk-songs the major and minor scales are both used, and abrupt changes occur. As no instruments are used in Russian churches the basso voices are wonderful. The people have suffered such oppression that their best songs are sad. The polonaise and mazurka are the national dances of Poland. Chopin and Paderewski have written many of these dances.

1. Song. *Flicker, flicker, fire sprite.*
2. Piano. *Mazurka*, Op. 7, No. 1. Chopin.

7. Folk-songs of Ireland.

Each occupation of the Irish has its own tune. They play upon the bagpipe, harp, and an instrument called a geige, from which the dance "jig" is named. The early harpers played chants from which some of our hymn tunes originated. Their folk-songs are many of them lively in character.

1. Song. *Cockles and Mussels.*

8. Folk-songs of England.

All folk-songs in England were written on certain lines as they had a school of counterpoint. This gave them less freedom in expression. They are famous for their May songs, hunting songs, and holiday songs.

1. Song. *The Mulberry Bush* or *Old King Cole.*

9. Folk-songs of Scotland.

Many Scotch melodies are based on a five-toned scale, the bagpipe being their special instrument. Different clans have different songs. The bagpipe is a very old instrument. It is found on a coin of Nero's and is even older than that date. It has been used in many countries. It was used in church decoration in England. The monks used it occasionally. In a volume in Lambeth Palace there is a picture of a fox playing a bagpipe. The musette, a small bagpipe, was played in court. The Scottish bagpipe has a chanter and three drones which sound the note "A" in unison. The melody is played on the chanter.

Songs:

1. *Annie Laurie.*
2. *Blue Bells of Scotland.*
3. *Loch Lomond.*

10. Folk-songs in America.

Folk-songs in America consist mostly of Indian and Negro airs. We have several Indian operas written by white men. The early New England hymn tunes influenced our music. Many folk-ballads are sung in the hills of Kentucky. They are accompanied on the dulcimer or banjo. An effort has been made to collect cowboy songs, frontier songs, and steam-boat songs. A good collection of American folk-songs is now in the Harvard Library.

Songs:

1. *Old Kentucky Home.*
2. *Indian Pawnee War Song.*
3. *Star Spangled Banner.*

(The entertainment closes with a flag drill. The children wave American flags while singing the song, then come forward with the flags of all nations and go through a short drill and march off).

———o———

JUST NOTES

BY ELIZABETH A. GEST

LAURETTE had just come home from her music lesson, and she began to practise. But soon the room became dark, and she was too small to reach the light, so she curled up in the big chair before the open fire and watched the flames.

She began to think about her music lesson, and wondered why her teacher called her stupid. "I really do not think that I am stupid," she said to herself. "Of course I do not know as much as she does, but then I am only a little girl," she told herself, as she watched a big spark go up the chimney.

"Of course I do not know the difference between a tone and a note," she continued, "but that is not my fault. It is not because I am stupid, it is because no one ever told me, that's all. I wish some one would tell me."

"What do you wish some one would tell you?" asked a little voice.

"Teacher told me to find out the difference between a tone and a note for my next lesson, and I wish some one would tell me," and as she spoke she saw a big note, in appearance a thirty-second, jump up on the fire grate.

"I'll tell you," answered the little voice. "Just take a look at me. What am I?"

"You look like a note," answered the little girl. "Where did you come from?"

"I came out of your music book. There are lots of others around, too. Wait a moment, I'll call some of the others," and when Laurette looked up she saw a row of notes sitting on the fire grate.

"Oh, dear!" said Laurette, "you will all be burnt up."

"Oh, no, we won't because how could we! Whenever the flames come near us, we jump away—like this," and the first little note jumped right up on Laurette's chair as he spoke.

"What kind of a note am I?" he asked.

"A sixteenth note, I think," answered the little girl.

"Right, and do you know all these other notes?" he asked her.

"I know half note, and whole note, and quarter note, and eighth note, and you. That is all I know," she said.

"Well, that is very good. But now you know that we are not tones, don't you?" he continued.

"I know that you are notes, but I thought that you were tones, too," she said.

"Nonsense! How could we be! You surely know that a tone is a sound; and we are not sounds—we are only shapes."

"How funny," said Laurette.

"It is not funny at all," contradicted the little note. "Can you sing?"

"A little," answered Laurette.

"Well, sing then. Just make one beautiful sound."

"I cannot make a beautiful one," confessed Laurette.

"Well, make any kind. Sing *My country 'tis of thee*"; and Laurette hummed the first phrase quietly.

"Good," said the little note. "Now you are making tones—they are things that you can hear. But we are notes—we are shapes that you can see. Do you understand?"

"Why certainly I do," answered Laurette. "But nobody ever told me that before Thank you so much. I will always remember."

"Good," said the note again. "But dear me! all the other notes have left me. I must run after them. Come again some time, and we will explain some more things that you do not understand."

And Laurette opened her eyes, and found the room very bright, for some one who could reach the light, had come in to tell her it was tea-time.

DON'T drop your music for the summer. Keep your technic up.

MUSICAL HINTS FOR MOTHERS

BY PRISCILLA PEARSON

SELECT only a teacher who loves and unde stands children.

The teacher must have a fine education a the gift of teaching. The ability to app her knowledge to the needs of each child essential.

The union of these qualities makes a su cessful teacher and a fine pupil.

If money is not plentiful, do not choose t cheap teacher. Give your children to t best teacher you can find, even if it means h the number of lessons that can be obtain from a cheap teacher.

Build your musical house on a rock. T build on sand means a waste of time, mone and courage.

It is almost impossible to undo bad habi either for the teacher or child. Never forg that! Save all the tears and heartaches y can for your child. She will thank you f it some day.

Buy as good an instrument as you can affo and keep it in tune, for ear-training is importa with young children.

A young child should have two lessons week, unless some member of the family h the ability and time to direct the child, un the teacher comes again.

Have a regular practice time for the pup It must be as regular as the time for goi to school. Do not break into the rule exce for illness.

In this manner habits are formed wh will last a lifetime. Duty will become a ple ure.

Try to find time to read to the child abo the struggles of the great masters. It w encourage them.

Take children to fine concerts. They a lessons and very valuable ones. Ambition aroused. The musical senses are being c tivated. Let the child hear good music of kinds.

Later in life there will be ensemble playi and some knowledge of other instruments w be very valuable.

At the end of each week, give the pupil so pleasure or a little money reward for faith work. It pays. After a while the pu can see for herself that the musical knowled is reward enough.

If you entertain, have little musicales your own home. This creates a musi atmosphere and is a pleasure.

Play a duet with your own child, for c number of the program. This will cre confidence in the pupil till she can stand al and not fear an audience.

This seems a long program for you to ca out, but it is not so difficult as it seems. Wh a baby is born the mother takes one step a time and the child soon grows up. So it is music. Be patient and your reward is sure come.

(Children, be sure to give this to your mot to read.)

THE VIOLIN

CONDUCTED BY RAY G. EDWARDS

E WRIST STROKE A MISNOMER

BY WILLIAM WALKER TODD

'o many violin students the attainment of the emely important, in fact indispensable stroke he bow, commonly known as the "wrist stroke," ns to offer peculiar, and in some cases, almost rmountable difficulties.

'here are, of course, numbers of students who, inning the study of the instrument very early, e through excellent teaching and more or less onscious imitation, acquired a fluent technic of wrist without actually realizing just how they e accomplished it. On the other hand there many students, who, either through poor inction, or because of taking up violin study later t a period when the imitative faculties of child- d must begin to give way to the mental processes approaching maturity, find in this particular nent of right-hand technic obstacles out of all portion to their actual difficulty.

ecause, for some time in one period of his study, ing undergone some of the difficulties experienced this latter class of students, the present writer thoroughly understand the handicap under ch the student of more mature years may labor is efforts to comprehend and attain this par- lar style of bowing.

he writer is convinced that in the case of stu- ts who find a good wrist stroke difficult of erstanding or performance, the trouble is really ut ninety per cent mental, being caused by a mis- eption or exaggerated idea of the physical effort essary for its production. This may be, and bably is, in many cases caused by the popular "wrist stroke," which is in itself, to a certain ee, misleading. In the opinion of the writer his article the term should be discarded (as e few writers and teachers have already done) the clearer and more accurate "hand stroke" or nd bowing."

he muscular action involved in swinging or ing the hand on the wrist joint is a very complex ormance, and an anatomical analysis of the esses involved in this particular physical ement will be of little or no help toward a er conception, on the part of the student, of the al sensation or "bow feeling" his hand must rience in the performance of the wrist or hand bowing. Suffice it to say that the motions of the hand on the wrist are principally controlled by the intricate set of muscles and leaders which run well up into the forearm, whence the muscular impulse really originates when the brain orders a movement, lateral or otherwise, of the hand.

As a matter of technical performance, however, the violinist must not imagine any such thing as a "wrist stroke" *per se*, in the sense of any actual impulse coming from the wrist alone, as some pupils are prone to think. It would be just as sensible to imagine the forearm bowing as an "elbow stroke" because the forearm swings on the elbow joint. Let the student concentrate his mind on the idea that the wrist joint plays the part of a sort of a hinge or pivot, upon which the hand swings of its *own volition*, with all freedom and utter absence of any stiffness; let him think of the hand as swinging *on* the wrist joint, *not* as a result of any impulse *from* it; of the stroke as a movement originating, if he pleases, from the tips of the fingers and the hand *down*, not from the wrist *up*.

Once the student gets this idea firmly fixed in his mind, the mysterious and improperly named "wrist stroke" has resolved into the readily understandable and easy "hand stroke," almost the simplest bowing with which the violinist has to deal, and the one requiring the minimum of effort for its production.

Let it be understood that in speaking, from a technical standpoint, of the "hand stroke" or "wrist bowing," we mean simply those very short separate strokes of the bow performed by the *hand alone*, independent of any aid or participation of the forearm in the stroke, beyond the necessary raising or lowering of that member as demanded by the changing of the bow from the plane or level of one string to that of another.

The "hand bowing" may be performed as a series of perfectly smooth, legato strokes; or, with the hair firmly gripping the string, each note sharply cut out as though there were a tiny but distinct rest between each stroke, in which case it is known as the *martele* or "hammered" hand bowing, a diminution of the forearm stroke of the same name; or it may be played in a moderato tempo as a sort of bounding stroke in the lower half of the bow, which gives what is called by some the *saltato* bowing, in which case the character of this stroke may be, and generally is, modified by more or less participation of the forearm; played with the minimum amount of stroke at a fast, or very fast rate of speed, at or slightly above the middle of the bow, and allowing the bow, by reason of its elasticity, to spring on the string for each stroke, it becomes the highly effective *spiccato*, or springing bow.

These various forms and modifications of the "hand stroke" are, however, not to be learned or conquered at once, but are a gradual outcome of a thorough understanding and practice of the basic principle of all hand bowings, the plain legato "hand stroke," performed first at the middle of the bow, then as the wrist becomes more free and elastic further along in the lower half of the stick, until a firm, smooth stroke can be made with ease near the nut. Above the middle of the bow the available length of the "hand stroke" gradually diminishes as one nears the point, at which portion of the bow it is most difficult of performance and most limited in its application. However, practice of the "hand stroke" in the upper part of the bow is excellent for rendering elastic and strong the various muscles involved in this type of bowing.

In direct contrast to the hand bowing, but of great value in loosening, toughening, and preparing the wrist for its various functions, the pupil should do much work on the full-arm *martele*, or, as some teachers term it, the *grande martele*, in other words a full-arm stroke played with all power and considerable speed, with a brief stop or rest between up and down strokes.

However, before the student attempts, with the bow, the performance of the "wrist bowing" he should first be sure that he fully understands the real movement of the hand incident thereto. Let us first briefly analyze the various movements on the wrist joint of which the hand is capable.

The student holds out his right hand, palm down, in front of him. The easiest and most natural movement of the hand on the wrist joint is an up and down motion, the tips of the fingers moving in a vertical line. This particular motion is the one which is employed in a certain degree in changing the bow from a lower to a higher string, and *vice versa*. Now swing the hand slowly and freely from side to side, the tips of the fingers moving on a horizontal line, and we have the purely lateral or sidewise motion. If these two movements of the hand, the vertical and the horizontal, are performed alternately the tips of the fingers will make a plus mark in the air. With the palm still constantly held down, move the hand with a circular motion on the wrist joint, so that the finger tips describe a complete circle in the air. This is, approximately, the movement that is used in rapid detached bowings that demand a constant transfer back and forth of the middle or upper half of the bow from one string to another. Still holding the palm down, move the hand so that the finger tips make a *diagonal* stroke, back and forth, from left to right *downward*, and from right to left *upward*, thus; down, ↙ up, ↗

This, which the student will recognize as being midway between the vertical and horizontal movements of the hand, and embracing some of the elements of both, is the true "wrist stroke" or "hand bowing," not the purely lateral movement as some students incorrectly suppose. An attempt to employ the purely lateral motion in the execution of the hand stroke will result in the bow moving in an eliptical or curved line, instead of in a straight line and parallel to the bridge.

Another point in which students err and add to the difficulty of their acquirement of the hand stroke is by entertaining an exaggerated idea of the amount of bow necessary for its production. It should be clearly understood that the hand stroke is, by reason of its very nature, the minimum movement used in bowing, and that any attempt to expand the stroke beyond its reasonable bounds destroys at once its characteristic effectiveness and technical usefulness. Any bowing that would demand an exaggerated hand movement can, to much better advantage, be played with a light forearm stroke. However, this does not mean that the student should not strive for a free and elastic wrist with plenty of "swing." Indeed, it is highly important for various technical reasons that the wrist be as supple and have as much freedom of play as possible.

How much of the bow, then, is it practicable to use for an average hand stroke? Naturally, this will depend upon the style and variety of bowing demanded by the mood of the composition being played, whether a legato, martelé, saltato, or spiccato effect is needed, and will also be influenced to a considerable extent by the individual temperament and physical capacity of the player. It is possible for a player who possesses a well-loosened wrist to make a hand stroke of four-and-a-half to five inches in the middle or lower half of the bow, though such an extended hand stroke would be of value

Weeman, Beal & Holmberg
564 Washington Street, Room 527 and 528
BOSTON, MASS.
VIOLIN MAKERS and REPAIRERS
All Grades of Both Old and New Instruments
Telephone Connection

principally as a means of exercise for rendering the wrist strong and supple, and would not be applied in such an exaggerated degree in actual performance of solos. A safe average length for a legato hand stroke for most players with a reasonably limber wrist would be one-and-a-half or two inches at the middle of the bow; for the martelé or "hammered" stroke in the lower half of the bow, about two or two-and-a-half inches; for the saltato or bounding stroke below the middle of the bow, in which the forearm would be to some extent involved, about an inch to two inches; for the spiccato at the middle of the bow, about three-fourths of an inch to a quarter of an inch, governed by the tempo and degree of power being used.

In a very light and rapid spiccato bowing the hair practically springs up and down at the same point of contact, and the hand action is almost reduced to the purely vertical, *i.e.*, straight up and down motion. In extremely rapid spiccato, which is played slightly above the middle of the stick, the hair touches with the smallest possible portion of contact, producing, as it were, mere points or sparks of sound. The student must understand, however, that the above given dimensions of stroke are only approximate and are not, by any means, to be regarded as an arbitrary table to be blindly followed. As before stated, individual cases will be modified by individual characteristics and conditions. Some players will naturally have greater play of hand than others, while responsive instruments will demand less quantity of stroke than others with a less responsive quality of tone.

It is, of course, very necessary that the player strive continually for an elastic and muscularly well-developed wrist and forearm. Proper gymnastics applied to this particular phase of wrist and forearm development are of great benefit, and for the purpose the excellent little pamphlet *Hand Gymnastics*, by Ridley Prentice is recommended. Despite the fact that it seems to have been written primarily for piano students, violinists will find it of equal value. The author presents a series of daily exercises, which, when faithfully practised, are sure to have a beneficial effect in developing and rendering elastic the muscles of the hand and arm.

The present writer would also strongly urge the student carefully to study such text books as *True Principles of the Art of Violin-Playing* by George Lehmann, *How to Study Kreutzer*, by Benjamin Cutter, and Paul Stoeving's masterly little work *The Technics of Violin Bowing*. If possible get all the books at once, read in the order named, then together, carefully comparing and working out the various fundamental principles of bowing as described by the several authors. In this way the student may gain a comprehensive idea of bowing technic, as the above mentioned works are written in a clear and concise manner, with special reference to the needs of the pupil who may be compelled to work out technical problems without the aid of a teacher.

The confines of a single article will naturally forbid one having anything to say upon the functions of the wrist, or rather, hand as applied in the production of numerous other styles of bowing, such as firm and bounding staccato, arpeggio bowing, ricochét, tremolo, etc. However, these are all dependent for their successful execution upon a limber wrist joint, and let us say, a well-educated *hand*, for the schooling of which the student can do nothing better than to devote careful study and experiment in the gaining of the natural and simple "hand stroke," the foundation principles of which the present writer has herein endeavored to describe.

ZOELLNER STRING QUARTET
SEASON, 1915-16
Direction
HARRY CULBERTSON, Fine Arts Building, CHICAGO

AMERICAN SYMPHONY ORCHESTRAS

Some months ago the *Musical Courier* published a sketch of American symphony orchestras, written by Henry B. Baerman of San Francisco, We glean the following statistics which should interest our readers:

Fifteen orchestras are noted.

The number of men composing the personnel of these orchestras is 1087. The Boston Symphony Orchestra is credited with the largest number of men, 97.

These orchestras give more than 1000 concerts in a season.

The majority of the players are on a weekly salary, in some orchestras the minimum is $25 per week, in other cases the minimum is from $35 to $40.

The Boston Symphony Orchestra is the only one which does not employ union men. The deficits seem to be growing smaller. The Boston and Chicago Orchestras are self-supporting, and the Philharmonic Society of New York has an endowment fund.

—o—

EQUIPMENT IN MUSIC

BY RAY G. EDWARDS

The equipment of the musician is quite as important as the equipment of the business man or the man of science. The equipment of the individual is such as enables that person to attain the goal with the greatest ease, grace, and certainty. In the case of the musician there is a long period of preparation, then the proper sort of an instrument, and varied experiences before the public, before he may be said to be "equipped."

We are not using this word in the sense of material equipment only, but in the sense that the word equip means "to furnish or fit out for any special service or undertaking." The special service of the musician is, or should be, his art.

It is also his greatest undertaking. How great only he knows who has arrived. But certainly to be equipped is a very desirable thing. It fits one for life. To "feel fit" is a very satisfactory sensation. And actually to be in good working condition is even better. Not a feeling merely but a matter of actual fact. Not only to feel right but to be right. In the latter case there need be no question about results; the goal is to be reached with the greatest ease, grace and certainty.

The masterly musician must accomplish his ends with ease, grace, and certainty. In no position in which a human being may be placed is this more necessary. Remember the words, "ease, grace, and certainty." When you, as a student of music, are not at ease or not doing things gracefully, you are not equipped, you are not in good working condition, the result will not be what you expect.

If, for example, you are a violin player, every movement must be the very acme of ease. A deaf man can tell whether a violinist is master of his instrument, by the grace of his movements. Usually ease and grace go together, yet it is possible to have almost perfect ease without being entirely graceful. A noted violinist of America has this almost perfect ease, yet we know he is not so comfortable a she might be because of an ungraceful hitch of his right shoulder. But just think for a moment of the half-dozen greatest violinists on the concert stage. You will agree that their ease is perfect, and so by their masterly grace they please their audiences and put everyone at ease. This is the test of an artist and of artistry.

A musician, to be at ease in his profession, must not run the risk of ever exposing the fact that he

PETROWITSCH BISSING
Violin Virtuoso---Composer---Master of Instruction
Author of SYNTHETICAL VIOLIN TECHNIC (the acme material for left hand), CULTIVATION OF VIOLIN BRATO TONE (indispensable to the violin student).
STUDIO, KIMBALL HALL - - CHICAGO, U. S.

is not equipped on the fundamentals of his He must know the theory of creating art wo even if he has not the gift for composition, altho in this would be evidence of his lack of equipm This appears as a more serious fault when we sider a point that is very well taken—wit knowledge of the theory of music how is the musi to enjoy to the full, or to interpret, the composit of other musicians? I fear we must consider below the standard of proper equipment unles has the creative talents also.

Science has had something to contribute to art; he must study acoustics. Literature has n to explain, mythology holds the secret key to chamber wherein is locked the motif. the ins tion, of many great musical works. Science, li ture, and mythology must therefore make contributions to the equipment of the musicia

Then comes the material equipment, both pl cal and material if I may so classify. Physicall must fit his instrument. To do so calls for things, natural endowment and early trai Given the best possible formation of hands, le of arm, and general good health, the training not begin so early; but as a usual thing our artists begin training so early that they forget training is early in their teens. Such an artist least physically equipped. Then to the mat equipment.

I am confident that many musicians mis important point when their enthusiasm fail bring them personal ownership of a grand in ment, whether it be a grand piano, a grand v or a grand violoncello. These are part of a g equipment—and few are the masters of music who can coax honeyed tones from instrumer inferior quality. Godowsky, in a recent co in Tampa, Florida, found it necessary to subs another piano for his own, which had not ar Musicians present reported that the first crash agony, although his mastery of even an in instrument transported them through seven di heavens. For the player upon bowed instru there is no such excuse; he should equip hi with the best he can secure and never rest that best is as good as he can use to adva Never let him say or feel, that he could do with a better instrument. If he is what he c or thinks himself he will get the instrument he Not even a faulty string should be countena or bad rosin, slipping pegs, a draft that pu instrument out of tune. For it is a part of ment to see that there is no likelihood of a dra to forestall as nearly as may be all possible dents.

These are the things that equip a musicia success. Every failure in the musical world there have been countless thousands, even our generation, can be attributed to stumbli some manner in the acquirement of the nec equipment.

—o—

CHAMBER MUSIC

The Musician has frequently referred t desirability of encouraging the formation of o zations to cultivate chamber music. If you c together a string orchestra very good. If yo sources are not so extensive perhaps you c together a quartet, and occasionally double th instruments adding a double-bass to the co tion. If a quartet is not possible be content trio. But keep at the matter until you acco something.

Address Registrar, **Musin's Virtuose Violin School,**
51 West 76th St., New York City

a recent issue of the New York *Sun* Mr. W. Henderson, the well-known music critic writes he subject:

It is worthy of note that the most interesting positions of absolute music brought before this lic in the last two seasons have been chiefly e in the chamber music forms. This is a ter of no small importance, because chamber ic affords smaller opportunity than other varie- for creating false impressions by means of il- n. The singer naturally excites as much rest by his personality as he does by his art. ed it is just his art which escapes the detection ie majority of his adorers, who perceive only the ity of his voice.

The orchestra is a fine field for effect hunting, anyone who masters the technic of orchestra- can make the common chord of C major sound nishing and important. Indeed every music r knows that repeated hearings of some very entious orchestral compositions leads to the itable discovery that they consist of much paint, e drawing, and less idea.

A string quartet, on the other hand, has to offer ething more than mere texture. A trio for oforte and strings may indeed be written in a way that the brilliancy of the piano part racts the attention of the listener from the pov- of the other two. But in a string quartet the of a solo for first violin with accompaniment he other three instruments betrays its own ity instantly.

Some of the later writers have fought shy of the tet probably because of its exacting nature. oenberg's remarkable quartet in D minor, luced here by the Flonzaleys, is one of the rare nples of a successful creation in this form by a emporaneous master. It is hardly necessary peat that this work is one of uncommon beauty of profound interest to musicians and music rs.

Florent Schmitt's quintet, which was produced Friends of Music concert, may also be men- ed as one of the greatest of the new men's works, now we may fairly admit to the distinguished pany the octet of Enesco, introduced by the isel Quartet.

All these novelties must acquire favor with the ic only by frequent performance. They suffer too great length, but this is an unavoidable ome of the character of the works. The com- r of today is more introspective than his fore- ner of the middle of the last century. He ap- ches music with a different conception of its re and its possibilities. He is not content to e a movement with two principal melodic ideas a short and pointed working out. He con- es his composition as a large working out in , and he aims at a logical presentation of his ds by the treatment of certain melodic roots rthed in the first movement and caused to grow blossom in the others. The wholo plan is one h leads to intricacy of part writing. It tempts fects which frequently seem to us to be out of e in the chamber music field and better left for tterance of large bodies of instruments.

Violin Instruction **Victor Küzdö**

Sole authorized exponent (in America) of the system of

LEOPOLD AUER

(Teacher of Elman, Zimbalist, Parlow, etc.)

STUDIO: 560 West End Avenue, New York City

"In the creation of this feeling there is some influence of that slavery to habit which makes it difficult for us to cross new boundaries in art, but there is surely also at times over-anxiety in the technical methods of some of the composers. They have not yet quite solved the problems of style. Somewhere between the familiar method of building up the dramatic cries of an orchestra and the austere reticence of the older quartets there is an instrumental idiom which will give perfect freedom to the composer seeking to publish poignant emotion or even tragedy through the medium of a sextet or an octet.

"This idiom is not far now from tangibility. In such a work as the Enesco octet there are moments of over-elaboration, but there are many more in which the composer delivers his message with firm strength and simple directness. Schoenberg's D minor quartet, which does not aim at so tumultuous an expression of emotion, has a finer texture, but it has no richer quality.

"It is to be hoped that the various new chamber music compositions which have aroused so much discussion in the last two or three seasons will not be permitted to sink into disuse. They should be heard often. They are mostly well worth rehearing, and at any rate they represent a clearly defined and significant phase of musical art."

FIDDLERS FOUR

In the May issue of *Everybody's Magazine* is an encouraging article on chamber music. The title being: *Fiddlers Four Who Are Making a Musical America*, and is by Virgil Jordan.

"The traveling string quartets are the chief means by which the level of musical taste in this country has been raised. They have spread everywhere the knowledge and love of chamber music, and encouraged its playing. They reach more of the country than the eminent soloist or orchestra or opera company can.

"The string quartet plays only the highest type of music, which soloists often do not. It represents the most intimate side of the greatest composers. Their other works, as we hear them today, have changed with changes in the size and powers of the orchestra. Beethoven's quartets are heard today just as he wrote them."

Then in continuing his article, he speaks about the Kneisels, Flonzaleys, and others, and has the following to say about the Zoellner Quartet, which is prefaced by an excellent likeness of the Zoellners:

"The Zoellners prove completely that chamber music is a domestic art. They are the most widely known family organization in the world. There is, to be sure, a New England family of father, mother, and six children, each of whom plays a different instrument. But this is an orchestra. Quartet-playing *en famille* has many difficulties, but the Zoellners seem to have conquered them all.

"Mr. Joseph Zoellner began quartet-playing at fourteen in the weekly chamber-music evenings of a German manufacturer in New York. When he married he lost no time organizing, so to speak, a quartet of his own. All three children proved to be prodigies. Their first public appearance was in a church in Brooklyn. Their number came at the end of a miscellaneous program, but it had to be put at the beginning because the second violinist, little Amandus, was falling asleep. Eight o'clock was his bedtime. Since then Amandus and the rest have kept later hours, bringing chamber music to countless towns off the beaten path."

CONDUCTED BY H. C. MACDOUGALL

FRANCOIS COUPERIN

BY HARVEY B. GAUL

The Couperin family was one of the most famous in the history of music. Today it is forgotten. Their talent for music ran strata-wise through several generations. Their ability and family influence made them powerful factors in music in the seventeenth century of grace.

Louis Couperin was born in 1630, François Couperin, in 1631, and Charles Couperin in 1638. They were brothers. In 1668 another Couperin was born. He was the son of Charles, and he was baptized François after his uncle. This François was the greatest of the family. He was called *le grand* (the great).

The whole Couperin family, at various times, were organists at St. Gervais, in Paris. St. Gervais was literally a family heirloom. It was passed along from Louis to François, and then down another generation to Nicolas, a son of François, and from there on different members and descendants held the post until 1815. This speaks well for the Couperin family. Our modern organists know that a church today, when relieved of its organist, is glad to be free from any family entanglements.

The Couperin family, as writers, may be called classic composers. Their *metier* was the *clavecin.* They all wrote. François, as a teacher, was the Parisian idol; Louis composed three suites of dances.

François the second, or Couperin *le grand* (the great Couperin), deserves particular attention. He has been called the first great composer for the clavichord. He was termed Couperin *le grand* because he excelled his family and outstripped his confréres. He was a pupil of Thomelin. His rise as a performer was rapid. In 1701 he was appointed court clavier player, and organist at the Royal Chapel, a post he held with great distinction. When he died in 1733, he left two daughters, one became claveçin player to the king, while the other became a nun and afterwards was made organist in the convent.

Couperin, as a composer, was tremendously painstaking. In the several books published, he goes into minute detail for the interpretation of his *fiorature.* Most of the pieces are written in two parts, with the upper melody slightly accented. They have all the grace, and glitter of the court at Versailles. They have one virtue at least. They played the rôle of John the Baptist for Scarlotti and Bach. Couperin paved the way and amplified clavier resources. Many of his morceaux were picture pieces. He was the first to depict in tone, people and emotions. The pieces *La flatteuse* and *La tandre Nanette* are examples of this.

While Couperin was one of the great organists of his period, he left nothing of value for his instrument. This is rather remarkable as his reputation while at St. Gervais was of the highest order. He did, however, leave volumes of claveçin music, also a treatise on touch. He was one of the first to advocate and make use of the thumb. For his discovery of the prehensible digit, let us be grateful.

THE PRESERVATION OF OUR ORGANS

HOW TO PREVENT THE EFFECTS OF VARYING TEMPERATURE AND DAMP

When we remember that the organ is the most delicate piece of furniture in a church, and that it is, moreover, specially susceptible to sudden atmospheric changes, says a writer in *The Choir*, it is somewhat remarkable that hitherto no contrivance has ever been designed which would preserve the instrument from the evil effects of a constantly varying temperature.

There is no doubt that the indifference shown, not by organists themselves, but by trustees and other officers directly responsible for the upkeep of the instrument, is due largely to ignorance.

Few persons realize how complicated and intricate the interior mechanism of an organ is, and how the slightest defect may cause a temporary breakdown. This may result from the warping of the wood, the perishing of the leather, the rusting of some bit of wire or some other cause. But whatever it may be, the fault may, in nine cases out of ten, be attributable either to damp or to atmospheric changes.

"What was the matter with the organ this morning?" said an official to the organist, one unusually wet Sunday morning; "there was something kept on sounding nearly all through the service."

"Oh!" replied the unfortunate musician, "it was only some note ciphering. It's this damp weather; it's always sending something out of order."

As every organist knows, this is no unusual occurrence; in fact, so widespread is the evil thus caused, that all who are interested—organists, because they love their instruments, and church officials, because they hold the money bags—will be glad to know that a serious attempt has at last been made to remedy the evils referred to and that for some months past a series of experiments has been carried out with results that are so far eminently satisfactory. These experiments have been conducted under the auspices of the British Commercial Gas Association, and a report has recently been issued from which we make the following extracts:—

"It has been clearly proved that the cause of the above-mentioned defects is the fact that in churches and similar buildings which are not in constant hourly (or in many cases even daily) use, or when used are frequently only partially so, the temperature of the air and the surroundings in the inclement seasons of the year d to a very low point during the period when building is either entirely unused or is no full use. Dampness is also experienced in s cases.

"When the building comes into use, some f of apparatus for its general heating is star The temperature then rises fairly rapidly, the effect of this, and the heat and mois arising from the congregation or audience w they assemble, is to cause air containing m ture—and at a temperature materially gre than that of the organ itself—to come into c tact with the metal wires and plates, woo stops, and other working parts of the or This causes condensation to form on the m and oxidization, etc., to ensue, causing su quent corrosion. . . .

"It has been discovered that a means of venting the trouble herein explained is to k a constant stream of warm dry air passing the internal parts of the organ during the clement months of the year, so that the tem ature of the organ and these internal part always kept above that of the general air the contents and structure of the other part the building. Indeed, if necessary, it w thereby be possible always to keep the ai and around the organ at what may be ter normal summer temperature."

As this question is one in which a large n ber of our readers are sure to be greatly in ested, we have availed ourselves of an invita to meet one of the representatives of the sociation, and inspect the working of the invention for ourselves.

The experiments have been carried out New College Chapel, Avenue Road, Lon N.W., and perhaps no more suitable p could have been found. The building has fered greatly from damp and the walls bear evidence of this. Consequently the organ suffered severely, and had been rendered v nigh unplayable.

Such was the state of things in October, when the newly-designed apparatus was ins ed, which we will briefly describe. A tin divided into upper and lower compartm stands by the side of the organ, practically of sight. In the lower compartment is a Bu burner. One side of the upper compartmen pierced with half a dozen holes, and the air drawn in is heated from the burner in the ch ber below, and passes out of the opposite into a long tube with a bell mouth, which veys the warm air into the interior of the strument; and that is all!

The burner was kept going throughout winter until April 26, and when we visited church at the commencement of last mont had just been relighted for the ensuing win

Meanwhile, the effect on the organ has little short of marvelous, and both organist officials express themselves highly pleased at great improvement that has taken place in mechanism of the instrument. But while the effects of damp have been largely countera or removed, care has been taken so to con the action of this ingenious invention as avoid or prevent any excessive dryness, the sults of which might be equally disastrous.

We attach considerable importance to this teresting invention for the simple reason th appears to offer a satisfactory solution of difficulties which have attended the overs and upkeep of our church organs, especiall country places.

THE STATUS OF THE ORGAN VOLUNTARY

BY WILLIAM REED

HOULD the organ voluntary be regarded as officially integral part of the church service, as a mere stop gap to be exploited in much same way as is the instrumental music fur- ed at a public secular function?

here seems to be sufficient reason for pro- ng the question, since it is undeniable that nany of our churches the organ voluntaries ear more or less perfunctory, inappropriate, uninteresting. Sometimes it would even ap- as if the selections were hurriedly made he last moment and of whatever material e first to hand. Of course, this is not as it ild be.

ut do organists, in general, find sufficient ouragement to select their voluntaries with and forethought, to prepare them duly, or present them interestingly? Consider an or- ry church service.

his opens with a voluntary which is accom- ied by the rapid perambulations of ushers, sperings among the singers, and even ques- s addressed to the organist, all resulting in enerally unsettled atmosphere.

nder such circumstances, it is reasonable to r that but few present are giving intelligent to the organ and that the player himself is ble to bestow an undivided attention on the ter in hand.

he Offertory voluntary fares better. But ild the organist's selection exceed, even tly, the exact period (always variable) oc- ed by the collection, he is likely to hear of ter. Not so, if a vocal solo or concerted e is given instead of a voluntary. These may f an appreciably greater length, but will es- criticism on that point. Such discrimina- can hardly be specified as fair.

to the Postlude on the pronouncement of Benediction, the majority of the congrega- quickly departs, the remainder disposing it- into conversational groups in order to wel- e strangers or discuss church matters. (And always church matters.) An amusing and entic occurrence will illustrate this.

n organist was frequently annoyed by the istent whisperings of two ladies in the con- ation during the Offertory voluntary. With ose of revenge, on a certain occasion, he ed an improvisation, in which after some sures of *ff* effect he suddenly dropped to a The assembled people were scandalized to the following loudly spoken, "We fry ours utter!"

hat has been above said as to the attitude nany congregations toward organ voluntaries y no means an exaggeration. Church people nselves will admit its truth. What encour- nent, then, has a good organist to make a t of his solo playing in church? His people be aware of his standing as an organist musician and may even see to it that they represented at his recitals; but as to regard- his voluntaries as actual parts of the church ice—that is another thing.

d, speaking of recitals, does not many a ble player consider these as a species of y valve and as opportunities for conserving rtistic self-respect as a player?

course, organists differ: There is the man e primary aim is to retain his position and e everyone—natural ambitions, but as re- s the last point unlikely to succeed. As a ast, we find the conscientious artist who, while sincerely desirous of maintaining a good standard of choir and organ music, has to meet the wishes of his music committee as to the attractiveness of both. Sometimes he is congenially situated, encouraged and helped by pastor and people, and reasonably free to carry out his ideas as to what is fitting and advisable in all the music provided. Such cases are, however, not so common as they should be.

Now, seeing that a church organ is designed for a definite use, that it has not only been officially "opened," but often consecrated to its purpose as well, it is but reasonable to expect that it be regarded and used accordingly, namely, as being, in all points, a necessary adjunct to divine worship and not as so much convenient machinery.

I have said that many voluntaries appear perfunctory, inappropriate, and uninteresting. Perfunctoriness may include the other shortcomings and *vice-versa*. But why should any or all of these be present?

The answer is that the proper status of the organ voluntary has yet to be more generally recognized by pastors, congregations, and even by organists themselves. Organ voluntaries undoubtedly are components of the church service, and, as such, claim respect and due appreciation. All the components of a service claim these, even during the process of assimilation, if they are appropriate and religiously dignified.

That such conditions will eventually be realized there is reason to expect; but, in the interval, persistent, exemplified effort and patience are needed to bring them about.

Nor must the onus of generally existing conditions be laid entirely on congregations. Not a few organists must share the blame, being themselves inclined to estimate church voluntaries as of comparatively little importance and directing their zeal largely toward choir efficiency. That they should do their best in this latter department goes without saying. But this by no means implies under-estimation of the purely organ parts of the church service.

It may be objected that the case, as above put, is urged too strongly, and that it is open to counter arguments on the grounds of circumstances, exigencies, and of even the interpretation of what may or may not constitute necessary components in the makeup of a church service. But the upshot of the question will still remain unchanged.

And that is the obvious need for a more general recognition of the claims of the organ as a factor in and an aid to devotion.

With a better understanding in this respect would come an improved attitude towards the organ voluntary. At such a consummation, no one would rejoice more heartily than the conscientious organist. He will have come into his own, will perceive an added importance to his calling, and will feel more encouraged to give of the best and in his best manner.

———o———

An artist should be inspired by a splendid Charity—"the greatest of these." To love should be his aim in life; for the moving principle of all creation is divine and charitable Love."—*D'Indy* in an address to students of the Schola Cantorum, Paris.

INTRODUCTION RATES — ONLY 3 CENTS FOR A SAMPLE COPY

New Octavo Music

(PLEASE ORDER BY NUMBER)

ANTHEMS: MIXED VOICES

McCOLLIN, FRANCES
No. 12,939. **O be joyful in the Lord** $0.12
A bright, tuneful setting of the *Jubilate Deo*, with effective chorus passages. It is easy.

SCOTT, CHARLES P.
No. 12,915. **O word of God incarnate** ..... .12
No. 12,915.-Obl. Violin obbligato ..... .25
A fine anthem for festival or general occasions, with fine alto solo, and violin obbligato available if desired The chorus writing is interesting and attractive.

SACRED: MEN'S VOICES

ROBINSON, CLARENCE C.
No. 12,830. **Twelve responses** ..... .16
Easy, melodious, and varied in style and text.

CATHOLIC MUSIC

NIEDERMEYER, LOUIS
No. 12,818. **O salutaris,** in F♯ minor ..... .10
A delightful number for quartet or chorus.

ROSSI, J. F.
No. 12,862. **Tantum ergo** ..... .12
In two parts, for tenor and bass.

PART SONGS: MIXED VOICES
(Suitable for School Use)

DONIZETTI, GAETANO
No. 12,973. **Oh, Italia beloved** (*Lucrezia Borgia*) .... .08
One of the finest opera choruses; not at all difficult.

PESTALOZZA, A.
No. 12,951. **Almond blossom** $0.08
A delightful chorus in waltz movement.

WILDER, BURT G.
No. 12,955. **Old Ironsides** ..... .08
A chorus of patriotic sentiment, easy but strong in its musical effect.

PART SONGS: WOMEN'S VOICES

BOSCOWITZ, F.
No. 12,866. **Bella Napoli** ..... .12
A famous Neapolitan song arranged for three-part chorus of women's voices.

COLLINS, LAURA SEDGWICK
No. 12,875. **Sleepy time** ..... .12
An effective arrangement for three-part chorus of a popular song.

PART SONGS: MEN'S VOICES

BERGH, ARTHUR
No. 12,947. **Vanitas! Vanitum! Vanitas!** Op. 19, No. 1 ..... .12
A rollicking piece for chorus or quartet.

ROBINSON, ELIOT H.
No. 12,969. **The night may have a thousand eyes** . .10
Easy, melodious, somewhat in the serenade style.

THE ECHO ORGAN

BY H. C. M.

Those organists who direct choirs of women must have noticed how the modern feminist movement has changed the character of the words used in music for women's voices. If one takes the publications of the English firms it will be noticed that the words, years ago, were absurdly juvenile, referring usually to violets and waterfalls, quarrels for precedence between flowers, and other important matters. The music, too, was inevitably of the Henry Smart type,—melodious, smooth, and graceful, but with no real power. It was assumed by composers for women's voices that the softer, more graceful side of life is the realm of the sex, not only in politics and social life but also in music.

* * *

The modern movement towards woman's "emancipation" has changed all that. Words now must have (as the college student put it) "lots of pep," and the subjects treated may, or even *must*, include fighting, mystery, and the whole strenuous side of modern life.

* * *

The same change is coming into our church music. No longer is the 23d Psalm the typically feminine selection for a college women's choir, but the bigger the theme, its conception, and execution, the better. I speak of this change for two reasons: First, to attract the attention of composers who have not noticed it; second, to show how far-reaching the feminist movement is.

* * *

Last month, in answer to a query from some one who wished a little information concerning the use of the pedals in playing over hymn-tunes for congregational singing, I suggested that the double bass of the orchestra is the prototype of the 16 ft. open pedal stop. Some of my readers may have thought me unwise in thus suggesting a workable connection between organ and orchestra, lest some inexperienced player should be led into playing "arrangements." My feeling in the matter is quite the contrary. Irrespective of whether it is a wholesome thing for an organist to make much of arrangements, it is quite clear in my own mind that the more an organist knows about the orchestra the better he will play the classical works.

* * *

The greatest trouble we have with our organ students is this: They separate themselves from the general currents of modern musical life. They are too intensive, too specialized, too obsessed by the external bigness of their instrument. After all, these matters of mechanism exist for the music and not for themselves. To counteract this excessive, narrow specialism, every young organist ought to learn at least one instrument aside from the piano and organ. Some one, I've been reading lately, advises study of the violin or 'cello, clarinet and horn up to the point of playing the easier typical or characteristic passages on these instruments. In this way the strings, wood-wind, and brass instruments (three important families of instruments) come under observation and their peculiarities and qualities are noted.

* * *

It would do a young organist a great deal of good to found an amateur orchestra or to join one already founded. I know that at the mere mention of the amateur orchestra my readers—at least the professional portion of them—will smile either in pure amusement or in derision. But our young player will learn a great deal that will be of incalculable benefit to him in all sorts of ways later on in life. Music is destined to play a greater part in our social life in the next hundred years than ever before. One can see this when one takes into account at least two factors in the life of today. I allude to the immense interest taken in school orchestras and in the equal interest shown all over the United States in community music.

* * *

It has taken some time for the good seed sown by Theodore Thomas to develop. He went up and down the country giving classic programs, cunningly intermixed with popular selections, until he had infected music lovers with his own enthusiasm for the highest and best in composition and execution. But the immediate effect of his work was the destruction of all orchestras that did not come up to his technical standards. For a conspicuous instance of this recall the fate of the Harvard Musical Association concerts. These had to give way to the Boston Symphony series, with its promise of superior excellence. In this case, as in many others of a similar nature, the best was the enemy of the good. As time has gone on, however, the demand for good orchestral music has, through the labors of Thomas and other great conductors, increased so that all over the United States municipalities and public-spirited citizens are founding and generously supporting orchestras. This has come to be a movement working downward through the body politic until it has reached the public schools. Here we see the full fruits of Theodore Thomas's work; started as an intensive movement it has had, forty years after, extensive results.

* * *

The great economic movements of the past fifty years have all tended towards what is vaguely termed socialism. So far as I know anything about the general movement towards the equalization of the good things and the opportunities of this life, it has always been thought that music was the best universal solvent—so far as it went—for social difficulties. In music, especially chorus and orchestral music, there is the consciousness of solidarity, the subordination of self and selfish interests for the good of the whole, that must distinguish any real upward movement of the masses. Hence community music, which may take various forms but has for its basic principle the participation by the community as a whole in some form of music work. Naturally this often results in a chorus and orchestra or a great many choruses and orchestras scattered about a city.

* * *

The point I wish to make, then, after all this preliminary, is that the young organist must train himself for this larger leadership and must not only perfect himself in his chosen instrument (so far as his native talents will allow) but must also get an intimate knowledge of that greatest power in the musical world, the orchestra, in order to do his part in the leadership which will fall to him if he be ready; is certain that, from the thousands of young or tral players receiving a certain amount of traini the high schools of our land, there will come a g number of orchestras. These orchestras will be powers in the cities, towns, and villages where will form part of the social life. They will nee rectors. The organist has, up to now at least, thought to be the broadest educated man in musical profession. That impression has come a because the young organ student has been easily convinced than the piano or violin studen to the necessity of harmony and counterpoint st The knowledge of musical theory has given th ganist a broad foundation on which to build. now pleading for a further extension of that f dation.

* * *

The objection will at once be made that, as a student must spend at least ten years in study before his repertoire is at all commensu with modern demands on the concert player. is true, entirely true. But why, may I ask, necessary for the organ student to set concert-p ing as his goal? Is there no field for the churc ganist and choir-trainer? The truth is, not one son in one hundred has any right to think he can be a virtuoso organist. The young player less he be quite sure that he is a Buxtehude, B or Handel in embryo, better prepare for other broader fields. Let him resolve to be a leader i great music-expansion that is, I feel confident come in the near future.

The Best Piano To Buy

There's economy in quality. This is especially true of a piano. It is a permanent investment—a life-time purchase.

The Sohmer is the best piano to buy because it is a quality product.

It combines a wondrous beauty of tone with the maximum of durability. The purchase of a Sohmer is the economy of quality.

Sohmer

315 Fifth Ave. New York, N. Y.

TEACHERS' FORUM

Address all questions relating to the work of this department to Mrs. Blanche Dingley-Mathews, 25 E. 18th Avenue, Denver, Colorado.

CONDUCTED BY BLANCH DINGLEY-MATHEWS

AM a new reader of THE MUSICIAN and have your letter in the February number.

hen I was a child I took some music lessons on piano, but was not taught anything of earing, or theory, or much of anything but just ing notes.

fter some years, I am taking up the study again, would so much like to know *how* to practise ligently to get the utmost out of each practice .—V. R.

good method of study is the key to success in ic, and while your question seems a simple one, in fact very difficult to answer helpfully.

certain amount of theory work and keyboard nony is essential. One must know the simple the scales with fingering, arpeggios, and chords, lay, to write, and to recognize them by ear and ye.

you lack this training you can easily acquire it evoting possibly a half-hour a day to this work. will find my *Conversation Lessons*, especially the part of the book, very helpful as it covers the chord writing. If you would carry along with some work in transposition beginning with the easiest things you can find, your concept of will be gradually enlarged. All of this work is y a preparation for the good understanding of o music and certainty if you do not *understand* music you will be able to make little or no ress.

ne general rule that is given for the allotment of practice time is one-quarter of the time to nical exercises. That would mean about twenty ites a day if you practise an hour and a half a for five-finger exercises, scales, or arpeggios, d exercises, etc.

ne rest of the time I should divide into two forty-ite periods, one for memorizing, the other for ing work and interpretation.

my own study I break over these rules; for as as I begin the interpretation work I never think me until an interruption from the outside occurs. udge from your letter that you are working out own salvation without regular lessons. If so, mportant thing is quite as much *what to study w to study*. Without some knowledge of your irements I cannot be of any real help on this But I would caution you against having the material all of one type of music. Also, if you have little time and strength for work, study pieces rather than exercises, and make exercises out of the difficult parts of the composition. Keep some melody work going along with some running work. Then change off to the thematic music like some of Schumann or, if you have a taste for it, Bach.

Take for instance a piece or rather a combination like the following:

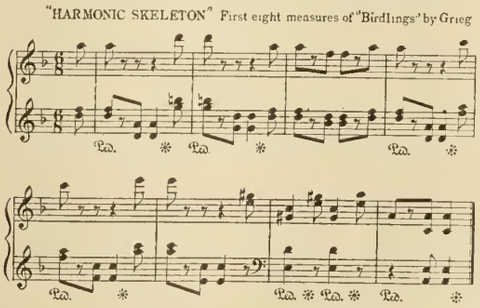
Birdlings, Grieg;
Prelude in B minor, Chopin;
Nodding Ferns from *Sylvan Scenes*, Helm.

Begin to memorize the *Birdlings* in something this manner:

Birdlings

First step: Key and rhythm. Key is D minor rhythm, 6–8. Play the scale of D minor and work out the rhythm of the first two lines by tapping each note and counting out loud. You will find out by doing this how important the silent pulses are. Do this tapping work *away from the piano and before you have tried to play it.* Do not take it to the piano until you have the rhythm exact and be sure to keep the count steady. Note that Grieg uses his two pulse motive always weak, strong, or 6,1, and that the rhythm is further intensified by the use of the open fifth in the left hand part on weak, strong or 3, 4. Much of the style comes through the crispness of the rhythm and if you study it alone first, you will not get into bad habits.

"HARMONIC SKELETON" First eight measures of "Birdlings" by Grieg



Second Step: Working out the harmonic skeleton. Look at the first motive. At A you will find it built on the chord of D minor. Play it, then answer it with the open fifth in the left hand part. Go on to the next, which you find is the major chord of G. Play that and answer it with the open fifth on G which follows. Then comes our chord of D minor again and instead of the open fifth answer we have another chord-major on B flat; then back to our D minor chord; this time the open fifth answers. Go back to the beginning and play through these first four measures until you have the skeleton perfectly clear in your mind. Then continue in the same way through the rest of the period in which the major chord on F is followed by the open fifth answer, the minor chord on A followed not by a fifth on the same tone but by a sixth on E, and then the full predicate part of the sentence is entirely different, built on the dominant seventh of A minor—a broken third on E with a chord answer, same repeated; then this little hopping motive repeated in the key of A minor, only instead of a third, it is a fourth on E followed by the answer to the dominant seventh chord of A minor. Be careful to keep the rhythm exact in playing the skeleton, for you must not undo the work you have done in tapping. This takes only about five minutes to do and saves more time than you can imagine in learning the piece.

Third Step: Working out the technic. You will find the difficulty will be to keep the left hand exactly with the right hand on the thirty-second notes. Practise each hand alone in the rhythmic table, starting with the accent on the first note counting four. Double up as many times as you can. Then count two, and bear on the second count, which will throw the accent on the second and fourth notes of the group. Play with pure finger raising fingers high in slow motion, and closer to the keys in fast work. After the hands have been practised alone do the same things with the hands together. This is making an exercise out of a piece, and is far better than wasting time on studies for at the end you have something.

Fourth Step: Working out interpretation. In this you should consider the accent in order to keep the rhythmic feeling, the pedal, the daintiness of the touches used, and the balance between the parts. Stay long enough on the first count of each measure to secure a clean pedal without any suggestion of the trill effect which precedes the first count. That is, pedal not on one but just after one. Hold pedal until three. Take again after four and hold until six.

The best way to get the pedaling well is to practise it when you are working on the skeleton.

I use this method of study for everything and find it not only saves time, but is far more interest-

HE TUNES PIANOS So Can You

He was taught at home in leisure hours by correspondence, in a way that is open to all who wish to learn. He says that **HE MAKES $50 A WEEK.** Send for his name and read his letter. What we have done for him and others we can do for you. The TUNE-A-PHONE, our patented instrument for precisely indicating comparison of sound-beats in tuning proof intervals, makes it easy for any man or woman to become a proficient piano tuner. This device unfailingly teaches first principles that you never forget and is then discarded. Eliminates guesswork or faulty start. Our course includes Action Regulating, Voicing and Fine Repairing. Action model and tools loaned. Diploma granted. Graduates are Big Money makers on salary or at work for themselves. Many of our most successful tuners had no previous musical knowledge. 18 years of correspondence teaching by unfailing and practical plan.

Investigate at our expense. A postal request brings indisputable facts, FREE.

OVER THIRTY YEARS IN MUSIC

"The World's Greatest Musical Weekly"

MUSICAL COURIER
A WEEKLY JOURNAL

Published Every Wednesday

Contains all the news on classical music and musicians the world over. Read by all intelligent musicians

Publication Office: 437 Fifth Ave., S. E. Cor. 39th St., New York

ing than the old-fashioned way of going to the piano and reading the passages over and over again until I knew them. Such a method of study makes for musicianship and for a reliable memory.

The whole secret of good practice lies in avoiding mistakes in notation and rhythm, and gaining a clear conception of the harmonic content of the composition in hand.

If you will do such work as outlined and get a good combination of material to study, you will be delighted at your progress even without lessons. Then when you are situated so that you can take lessons, you will be in condition to get the finest work a teacher can give, which is interpretation. Don't overlook the fine possibilities in the short term summer sessions.

* * *

I find it difficult to select pieces of genuine musical worth for Grades II and III, ages 11 to 15. Such pieces as the *March of Fingall's Men*, with good harmonies, stirring rhythm, and attractive melodies. So little of the music sent from the publishers for examination is of use in developing a good musical taste and I am not satisfied with less.

E. B.

It is difficult to find pieces in the second and third grade for pupils of that age. Most of the titles are so babyish, which ruins the music for boys who feel they are nearly men.

I would suggest in Grade II the following:

June morning, Marschall-Loepke; *Gypsies are coming*, Rogers; *Enchantment Waltz*, Paldi: *Vivacity*, Zilcher; *The juggler*, Kern; *Dance of the gnomes*, Poldini; *Trilletto*, Florence Goodrich; *Waltz in C*, Gaynor; *Little major march*, Florence Goodrich; *Wooden shoe dance*, Rogers; *Gavotte in G*, Rogers; *Little chicken*, Seeboeck; *Shadow picture*, Reinhold; *Under the rose arbor*, Dutton; *Flower girl waltz*, Dingley-Mathews.

Grade III: *Twilight*, Grant-Schaeffer; *Musetta's waltz*, Puccini; *Forest flowers*, Morley; *Silent night*, Gillet; *Berceuse*, Iljinsky; *Restlessness*, Zilcher; *Hovering butterflies*, Gaynor; *Sirens*, Rogers; *Avalanche*, Heller.

GENERAL NEWS ITEMS

Hotel musicales have evidently come to stay in the big cities. The series given at the Copley-Plaza, Boston, will be continued next season, it is announced, under the management of W. R. MacDonald, who will present a series of eight musicales, December to March.

Edward J. De Coppet, founder of the Flonzaley Quartet, and a well-known patron of music, died in New York, April 30. Mr. De Coppet was the son of a Swiss banker who engaged in business in New York, where the son was born, although the latter received his education in Switzerland. Music in the United States owes much to Mr. De Coppet for the generous support which enabled the Quartet to perfect its work to that point which made it rank with the best in the world.

The Ohio State Music Teachers' Association met in annual convention at Springfield, April 24-26. Mr. Lynn B. Dana, of Warren, was president. The Chicago Orchestra gave one of the evening concerts.

Mason City, Ia., was so delighted with the performance of *Elijah*, in March, by the local choral society under the direction of Mr. E. A. Patchen, that a music festival organization was formed to conduct a May Music Festival annually. Western towns seem to have learned that it pays to have well-organized musical forces.

The Hellenic Society of the New England Conservatory, Boston, gave a production of Gounod's opera *Mirella*, April 28, under the direction of Mr. Clément Lenom, of the faculty, a well-known member of the Boston Symphony Orchestra. It was in three acts, condensed from the original in five.

The fifteenth annual spring musical festival of the Keene, N. H., Chorus Club, Nelson P. Coffin, conductor, assisted by the Boston Opera House Orchestra, under Louis Eaton, was held May 18 and 19. Gounod's *Gallia*, Grieg's *Olaf Trygvasson* and Verdi's *Manzoni Requiem* were sung by the chorus.

The Louisiana Music Teachers' Association held its annual convention at Lake Charles, April 12-14, Prof. H. W. Stopher, of the University of Louisiana, presiding. Examinations for teachers' certificate were held during the convention.

The pension fund of the Chicago Orchestra has been increased $100,000 by a gift from Mrs. Elizabeth Sprague Coolidge, of Pittsfield, Mass.

Cincinnati's 22d biennial May Festival was held May 2-6, under the direction of Dr. Ernst Kunwald, conductor of the Cincinnati Symphony Orchestra. The festival chorus was augmented by 800 children from the public schools. Mendelssohn's *Saint Paul*, Beethoven's *Missa Solennis*, Pierné's *Children's Crusade*, and Brahms' *German Requiem* were sung. The soloists included Schumann-Heink, Olive Fremstad, Clarence Whitehill, Florence Hinkle, and Lambert Murphy. Several novelties were produced by the orchestra, among them works by Edgar Stillman Kelley and John Alden Carpenter.

The 23d annual May Festival of the University of Michigan, Prof. A. A. Stanley, conductor, was held May 17-20. Bossi's *Paradise Lost*, Pierné's *Children at Bethlehem*, and Saint-Saëns' *Samson and Delilah* were sung by the University Choral Union and a children's chorus, accompanied by the Chicago Symphony Orchestra. Among the artists were Amato, Frieda Hempel, Florence Hinkle, John McCormack, and Reinald Werrenrath.

Connecticut musicians have organized un the name, The Music Teachers of Connecticut. M Mariette N. Fitch, of Rockville, is president.

Horatio Connell, a well-known concert b tone, will have charge of the vocal departmen the Chautauqua, N. Y., summer schools this sea

English musical papers have expressed fears the musical library of the late Wm. H. Cummi which is rich in all kinds of books and documents ferring to music and musicians, may not be kep tact, and that it may go across the Atlantic.

The Chicago North Shore Festival Associa will hold its 8th music festival at Evanston, May June 1, under the direction of Prof. P. C. Lutkin the Northwestern University School of Mu Berlioz' *Damnation of Faust*, Wolf-Ferrari's *Life*, Cyril Graham's *Piper of Hameln*, and a cantata by Mrs. Beach, *The Sea Fairies*, wil sung by the chorus. The Chicago Symphony chestra will assist.

The 9th annual convention of the National sociation of Organists will be held at Springf Mass., Aug. 1-4.

Spartanburg, S. C., held its annual music tival May 17-19, under the direction of Mr. Ed Morris. *The Messiah* and Donizetti's opera *Luc Lammermoor*, in concert form, were sung by Converse College Choral Society. A childr chorus assisted, and the New York Symphony ciety Orchestra, Walter Damrosch, conductor, present.

Stephen Foster's old home, at Pittsburgh, be restored and made into a Foster Museum.

Central New York's Greater Music Fes was held at Syracuse, May 8-10, under the dire of Tom Ward and Howard W. Lyman. The Fes Chorus of 500 voices was assisted by a child chorus of 500.

Bellingham, Wash., has a symphony orch of eighty performers, under the direction of M Davenport-Engberg, violinist. The orchestra h successful season, and is well supported by the p of that section.

San Diego held a May Music Festival, May 13, the assisting organizations being the San I Choral Society, the San Diego Symphony chestra, and a chorus of 5000 children fro public schools.

The Western State Normal School, Kalam Mich., held its second annual music festival, 20-22, under the direction of Harper C. Mayb the Music Department. A children's chorus ticipated.

The Saint Louis Orchestra Club, Frank G conductor, gave the last concert of its 24th se April 27. This is an amateur organization

A popular Sunday Concert was given in K City, April 14, by the Kansas City Symphony rus, Earl Rosenberg, conductor, with the assista part of the local Symphony Orchestra. Ora Choruses were sung. The Symphony Choru sing *The Messiah* next December and hold a S festival of at least three days in 1917, with iliary choruses from nearby cities.

The Arbuckle Institute Choral Club of Broo Bruno Huhn, conductor, gave its final concert season, May 3.

The Cecilia Choir of the Western Theol Seminary, Pittsburgh, Charles N. Boyd, dir gave a program of church music, May 3, prese compositions by Bach, Tallis, Martin, Tchaiko and Bruckner, an anthem in the negro folk song by R. Nathaniel Dett, and a motet specially w for the Cecilia Choir by T. Carl Whitmer, of burgh.

Victrola

The instrument of the world's greatest artists

To bring the world's greatest artists right into your home is the exclusive privilege of the Victrola.

It is the only instrument for which the greatest singers and instrumentalists make records. And when you hear them on the Victrola you enjoy to the utmost the wonderful beauty which distinguishes their every interpretation.

Any Victor dealer will gladly show you the complete line of Victors and Victrolas—$10 to $400—and play the music you know and like best, which is the only way for you to personally judge its capabilities of satisfying *your* musical longings.

Victor Talking Machine Co., Camden, N. J., U. S. A.
Berliner Gramophone Co., Montreal, Canadian Distributors

Important warning. Victor Records can be safely and satisfactorily played only with ***Victor Needles or Tungs-tone Stylus*** on Victors or Victrolas. Victor Records cannot be safely played on machines with jeweled or other reproducing points.

New Victor Records demonstrated at all dealers on the 28th of each month

WITH THE SCHOOLS AND TEACHERS

PUPILS of Miss Louisa Hopkins and Miss Florence Leonard of the Breithaupt School, Philadelphia, illustrated a lecture about the Breithaupt ideas in piano study, April 15. Miss Leonard spoke on tone and tone-color in piano playing and of the influence of the new ideas in the training of children. The compositions used for illustration were by classical and modern writers.

MRS. BEATRICE HUBBELL-PLUMMER gave a number of original compositions at Pasadena, April 30. Mrs. Plummer is a pupil of Leo Oehmler, the well-known composer.

MR. CLARENCE CAMERON WHITE, violinist of Boston, played a recital at the Music School Settlement, West 131st St., New York, April 30. Henry Lee Grant accompanied him.

A CHORAL and orchestral concert was given, April 27, at the Lafayette Ave. Baptist Church, Buffalo, by the church choir, 50 voices, and the Cazenovia Orchestra Club, 20 players, under the direction of Carl E. Wittwer.

SUMMER SCHOOL ANNOUNCEMENT

Fannie Church Parsons

Will Hold Her Annual Summer School for Students and Teachers this Year in Chicago, July 5—August 5

Every day will be a Red-Letter Day for new ideas.

Each of the one hundred twenty hours will be filled with instruction to the students' utmost profit.

Pleasant location; quiet surroundings; and most reasonable prices.

Mrs. Parsons is known throughout the Musical World as the originator of the Kindergarten Idea of presenting Music. Her inventive genius, coupled with pedagogic intuition, made innovations in piano instruction inevitable. This system makes a specialty of Rhythmic work, Audition and Interpretation.

HARMONY

3-YEAR COURSE IN ONE MONTH

Many years of teaching along most advanced lines have now resulted in the publication of a text-book which presents equally original ideas for teaching Modern Harmony. This plan makes the pupil HEAR, SEE, FEEL and UNDERSTAND all the usual and unusual chords of a tonality.

Mrs. Parsons will present her new course in Picture Harmony in connection with her Normal Work, which has been revised and greatly enlarged.

Enroll with the originator and get the benefit of her methods first hand.

Further information and literature sent upon request.

Address **FANNIE CHURCH PARSONS COLLEGE—4040 Ellis Ave., Chicago**

THE FLETCHER MUSIC METHOD

THE ORIGINAL MUSICAL KINDERGARTEN AND SIMPLEX METHOD OF AMERICA

Brought to America through the interest of the New England Conservatory eighteen years ago; and during that time taught to over 700 music teachers (every one of whom could be employed in Boston alone); the demand is growing rapidly for Fletcher Music Method teachers in spite of the many cheap copies of this system.

The Summer School will be divided into two classes: the first opening May 20th, and the second opening July 10th.

In the 200 hours of instruction, which lasts eight weeks, more ground is covered in practical harmony than is covered in any Conservatory in two years.

Read "What is the Fletcher Music Method?" price $2.00.

For full information regarding Normal classes and lectures for Educational, Musical, and Mothers' Clubs, apply directly to

MRS. EVELYN FLETCHER-COPP, 31 York Terrace, BROOKLINE, MASS.

New School Operettas

Miss Muffet Lost and Found

A Mother Goose Play by Katharine C. Baker.....50c
Available for children of Primary and Intermediate Grades.

The Witch of Fairy Dell

A Light Opera for Girls' Voices.
Words by Frances V. Hubbard.
Music by Frederic W. Mills.....75c
Available for High Schools.

The above are musicianly works written in most attractive, tuneful style. Both are bright in character, have plots with a point and are interestingly told.

Demeter and Persephone

A Prologue or Masque.
Story by Thomas Wood Stevens.
Music by George Colburn.....75c
For Festival or other occasions.

A well written work, attractive in its story and its musical setting. Particularly fitting for High School entertainments.
